SOUTH CAROLINA, Aikin, Aikin Co., Aug. 17.—Perhaps RURAL readers would like to know something of this region at mid-summer. This town is on high ground, certainly the highest in this vicinity, the country sloping downward from us in all directions. A part of the rainfall on our streets runs eastward and empties into the Edisto River, reaching the Atlantic at Charleston, while on the west side of the town the water runs westward and into the Savannah River, reaching the ocean at Savannah. Thus we are on the summit of this sand-hill region, and this will account for the extreme healthfulness of the place at all seasons of the year. Having lived here now over ten years continuously, I am prepared to state that during that whole period we have had nothing to interrupt the salubrity of the place. On coming hither from N. Y. State in 1869, I found here a disorganized state of affairs. The war had cleaned out the country, and its stock and farm implements were wretched sights. Before that time the lands here were counted too poor to be worth working, but necessity forced a trial, and it was found these sandy soils, especially those having a clay sub-soil, would pay, and make good crops. The people went to work on them, and, while before the war the farm products brought to this market—especially cotton—were of very small amount, in 1874, six years after the start in 1868, 800 bales of the staple were sold on our streets, and the quantity has been increasing every year steadily until the last year's crop was probably not less than 4,300 bales. At the same time the yield in other farm products was doubled up, and is rapidly increasing. In looking at the farms, fences, buildings, implements, stock, etc., the improvement seems magical, so great has it been. There will be found few points in our country, or in this southern country rather, that have advanced so much and improved so rapidly as the farming community and farms in this vicinity. With a soil susceptible of quick improvement and returns for the work put on it, a mild climate, healthy at all seasons of the year, it presents great attractions. As to crops, so far the grain crops are fair. Wheat and oats are good; corn was badly injured by the long drought, lasting from the latter part of April to the latter part of July, with only a few small showers—the driest time while I have lived here. Cotton is now looking very well; the dry spell did not injure it, and the rains since have set it forward, and this week "picking" begins, and soon all will be busy in securing the fleecy crop. There are two agricultural clubs in this county. The Beech Island Agricultural Club, in the southern section of the county, one of the oldest in the Union, holds regular monthly meetings to discuss the best ways and means for advancing our agricultural interests, and the Millbrook Club, in the eastern part of the county, is also doing good work collecting, discussing and disseminating farm knowledge. This year we have to lament the loss of our early peach crop—cut off by a sharp freeze in March; there are thousands of trees that would not average one peach to the tree. Of late peaches we have only a few. Taking advantage of early and late varieties, we generally have peaches from early June to October. The apple crop promises fairly. Figs were somewhat injured by the drought. The Blount corn sent me I planted in my garden and it did splendidly. It had set from three to eleven ears per stalk; but alas! the dry time cut it down and ruined it entirely. It called forth much wonder and speculation while it was flourishing, and I had many requests for seed from it, as nothing of the kind had ever been seen here before. S. O.

ALABAMA, Danville, Morgan Co., Aug. 21st. The corn crop in north Alabama is very fine. Cotton is injured by red and black rust, Blount's Prolific corn sent me by the RURAL, was planted on May the 8th. It grew very tall, and has from two to five ears now nearly dry enough for gathering. The ears are fine, and I think will beat any of our Southern corn yet produced. Our Pearl Millet has been cut the third time. I left for seed one bunch which is in full head and eight feet high. Beauty of Hebron did not do well. It was planted rather late. The few potatoes raised from it are fine. The wheat crop is hardly an average one. Oats are over an average crop. Sweet potatoes, I think will be an average crop. Bacon sells from 8 to 9c. Corn, 75c.; flour, from 3½c to 4c. per lb; butter, 18c to 20c.; eggs, from 6c to 10c.; chickens, 8½ to 12½c. Money is very scarce, and business dull. The farmers work hard and live economically to get out of debt incurred before contraction, but money is too dear; it takes too much of the farmer's produce to get one hundred cents. Farmers will in a great measure have to succumb to the heavy mortgages unless help comes in the way of inflation in the circulating medium. People cannot pay debts without money to pay them with. H. N. V.

ALA., Orrville, Dallas Co., Aug. 9th.—I am pleased to report that all the seeds the RURAL so kindly sent me have given satisfaction. One of your correspondents has surpassed me in the yield from the Beauty of Hebron potato. I have so far gotten 13½ pounds, and will probably get a few pounds more. I have strong hopes of being near the foremost on Blount's corn. It is unquestionably a very superior variety, and is maturing quite early here. Our corn crop is unusually good. The cotton is being seriously damaged by rain, and the caterpillar has made its appearance. A two-thirds crop is all we can now hope for. B. F. R.

TEXAS, San Antonio, Bexar Co., August 16.—Corn and all other grains are failures, on the whole, hereabouts this year owing to drought, although a few will make average crops. I am one of the lucky farmers, as I have 18 acres of pretty good corn. I think I owe a good deal of my success in farming to the RURAL. Last year I started in the business with no experience. I followed the example of the best farmers among my neighbors and got many a hint from my paper, and I think I made as good crops as any one about here. But then there was no merit in making good crops in such a favorable season as we had last year. This year there is a difference. I took the RURAL's advice and cultivated my land thoroughly—three times—although everybody said it would cause the land to dry up; but in spite of these predictions I had green corn when there were not half a dozen fields of green corn between here and New Brownsville—30 miles away. G. W.

The Querist.

ANSWERS TO CORRESPONDENTS

Malignant Foot Rot.

W. J. C., Colgrove, Pa., has a fine cow that has been lame for some months in one hind foot. On one side of the foot there is a diseased spot lengthwise, about an inch and a-half long and three-eighths of an inch wide. Out of this protrudes a substance not oversensitive, but which bleeds if chafed. The cow keeps lifting up the affected foot when standing. The quantity of matter exuded is not large, nor is it offensive. One of his neighbors has a cow that has been similarly affected for two or three years, and others of his herd have become deceased also in the same way. Our friend asks the name of the disease, and a remedy for it.

ANS.—The disease is malignant foot rot; it consists of a fungoid growth from the sole of the hoof, and is contagious. It is peculiarly a disease of sheep, but affects cattle as well. It is caused either by contagion, by passing over ground infected by matter discharged from diseased feet; or is primarily contracted by exposure to wet, filthy yards or pastures, by which the sole becomes softened, disorganized and decayed, poisoning the adjoining tissues of the foot by absorption, and causing the fungoid growths which are peculiar to the disease. The remedy is to use caustics, by which the diseased growth is eaten away until sound tissue is reached; then to procure healthful healing and restoration of the parts. In this case cleanse the part thoroughly and apply a strong solution of blue-stone, injecting it into any cracks or openings, so as to reach every diseased portion. Cover the diseased part with tow dipped in a solution of one part of carbolic acid in 20 parts of water, and wrap the foot in a bandage of canvas. Continue this until the protruding part is removed and the foot has a healthy appearance. Then dress daily with compound tincture of benzoin, and cover with tow steeped in the same, keeping the foot protected by the bandage. The animal must be kept in a clean, dry field or stable; exposure to filth or mud will prevent a cure. To save other animals from the disease, wash the feet thoroughly with the solution of carbolic acid mentioned, especially that part between the claws.

A Philological Difficulty.

C. W. G., Abeline, Kansas, asks whether the fact that Gray, Webster and the RURAL NEW-YORKER differ from G. D. S. in the botanical definition of the word variety—as stated in the RURAL for August 9—proves that he is wrong and they correct. He further remarks upon the funny nature of a language that permits the naming of single things as if each were a collection of sorts or kinds. A sort or kind may be a variety, according to them, or a variety may be a sort or kind. A sort or kind may be a single thing, but how can a single object be a variety?

ANS.—While "sort," "kind" and "variety" are synonymous nouns as applied to slight deviations from a specific type, yet the first two may also be applied to species, genera, and even to orders. Not so with "variety." This word sometimes conveys the idea of many taken individually; for instance: Seedlings of the Norway Spruce have given rise to many different forms of that species—hence variety—of which the Conical Spruce is one. According to C. W. G., it would be correct to say that the Conical Spruce is one of the *variety* of sorts. But according to him it would not be correct to say, it is a variety of the Norway. And yet it is one of the departures from the species, which goes to make up *variety* in its usual sense. Variety, in its botanical sense, signifies a variation from a recognized species. Besides the three authorities named above, this definition of the word has the support of all English-speaking people—barring possibly our two friends, C. W. G., G. D. S., and perchance a few others. As to the "curiosities" of the language, numerous as they are, it is a matter of surprise that they are not even more so, in view of the way which it has been formed. And yet, in spite of all its shortcomings, it is very doubtful whether any people have, or have had, a more concise, forcible, or perspicuous medium for expressing their ideas.

About Plum Trees.

T. T., Highlandville, Mass., 1, sends a leaf of a plum tree and asks whether it belongs to genuine Wild Goose variety; 2, he inquires what kind of Plum would be the best to plant on his place, ten miles south of Boston, the location being low and not very wet, and his object being to supply the Boston market; 3, would Damson be the best; 4, is the curculio as great an enemy to that sort as to other kinds; 5, where can he buy the trees; 6, and at what price ought he to be able to get two-year-old plants.

ANS.—1. We cannot tell from the leaf, not having that variety to compare with. The fruit of the Wild Goose is medium, roundish, oblong, reddish-yellow. It is a variety of the Chickasaw, productive, hardy and a good *market* sort where others will not succeed. 2. Duane's Purple, Green Gage, Jefferson, McLaughlin, and Washington will succeed best in Massachusetts as far as we can learn. 3. No. 4. Yes. 5. G. H. & J. H. Hale, South Glastonbury, Conn.; Ellwanger & Barry, W. S. Little, Frost & Co., Rochester, N. Y.; T. C. Maxwell & Co., Geneva, N. Y. 6. About 50 cents each for two-year-old trees, if only a few be ordered. Our friend need not try to get curculio-proof trees. Two or three years ago Bassett's "Americana" was advertised as curculio-proof. It bears with us the present season. The fruit is small and worthless, except for preserving. There is not a pint of sound plums upon the tree. The best way is to purchase the best sorts that will thrive in the section where needed, and then protect the fruit by *jarring* the trees. It is the only effectual remedy known at present.

A Cow Losing Her Milk.

O. F. L., Wheaton, Ill., has a fine three-year old Jersey cow which dropped her second calf about a month ago. Thereafter for about three weeks she gave a fine mess of milk, with no sign of leakage. Suddenly, however, she began to lose her milk before milking time, and since then her yield has been from a quarter to a half less than before, and he asks for the cause and a remedy.

ANS.—The cause of leaking milk is the relaxation of the muscles consequent upon continued expansion of the udder when full of milk. A cow is often made leaky for want of regular milking, or for want of milking when the udder is fully distended. Such a cow should be milked three times a day, and the milking should be so arranged as to leave the interval at night as short as possible. For instance, in a case occurring in the writer's dairy a cow has to be milked at six in the morning, one in the afternoon and nine in the evening; the intervals being seven, eight and nine hours; there is no leaking and the milk increases one-fifth more than when the cow is milked at six in the morning and six in the evening. The udder of a three-year-old cow is not fully grown and in some cases cannot hold the milk which is secreted in 12 hours. The weight alone of six or eight quarts of milk is sufficient to relax the muscles and permit the milk to escape.

Treatment of a Brook Meadow

A. C., Shrub Oak, N. Y., has a meadow of three acres, through one side of which runs a brook; but the field is dry the year through, except for a few days in spring. He wishes to ditch and plow it this fall, and plant some crop on it next spring. For about six inches down the soil is sand, beneath which is a loamy black layer which packs very easily. Our friend asks what is the best time for ditching the meadow, and what crop would be likely to thrive best on it.

ANS.—The best time to ditch is when the ground is driest. This may be at this season. This meadow may not need ditching, and may possibly be reclaimed by proper plowing. If the ground be plowed in lands 24 feet wide, throwing up a good back furrow to begin with, and plowing to this, and finishing each land with a deep, smooth, open furrow, it is probable that nothing more will be needed. The open furrows should be cleared out with a shovel, and made to carry the water into the brook. Corn would be the best crop to begin with; then oats, and after that to seed down with timothy and red-top would be the best course, in all probability. Such land is better for grass than grain.

Miscellaneous.

J. S., Starke, Bradford Co., Fla., asks how to prevent weevils and worms from destroying the corn crop after it has been gathered.

ANS.—Weevils and their larvæ may be separated from shelled corn and other grains by winnowing; keeping it cool and frequently moved will check them in their work of destruction. Corn in the ear should be in a well-aired crib and be turned occasionally. This is the only practical preventive we know of.

N. C., Toms's River, N. J., asks, whether salt marsh mud is a beneficial application on grass land.

ANS.—Yes. After getting it out, let it dry on the shore. If it becomes easily pulverized, it may be spread at once on grass land—better after mowing. If composted either with lime or yard manure, it will have a beneficial effect on any crop.

C. P. B., Edwardsville, Ill., sends a cocoon which he found on his Red June apple tree, with the request that we give the name of the insect.

ANS.—The cocoon is that of a silk-moth, but what species we cannot determine unless we see the moth. It may be Tolype Velleda (Stoll), which feeds on the apple tree.

C. H., Fountain Green, Ill., asks where can he get Clawson wheat for seed and at what price.

ANS.—D. M. Ferry & Co., Detroit, Mich., are the nearest to you of any seedsmen we can at present recall. They charged last year $2 50 per bushel for it. It seems to us, $1 50 ought to be enough for it this year.

T. T. M., Maiden Lane, N. Y. City, asks where can he get the Great Western Raspberry said, in the RURAL of the 9th inst., to be superior to Mammoth Cluster.

ANS.—We have never tried this Raspberry, and do not know who offers it for sale.

C. T., Millersville, O., sends some specimens of seeds from a Voorhis watermelon, and asks whether they will grow.

ANS.—Most of them will grow.

J. R. K., Rileyville, Ohio—We do not know the wheat—will endeavor to try it.

THE
RURAL NEW-YORKER.

PUBLISHED EVERY SATURDAY.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, AUG. 30, 1879.

A CUSTOM AND ITS RESULT.

It has been patent to all unprejudiced observers for years, that the race-course at so-called agricultural fairs attracts attention to the neglect of more important matters, to the demoralization of many persons, and to the utter perversion of the true objects and interests of those important public institutions. Under the euphonious name of "trials of speed," and the pretence of improving our horses, genuine racing has absorbed even the interest that ought to be given to that kind of improvement of the horse which concerns the well-being of the farmer and society in general. As it is called "trials of speed," and is conducted so as to secure the greatest possible attention, multitudes of the better classes not only give it their countenance, but also enter with unrestrained excitement into the gambling and unprofitable pleasure.

By a principle of social economy, when the conservative part of society falls to a lower grade in morals and practice, there is a corresponding declension in the spirit and conduct of those more inclined to dissipation. Hence, as the moral people have sold their patronage to the specious form of the turf at our fairs, the devotees of bold, undisguised racing have thrown aside all hesitancy and modesty, and entered with astonishing abandon into this dangerous and intoxicating pleasure.

There seems to be a universal mania in America on this subject. Men who ought to be aiding to develop our resources and to ameliorate the condition of our struggling masses, are keeping magnificent stables and numbers of four-legged gambling animals, at very great expense. More mind and time and money are wasted on the vain passion of these adventurous sportsmen than the interest of the country can afford to lose. The feverish passion is spreading like an infection. It passes comparatively unrebuked. They can refer to the fashionable races at the fairs. The dispatches in the daily press are becoming largely devoted to reports of races. The subject has risen to not only national but international importance. The like was never known before in the history of our Republic. The fairs have in part set the example, fostered the custom, mis-educated the people and compromised the moral sentiment that used to stand as a wall between such customs, and what is better.

If any one doubts these statements, let him recall what he has seen at fairs, observe closely what takes place at fairs this year, and glance at the telegraphic columns of the daily papers. Is there no remedy?

PATENTS.

Considerable dissatisfaction is expressed with the operation of the patent laws. Many persons, but more especially farmers, who are obliged to make use of many of those small matters which might come under the head of patented trifles, are continually threatened with claims and suits at law for their enforcement by patent agents or owners of patents, until their patience has become exhausted. In this way a strong popular feeling adverse to patent laws has arisen; and it needs no great prophetic capacity to prognosticate an early reform in some manner of the present law of patents, under which a thing that is old and antiquated, worn out and discarded by our fathers perhaps, may be patented and made a source of trouble. Cases of this nature have become so frequent that it has passed into a byword, and the exacting patent agent, with his claims on fences, gates, harrows, churns and other such matters, takes rank with the bothersome tree agent and lightning-rod peddlers.

There is a reason which is not creditable to human nature at the bottom of all this, and which has been discovered through many cases personally known to the writer. A man who has benefited in a hundred ways from valuable information given freely by good-natured correspondents of the Rural New-Yorker, perhaps, or, let us say, of some other good and useful paper, designs some change, or, possibly, improves in some manner, upon a hint thus given, and straightway takes a patent for his so-called invention, which may or may not be new and useful, as the law exacts. Examiners of patent claims cannot know everything, and the required patent may be granted perhaps illegally, when to gather in the proceeds from that patent, there begins a course of petty annoyances which are intolerable. Persons, who like this selfish patentee, procured information from the same source and used it privately, are sought out by spies and threatened with prosecution if an unjust tax is not paid on demand. This is a typical case out of hundreds or thousands of the same sort. Rarely we find men who are unselfish, and who scorn to tax their fellows for what small benefit may be gained from an accidental thought, or from a hint dropped by others, and which may lead to a really valuable device to save labor, time or money. This used to be so to a greater extent than at present. The man who invented friction matches, for instance, gave his discovery to the public; and so with many other persons who lived in "good old times." At the present we are too fond of money—too anxious to live on the labors of others, and too desirous to own a patent to be—well, let us say—strictly honest. And this general failing is the cause of trouble, and has created the dissatisfaction we have referred to.

FARMING AND EDUCATION.

Whatever croakers may say, the rolling years are slowly but surely bringing forth progress in many essential departments of human interest. As experience utters its unanswerable voice, error grows less confident and gradually disappears; while the right and the best win popularity and secure the approval and patronage of the intelligent and influential.

It is but a few years since the opinion prevailed in a large part of our country, that agriculture required but little information and mental training for its successful conduct; that an educated man ought not to waste his talents in so plain and humble a calling; and that it was compromising to personal dignity for one to identify himself with the common duties of the tiller of the soil. Now it is clear that there is a very great demand for brain as well as muscle in performing the duties of the farm. The difficulty is found to be in the want of sound judgment, of fertile minds as well as acres; of power to promptly and economically utilize discoveries and improvements. There is now a general desire in the highest educated circles to devise the best methods for preparing our young men for the calling that supports all other callings. Hence our agricultural colleges. While the problem is hard to solve, it is evident that the extraordinary attention to the higher departments of instruction in industrial pursuits, is rapidly strengthening, enlarging, and enriching the minds of those who are entering the occupation of the farmer. The farmer has long been working for the world unappreciated; but now the world is turning to most earnest work for the farmer. So far from the educated man feeling himself above the grand old calling, he is now, in multitudes of instances, toiling with his mighty talents to give more success to those who pursue that avocation.

It is highly complimentary to farming, that, while few farmers leave their plain work for complete or continued devotion to any one of the so-called learned professions, there are many, very many, of those who profess to be devotees of one of those professions, who gladly and persistently add the pleasure and security of farming to their special work. It is not merely Anglo-Saxon love of land;—it is an intuitive conviction of what is the most trustworthy of merely human possessions. Farming, elevated, directed and constantly improved by advancing knowledge, is, in a large degree, the hope of the continued prosperity and progress of our country.

WAGES IN EUROPE AND AMERICA.

Information has been gathered by the State Department through our foreign consuls relative to the wages of laborers in foreign countries. The figures as usual show a condition of matters which is remarkably favorable to American workmen, especially those engaged in agriculture. Among other interesting facts, we may cite the following: In Belgium, the most thickly populated and thrifty country in Europe, the wages of agricultural laborers are from 17 to 20 cents per day for men and 15 to 17 cents for women, with food only in addition. When hired by the month with board and lodging, the wages are $1.75 to $2 per month. In France there are 10,000,000 land-owners and eighteen million, or nearly half the population, are engaged in agriculture. Farm laborers receive $3.15 per week without board, and with board and lodging $1.36 per week. Upon these low wages the laborers not only support themselves, but often save enough to purchase a small plot of land and become *proprietaires*. The report emphatically states that these industrious and economical people possessing the rural virtues to a large extent, are more comfortable and better off than the same class of people in America. Knowing something of both classes, we entirely agree with the consul in this opinion. In Germany the agricultural laborer is not nearly so well off, with $3.50 per week without board, and but $1 80 with board; but without carefulness and economy he lives in squalor and poverty. In England the tippling habits of the workman render his $4.25 weekly, insufficient for his comfort, and it is expected that in the next five years 500,000 of these men will seek to better themselves in this country.

ADD AS YOU ARE ABLE.

A venerable and distinguished bishop once advised a body of ministers as follows: "Owe no man more than you are able to pay; and permit no man to owe you more than you are able to lose." A rational application of this advice would divest the credit system of many, if not of all its objectionable features. Consistent with the first part of the exhortation, young men—and older ones as well—are admonished to be content with a gradual addition to their property of any kind. If one has not the money to spare for much, let him confine himself to the little. After a while he can easily venture on another part; and, after waiting and earning, on still another and another, and another, either paying as he goes, or surely avoiding heavy indebtedness. Do not attempt too much at once. Do what you can afford this time, and put off the other things to another time. Don't try to build too much and too fast. Don't buy at once all the furniture you would like to see in your house. Improve and increase your implements and stock by degrees. A little that is paid for is far better than much that you owe for. Debt, bankruptcy and distress come often from burdening the present for the sake of the future. It is easier to pay little debts every now and then, than to pay a large debt at one time. All who have tried them know that large debts are costly and unpleasant things.

THWACK.

We are sorry to see Western writers praising the Thwack Raspberry as one promising to rank high among the new sorts. We have tried this thoroughly, and as we have several times told our readers, it is not worth the ground it may occupy. The first season it fruited with us, we reported that the berries were of a bright red color, *very* firm, though of a poor quality. Last winter it was killed to the ground, and our six plants have produced scarcely a gill of fruit which was borne, of course, upon this season's canes. Had it proved *hardy* or nearly so, it might have become popular as a *market* berry. As it is not hardy, we do not think it has a single redeeming trait. We are in favor of Thwacking it out of existence.

BREVITIES.

The latest English papers report "*three* real summer days."

Make your applications for entries at the fairs early.

From $20 to $25 per ton are paid for grapes in California this season for wine-making.

Fine peaches, one day last week, sold in the New York market for twenty-five cents the basket!

Prepare the ground during leisure for the fruit and ornamental trees that are to be ordered this fall.

A lady remarked to us a few days ago that "Clawson flour is sweet and tastes good, and all that—but it is so dark."

Let us touch new plants and seeds cautiously, until their value is proven. Better be successful with a small plot than to fail with an acre.

Mr. G. T. Ausbern, of Georgetown, Conn., writes us that he has Blount's corn 14 feet high with 10 sets on the stalk. He adds "Come and see it."

During a visit to the Rural Grounds last week, Gen. LeDuc, our Commissioner of Agriculture, was especially pleased with the Sunray Pine, Pinus Massoniauus.

The National Agricultural Congress will hold its next session at Rochester, N. Y., on the 15th of September. Let this society be national in fact as well as in name.

What the young English farmer is saying to his Papa:

"Tell me not in cheerful numbers,
You have known when times was wuss."

"Let anyone glance over the hurdles at the sheep at any of our agricultural shows," says the London Agricultural Gazette, "and he will see that the flockmasters who breed for exhibition all use cabbage."

The Michigan State Board of Agriculture, offer through President Abbott, the chair of agriculture of the State College to our occasional contributor, Professor E. M. Shelton. He is a very able man.

Mr. N. A. Beecher says he knows a man who some years sells 1,000 bushels of the finest apples, whose children, pale and scrawny, are gnawing at hard green fruit from morning till night. Mr. Beecher ought to cut that man's acquaintance.

If you have young pear, apple, plum or peach trees of an undesirable kind, now is the time to bud good sorts upon them. It is less trouble than to send far off to get trees, and is very much cheaper. Budding may bring you improved fruit as soon as the purchased trees; perhaps sooner. Besides, you are apt to feel more interested in your own handiwork.

Professor Gale recommends, in the Kansas Farmer, the use of narrow strips of zinc for labels, with the name, date, etc., written with a *common lead-pencil*. This shows dimly at first, but grows more legible with years. He has such labels that have been exposed to the weather for four years, and the writing promises to last as long as the zinc plates. "Away then," he says "with all patent pencils and corrosive compositions."

The present is a good time to make new strawberry plantations. The green suckers should be separated from the parent plant by a clean cut, and as much soil as possible should be left adhering to the fibers. Set in the new plantation immediately, so that neither the fibers nor soil adhering thereto shall have a chance to dry. If the soil is dry, a mulch will help. When thus carefully transplanted, the present cane will often bear fruit next year.

The Borer.—Though the advice is not needed by careful culturists, it is well to remind all that if they have not guarded their fruit trees against the borer, it is well to attend to the matter at once. The eggs have been deposited, and, at least in many places, hatched. The pests are generally found under the bark at the surface of the ground, or a little lower. It is specially important to look after the small trees.

Rev. A. W. Mangum writes us from North Carolina that there are two points of merit in the Scuppernong Grape that commend it. After the vine is well rooted it seems to require little more than plenty of room to insure a regular, abundant harvest. Of course, judicious help is advisable. Another good quality consists in the wholesomeness of the luscious fruit. It may be doubted whether any variety that we raise in this country is more so. The vine is also exceptionally hardy and long-lived.

We have just picked from one of our Acme tomato bushes (why not *bushes?*) a tomato that is peculiar. Half of it (the half that includes the flower end) is of the usual Acme color, which is a characteristic color hard to define. This gradually merges into yellow about the stem end, so that the tomato is three-quarters red and one-quarter golden. It is of an oblate shape, without a seam—measures 9½x8½ inches, and is as firm as a ripe apple. It is indeed in appearance a perfect tomato and as pretty as any fruit can be. We shall save the seeds in the hopes of obtaining a variety like the parent.

P. J. Berckmans, at the late meeting of the Georgia Horticultural Society, alluded to the fact that about 20 new varieties of Peaches were introduced last year, offering the caution that the buyer has little guarantee that most of them will prove improvements upon old sorts, or indeed, materially different. We shall be glad when the epidemic for early fruits has run its length. He also referred to the late rage for early tomatoes. When it is known that earlier tomatoes than we now have are necessarily poorer tomatoes, one would suppose that "the earliest tomato known" would in the future be offered to an indifferent public. When we can change the seasons and make the climate of this latitude earlier, we may have earlier fruits to correspond.

One of the meanest injuries that one person is capable of perpetrating against another, may be done by means of what is known as a "left-handed compliment."

It is the most powerful weapon of cunning hypocrites and invidious cowards. Words may be written that, to the careless or disinterested reader, may *seem* words of praise, and yet they may serve to influence the reader against the praised object. Words may be spoken that in themselves harmless, may be made by the voice, the look, the manner, to harm the one respecting whom they are spoken. Then the hypocrite says, when assailed by the injured man—"I have never spoken aught against thee, my friend." We have an abiding faith, that God will punish those who are full of "left-handed compliments" more severely than those who steal and lie in the usual unrefined manner.

Our correspondent, Professor Sheldon, of England, says: "It may be said that the Americans are 'killing the goose that laid the golden eggs by plowing their land and selling off the corn; and no doubt this is in a sense true, but it will be scores of years yet before they have *killed all the goose*—at present they have only broken one wing. And, again, the American climate is much better than ours for restoring condition to land that is impoverished by over-cropping. Though the average yield is more than twice as large per acre in this country than it is in America, and though American wheat has to pay 2s. 6d. a bushel in carriage and commission on its way to this country, still the American farmers can make money by wheat growing, where British farmers can do nothing of the kind, for the latter are handicapped in other ways far more than the former are in the items I have mentioned."

Literary Miscellany.

LITTLE PHIL.

BY MRS. HELEN RICH.

"MAKE me a headboard, mister, smooth and painted, you see;
Our ma she died last winter, and sister and Jack and me
Last Sunday could hardly find her, so many new graves about,
And Bud cried out 'We've lost her,' when Jack gave a little shout.
We have worked and saved all winter—been hungry, sometimes, I own—
But we hid this much from father, under the old door-stone.
He never goes there to see her; he hated her; scolded Jack
When he heard us talking about her and wishing that she'd come back.
But up in the garret we whisper, and have a good time to cry,
Our beautiful mother who kissed us, and wasn't afraid to die.
Put on that she was forty, in November she went away,
That she was the best of mothers, and we havn't forgot to pray;
And we mean to do as she taught us—be loving and true and square,
To work and read, to love her, till we go to her up there.
Let the board be white, like mother," (the small chin quivered here,)
And the lad coughed something under, and conquered a rebel tear,
"Here is all we could keep from father, a dollar and thirty cents,
The rest he's got for coal and flour, and partly to pay the rents."
Blushing the white lie over, and dropping the honest eyes,
"What is the price of headboards, with writing and handsome size?"
"Three dollars?" A young roe wounded, just falls with a moan, and he
With a face like the ghost of his mother, sank down on his tattered knee,
"Three dollars? and we shall lose her, next winter the rain and snow?"
But the boss had his arms about him, and cuddled the head of tow
Close up to the great heart's shelter, and womanly tears fell fast—
"Dear boy, you shall never lose her; O cling to your sacred past!
Come to-morrow, and bring your sister and Jack, and the board shall be
The best that this shop can furnish; then come here and live with me."

* * * * *

When the orphans loaded their treasure on the rugged old cart next day,
The surprise of a footboard varnish, with all that their love could say;
And "Edith St. John, Our Mother! baby Jack gave his little shout,
And Bud, like a mountain daisy, went dancing her doll about.
But Phil grew white and trembled, and close to the boss he crept,
Kissing him like a woman, shivered and laughed and wept;
"Do you think, my benefactor, in heaven that she'll be glad?"
"Not as glad as you are, Philip, but finish this job, my lad." [*Boston Transcript.*

THE SCANDALOUS LETTER.

[Complete in Ten Chapters.]

Miss Elizabeth tried to look sympathetic. She was almost forgetting her hatred of the actress, and her desire of hopelessly blackening her character, in the intoxication of the present interview.

"But very soon after that," the little lady was going on, "while Jack was abroad, and poor Olive was hiding from us all and struggling on in her profession, I met Ernest—my husband—and I forgot all about the money. I wonder people ever trouble themselves about such trifles, don't you? It is all Jack's now, but I have Ernest and my baby-boy—oh, Miss Yorke"—Lady Tempest clasped her little hands in their long fawn-colored gloves—"you should see my boy! We have called him Ernest Dacre, and he is as brown as a berry, and has great gipsy-black eyes, and light curls all over his head, and six teeth already! Just think of it—six teeth, and he is only eight months old! Nurse says it is perfectly wonderful!"

"Dear me, my lady!" ejaculated Miss Elizabeth, who was not easily interested in babies, but who made an exception in favor of such an aristocratic infant. "He must be a sweet little fellow indeed!"

The happy young mother laughed and blushed, "I tell my cousin he ought to be very grateful to me for coming away from him, and from Ernest and Silverdale, just when the trees are budding so beautifully too! But, I would do more than that to make Jack happy. He is such a dear good old fellow, and he is head over ears in love with Miss Carew. Not that that is at all surprising. I remember her as being quite a beauty, and Jack says she is perfectly well-bred."

Miss Elizabeth's ideas were undergoing a rapid revolution. True, her dislike of Olive remained unchanged, as it would remain until her dying day; but, if the actress was looked upon as a desirable connection by such people as Lady Tempest and her cousin, why should she not be equally desirable for Dr. Yorke? The marriage would certainly lead to a very agreeable intimacy between their family and "the Tempests," and then what a chance there would be of settling in life!

"You are aware, my lady, I presume," Miss Yorke began, reddening, "that Miss Carew is engaged to my brother? Indeed, it is in consequence of some little quarrel between them—a mere lovers' quarrel, your ladyship—that Olive has thought fit to give us all this anxiety."

"Engaged to your brother! Impossible!" cried Lady Tempest, rising dismayed. "I beg your pardon, I mean that Jack declares he has never released her from her promise to him, so how——"

"Dr. Yorke has explained everything to me, Flossy," put in Colonel Dacre, advancing towards the two ladies at that moment. "You see, here is the poor child's letter in which she asks his pardon for some hasty words she spoke to him at parting, and declares that it will be useless to seek her, as she has resolved never to marry."

"Of course—never to marry Dr. Yorke!" cried Lady Tempest naively. "All we have to do now, Jack, is to find out where Olive is. The rest will be like the finish to the old nursery stories."

"If I can be of any service to Miss Carew," said Robert Yorke, who was looking very wan and haggard, "she may command me to the day of my death. She is a noble and beautiful young creature who has been grievously wronged by me and by my family—and I would ask her pardon on my knees."

Miss Elizabeth tossed her head. She did not like the stiffness with which Colonel Dacre saw fit to bear himself towards her, nor was she slow to observe that since the Doctor's speech Lady Tempest was following her cousin's lead.

"I will ask you to communicate with me, Dr. Yorke, should you ever obtain a clue to Miss Carew's address," said Jack Dacre, shaking hands with the Doctor heartily enough at parting. "The little woman of the house keeps the secret so well that I suspect she does not know it, the manager of the theatre is no better informed, but it will be hard if by dint of perseverance and patience I do not send you some good news. Now, Flossy, if you are ready, I will put you into the carriage, child, and take you back by the next train to that turbulent young gentleman at Silverdale."

And so ended Miss Elizabeth's hopes of an aristocratic connection for her niece. A very frigid little bow from Lady Tempest brought the interview to a close, and in furious silence Miss Yorke followed her nephew out of the house, and through the little iron gate, which Robert Yorke was not to see again for nearly a year.

"What a dreadful woman!" said Jack Dacre with a shudder, as he drove away with his cousin. "To think of my beautiful, sensitive Olive breathing the same air as that ogress in red and green ribbons!"

"Oh, Jack, don't be hard upon Miss Yorke!" pleaded little Lady Tempest. "I am so sorry for her, though she would smile so painfully and call me 'your ladyship.' I could not help wondering as I looked at her what it must be like to grow old as she has done."

"Flossy, child, your sentiments are noble if somewhat incoherent, and your expressions are correct, my little cousin." Colonel Dacre, whose face had been radiant with hopeful determination ever since his conversation with the Doctor, took little Lady Tempest's hand and kissed it. "You must help me to convert Olive. How would you like to see her wither away into old maidenhood, when she might have a Jack of her own instead?"

"The idea is ridiculous, Jack! A lovely girl like that!"

"So I think."

"Only find her, dear, and I promise you there shall be a wedding at Silverdale as soon as the dressmakers will permit!"

"Ah, yes—find her!" echoed Jack, becoming suddenly grave. "Who shall say when and where that will come to pass? My poor sweet foolish love!"

CHAPTER IX.

A PIANO, painfully audible through the thin wall, and much in need of tuning, broke out with a distorted variation on the "Keel Row," played over and over again with maddening persistence, and a complacent repetition of the same mistake in the same bar each time. The girl who had been pacing the floor of her small room, book in hand, and trying—not to study the part of Rosalind, for that she had not time, but—to hammer the mere words into her head as soon as possible—the tall pale girl in her black gown, stopped in despair, and pressed her hands to her temples.

"First the organ in the street, and now my neighbor's daily practice," she sighed, too thoroughly dejected to smile at the hideous noise. "I don't know whether it is for want of sleep or not, but I am afraid I am 'losing my study.' I cannot keep a sentence in my head to-day for five minutes together."

Once more she took up the book and paced the floor.

"Alas, the day! What shall I do with my doublet and hose? What did he when thou saw'st him? What said he? How looked he? Wherein went he? What makes he here? Did he ask for me? Where remains he? How parted he with thee? And when shalt thou see him again? Answer me in one word," she repeated in a dull, mechanical fashion, while the piano kept on relentlessly, and the shouts of children at play beneath the window in the narrow street outside—sounds which might have been pretty and suggestive at a distance or in a green country lane—mingled distractingly with the abominable strains.

There was very little fire in the grate, although the March afternoon was gray and chill, and the ill-fitting sashes rattled drearily with every gust of wind; but Miss Charteris, of the Theatre Royal, Grindham, had not time to feel cold, and the delicate boy who lay on the sofa was covered warmly with a great woolen shawl. On a little table at his elbow were a bunch of wallflowers in a mug and a few grapes, and the actress, as she paced softly up and down, stopped from time to time to see if the boy was still asleep, and to pass her handkerchief across his forehead. And then she resumed her weary walk and her part, and the words—Rosalind's arch gracious words—seemed to set themselves to the tune that resounded stridently from next door and to dance in her brain in an unseemly fashion.

"I hope I am not going to be ill," she thought at last, sinking heavily into a chair. "What will become of us if I am?" Burying her pallid face in her hands, the actress prayed in feverish, broken words that she might be spared this great affliction, since there was no one but herself to work for the child who had been entrusted to her by their dead mother.

It had been easy to change "Miss Olive Carew" into "Miss Charteris" in the play-bills, but in so doing the poor little struggling actress, who sought to conceal her whereabouts from her two lovers, had at the same time lessened her chances of obtaining good engagements by sacrificing what little prestige attached to her own name. Besides this, she had purposely avoided the more important towns, where she was more likely to be traced, so that her resources, never very large, had been painfully cramped for months after her flight from Woolchester. This would have mattered little to her if it had not been for Nelson's health, which, even Olive was obliged to admit to herself with a dreadful sinking of the heart, began to fail rapidly under the privations which for some time had little or no effect on her own blooming and vigorous frame.

"I must not be ill," she thought, shuddering, as again and again the words of the part escaped her and danced in maddening fashion to the rhythm of her neighbor's piano. "Heaven will not make me suffer such punishment as that for my fault! I did wrong—I know it now. I committed a sacrilege against love in promising to marry Dr. Yorke, even for Nelson's sake, and all this misery has come of it. I confess that I was worldly, and disloyal to Jack, and ungenerous to poor Robert, but —— I must not be ill—that would be too horrible!" The book fell to the ground and the actress started to her feet with a long, despairing breath. "I must go out," she thought, going to the window and looking at the dreary sky and the dust swirling along the street. "I must take my 'part' somewhere away from the sound of that piano. Nelson won't miss me for half an hour—he is sleeping so soundly. Bless my darling!"

The boy did not stir as she kissed him and stole out of the room; and so, putting on her hat, and a jacket which was far too thin for so bleak a day, Miss Charteris shut the little hall-door mindlessly behind her, and made her way, "part" in hand, through the swarms of children at play in the narrow street. There was a stunted little park at some distance from the town. It stood on a hill, and was usually deserted, as Olive had discovered, at that hour of the day, so she turned in that direction. The wind blew through her thin garments, chilling her to the bone; the dust blinded her: but she thought, with a dull sense of relief, that with every step she was leaving the "Keel Row" farther behind, and that under the bare brown trees on the hill there were solitude and silence, at least—two boons utterly unknown in Chapel Place. If she could be by herself for an hour, the girl thought feverishly, perhaps that horribly tight band round her forehead would give way, and she would think and remember and study again.

The little park seemed like a haven of rest therefore, as it loomed above her stiff and sad and square, against the colorless sky, and, though she felt very tired, and her knees seemed to bend very strangely under her as she walked, Olive struggled on—still holding her "part" in her hand—through the sordid outskirts of the town, and up the hilly road, where the wind rushed down to meet her, whistling sharply, and the steep ascent took away her breath. Half-way up the hill she was compelled to stop and recover herself. There was a big gray stone by the road-side, and on this she sat down, and then tried to fasten back her hair, which was blowing across her face and getting into her eyes. As she lifted her hands, a great gust came rushing by, and carried the "part" from her lap, and blew it half-way down the hill she had just climbed. It was nothing very serious. A year ago Olive would have laughed, and run a race with the wind for her book. But now she stood and looked after it, her poor thin gown fluttering and flapping dismally, and her long hair streaming before her face, and she felt very wretched indeed.

"I must go and look for it," she sighed—"I don't know a line of the last act yet. I hope it won't blow all the way back to Chapel Place." As the girl turned to begin the descent of the hilly road, she saw that some one was coming towards her from the town. "I will wait," she thought, sitting down wearily upon the big stone. "Perhaps he will pick it up and bring it with him." And she drew her thin jacket closer round her—for the wind was bitter cold, and her teeth were chattering.

The man who was coming towards her must soon pass. Yes; there was his hat just showing above the hedges—and such a long, ruddy beard, like Jack's—and gray clothes like Jack's. Ah, if it were only Jack, he would bring her the book! But Jack was far enough away from Grindham, thank Heaven! Jack would never know how hard she had tried to study that "part," and how her head was aching, and how the wind was deadening her with cold, numbing her hands and her brain too, and—— Now she could hear the man's footsteps on the stony road, and there he was coming round the little turning in the path.

Miss Charteris stood up, ready to claim her book should she see it in the hands of the stranger, and then—her lips began to quiver and her eyes to dilate, her breath grew short and hurried.

"Oh, Colonel Dacre," she said, piteously, "the wind has blown my book away, and I don't know one line of the last act yet!"—with which speech the poor child burst into tears, and sank down on her stone again, sobbing as if her heart would break.

Jack Dacre, kneeling down in the grass by her side, took her bodily into his arms, and the "part" went blowing unheeded back to Chapel Place.

"At last! At last!" was all the young man could say, when presently, the storm of tears which had mercifully been granted to Olive having worn itself out, the two were walking homewards along the bleak hill-side. "Olive, have I really found you at last?"

Olive flushed, and drew her head up with a little of her old spirit.

"You had no right to look for me," she said, withdrawing her hand from her lover's clasp. "I am very glad to see you, of course, and you must come home and see Nelson, of course; but after that——"

"After that?" interposed the young man, whose heart yearned more fondly than ever to the poor child, as his quick eye took in all the pathos of her faded beauty and miserable garments, and the sacred lines which love and pain had traced upon her face. "After that, darling?"

"You will go away, Colonel Dacre," returned Miss Carew, firmly, in a voice still husky from sobbing. "I am sorry—it is all very wretched and unhappy—but I cannot help it, and we must say good-bye again."

"Why?" asked Jack Dacre, with angelic patience. "You will give me some reason, dear, at least, for your persistent cruelty?"

"Would you like Dr. Yorke to think," she said, with quivering lips, "that I broke off my engagement with him only because—because my old lover had come back, and I was glad to seize upon the first pretext for a quarrel?"

"Olive, he doubted, insulted you—he——"

"He was very good to me and to Nelson before that, and—oh, Jack, can't you see that I owe it to my own self-respect not to marry at all, as I will not marry him? I did wrong, and I am punished. I have made you suffer, too, and I am sorry; but I—I cannot marry any one—my life belongs to Nelson—and so we must say good-bye again—that is all."

She was nearly breaking down again, but Jack Dacre took no notice.

"That is your only reason, Olive?" he asked, gently, as he stopped in the lonely road and took her hands in both his own. "Your love for me has not changed? You would be my wife—I have waited four years already, dear!—if the spectre of Dr. Yorke's bad opinion of you did not stand between us?"

Olive's tears answered him.

"Darling," cried the young man, catching her eagerly to his heart, "swear it to me here now, and we need never say good-bye! Dr. Yorke was married a week ago to his cousin, and I am the bearer of his very humble and contrite apologies to you for the wrong he did you, and of his wishes for your happiness in the life you are going to begin with me."

"Jack—oh, Jack, is it really true?"

As true as that I am going to take you and Nelson to Silverdale to-morrow, and that the manager must find some one else to study that part—as true as that I have won the sweetest, truest, most loyal wife that ever man was blessed with, and that I am going to kiss you, my beautiful proud cold Miss Charteris, on this hill, and in the presence or all Grindham that cares to see us. Yes, and not once, but twenty times!"

Miss Charteris submitted, with a blush and a smile that made her look once more like Olive Carew, and hand in hand the lovers walked on towards the town.

CHAPTER X.

IT was nearly a year after Miss Carew left Woolchester before Robert Yorke saw the house with the iron gate again, and then he had been married for some weeks.

Dr. and Mrs. Yorke had spent their honeymoon in London, which place had been chosen by the bride on account of the shops, all places being alike to the Doctor, who made but a sober-faced lover, Woolchester thought. A whirl of shopping and sight-seeing was what the Doctor's wife offered him for an aching heart, and he went through it with patience, remembering that he need not suffer such an ordeal more than once, but would be free at the end of the happy month to return to the hard work which was all he cared much about now.

It was on a mild April evening that Dr. and Mrs. Yorke came home to Woolchester, to be received with grim delight by Miss Elizabeth, who had prepared an elaborate dinner, to which the bride alone did full justice. The ladies had so much to say to each other about the new style of bonnets, and the costumes of the Princess of Wales, whom Gertrude had seen twice—once at the Opera and once in the park—that the Doctor's silence was not noticed during the meal. And when he had drunk his coffee, and said that he had some business to attend to, and would go out for half an hour, though Gertrude pouted, as became the interesting young wife, she was not sorry at heart, but drew her chair closer to aunt Elizabeth's, and prepared for an exhaustive chat.

"Don't be late, Robert," she said, as her husband stooped down to kiss her cheek; and then he was free to go.

The Doctor lit his cigar in the hall—it was almost dark now in the quiet streets—and prepared to attend to the "little business" he had spoken of.

And so it was that he found himself at the iron gate again, and once more saw the old house with the trees growing above the red-tiled roof. The hall-door was open. Strange children were playing on the neglected grass-plot. The sharp continuous click of a sewing-machine sounded from the room where Nelson's piano used to stand. A woman's shrill voice laughed inside. And only a year ago that quaint little house had been a paradise to Robert Yorke. He had listened in that dusky parlor to the high thoughts of poets, and heard the immortal ideas of the old composers translated on the jingling "music-box" on which the boy used to play. In that house he had lived all he had ever known of youth in his busy life of forty years, and now——The shrill voice laughed again, and some one called to the children who were staring at the dark tall stranger, and wondering what he could want.

With a sigh the Doctor lifted his arms from the gate, and turned away down the darkening street, and past the church where the organ had played on that Sunday evening long ago—a year ago—and so out by the deserted lanes to the old happy

fields, with the gray windy grass blowing about under the hedges, where he had walked so often with the girl who was called Olive Carew.

He leant against the stump of an old willow-tree that grew by the stile, and a cool breeze lifted the hair from his tired forehead. At home in the warm drawing-room his wife was waiting for him, as she would wait every day now while they both lived. Nothing but death, he thought, could ever alter the unvarying routine of the comfortable well-ordered house in George Street. He might look forward to long years of heavy dinners and tea-drinking, and gossip about the servants, and the neighbors, and the fashions. That was the life he had chosen. And the other fairer life, of congenial tastes and mutual cares, and interests, from which he had had such a narrow escape?

It seemed to him, alone there in the meadows, as he puffed absently at his cigar, and a white tremor of moonlight crept along the grass, that the past was the only real thing the world now held for him.

But while Robert Yorke was dreaming and while his veins were yet on fire, a clock struck slowly in the distant town, reminding him as once before, that he was waited for and that he would be late. So he threw away his cigar, and, shivering a little in the balmy evening air, he left the tranquil moon-lighted meadows and went home to the house in George Street.

* * * * * * * * *

"Olive," said a lazy contented man's voice, speaking from behind the glowing tip of a cigarette—"Olive, do you hear that clock?"

"I hear it, Jack. Why? Just look at the sunset dying away from the river!"

"Are you aware of what is going on just at this particular time in the big city over yonder?"

The girl, who was sitting at the smoker's feet, and leaning her head on his knee, put up a shy warm hand in the dusk, and pulled her husband's arm round her neck.

"I am more interested in a certain little villa at Twickenham," she whispered, blushing; and in the little pause that followed this remark a faint sound of music was heard from one of the windows, opening on to the lawn, where Colonel Dacre and his six weeks' wife were sitting after dinner.

The first white star had risen, the river gleamed gray and cool and still at their feet, and the Colonel's cigarette scented the air with its fragrance.

"But you forget!" continued Jack's happy voice presently. "You forget that the theatres are just going to open. The actresses are all busy dressing for their parts, the orchestra is tuning up, the sweet familiar scent of gas is pervading the house, and—Olive Carew will not be there."

"Of course not, Jack. There is no Olive Carew to be there. Pray, sir, who am I? And what is my name?"

Jack stooped his handsome head and kissed with a lover's lingering kiss, the eager smiling lips that questioned him.

"You are my wife!" he whispered proudly. "And your name is Olive Daere."

"Brother Jack," said a boy's little voice, calling from the leafy porch, "Lady Tempest says you are to bring Olive in at once! The dew is falling, and tea is ready, and did you hear me play the *Mignon* duet, '*Ah, son felice!*' Lady Tempest told me to ask you particularly, because you know I heard the opera only once, and she says you will whistle the air for me *con amore*. What does *con amore* mean?"

"Nelson," said Colonel Dacre calmly, as he helped his wife up from her low seat, and wrapped her soft white shawl closer round her shoulders, "the dew is falling, and tea is ready. Come, my darling, I will take you in, if Lady Tempest says I must."

"And, Olive"—Nelson put his arms fondly about his sister's waist, regardless of Jack's growling remonstrance—"there is a letter from Dr. Yorke, and he wants you to let me go and stay with them while you are in Rome, and ride Jerry again. May I, dear?"

"We will ask 'the governor,'" said Olive, smiling and nodding down at the boy's eager face. "I don't think Jack will be vexed to find that Nelson keeps a warm corner in his heart for an old friend."

Her husband pressed against his side the little hand that lay on his arm.

"Fidelity runs in the blood of the Carews," he whispered. "Let the boy go, child, by all means. It will be a delightful riddance for his big brother."

Nelson laughed, and found himself indignantly chased in doors by "the governor." JESSON.

SALE OF RARE POSTAGE STAMPS.

PRAKRAMA.

THE number of stamp collectors in the United States is constantly increasing, and doubtless many readers of the RURAL are interested in the subject. The supply of the rarer stamps is so limited that the prices at which they are quoted in dealers' catalogues are unreliable, and it is only on those rare occasions when a large collection is sold at auction that philatelists have an opportunity of learning what they are really worth. Believing that it will interest collectors, I will give an account of a recent sale which I attended. The collection was the property of Mr. John Rice, and was sold on the 11th, 12th and 13th of August, at the Clinton Hall salesrooms, New York. It included some of the rarest government postals, a very fine lot of American and Swiss locals, the former including some supposed to be *unique*, and a collection of proofs and essays perhaps the finest in America. The collection contained several thousand specimens, a large part of them bringing merely nominal prices, but the total receipts were about $1,500.

The sale opened with a few lots of rather common stamps, followed by the rare United States locals. Of these, the Brattleboro 5-cents buff brought $32.50; a reprint of the almost *unique* New Haven 5-cents (envelope) red, $2, an extremely low price, as only thirty exist. The St. Louis 5-cents black sold for $19, and two varieties of the 10-cents black, after a sharp contest, for the rather excessive prices of $16 and $18. A Carrier's stamp, 1-cent (horseman) red, sold for $3; Glenhaven Daily Mail 1-cent green, $9; Whittelsey's Express (head of Washington) 2-cents red on white, $12, and Swart's Rough and Ready Dispatch vermilion on blue, *unique*, $11.

A Bolivia 10-centavos brown, 1867, brought $4.75; the 50c. blue, $10, and the 500c. black, 1871, $9—all unused; a Brazil 180-reis black, 1845, unused, $3.25; 300-reis black, $2.50, and 600-reis black, $3.75.

The excessively rare British Guiana 4-cents carmine, 1856, sold for $21.50, and would have brought more if it had not been badly torn. Another rare stamp of the same country, the 2-cents yellow (provisional), 1862, sold for $4.25, and the rare Buenos Ayres 3-peso green, 1858, for $2.25.

Among the Confederate States locals, the Mobile 5-cents blue brought $3.25; the Charleston 5-cents blue, $4.30, and the Petersburg 5-cents red, $2.60. The Mexico 3-centavos brown, 1865, sold for $3.10, and the 100c. brown on brown, 1868, $2.25. The noticeable feature of the Mexican stamps, however, was the fine set of Guadalajara, which brought the following prices: 1867, 4-reales blue, $2.25, and 1-peso violet, $2; 1868, 1-real green, $2, 2-reales pink, $2 (all the preceding unused), and 2-reales violet, used, $3.10. An unused New Brunswick 1-shilling violet, 1851, sold for $6.75, and a used specimen of the same for $6.50. The extremely rare Newfoundland 1-shilling orange, 1857, sold for $13.50, the 6d. vermilion for $3.75 and the 6½d. vermilion for $4.75. The rare Nova Scotia 1-shilling violet, 1857, unused, cost the purchaser $10, and the same used sold for $6.50. The Peru ½-peso orange, 1858, brought $5.25.

Some of the prices at the second night's sale were: Trinidad brown on blue, 1851, $2.10; lithographed blue, 1858, $2; U. S. of Colombia 2½-centavos black, 1861, $2, and 1-peso violet, 1862, $3.10; Bolivar 1-peso red, $2.50; Bergedorf ½-schilling black on violet, $3.10, and 3s. black on rose, $2.30. The rare Finland envelope stamps sold as follows: 1845, 10-kopek red, $4, 20k. Russian green, $3.10, and 20k. black, $2; 1856, 20k. Russian green, $3.60, and another specimen nearly black, $3. The France 1849 Republic 1-franc vermilion sold at $5. The celebrated Mulready envelopes of Great Britain, 1d., used, and 2d., unused, sold for $2 and $2.85. The excessively rare Naples ½-tornese (arms) blue sold for $11, and the ½-tornese (cross of Savoy) blue, unused, for $3, and used for $2.50.

The Spain 2-reales orange-red, 1851, unused, brought $11.50; the 2r. red, 1852, $7.50, and the 2r. scarlet, 1853, $3.25. Among the Swiss locals, the Geneva 10-centimes (double stamp) green, 1844, realized $5; Zurich 4-rappen (vertical lines), 1843, $2.25; Neufchatel 5-centimes black and red, 1851, $2, and Vaud 4-centimes black and red, 1849, $5.25. The Tuscany 60-crazie red-brown sold for $3.25, and the 3-lira orange, 1859, $3.25.

The third night's sale included the extremely rare India 2-annas green, 1860, which sold for $5.40. Several rare India provisionals surcharged over revenue stamps sold at good prices, an unused specimen of the 4-annas stamp bringing $5.50, and an unused 2-annas, $5. A Fiji 9-pence pink, 1871, unused, brought $2.25. Among the Philippine stamps, the 5-cuartos orange, 1854, sold for $5; the 10c. carmine, $2; the 1-real blue, $2.75, and the 2-reales green, $2.25 (the last three unused); while the 1-real violet, 1863, brought $2.25, and the 2-reales blue, $2, both unused.

The interest of the sale culminated when two of the excessively rare stamps of the Sandwich Islands, of the 1852 issue, with numeral in fancy border were offered. The 5-cents sold, after an exciting contest, for $51, and the 13-cents H. I. & U. S. postage—which, having been attached to the letter by a wafer, was broken by the postmark—for $31. The Victoria 6d. orange, 1862, sold for $3, and the Western Australia 6d. bronze, 1856, for $2.25. Among the last lots offered, the rare D. O. Blood & Co. stamp, with picture of a man stepping over houses, sold for $5.50 (a very inadequate price); City Dispatch Post C. C. 2-cents scarlet, $3.75; Blood's "For the Post Office" Dispatch (scroll) black and blue, $9.50; Honor's City Express Post (plain center) 2-cents black on yellow, *unique*, $11, and Eighth Avenue Post Office, Paid, red on white, $13.50. The essays and proofs brought good prices, as a rule, for property of such very questionable value.

The prices realized at this sale will give those not collecting some idea of what rare stamps are worth, but I may remark that the very rarest government postage stamps were not represented. There are a few stamps which, if in perfect condition, would bring over one hundred dollars at auction. Of course, all philatelists cannot possess the rarest stamps, but even a small collection contains much valuable information, and the study of Philately once commenced becomes very fascinating.

BUYING BOOKS.

SHOULD all men read? Certainly: the man who simply eats and sleeps and works is little better than a brute. Must they read books? Yes; or lose the richest knowledge. The Bible, poetry, science, history, biography and travel are precious mines of gold which yield only flakes on the newspaper surface. May they borrow books and make no return for such favor? No; honest people may not. Then must they *buy* books? Granted, they must buy books. But *do* they as a rule? Denied. They count the expense of food, furniture, lights and clothing, all of which supply our wonderful bodies, but the God-given gem of mind which these bodies simply enshrine, is allowed to remain naked and hungry, cold and dark, or expected to grow on such scraps as it can beg or steal.

Judging from a considerable experience in the rural districts, I say that people generally, and farmers especially, do not buy books except of the most persistent book-agents, or possibly for a child's Christmas present, and not then if the child needs any article of clothing. What can be said of the judgment and independence of a man who buys an expensive book because an agent "troubleth him," but seldom opens it afterward, and is glad to exchange it for a cheaper article when another peddler comes, yet who can never afford to get a magazine for his wife, or a juvenile book for his child. Children in such families subsist on such trashy story-papers as they can obtain by foraging, and when they grow up their parents wonder why they will go in second or third rate society, and why they don't try to be respectable and do honor to the family.

A wealthy man of my acquaintance envelops himself in political papers, and takes pride in being "posted," but his wife, who is a superior woman, and their two intellectual children, have nothing but the politics to read, and for years they did without even a dictionary. Yet his is only one house among many that are handsome, convenient and thoroughly furnished, except with books.

I never shall forget the impression which a certain point in a story once made upon me. A lady said she should wear her shawl another year instead of buying a new cloak, as *the family must have $50 worth of books that fall*. I suppose it seemed more strange to me because I never knew anything like it in real life. Of course, lawyers and physicians and ministers buy libraries as part of their capital, but *books for the family*—wonderful!

But probably most people who read this will say, "Yes, that's so; folks who have money ought to buy books, but we can't afford it." My friend, you cannot afford to do without them. Do you not manage to get the absolute necessities of life? Well, books are among the most important of these necessities. If you can subscribe toward a public library for some of your reading, so much the better, as it will be cheaper, and you will be helping to supply others.

Why have the district libraries fallen into disuse? Almost every district has a small library of antiquated volumes, some of which are worth reading, but nobody reads them because there have been no new books since the early days of the oldest inhabitants. Every person ought to have access to some library containing a Cyclopedia, other works of reference, and some of the most excellent readable books of the day. If the districts will not replenish their libraries, let the Grangers, Good Templars, Farmers' Clubs, Sunday-Schools, and all sorts of associations get libraries and open them to the public for a ten-cent fee on the loan of the books, if they choose.

If you live in a region unsupplied with a library, start out with a brave heart and stay not your efforts till you have organized a Y. M. C. A., or a Ladies' Society or a Library Association, and have something with which to buy good books; so shall you surely help to enlighten and elevate your fellow-men; and when you have done this, look on your own book-shelves, and into your own hearts and minds, and see what books will best fit the every-day needs of your own soul. Z. C.

THE MEETING OF MARY AND PHILIP II.

ACCORDING to Holinshed, Mary had traveled from Bishop's Waltham to Winchester on the preceding Saturday, July 21. Her ladies traveled from Windsor in a wagon painted red and covered with fine red cloth, the harness all of red leather. This vehicle, as Miss Strickland, quoting the order for its construction, says, must have surpassed the splendor of a modern wild beast show. At 10 o'clock on the night of his arrival in Winchester, Philip paid a private visit to the Queen, so secret, indeed, as to escape the research of Holinshed, who says that his first visit was made on the following day. Private as it was, he was accompanied by some twenty grandees, among them Alva, Pescara, Feria, Hoorn and Egmont, names to be heard of again in far different scenes in the time to come. Passing through the gardens of the Episcopal Palace, which had been prepared for the Queen's reception, the green lawns and flowing streams in all the glory of a midsummer night, suggesting to the Spaniards the scenes described in the books of chivalry, they reached a small door which led to the apartments of Mary, attended by Gardiner and some elderly magnates and ladies, awaiting her hitherto unseen bridegroom. As he entered she hurried forward to meet him, seizing him by the hand; he, however, putting all ceremony aside, kissed her, as, says Munos, is the custom here. They then conversed—he in Spanish, she in French—and, we are told, seemed to understand one another perfectly. Lord William Howard, the Admiral, who is described as a man who would have his joke, said, among his other pleasantries, that "well as they understood each other now, they would be still far more intimate in four or five days." After a while Philip, who had had a long wet ride and a fatiguing day, manifested a wish to retire to his lodging—the Queen, from some feeling of prudery, not having allowed him rooms in the palace. Permission being granted after some little demur, he asked how he was to say "*buenas noches*" to the ladies of the Court; this salutation, according to Munos, is correctly rendered into English by the words, "God ni hit," which were then and there taught him by the Queen. Forgetting his lesson before he reached the ladies, he was obliged to turn back when already in the middle of the hall to relearn it. This amused her Majesty very much, and so ended the evening of the first interview. The next day, after dinner, Philip again visited the Queen, who received him in an apartment called the room of "Poncla," probably thus named after an early Bishop of Winchester, John De Pontoise, who died A. D. 1304. Considering the treatment which English names meet at the hands of the author, the resemblance in this case seems sufficiently close. The second visit being of a more ceremonious nature, the Queen issued from her chamber, preceded by her ladies and by two kings-at-arms. Retiring with Philip to another room, they remained a long time together, the Spanish attendants endeavoring, with no very great success to converse with the ladies of the Court. This evening, Figueroa, the Regent of Naples, arrived with the investiture of that kingdom—an appointment which was intended to place Philip on a footing of equality with the Queen of England. The following day, July 25th, being the day of St. James, the patron saint of Spain, the marriage ceremony was performed with great pomp. The swords of state were borne before their Majesties by the Earls of Pembroke and Derby. We are told that the latter could muster 20,000 soldiers, and that, as King of a certain island (Man), he was entitled to wear a crown of lead.—*Earl of Ducie, in Fortnightly Review.*

RECENT LITERATURE.

Long Life and How to Reach It: By JOSEPH G. RICHARDSON, M. D. Published by Lindsay & Blakeston, Philadelphia. Price 50 cents.

THE series—American Health Primers—of which this is the second volume, cannot be too highly praised. Physicians who are specialists in the subjects of which they treat, present to the reader in condensed form and in simple every-day language the causes, cures, and modes of prevention of different forms of disease. Works of this kind should be classed among the necessities, for very few,—perhaps not one in a thousand—ever purchase, or read bulky volumes on Materia Medica, but depend on newspaper clippings or the traditions of the village for information on questions of hygiene. It is perhaps superfluous to add, that the rather necessary element of reliability is wanting in both of the sources of knowledge indicated above. The Health Primers are designed for missionary work quite as meritorious as that of "converting the heathen," for it is hoped through their instrumentality that people will be brought to a knowledge which will save them much of pain and suffering. In sixteen chapters Dr. Richardson treats of causes of disease, and how to avoid them; heat and cold as causes of disease; contagion and how to escape it; clothing and how to wear it; pure air and how to breathe it; pure water and how to obtain it; baths and how to take them; the house and how to build it; food and how to digest it; impurities in food and drink and how to detect them; exercise and how to take it; sleep and how to retain it; mental power and how to retain it; parasitic enemies and how to escape them; old age and how to meet it. From the chapter on contagion we extract the following at random: "A certain horrible contagious disease is sometimes conveyed to innocent persons, especially children by their lips being touched to drinking-cups, whistles, &c., which have been contaminated by the mouths or hands of persons infected with it, so that ladies, parents and nurses cannot be too careful to guard against danger of this kind, * * * clothing, especially woolen fabrics, if not purified by thorough ventilation and disinfection, has been known to convey scarlet fever one, two, or even three years after it was impregnated with the contagion of the disease. * * * * * Remember always, that if cholera, cholera-infantum, typhoid fever, diarrhœa, appear in your family without obvious cause, the chances are at least two to one that there is something wrong with the water supply, the milk supply, or the drainage of your house." We would be glad to know that a goodly number of our readers included the whole series in their libraries.

At a High Price: Translated by MARY STUART SMITH from the German of E. Werner. BOSTON: Estes & Lauriat.

All the elements which go to make an entertaining novel are to be found in this one, and the author has made the most of the material. The hero, Baron Arno von Raven, is cleverly drawn, as is also the love he inspires in the heart of his ward Gabrielle, a charming, self-willed girl. The interest is well sustained throughout, and the denoument well worked up.

MAGAZINES.

HARPER'S MAGAZINE—CONTENTS FOR SEPTEMBER, 1879.—Fifty Years of American Art. II.—S. G. W. Benjamin, with Fifteen Illustrations. Newport Society in the last Century; Lizzie W. Champney, with Six Illustrations. Gold-Mining in Georgia; Ernest Ingersoll, with Fourteen Illustrations. The Last Revel in Printz Hall; A Story—Howard Pyle, with Eight Illustrations. My Mariner; A Poem—Lucy Larcom, with One Illustration. White Wings; A Yachting Romance—William Black, with Two Illustrations. An Industrial Society and its Work; Edward Howland. Young Mrs. Jardine; A Novel—D. M. Craik, with Two Illustrations. How that Cup Slipped; A Story—Annie Howells Frechetti. The Last Rose of Summer; A Poem—William Gibson. Mary Anerly; A Novel—R. D. Blackmore. Summer; From Spenser's "Faerie Queen."

DEGENERATE MANNERS.—It was a wise father who said to his son, "Beware of the woman who allows you to kiss her." The woman who does not require of a man the form of respect, invites him to discard the substance. And there is one violation of the form which is recent and gross, and might be well cited as a striking illustration of the decay of manners. It is the practice of smoking in the society of ladies in public places, whether driving, or walking, or sailing, or sitting. There are *preux chevaliers* who would be honestly amazed if they were told they did not behave like gentlemen, who, sitting with a lady on a hotel piazza, or strolling on a public park, whip out a cigarette, light it, and puff as tranquilly as if they were alone in their rooms. Or a young man comes alone upon the deck of a steamer, where throngs of ladies are sitting, and blows clouds of tobacco smoke in their faces, without even remarking that tobacco *is* disagreeable to some people. This is not, indeed, one of the seven deadly sins, but a man who unconcernedly sings false betrays that

he has no ear for music, and the man who smokes in this way shows that he is not quite a gentleman.

But some ladies smoke? Yes, and some ladies drink liquor. Does that mend the matter? The Easy Chair has seen a lady at the head of her own table smoking a fine cigar. You will see a great many highly dressed women in Paris smoking cigarettes. Does all this change the situation? Does this make it more gentlemanly to smoke with a lady beside you in a carriage, or upon a bench on the piazza? But some ladies like the odor of a cigar? Not many: and the taste of those who sincerely do so cannot justify the habit of promiscuous puffing in their presence. The intimacy of domesticity is governed by other rules; but a gentleman smoking would hardly enter his own drawing-room, where other ladies sat with his wife without a word of apology. The Easy Chair is no King James, and is more likely to issue blasts of tobacco than blasts against it. But King James belonged to a very selfish sex—a sex which seems often to suppose that its indulgences and habits are to be tenderly tolerated, for no other reason than that they are its habits. Therefore the young woman must defend herself by showing plainly that she prohibits the intrusion of which, if suffered, she is really the victim. In other times the Easy Chair has seen the lovely Laura Matilda unwilling to refuse to dance with the partner who had bespoken her hand for the German, although when he presented himself he was plainly flown with wine. The Easy Chair has seen the hapless, foolish maid encircled by those Bacchic arms, and then a headlong whirl and dash down the room, ending in the promiscuous overthrow and downfall of maid, Bacchus, and musicians.

If in the Grandisonian day the morals were wanting, it was something to have the manners. They at least were to the imagination a memory and a prophecy. They recalled the idyllic age when fine manners expressed fine feelings, and they foretold the return of Astræa to her ancient haunts. Here is young Adonis dreaming of a four-in-hand and a yacht, like any other gentleman. Let us hope that he knows the test of the gentleman not to be the ownership of blood-horses and a unique drag, but perfect courtesy founded upon fine human feeling—that rare and indescribable gentleness and consideration which rests upon manner as lightly as the bloom upon a fruit. It may be imitated, as gold and diamonds are. But no counterfeit can harm it; and, Adonis, it is incompatible with smoking in a lady's face, even if she acquiesces.—*Harper's Magazine for September.*

ATLANTIC MONTHLY FOR SEPTEMBER.—CONTENTS: Cæsar's Art of War and of Writing; Miss Magdalena Peanuts, Phœbe Yates Pember; On Latmos, Miss L. W. Backus; Mountains in Literature, Thomas Sergeant Perry; Irene the Missionary. XXIII.—XXVI.; Married Bohemians, Edgar Fawcett; The Use of Numbers in Society, N. S. Shaler; The Race, and Why Yale Lost It; American Finances from 1789 to 1835. II., John Watts Kearny; Genesis, Ernest Dale Owen; Songs and Eccentricities of Birds, Wilson Flagg; A Tennysonian Retrospect, Julius H. Ward; Recent Novels; A Lesson in a Picture, Sallie M. B. Platt; Nobility and Gentry, Richard Grant White; A Word to Philosophers, Christopher P. Cranch; Story-Paper Literature, W. H. Bishop; The Contributors' Club; Recent Literature; The Jennings Sanitary Depot and Colonel George E. Waring.

THE USE OF NUMBERS IN SOCIETY.—The contrast between the rather evenly distributed wealth of France and the far less uniformly shared wealth of England is in good part the result of the lower birth-rate in the former country. Each generation in France is much better endowed with all the substantial elements of prosperity than that of any other country. Costly and ruinous wars, maladministrations of government, and a scanty supply of those mineral resources to which nations now look for the greater part of their gains have been more than counterbalanced by the fact that her wealth has not been wasted in the export of men,—the costliest product of the earth,—who have been driven in a great tide from the more northern States by the excessive growth of population. Fifty years of this conservatism of population has restored the waste of her land during the revolutionary period, and has laid the foundations for a great and stable future.

If the system of our modern society left the forces of natural selection in vigorous operation, there would be something to say for the continuance of this reckless increase of man. If the strongest alone survived, if the selection of combat or disease took away the weak, and left the strong and the skillful alone to continue the race, there might be some reason found in it. But the dictates of that humanity which must be reckoned as the most precious acquisition of the race preserves the weak along with the strong, the vicious with the virtuous, the fool with the philosopher. Education must in a good degree replace the ruder ancient training, and in order to educate effectively we must limit the number to be trained. We must educate highly, in order that the greater elevation of the few may give us in an economical way what Nature might win in her more wasteful way. Such education demands a high standard of comfort, and a great increase of the wages fund. It cannot be accomplished in poverty, but only in a condition of society where it is lifted to the level of self-sacrifice, and fortified by the influences of inheritance and tradition.

* * * * * * * *

There is another important point on which there are some dangers of a considerable popular misapprehension. It is boldly asserted that the diminution of the birth-rate is in some way connected with the lowering of the general vital conditions of a people. This is a fallacy, based on the assumption that the number of the progeny in a race is an index of the vital force. We have already seen that the number of the progeny of animals is subjected to a steady decrease with every advance in the grade of the organization, and has been directly connected with the gain in individual power. The force that formerly went to the multiplication of the species now goes to the making of a higher individuality. The growth of the individual and the multiplication of the race are opposed uses of the organic forces. The individual seems always to have gained by the reduction of numbers in its progeny, and there is no reason to fear that the reduction of the birth-rate in man has yet gone beyond the point where it is advantageous to the race.

* * * * * * * *

Last, but by no means least, we must consider that nothing so debases our conception of life, our understanding of the ends and possibilities of existence, as the wasted life that clogs every step of our way. We turn with horror from the ancient amphitheaters, with their contending gladiators; we easily see how debased and debasing they must have been; yet our system of crowding two mortals where there is but room for one makes the world an arena, in its way as debasing as the spectacle of the gladiatorial combat.—*N. S. Shaler, in Atlantic.*

SUNDAY AFTERNOON FOR SEPTEMBER.—Sunday Afternoon ($3.00 a year, Springfield, Mass.) for September is the last issue of the magazine under that name. The new title will be Good Company. The character of the magazine will remain the same, and there will be no change in its management. This number has stories by Rose Terry Cooke and Elizabeth W. Denison; these sketches,—A Bit of New England, A Practical Leaven, The Old Log School-house, and Sketches in Southern California; also, an account of the summer charities of New York, by William H. Rideing.

Rev. B. E. Warner writes about the pernicious periodical literature for the young, now so abundant; Rev. Dr. J. M. Whiton about some peculiarities of the books of Esther and Ruth, and there are carefully prepared papers on Latimer as a Social Reformer, by Octave Thanet, and on the Public Schools and National Culture, by Noble C. Butler. The Hebrew Hereafter is a reply to the Hebrew Faith in Immortality in the last number.

There are several poems, including one in the Still Hour Department.

The Editor's Taole has articles on Rink Religion; Vacation Sundays; makes an onslaught on the trashy periodicals of the day, and expresses gratification "that the great International Game of Hop, Skip and Jump, in which our Sunday-schools have been engaging every Sunday for almost seven years, is pretty nearly ended."

With the issue of Sunday Afternoon for January, 1879, Rev. Washington Gladden, finding the care of a large parish and the sole editorial charge of a magazine more than enough to occupy his time, withdrew wholly from his connection with the contributors' department of the magazine, and has not since had anything to do with it, though he has, as before, conducted the special editorial departments, and will continue to do so. The position of general editor was then taken, for the time being, by Edward F. Merriam, who has, however, retained it, and will sustain a similar relation to Good Company.

WASHING DAY IN A CALIFORNIA CAMP.—To such depths of degradation had I come at last that I must wash my own clothes, and, like Mr. Mantalini, I thought it a demnition grind indeed. Had I been as fastidious as some people are, they might have gone unwashed till the summer's end for all of me and my drudgery, but my baser nature prevailed, and I went forth laden like a slopshop peddler, to wash my clothes. Over the valley and half-way up the hill was a pool of warm mineral water which was better than concentrated lye for this purpose, so they said. By its side there sat an Indian, solemn and alone, probably come here on a mission like mine, and contemplating with timorous hesitation the event of his annual clean shirt. He looked at me and smiled. He saw the burden I bore, realized my intentions, noticed my hands, the cut of my whiskers, and other such items of appearance, and almost laughed outright. Well, what of it?

To say that I was nettled by his mirth and evident enjoyment is to put it very mildly. I could have slain him forthwith had I not feared remonstrance on his part. As it was I could only take revenge, which proved to be ample and sweet, by teaching him a lesson in the useful art of washing. From the moment in which I dipped the first garment into the water he became interested. When I drew it out and slashed it around upon the rock which was my wash-board, and plastered it with soap, which I rubbed in with my knuckles, just as I have seen my wi—I beg her pardon—my washerwoman do, he smiled, not in derision, but in delight. Then I mangled the cloth, tortured it, twisted it, and wasted the better part of my strength on it. After a time of exertion, emerging from a sea of lather and suds, I gave the cleansed garment a pull through the fresh water to rinse it, and, with many a dexterous twirl of hand over fist, I wrung it dry. Holding it up before his eyes, I shook the folds of flannel to the breeze, and lo, they were as blue as the depths of Heaven at midday. Then the stoic savage could no longer contain his admiration within himself, and he cried, in his confusion of tongues, "You *sabe mucho!*" Which polyglot compliment may be translated to mean, "You've washed before! Like as not your wife takes in washing for a living!"—*Sunday Afternoon for September.*

WOMAN'S POSITION IN GERMANY.—The young housekeeper will now be installed in her new office, but she will not be so genuine a mistress of it as my American reader may suppose. It is customary in Germany for the man to exercise a personal surveillance and control over all domestic regulations and expenditures, so that the wife is, strictly speaking, more like the steward of his house than the mistress of his home. Her position is meanwhile an arduous one. A lady is expected to do all the cooking and laundry-work of her household, washing excepted, together with such service as is usually assigned to the American housemaid; while the one rude servant who is apportioned to a family scrubs the uncarpeted floors, chops the kindling-wood and carries the coal, tills the garden and does the washing. This is not confined to the middle class or classes: ladies of lofty title and estate, unless their means are exceptionally large, perform all these functions in common with their humbler-born sisters. The obligation of unremitting drudgery for women is so universally maintained in Germany that no class of society escapes it. This statement presents a striking incongruity with the received idea of the German woman gathered from the German literature, but not more striking than that furnished by the fact. Woman in Germany is theoretically the helpless dependant, the unassertive worshipper at the shrine of the man. It is her own boast that she is so. Yet the part she performs in the partnership of married life is so large, so arduous and so incalculably valuable, that it would seem to entitle her to the recompense of a promotion to something like equality with her lord. At present, however, she neither possesses such equality nor desires it, but continues to spin day by day from the fibres of her own life the wings with which her nobler mate soars into the empyrean. Her patience, her industry and her thrift are beyond praise. In this land of poverty and pride, where lofty claims and slender purses go hand in hand, they have their amplest exercise.—*Lippincott's for September.*

For Women,

CONDUCTED BY MISS FAITH RIPLEY.

A RAINY DAY.

ELLA WHEELER.

How tired one grows of a rainy day,
For a rainy day brings back so much;
Old dreams revive that are buried away,
And the past comes back to the sight and touch.

When the night is short and the day is long,
And the rain falls down with ceaseless beat,
We tire of our thoughts, as we tire of a song
That over and over is played in the street.

When I woke this morning, and heard the splash
Of the rain-drops over the tall elms' leaves,
I was carried back, in a lightning's flash,
To the dear old home with the sloping eaves.

And you and I in the garret high,
Were playing again at hide-and-seek;
And bright was the light of your laughing eye,
And rich the glow of your rounded cheek.

And again I was nestled in my white bed,
Under the eaves, and hearing above
The feet of the rain-steeds over my head,
While I dreamed sweet dreams of you, my love.

Love, my lover, with eyes of truth—
O beautiful love of the vanished years.
There is no other love like the love of youth—
I say it over and over with tears.

Wealth, and honor, and fame may come—
They cannot replace what is taken away.
There is no other home like the childhood's home—
No other love like the love of May.

Though the sun is bright in the midday skies,
There cometh an hour when the sad heart grieves
With a lonely wail, like a lost child's cry,
For the trundle-bed and the sloping eaves;

When, with vague unrest and nameless pain
We hunger and thirst for a voice and touch
That we never on earth shall know again.
Oh! a rainy day brings back so much.

[*Chicago Times.*

"HOME PROTECTION."

An Argument for Woman's Temperance Ballot.

BY FRANCES E. WILLARD,
PRESIDENT OF ILLINOIS W. C. T. U.

THERE is also great force in the consideration that, if women, not themselves eligible to office, had the power to elect or to defeat men (who will alone be eligible for a long while yet), the precise check might by this arrangement be supplied which would keep politics from forming with the worst elements of society, that unholy alliance which is to-day the grief of Christians and the despair of patriots. Belonging to no party ourselves, we might be able to lift the Sabbath, the temperance movement, and kindred moral questions out of the mire of merely partisan politics into which they have fallen. It is, at least, worth trying. Into the seething caldron, when the witch's broth is bubbling, let us cast this one ingredient more. In speaking thus I am aware that I transcend the present purpose of my constituency, and represent myself rather than "the folks that voted me in!"

PLANS FOR THE FUTURE.

Our temperance women in the West are learning that, while the primary meetings are the most easily influenced, they are the most influential political bodies in America. Ere long the W. C. T. Us. will attend these, beginning in the smaller and more reputable communities. We are confident that nothing would be so effective in securing the attendance of the respectable voter as the presence at the primaries of "his sisters and his cousins and his aunts." To be "in at the birth" of measures vital to the well-being of society seems to us, in the light of last winter's experience, a more useful investment of our influence than to be "in at the death." At Springfield we found the enemy entrenched, while in the primaries his soldiers are not yet even recruited. We intend also to open in each locality books of record; and, by thorough canvass, to secure an informal registration of all men and women—the former as to how they will and the latter as to how they would (mournful potential mood!) vote on the question of permitting saloons. Every such effort helps to obliterate party lines; or, more correctly, to mass the moral elements by which alone society coheres, against the disintegrating forces, which of themselves would drive us into chaos and old night.

* * * * * * *

Friends, there is always a way out for humanity. Evermore in earth's affairs God works by means. To-day he hurls back upon us our complaining cry: "How long? O Lord! how long? Even as he answered faint-hearted Israel, so he replies to us: *What can I do for this people that I have not done? "Speak unto the children of Israel that they go forward."*

There's a light about to beam,
There's a fount about to stream,
There's a warmth about to glow,
There's a flower about to blow,
There's a midnight blackness
Changing into gray;
Men of thoughts, of votes, of action,
Clear the way!

Aid that dawning, tongue and pen;
Aid it, hopes of honest men;
Aid it, for the hour is ripe,
And our earnest must not slacken into play.
Men of thoughts, of *votes*, of action,
Clear the way!

Miss Willard's address was given in full in the Independent of July 10.

CORRESPONDENTS' CORNER.

DEAR MISS RIPLEY:—After an absence of some weeks I read the RURAL again with great pleasure; as usual, it is full of interest. The ladies especially, are making their department of it very entertaining with their letters. I hope Aunt Esther will continue her advice to girls, there is much need of it, and need of their learning to sew. I was taught to sew at school, but that is all out of fashion now. I think if I were compelled to do anything to earn money, keeping a sewing school would not only be a good financial experiment, but also a charity to others. Let us have a letter often from the "Sunny South," Florida.

Would not all of the lady readers of the RURAL like to take a peep into Miss Harvey's Artistic Room? I know you all would. I have seen lately some very pretty log-cabins, but our Jessie's was not among them. I would like to live in one, they look so comfortable and cosy, and I have seen some people in my travels like her Mrs. Brown, with no energy to make use of the good things that God has given them.

I cannot give you any recipes about cooking, for I know very little about it myself. I can make good bread and cook a plain dinner, but pies and cake I never could and never did make fit to eat; I do all kinds of home decoratings, and I love to see my house full of pretty home-made work. There are many things to be found in the woods that can be made use of by the way of ornaments in the house. I am always looking for pretty things when I go in the woods, and I find them too. I have brackets made of fungus; I have one 18 inches high and six inches wide, a perfect beauty, I think more of it than anything I could buy.

Matilda should have her RURALS bound, then she could always refer to them. I would not cut one of mine for twice the price of it; there is too much good and useful reading in them, they are always good to refer to. I put mine away where they will not get harmed, and some day intend to have them bound, and then they will find a place in our library.

Faith's advice to girls is good, I hope many will see it and profit by it. Girls can do more good than older persons, among their young men friends, they never should let an opportunity pass to warn men against intemperance. If young girls would turn the cold shoulder on all of their friends who use liquor too freely, they would soon see the good resulting from their course of action. Give the girls more on the same subject, do not let it rest here, and you will be well repaid by the thanks of all that read your letters; remember, men, young and old, read your letters, and some one is sure to benefit by them. I agree with Faith, life is short, and we have but one life. Live it well, do all the good you can. Never be afraid to give advice in a good cause; you may not be always listened to or thanked, never mind that, better have your feelings hurt than to see a dear person go to ruin, when a few words from you would help to save him. He may not take it kindly, the time will come though when he will and so will others that love him. This is a subject I am very much interested in, and I will read with deep interest anything that is written on it. Do, ladies, all take up the subject and do all you can. C.

MISS FAITH RIPLEY:—Allow me to introduce myself to the notice of my aged Southern lady friend (Mrs. T. J. B., in RURAL of Aug 9.) Aye yes, the lovers of the RURAL are all congenial friends. I know that I should like her, for I am particularly fond of old ladies, as having lost my own dear mother my heart reaches out in love to them. One must love flowers to be successful in raising them. The way Mrs. B prepares her soil cannot but produce beautiful flowers. Now is the time to propagate new plants from old ones by layers, viz: those of the Wiegela, Honeysuckle, Wisteria, Running Roses etc. A good support for any of them, or tender vines, can be so construc'ed, as to be lowered to the ground, at the approach of winter. These vines sometimes go through the winter unprotected, but in our climate particularly it is safest to lay them in the ground where they will be protected by the snow. Set a post, three and a half feet long, and four inches square, in the ground, and leave eight, or ten inches above the surface. Cut an opening in the top of this post to receive an upright shaft, eight, or ten feet high, three inches thick at the base and tapering at the top. Insert several rods in this shaft, to which vines are fastened. This shaft is kept in its place by two stout pins, at the bottom. Before the ground freezes, draw out the upper pin, and lay the frames and vines together on the ground; then cover with straw or leaves, and put boughs or sticks to fasten them down. I do not claim to be the originator of this support, but having tried it find it entirely satisfactory for the purpose and send a description of it for the benefit of the readers of the RURAL. MARIAN.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

LOG-CABIN SKETCHES; OR, JESSIE SEABRIGHT'S DIARY.—No. 8.

MAY MAPLE.

JUNE 24, 18.—The wee bit of chamber-room to our little cabin was without windows or doors, the entrance being up a ladder through a hole in the floor; and there was no way of ventilation except by taking out the "chinking." Of course, this was anything but convenient; and when a driving storm came, it was almost impossible to keep the water from running down on the inside of the wall, thus spoiling the paperhanging below, and making the logs damp and musty. I had looked at the logs many times with a wonder in my mind, if it were possible that I could saw out pieces of logs and put in a window frame at each end of the chamber. But I had no window sash or glass, and I would not ask John to get them, for I very well knew the contents of the purse, and our little clearing was constantly calling for outlays. So I must make my own plans.

The weather was getting extremely warm, and that close, dark, little room was not an agreeable sleeping apartment in summer or winter, I *must* remedy it some way. Well, one morning about two weeks ago, I chanced to be thinning out a large onion bed that John and I had planted in the early spring, when the thought struck me that these little onions might possibly aid me to a little pin-money; for they were just nice for table use. And then there were my long rows of crisp radishes that had been supplying our own table and those of our neighbors. Perhaps they might add their mite to my treasury. I could tie them up in small, neat bundles and make them look as attractive as possible. There had lately started up a flourishing settlement about five miles from us, and just now the new settlers were putting up a saw and grist mill, also a store. I could try to dispose of my vegetables at the boarding house.

Accordingly, after dinner I started out to seek my fortune with my basket on my arm, leaving Bertie in the field with his father. I found the pleasant-faced landlady very glad to purchase my "stock" in trade, and anxious to engage all the early vegetables I might have to spare through the season, as garden sauce was not abundant in that vicinity, and she was willing to give me a fair remuneration. I returned home richer in cash by one dollar. Of course, the long walk was somewhat fatiguing, but after this I could send my basket down by some neighbor for a trifle. I had bargained for my windows, and they were to be sent up the following week. They came to hand in due time and were promptly paid for; as I had managed to send down quite a large basketful of radishes and onions the day before, giving me an additional dollar and a half. Oh, how rich I was! The next morning, after the arrival of my windows, I made haste to do up the work below stairs, and then I made a grand rush for the chamber, saw in hand on business intent. I had just got cleverly at work when John came in from the corn-field for a drink of water.

"What's going on now little woman, building a new house?" said he.

"Come up here and see," was my reply. And with two steps up the ladder, he made his appearance.

"Whew! what do you expect to do now?"

"Saw out some pieces out of these logs, and have some windows put in."

"Well, my dear, wouldn't it be wiser to get the *windows* before you cut out the logs?"

And then I told him that they were already at hand, also the boards for casing.

"Oh, well! you wait till I get the cross-cut saw from the barn and I'll do this piece of work for you."

So John sawed out the logs and made the opening ready to receive the casings, and then went about his work, and I sawed the boards and nailed them to their places, and put in my half sash windows with hinges, so that I might open and close them readily. That was enough for one day's carpenter work.

THE HELP QUESTION.

L. A. G.

MY kind reader do you ever consider your own faults in managing your work and your help? Pardon me for the remark, but this is a thing I have thought much upon for the past few years, and I am obliged to say I have found as many mistakes made by the one who hires, as by the one hired.

We start with the knowledge that but very few of those who hire out at housework are competent for their business, nor can we wonder when we consider the circumstances of their lives. My favorite way of employing help is by the day, when I can, as I think it cheaper and less annoying. There are women in nearly all places who prefer to work in this way.

I never ask them to do a certain amount or any particular things, I ask them to give me a day's work, and then I plan the work. I only hire those who are able to do a good day's work.

As an example; there is a good German woman I have hired, who with my help can do my two weeks' washing, ironing and the scrubbing in one day, and it is well done.

Once a neighbor, knowing of my big day's work, hired her, thinking to do the same. Shortly after I went over to ask how she liked my way, and was not a little piqued to hear her say, "I don't care about such a big day's work, I want my work done decent." I replied, "I think I am a judge of work, and Mrs. G. has always done my work well. I also know of several others who like her work as well as I do, that are good housekeepers." Next time my woman came to work, I said to her, "You had better try to keep that place."

"No! No! dat not good," she replied, "tere is tifference in foks. She not good, she giff me too big wash and to iront, all dose tings to schrub and do in von day for a toller. I can no do dat goot."

The difference was simply this: I had my wash all ready for her to begin on, suds hot, and a warm breakfast ready. I helped what I could with the light parts. My neighbor did not do anything, but told her there was the work and she must do it, and for so much, in a certain amount of time—consequences, dissatisfaction on both sides. I will cite one more instance with the same woman. One morning when she came I told her there was only a half day's work, and I would give her sixty cents to do it. All was well. Not long after another lady hiring her thought she had not done a full day's work, and only gave her seventy-five cents. The woman was angry and would not go to her again. On talking with my friend, I remarked, "you missed it by not telling her that as she was so late in coming and the wash small, you could only give her seventy-five cents." Sometimes she would be a little late, I would always say, "Mrs. G. your breakfast has gotten cold." She would take the hint and make up for her lost time.

At times I hire my sewing by the day and find much more accomplished for the same money than by the piece. But I always plan to have my other work out of the way as much as possible; and my garments cut with the needed materials at hand, so there shall be no delay. Then when I have a few moments to spare I assist the seamstress. Some of my neighbors, on the other hand, are in the habit of waiting until after the seamstress gets there to send to the stores for needed materials. One sewing girl, who made a home with me for a short time, often got to their houses before they were up, at seven o'clock, often later, and she frequently would say "How can people expect me to accomplish anything for them?"

I find there is as much in planning as in doing, and I candidly ask, if you don't plan your own work, who do you think will?

THE PRESERVATION OF FRUITS AND DESTRUCTION OF INSECTS.

HATTIE HOPEFUL.

THE season of fruits keeps the housewife busy preparing and preserving them for future food and medicine.

I have cured obstinate fevers and inflammations with pure air, warm baths, rest and jells without the aid of a physician.

By all means grapes, currants, blackberries and elderberries should be made into jells instead of wine. The jell may be reduced with water when wanted to drink, and is nourishing and not intoxicating. Good jells may be made of apples, crab apples, plums and the nice parings of quinces and some other fruits.

Pure water, pure sugar, nice fruit kettles and clean glass cans, bottles or stone jars should be used for this purpose. The bushes of gooseberries and the nice red and white currants, so healthful and valuable, have in many parts of the country been destroyed by the green and black canker-worm. But last May, I discovered that the fly that lays the eggs for this worm, would hover under cloths spread on the bushes in cool nights, and could be killed early in the morning. So I have taken new courage, and the fragments of our gooseberry and currant bushes I want to take up in the fall, and set in a convenient place to put cloths on. The leaves of the bushes will need examining as they may lay some eggs before being caught.

Perhaps many other fruits and our rose bushes might be saved by spreading cloths over them at night as soon as the leaves appear, and killing all insects found on them early in the morning. To destroy injurious insects, however, requires a vigilant eye and a willing hand to do the work on their first appearance.

HIRE'S IMPROVED ROOT BEER.

WE received a package of prepared roots and leaves from Charles E. Hire's, of No. 9 Letitia street, Philadelphia, for the manufacture of a summer beer, with the request that we should give it a trial and report. We have tried it and think well of it. A 25-cent package contains enough prepared roots and leaves of such plants as pipsessiwa, wintergreen, sarsaparilla, etc., to make five gallons of beer. It is only necessary to boil the contents of the package in two or three gallons of water from half to three-quarters of an hour, then strain, add enough water to make five gallons in all, sweeten to taste with either sugar or molasses—of the former from three and a half to four pounds will be required, of the latter three to four pints. When just warm stir in a pint of good yeast. Let stand ten or twelve hours to ferment, or if made in the afternoon, let stand until the next morning. Again strain through a thin bag, bottle and cork, wiring or tying the corks down. In a few days we have a sparkling, aromatic and refreshing beverage very palatable in hot weather. As an inoffensive if not wholesome substitute for vinegar and molasses, sassafras beer and the like and even cider, unless it is quite new, we can recommend it.

DOMESTIC RECIPES.

"Johnny Cake."

To a half pint of meal add warm water enough for a thin batter, half a tablespoonful of melted butter, half a teaspoonful of cream-of-tartar, a little soda and salt. If convenient add an egg. This makes an excellent cake, and to those who have not a full allowance of milk and cream, it will prove a great help. AUNT EM.

Peach Cake.

Bake three layers of sponge-cake, cut ripe peaches into very thin slices; prepare some sweet, thick cream by whipping, sweetening and flavoring it; spread the peaches, with the cream poured over, between each layer as also over the top of the cake.

Mutton Pie With Tomatoes.

Cover the bottom of a baking-dish with dry bread crumbs, then alternate layers of thin sliced roast or boiled mutton and sliced tomatoes, with a thin sprinkling of bread crumbs. Season each layer of tomatoes with pepper, salt and bits of butter. Let the tomatoes and bread crumbs be last. Bake three-quarters of an hour. MARY B.

Tomato Sauce.

Twelve large, ripe tomatoes, four ripe or three green peppers, two onions, two tablespoonfuls of salt, two of sugar, one of cinnamon, and three cups of vinegar. Peel tomatoes and onions, chop all fine, and boil one and a half hours. Bottle, and it will keep any length of time. One quart of canned tomatoes may be used instead of the ripe ones.

Tomato Preserves.

Take of the small yellow tomatoes eleven pounds, seven pounds of sugar, four lemons, and a small quantity of ginger root, boil a short time, and if the sirup does not seem to be thick enough to keep from spoiling, skim out the tomatoes, and boil the syrup until it is a little richer or thicker. Put in jars and seal them. If the tomatoes are boiled too much they will harden. Take them out in time and they will be beautifully light, clear and soft. It is not necessary to put them in glass jars, simply stone jars of any kind.

MISS JENNIE PERRY.

News of the Week.

MISCELLANEOUS.

Monday, August 25th, 1879.

In San Francisco and indeed in the whole of California, the excitement is intense. Next week the first election under the new Constitution takes place. There are three parties in the field—the Republican, the People's, commonly known as the Honorable Bilks, and the Workingmen's, under the control of Dennis Kearney. The Honorable Bilks' party was mainly started and kept up by the San Francisco Chronicle, of which Charles and Mike De Young are editors and proprietors. The Rev. Mr. Kalloch is the Workingman's candidate for Mayor of the city. The De Youngs have been bitterly blackguarding him in their paper for some time back, raking up old immoral scandals reported against him in Boston and Kansas, in both of which places he has figured somewhat prominently. They even vilified his father who has been dead 30 years. Last Friday in addressing a mass meeting of his adherents, he retaliated on the De Youngs by quoting from a small paper published a couple of years ago by an enemy of theirs, a vile attack on the reputation of their mother now about 80 years old, and he threatened to read the whole scurrilous article at a called meeting next day. Shortly afterwards, Charles De Young drove in a buggy to Kalloch's office, sent in a message that a gentleman wanted to see him, and as Kalloch came towards the buggy, shot him in the breast. The wounded man turned to flee, and was again shot in the back. A mob instantly collected, upset the buggy and dragged De Young to the pavement where he was kicked, beaten and would have been torn limb from limb, were it not for the prompt appearance of a large number of policemen. These hurried him off to jail, which was instantly surrounded by a yelling crowd of exasperated workingmen, bent upon lynching the man. The whole force of police was soon concentrated about the place, while the militia were called to arms and a battery of Gatling guns placed near the prison. Kearney, who was up at Vallejo, was at once sent for, the leaders of the workingmen with difficulty restraining their followers from violence until his arrival. He addressed an immense crowd at the Sand Lots on the outskirts of the city, and urgently counseled moderation, saying that the election would give them entire control of the city government in ten days, that De Young should certainly be hung, that a present attack upon the jail must cost them many lives, and that they must wait. This address, with others of the same tone from other prominent leaders, quieted the mob, who dispersed peaceably. There are some hopes that Kalloch will recover; De Young's brother, Mike, shares his imprisonment; a detail of armed workingmen guards the jail along with the jailers, policemen and militia, in order to prevent the removal or escape of the prisoners, and though no immediate outbreak is now apprehended, the excitement is still at fever-heat. There is now no doubt of the triumph of the Workingmen's party in San Francisco, while it will be greatly strengthened throughout the State. The People's party, better known as the Honorable Bilks, including most of the straight democrats, is said to have no chance, while the Republican party, it is thought, will be strengthened through the State by the occurrence.

THE GREAT STORM.—The most terrible storm ever known at Morehead City, N. C., did great damage, Monday. The loss in that place and Beaufort reached nearly $100,000. The front streets of Beaufort were strewn with lumber, trunks and goods. There is not a wharf left in Beaufort. Morehead City lost its market house, school house, wharf, and the colored Methodist church, also several fish houses and four thousand terrapins. In the vicinity of Norfolk, Va., the storm and tornado were the severest ever experienced. Many buildings were unroofed and flooded. Many vessels were also dragged ashore, wharves and warehouses flooded, and the tide was higher than ever before known. The handsome spire of the Freeman Street Baptist church was blown down; the slating of Christ (Episcopal) church was torn off, the cornice and steeple ornaments of St. Mary's Catholic church were damaged, and the beautiful grounds of old St. Paul's were badly wrecked. Great anxiety prevailed during the storm. The mayor ordered out the entire police force and fire department. The loss is estimated at from $200,000 to $300,000. The Atlantic City, N. J., signal service reports that the velocity of the wind was sixty miles, from the northeast. At 4 P. M. the schooner Flora Curtis, of Perth Amboy, was blown ashore. The life-saving crew could not get to the schooner, the surf was running so high. The crew remained in the rigging until 3 A. M. when they were rescued by the life-saving crew. The amount of rainfall was nearly ten inches. All the yachts are damaged, four were sunk and one carried out to sea. The gale at Providence, R. I., at midnight was very severe on the bay. Twenty to thirty sailboats had been sunk or damaged. The steam yacht Experiment, of Boston, sank at the wharf. The yacht Pilot and another Newport yacht were also sunk. Others were damaged. Newburyport, Mass., has not experienced a more severe storm for ten years, the wind blowing a hurricane demoralized 20 small boats, badly wrenching a steamer and schooners in harbor, and destroying four yachts. Fruit was stripped from the trees. Sad havoc was made among the tents at the beach, several of which were blown into the sea. At West Newbury a frame house was blown several yards. Many narrow escapes are reported The storm at Ocean Grove, N. J., was the severest this season since 1872. Three thousand of a population of fifteen thousand were living in tents. The association and employes sent omnibuses to all tents exposed to the storm and removed to more comfortable quarters all who desired to leave. About seventy-five persons went to the Tabernacle, where mattresses were provided. Five tents were blown down. The damages to the growing crops in Virginia counties by the storm, which was the severest experienced in that section for years, is expected to be very great. In Surrey county alone, the damage to corn is estimated at fifty per cent. Barns and out-buildings are considerably damaged. Considerable damage was done along the New England coast. The yachting fleet at South Boston was badly used, most of the vessels being injured, many seriously. At Portland several yachts and schooners were sunk. Other towns along the coast report a long list of disasters to the local craft and property.

Lesseps announces in a circular that the issue of 800,000 shares of the Panama Canal stock has not been covered. He says he might convene a meeting of subscribers and start a company with them, but he prefers, being certain of success, to wait until more light has been thrown on the value of the attacks which have been directed against the scheme at the last moment. De Lesseps will shortly come to America, and on his return he will set the company on its feet. The subscribers are, therefore, informed they can withdraw their deposits whenever they like. Their present subscriptions, however, will give them the right to shares when the company is eventually constituted. This is probably the end of the undertaking, at least for some years, although a good deal of agitation may be attempted in regard to it here by Appleton, Lesseps' agent.

Down at Yazoo City, Miss., the bulldozers' threat that they would kill J. H. Dixon, the independent candidate, unless he left the country, has been executed. Shortly after he withdrew from the canvass, he revoked his withdrawal, as he had been accused of cowardice and deemed it his duty to contend against the bulldozers' tyranny. On the 19th inst. in Yazoo City, while passing down the west side of Maine street, he was hailed by Barksdale the rival candidate from the east side,

who, at the same time advanced to the middle of the street armed with a double-barreled shot-gun. Dixon halted and placed his hand on his pistol, drawing it. Barksdale raised the gun to his shoulder. Dixon, seeing this, moved towards a stairway, when Barksdale fired, four buckshot entering Dixon's back. Dixon then fired several times at Barksdale without effect. Barksdale missed the second shot. Dixon bled internally and died at 4:30 p. m. The difficulty is represented as of a personal nature by Barksdale's friends. Barksdale has been released on $15000 bail.

Opossums are so plenty in Petersburg, Va., that it is not uncommon to run against them in the streets at night. Rabbits and partridges also abound, the latter being found in every yard which affords them food. A census of Kansas, just completed, shows a population of 849,878, an increase of 60 per cent. over that of 1875, which was returned as 528,437. A Wisconsin boy fired at what he thought was a scarecrow, and hit a tramp, whose ragged clothes were flapping in the wind as he crossed a field. A street car at New Albany, Ind., was stopped by highwaymen, and the conductor and one passenger were robbed of their money and watches. The wet weather ruined the coaching season in England this year. Gen. Sheridan has received from the Secretary of War an order directing a board of inquiry to consider the positions and handling of troops at the battle of Chickamauga. The date of the session has not yet been decided upon, but it will be at the discretion of Gen. Sheridan, and probably within a few weeks. The order directs that the sessions be held in Chicago.

The driver boys and car runners at the Exeter Colliery, Pittston, Pa., operated by the Lehigh Valley Company, are on a strike for an increase of wages. The mine is idle and 500 men and boys are out of employment.

H. P. Williams, the Workingmen's candidate for Congress in the Second California District, has declined, and E. J. Clunie, the "Honorable Bilks'" candidate, was nominated instead.

FOREIGN.

Two hundred colliers will embark at London on Friday next as emigrants to New Zealand. *Le Soir* (Paris newspaper) announces that Count de Chambord, the Legitimist pretender, has started for England. M. de Lesseps, the promoter of the Panama Canal scheme, is already preparing at Paris for his journey to the United States. His wife will accompany him. A Berlin despatch says: "The Russian Government is about signing a contract with the agent of certain American firms for the construction of a number of cruisers at a total cost of $16,250,000." The London Standard announces, semi-officially, that England is the only power which has not been invited to send officers to witness the great Russian military manœuvers, beginning on Monday, the 25th of Aug.

Mr. Gladstone and Sir Charles Dilke on Tuesday night addressed large meetings at Chester and Chelsea respectively. Mr. Gladstone urged that the Liberals could force on a dissolution of Parliament by bringing their candidates prominently forward.

An asylum for aged domesticated animals has just been opened by an inhabitant of Gonesse, in France. It already contains a cow 36 years of age, a pig aged 25, and an 18-year-old goat. The senior member of this happy family is, however, a mule. He is 40 years of age. Next comes a sparrow, whose summers number 31: 28 years of life have been granted to a goldfinch; and a guinea fowl and a goose have respectively reached the ages of 12 and 37 years. The bridging of the English Channel is seriously proposed by Sainte Anne, a French engineer of good professional standing. He proposes to build a line of immensely solid stone piers, and on them place sections of girder, suspension and tubular structure, according to local requirements. Victoria, Australia, still retains the death penalty for rape, and the question is now whether two youths are to be hanged for this offence, of which they are convicted. The one who planned the whole thing was at the time of the perpetration 14, the other 19. The Executive decided to let the law take its course, but public sentiment compelled a respite. In 25 years only one white man has been hanged for this offence. "Disappointed" writes from Vevay, France, to the London Times, that, driven desperate by the vile weather in England, he had gone abroad four weeks before, and had since experienced but two fine days. On all others it rained, and, further, was bitterly chilly. "It is a dreadful summer," he adds, "for hotel keepers and walkers, as snow fell in the high mountain localities only last week. Thermometer, 62 deg. Last summer a number of hotels in Switzerland closed, owing to the bad season, and this year more will follow—very few are making their expenses. The Lake of Geneva has not been so stormy for fifteen years."

Lord Carnarvon, while Secretary of State, called for information from the colonies as to their timber supply. During the five years ending 1876 Canada sent England about $125,000,000 of timber. In Nova Scotia the approximate amount of timber-producing land was, in 1875, computed at 9,000,000 acres; in Ontario, 30,000 square miles; in Quebec, 73,711,114 acres; New Brunswick, 6,000,000 acres. In British Columbia about 110,000,000 acres are covered with timber. Newfoundland, too, is densely wooded, but forest fires have there, as also to a considerable degree in Canada, made serious inroads. In Natal (Africa) the Crown forests have for some time been suffering so seriously from the depredations of the natives that the Surveyor-General has absolutely prohibited the use of forest lands for the cultivation of crops. It is computed that Cape Colony has between 500 and 600 square miles of forest. Between 1868 and 1878 British Honduras sent 34,000,000 feet of mahogany. In Victoria, Australia, timber is diminishing far too rapidly, and in Western Australia the Governor thinks that steps must be taken to arrest destruction. In Queensland an annual license fee is exacted from wood cutters, and officer has been appointed to report on the public timber-producing lands, with a view to their conversation. Tasmania (Van Dieman's Land) has about 8,000,000 acres under timber, of which amount 1,000,000 are in private hands. In Ceylon steps were some time since taken to arrest reckless destruction. In Queensland and South Australia the clearing of the forests has produced no effect whatever on the rainfall. In St. Helena, on the other hand, where the destruction of the trees shortly after colonization of the island was followed by a succession of severe and destructive droughts, now that the forests have been allowed to grow again, there has been much less trouble on that score. The climate of Jamaica is reported much drier of late years in the south side of the island, where the greatest clearances have been made. Gen. Garibaldi's condition has improved. A despatch from Berlin says that Gen. Ignatieff will replace Gen. Todleben as Governor-General of Odessa, and that Todleben will become Governor-General of Poland. The Diritto announces that a recent meeting of the Cardinals, at which the Pope was present, discussed a proposal to ask the Italian Government to restore the Pantheon to the Holy See.

Flooded partridge nests will make the English shooting poor this year. Shooting won't be general until Michaelmas (Sept. 29), instead of Sept. 1. The Duke of Sutherland has permitted the exhibition on his grounds in London of a portable railroad, said to be of extraordinary value in war. It is also specially designed for farming operations—saving labor in heavy carting. The Mark Lane Express observes that farmers who propose to act on Lord Derby's recipe (emigration) for the cure of agricultural depression, will read with interest in the Toronto Mail: "Mr. W. Weld, editor of the Farmers' Advocate, who is at present in Manitoba, telegraphs that the destitution there is fearful, and that many are walking back to Ontario." The special Parliament or Landtag for the kingdom of Prussia will, it is generally believed, be dissolved in September, and already much curiosity, and even anxiety, is felt as to its party composition. At the close of the last session the relative strength of the several political parties stood thus: The total number of representatives in the Chamber of Deputies was 432. Of these 168 were National Liberals, 63 Progressists; Liberals (simply), 12; Centre, 80; Conservatives of all sections, 93; Poles, 15; Danes, 2. Thus the united Liberal votes were 243, or 26 more than the absolute majority of the Chamber. Even if the recent alliance between the Conservatives and the Centre be continued and extended to the Landtag, they will have between them to gain 45 seats in order to gain a bare majority. From 1870 to 1873 the Conservatives, who have now only 83 seat in the House, had 167.

It is generally admitted that there cannot be anything more exquisitely delicate for perfuming the handkerchief than MURRAY & LANMAN'S FLORIDA WATER; but its great and distinctive property is its adaptability to the uses of the bath. It is the only perfume we know of *especially and particularly* suited to use in this way. The power it has of imparting to the waters of the bath great soothing, refreshing, and invigorating effects, is peculiar to itself.

To restore nerve and brain waste, nothing equals Hop Bitters. Believe this.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, August 23, 1879.

BEANS AND PEAS.—Trade in beans is featureless and likely to remain so until new crop becomes prominent. Recent rains will check early curing. Beans, marrow, prime, $1.25@1.27½; fair to good, $1.17½@1.23½; medium prime, $1.30@1.32½; fair to good, $1.25@1.27½; red kidney, prime, $2.40@2.50; fair to good, $2.20@2.30. Canadian peas, 70@72c.; new green peas quoted as an opening price at $1.95@2.

Receipts of beans for week, 2,028; exports, 642 packages.

BROOM CORN.—There is a fair jobbing trade and prices ruling firm.

Brush and short broom, choice, ₹ lb, 5¼@6½c.; do., common to good, 4½@5½c.; hurl, good to choice, 4@5c.; do., common to fair, 3½@4c.; red and crooked, 2½@3½c.

BUTTER.—Receipts for the week, 30,400 pkgs. Exports, 12,189 do. The summer passiveness of the market is undisturbed. Business at this season when there is no exportation of moment or other influence to cause excitement or activity, is confined to regular customer wants, and dealers do not allow a steady buyer to be won away by competitors. Thus when top rates have to be enforced for fine table stock, the figures for under grades and cooking sorts are made profitably accommodating. A fact that might be here mentioned: New York and near-by summering places call for a better style of butter for kitchen use than was formerly demanded. Exports to Europe figure up better this week, but the amount taken does not represent much new business, many lots being from stock held by shippers. Receipts generally show the effect of a long summer; fine dairy tubs are particularly scarce.

State pails and half tubs, choice, 15@15½c.; good to prime, 14@14½c.; fair to good, 12@14c.; firkins, yellow, 14@15c.; Welsh, good to choice, 14@15c.; fair, 12@13c.; poor State, 8@9c.; State creamery, choice, 17½@18c.; good to prime, 16@17c.; fair to good, 15@16c.; sweet cream, 16@17c.; Western creamery, choice, 17@18c.; other, 15@17c.; imitation, 10@13c.; Western dairy, best, 12@13c.; fair to prime, 9@10c.; factory, choice, 10@11c.; other, 7@9c.; poor, 5@6½c.; grease butter, 4@5c.

COTTON—Has been active and closed firm at for August, 11.30c.; September, 11.39c.; October, 10.74c.; November, 10.41c.; December, 10.42c.; January, 10.47@10.48c.; February, 10.58@10.59; March, 10.68@10.69c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

CHEESE.—There has not been much activity to trade and shippers have been bearing down hard on prices; towards the close of the week rather more steadiness prevailed. Quotations for fancy, 5¼@5¼c.; good to prime, 4¾@5c; fair to good, at 4@4¼c.; half-skimmed, 3@4c.; skimmed, 2@3c.; State farm dairy: fine, 5c.; good to prime, 4¾@4¾c.; fair to good at 3¾@4¼c.; skimmed, 2@3c.; Wisconsin factory: Fine, 5@5¼c.; good to prime, 4¼@4¾c. Ohio factory: Cheddar, fine, 5c.; do., fair to good, 4@4¼c.; flat, fine, 4¾@5c.; flat, good to prime, 4¼@4¾c; flat, fair to good, 3¾@4¼c.; half-skimmed, 3@4c.; skimmed, 2@3c.

Receipts for week, 74,241 packages.
Exports for week, 51,912 packages.
Liverpool cable, 50s,
Steam, 49s.

DRIED FRUITS.—Pitted cherries have been active at 16c.; apples are wanted at better prices: new peaches are scarce and would sell well. Prices are:

Patent evaporated apples, choice, in cases, at 11c@12c.; do, fair to good, 8¾@10c.; N. Y. State sliced, choice, at 5¼@5¾c.; do, quarters, choice, 4¾@5c.; western quarters, bright, at 3¾@4¾c.; common and old at 2@3c.; N. C. pealed peaches at 10@11½c.; do. Georgia, 10@12c. for fair new; unpeeled halves, 3@3½c.; do., quarters at 2¾@3c. Blackberries at 5¼@5¾c. Raspberries at 28c. New York State plums at 8@10c. Pitted cherries at 15@16c.

EGGS.—Receipts for week, 6,700 bbls.; do., last week, 5,450 do. The market has favored sellers and sales of Western are prompt, as quality now gives buyers more confidence.

Near points, 16c.; State and Penn., 15@15½c.; Canadian and Western, prime, 14¾@15c.; inferior to fair, 13@14c. State eggs running poor, they contain a good many held-found, which hurts the average count.

FLOUR.—There has been a brisk call for supplies and the market is the turn better.

Latest prices are: $3.30@4.00 for very inferior to fancy superfine State; $4.20@4.40 for poor to good extra do., odd lots and lines (lines for September arrival quoted at $4.20@4.25 for standard brands); $4.40@4.75 for good to very choice do.; $3.30@4.00 for very inferior to fancy superfine Indiana, Iowa, Michigan, &c.; $4.20@4.40 for inferior to good shipping extra do., and $4.40@4.75 for good to very choice extra do.; common to choice white wheat extras, $4.60@5.00; choice to very fancy do at $5.00@5.50; red and amber winter wheat, inferior to very choice trade and family, at $4.40@5.75; round hoop Ohio at $4.20@4.60, and trade and family brands of do, at $4.75@5.85, the latter rate for choice; St. Louis, $4.60@5.50 for inferior to very good extra; $5.50@6.50 for very good to fancy; Minn. clear, very inferior to very fancy, at $4.15@5.50; do. "straight," very inferior to very fancy, at $4.90@6.50, and patent poor to fancy at $5.00@7.50; unsound stock at from $3.25@2.50; city mill extra at $5.20@5.45, fair to choice, for West Indies; do. for England, $4.15@4.60 for very poor to very choice; do. trade and family extras, $5.50@6.50; do. for South America, $5.25@5.50 for standard to choice brands; No. 2 at $2.50@3.25 for very poor to very choice.

FRESH FRUITS.—It has been a rough week for the peach trade. The heaviest supplies of the season have met wet weather, which checked large steady sales. Then the later offerings had a bad market on account of the tender condition of fruit. The rain storm of the 16th to 18th extended to Delaware and damaged the shipping quality of much stock. This was severely the case in larger sizes of Mixons and Crawfords. Supplies of the past few days add up baskets. Prices opened low, but not low enough to prevent a surplus that had to be sold at buyers' option, so that in the average little was returned to owners. The entire supply of Friday did not clear 30c. per basket. To-day the demand is fair, as fruit is in poor or bad keeping order; baskets quoted 30@40c.; crates, poor to good, 20@50c.; extra, 75c. Fair grades of N. J. begin to come. Receipts of the season thus far add up nearly one-quarter of a million baskets, exclusive of a large quantity that has gone directly eastward.

The weather has been severe upon fruits generally, and only prime lots hold a steady position; still prices are fair, considering the low peach market that has to be contended against.

Apples, red Astrachan, up-river, ₹ bbl., $2.00@2.50; do., Jersey, $1.50@2; Blush Pippin, $2@2.50; Orange do., prime, $1@1.50; Strawberry, $1.25@1.75; Sour Bough, $1.25@1.75; Sweet do., $1.25@1.75; mixed lots, Western N. Y., $1.25@1.50. Pears, Bartlett, up-river, per bbl., $2@3; Jersey, $2@3; Flemish Beauty, up-river, $2; Clapp's Favorite, up-river, $2@3; Bell, fair to prime, $1.50@1.75; cooking, $1@1.50. Grapes, Delaware, Southern, ₹ lb., 3@10c.; Ives, ₹ case of 18 3-lb. boxes, $2@3.50; Concord, ₹ case of 18 3-lb. boxes, $2.50@3; do., Southern, in baskets, ₹ lb., 3@5c.; Ives, Southern, in baskets, ₹ lb., 3@5c.; do., Jersey and Delaware, bulk, ₹ lb., 3@5c. Plums, up-river, Magnum Bonum, per bbl., $5; Egg, $3@4; Green Gage, $3@4; Blue Gage, $3@4; Lombard, $2@3; common green, $2@2.50; Md. and Del. Damson, per bu., $1.50@2. Whortleberries, Jersey, fair to good, per 11-qt. box, 40@50c. Watermelons, Jersey, Black Spanish, per 100, $5@10; Md., selects, $12@20; do., without selection, $5@10; Nantucket, prime, $5@10; culls, $2@5. Cantaloupes, Hackensack, per bbl., 25c.@$1. Grapes, Black Hamburg, per lb., 25@50c.; Muscat, 25@50c.; Sweet Water, 20@25c. Receipts of peanuts are very light, the demand continues fair and prices rule strong; the remaining stock in Norfolk is said to be but little over 3,000 bags: Va. hand-picked, $1.50@1.55; fancy, $1.42½@1.45; extra prime, $1.37½@1.40; good to prime, $1.30@1.35; shelled, per lb., 5½c.

The Prodncers' Price Current says of cranberries: "The crop advices so far received indicate as follows: In New Jersey the vine worm, drought and rot have caused much damage, and the probabilities are that the crop will be light, perhaps not larger than that of last year. Cape Cod reports that frosts, drought and worms have done some injury, but the crop promises to equal that of last year if nothing seriously adverse occurs between the present time and harvesting. Massachusetts and Rhode Island reports are much the same as those from the Cape. Taking the whole of New England, it is probable that the crop will be larger than that of last year but not so large as that of two years ago. Wisconsin advices were generally favorable for a large yield, estimated at 15,000 barrels in excess of the heavy crop of last year, until this week. Now we have advices of injury to the crop in the Valley of the Wisconsin River by recent droughts and frosts."

GRAIN.—Wheat has been stronger and more active; latest sales are of No. 1 amber at $1.10¾@1.11; No. 2 amber at $1.10@1.10¾ do., August option, at $1.10¾; do., September option, at $1.09¾@1.10; ungraded amber at $1.02¾@1.11; extra white at $1.11¾; No. 1 white at $1.11¾@1.11¾; do., August option, at $1.11¾@1.11¾; do., September option, at $1.11; do., No. 2 white at $1.09¾@1.09¾; No. 3 white at $1.02¾@1.03; ungraded white at $1.03@1.10¾; No. 1 red at $1.10¾@1.11; No. 2 red at $1.10@1.10¾; do., August option, at $1.10@1.10¾; do., September option, at $1.10@1.10¾; do. October option, at $1.10@1.10¾; do. No. 3 red at $1.07@1.08; ungraded red at 97c.@$1.10; mixed winter at 1.08@1.09; Chicago No. 2 spring (new crop to arrive) at $1.02; do. (new crop, special September), at $1.02; New York do., new crop, at $1.03; do., for October, at $1.01¾; No. 3 spring at 90c.; No. 4 spring, at 83@83½c.; rejected spring at 72@72½c.; ungraded spring at 90@96c.; No. 2 red, September delivery, $1.09¾; do., last half of October, $1.01¾; No. 1 white, September, $1.11. Rye at 64c. for Western and 67c. for State. Corn has been active, and closed at for New York No. 2 afloat at 46¾@46¾c.; do., August at 46½c.; do. September at 47c.; do. October at 47¾c.; New York steamer mixed quoted at 46@46¾c.; do. August at 46c. bid and 46½c. asked; do. September, at 46¾c.; do. October at 47c. bid and 47¾c. asked; ungraded Western mixed at 46@46¾c.; No. 2 white at 57c.; round yellow lat 58c. asked; yellow Western at 47¼@48c.; New York yellow at 48c.; Southern yellow at 47¾c. Oats are rather weak, fair supplies; latest sales of New York No. 1 white at 33c.; New York No. 2 white at 31@31½c.; New York No. 3 white at 32¾@32¾c.; No. 1 at 31¾@31¾c.; No. 2 at 31@31¾c.; No. 3 at 30c.; rejected at 28c.; ungraded mixed Western at 28¾@32c.; white do. at 32½@33c.; white State at 34@39c.; mixed State at 34; No. 2 Chicago at 31½c.

HAY AND STRAW—are in liberal receipt, but demand is good and prices hold steady.

New hay is at 50c. for shipping; 70@80c. for prime, and 55@60c. for medium. Old hay at 50c. for shipping and 70@85c. for prime retail qualities; medium at 50@65c. Straw at 45@49c. for long rye, 40@45c for short rye, and oat at 30@35c.

HOPS.—The receipts for the week were nearly 800 bales in excess of the exports, and as most of the arrivals (with the exception of Pacific coast hops) are of medium and low grades, the natural result is that the market for such is a shade easier. The reported improvement of crop prospects in New York State and Europe may have an effect on the value of the new crop, but until the entire harvest is secured and the result positively known, little apprehension need be felt as to the value of the few prime 1878 hops remaining, while older growths and poor grades already feel the effect.

Quotations are for New York's, new crop, prime choice, 14@18c.; New York's, new crop, medium, 10@12; New York's, new crop, low to fair, 7@9; Eastern, 8@12; Western, 8@11; Yearlings, 4@10; Olds, all growths, 3@5; Pacific coast, nominal, 9@15.

OIL-CAKE.—Western is quoted $28 per ton.

POULTRY AND GAME.—Live chickens again lower. Market generally easy, with a free supply.

Chickens, large per lb., 12@13c.; small, 10@11c.; fowls, N. J., 10½c.; Western, 9@10c.; Southern, 9@9½c.; roosters, old, 5c.; ducks, ₹ pair, 35@70c.; geese, best, $1.50@1.75; others, $1.12@1.37. Turkeys, 10@12c.

Dressed shows no quotable change.

Turkeys, Phila., dry-picked, 16c.; State and Western, 13@14c.; chickens, Philadelphia, per lb, 16@19c.; State, 15@16c.; Western, 13@15c.; fowls, choice, ₹ lb., 13@14c.; other, 11@12c.; dry-picked, 15c.; ducks, spring, dry-picked, 12@16c.; other, 11@12c.

Game has merely a light offering of woodcock quoted at 70@90c. ₹ pair, the latter for State; squabs, tame, $1@1.75 ₹ doz.

PROVISIONS—Hog products have been in very fair demand and prices closed strong. Mess for prompt delivery quoted at $8.30@8.90 for ordinary brands: August, $8.70@8.80; September, $8.70@8.80; October, $8.75@8.85; November at $8.80@8.90 for seller's option, old or new. Bacon at 5c. for long clear and 5¼c. for short clear. Beef—Plain mess at $10.25@11; extra mess at $11.50@12; packet at $11.50@12; tierced beef, city extra India mess, at $19@21. Beef hams at $17.50@18. Lard at $5.57½@6 for spot, Aug. & Sept.; $6.02½ for October. Stearine at 6¾@6¾c. for Western. Tallow at 5¾@5¾c. for prime.

SEED.—Clover is in demand and quoted at 6¾@7¼c. for Western; timothy at $1.70@1.75.

TOBACCO.—There has not been much export demand and the home trade has been moderate, with prices essentially as last week.

VEGETABLES.—Exports of potatoes for week, 5,121 bbls. Supplies coming from all points and the market remains easy. Choice potatoes; $1.50 ₹ bbl.; other, $1@1.12; culls, 50@75c.; Sweet Virginia, $3.50@5.75; Del., $4@4.25. Cabbage lower. Green corn, extra large, per 100, 25@50c.; do., poor, 40@50c.; cucumbers, L. I., 30@50c.; do., pickles, ₹ M, $1.00; tomatoes, L. I., near-by, per crate, 20@30c.; string beans, ₹ bag, $1.25; Lima beans, $1@1.50; squash, L. I. yellow, ₹ bbl., 50c.; do., do., white, 50c.; do., marrow, 75c.; green peas, L. I., ₹ bag, $1@1.75; cabbages, flat Dutch, per 100, $2@3; onions, white, per bbl., $2.25@2.50; red, $2; yellow, $2@2.50; beets, N. J., per 100 bchs, $1@1.25; Russia turnips, per bbl., 75c.@$1; carrots, $1@1.25; egg plant, L. I. and near-by, per 100, $1.50@$2; okra, Jersey, per 100, 15c.; peppers, bullnose, per bbl., $1@1.25.

WOOL.—There is a strong temper to the market, with a liberal inquiry from manufacturers. X and XX fleeces quoted at 38@39c., and No. 1 at 40@41c.

Sales of X, XXX and No. 1 Ohio at 37½@40c.; No. 1 do. at 41c.; Virginia at 31c.; spring Texas at 16@28½c.; do. at 20@25c.; spring California at 20@28c; Territory at 29@31c.; unwashed Indiana at 31@32c.; unwashed Western at 30@32½c.; Pennsylvania, at 30c.; scoured Texas at 51c@62c.; Mexican at 16c.; choice Oregon at 38c.; domestic nolls at 40@43c.; low do. at 30c.

LIVE STOCK MARKETS.

NEW YORK, Saturday, Aug. 23.

BEEVES.—Receipts for the week, 10,443 head; do. last week, 12,982 do. Good Cattle was about equal to the supply, and the offerings were sold out at strong Wednesday's price, although some sellers report an easier feeling toward the close. Common and Medium Cattle have been in disfavor all the week, partly on account of the rather limited supply of good stock; and the depression and weakness which was so apparent on Wednesday and yesterday amounted to a decline to-day of at least ½c. per lb, in some instances possibly a trifle more. Two carloads of stale Texans sold at 6¾c. to dress 55 lb, and 50c. per head, and some 15 cars of fresh Colorados at 8¼@8½c., to dress 55@56 lb; a few rough Oxen and Stags went as low as 7¾c., to dress 55 lb, but the general range for Common to Fair Native Steers was from 8c. to dress 55 lb, to 8¾c. to dress 56 lb, with good to choice at 9@10c., to dress 56 lb, and extra at 10¾c. to dress 57 lb.

MILCH COWS.—Supplies heavy and prices weak; the range is $25@$55 per head. Sales mainly at $30@$40.

VEAL CALVES.—Arrivals are liberal and prices low for common stock. It is useless to send inferior grass calves here; 1¾c. was paid for a car-load. Fair to good grassers and buttermilk, 3@3c.; common to prime veals, 4@6c., the extreme for N. J.

SHEEP AND LAMBS.—Receipts for the week, 31,238 head; do. last week, 32,212 do. The demand is not sharp and prime stock sells best. Sheep quoted, 4@5¾c.; lambs, 4¾@6¾c. Mixed lots, sheep and lambs, have sold at 4¾c.

SWINE.—Receipts for the week, 20,610 head; do. last week, 17,057 do. The market is easily supplied at the moment, and prices are lower with the comparatively free arrivals. Ordinary quoted, 3¾@4c.; prime, 4¼c. ₹ lb.; city dressed, $4.50@5.62 ₹ 100.

A COLLEGE STORY.

BY ELEANOR KIRK.

ARTHUR Hoyt looked at himself in the glass seriously, and without self-love or self-prejudice. He saw there a frank, good-natured face, a pair of blue eyes, and a mass of curly brown hair. As far as he could judge, there was nothing particularly out of the way with his countenance.

"Say, Dick," he began, to his room-mate, who was puzzling over a page of Xenophon, "I've been taking account of stock, and I don't see anything unpardonably wrong about my features. They are not angular enough to be called sharp, nor level enough to be justly styled flat; so I can't exactly see the suitableness of the expression which has somehow come to be my college cognomen."

"Don't be a fool!" growled Dick, without looking up from his book.

"I have always been a great stickler for the fitness of things, eternal and temporal," continued Arthur; "and if to be 'A flat' is really applicable as a correct description of the impression my personal appearance makes on my companions, all right! I'd as soon respond to that name as any other; but if it's not mine, then, old fellow, it's got to be stopped!"

"If you'd rob hen-roosts, and steal the housekeeper's preserves, and lay traps to trip up old men and women, and raise Cain generally, you'd be the most popular fellow in college," said Dick, with a disdainful grimace, still with his eyes fixed on his book. "They let me alone, you see, because I don't care a hang for 'em, and because they know I'm as poor as poverty, and as dull as a hard-shell clam. You get ahead of 'em in class. I'm always in the rear. You have money to subscribe to everything there is going, and you refuse to spend it in riotous living. I havn't any money, and therefore I'm of no consequence. Whoever says that there isn't compensation for everything don't know what they are talking about."

"You're a patient old soldier," said Arthur, with a merry laugh, "and I wish I had some of your philosophy! But, the fact is, every time I'm called 'A flat,' I feel the fight tingling all over me. I am afraid that some time my fists will become unmanageable."

"I guess not!" Dick replied. "You'd only get yourself in a worse muss, besides having something to be sorry for all the days of your life, perhaps! But there's the bell, and I'm all out of the bolt-ropes, as usual."

But there's a row in camp!" said Arthur's right-hand neighbor, as the young men took their seats in class. "Some of the boys scared old Mrs. Allen into a fit last night, and they say it's a 'liner.' Nobody thinks she'll pull through. One of the fellows dressed up in white, and rode the old woman's cow clear into the kitchen. They let out the pig, and stoned the house, and broke her windows, and goodness knows what they didn't do. There won't be any show for the boys that cut up those capers."

"Well, there oughtn't to be!" said Arthur, indignantly.

Just then the Greek Professor entered the classroom, and, after surveying the students a moment said, with great seriousness:

"I am requested by the President to say to Arthur Hoyt and Richard Denham that they are to repair at once to the library, where the Faculty of this college wait to see them."

"All right, sir," responded Arthur, pleasantly. Conscious integrity made him bold. Dick arose slowly, and walked out in his usual dogged manner.

"Say, 'A flat,' you're in for it!" said one of the class, in a low tone, as the young man passed him. "Your turn has come now, 'A flat!' said another. "Mebbe you won't be so high and mighty now you're found out at last!"

"What do you suppose it is?" Dick inquired, as he came up with Arthur.

"Some contemptible trick of the boys," said Arthur; "but we shall soon know. Brace up, old fellow, for here we are."

A few words sufficed to put the visitors in possession of all they wanted to know. After a few preliminary remarks, such as having been led to expect better things from the young men before him, the President produced a large silk handkerchief, with "Arthur Hoyt" plainly marked in one corner.

"Does this belong to you, Hoyt?" the President inquired.

"It does, sir," replied Arthur, pleasantly.

"And is this yours?" the gentleman asked of Dick, presenting a crooked stick, or cane, which the young man was accustomed to carry on long walks.

"That's mine, sir," said Dick.

"And here is a cuff with 'A. Hoyt' marked on it," the President continued, "torn from the wrist, probably, in the pleasant excitement of frightening an innocent old woman into a fit. I shall be compelled to hold your property, sirs, until such time as the law of the college, or the law of the State, shall be passed upon you. Mrs. Allen is not expected to live."

"I am very sorry, sir," said Arthur, respectfully; "and I am sure Dick is, too; but what sort of justice is this that takes our guilt so entirely for granted? Your evidence is simply circumstantial, sir, and I wish to say here that I was never on Mrs. Allen's premises in my life, and I am quite sure Denham never was."

"I never was," said Dick, with characteristic doggedness, "and I never expect to be."

"What would you say, Hoyt, if I were to tell you that one of the professors saw you there last night?" inquired the President.

"I should say, sir," Arthur responded, quickly, "that the professor was greatly mistaken; but if you were to tell me that one of the students saw me there, I should say that student lied."

There was a straightforwardness in the attitude of these suspected young men that was irresistible, still everything was against them. The old woman had testified that morning that she heard the names of Hoyt and Denham pronounced more than once the night before. The conspiracy was well arranged, nothing, so far as known, having been left out in its calculation. Arthur was in his room alone all the previous evening, but, as he thought it over, there was absolutely no one to testify to this fact. Dick had taken one of his long walks into the country, returning at ten o'clock. There was no way of proving this, either, for Dick had not spoken to a soul, and there was literally no way by which he could prove an alibi. Nothing more could be said at present, and Arthur and his chum withdrew and passed slowly along to their room, as the President had ordered. On their way they met several students, who, it was plain to be seen, were waiting for them to leave the library.

"You can't most always tell a flat from a sharp," said one of the number, a young man who had been particularly offensive in his manner to Arthur. "We have all been mistaken in your character, my boy. I take notice that when these goody-goody fellows do take it into their soft pates to cut up, they generally beat the rest of us all hollow in the meanness of their efforts."

Arthur's face was scarlet, and his hands worked nervously. He was full of desire to knock this fellow down, and, under the exasperating circumstances, it was hardly to be wondered at; but the young man had been trained in a different school, so he valiantly turned on his heel and left his enemy without a word.—"Valiantly" is the proper term to describe Arthur Hoyt's behavior in this crisis. It would have taken physical strength only—and Arthur had plenty of that—to have flogged Steve Cary, the young man who had just publicly insulted him, but it required real valor to turn away without either word or blow. That afternoon the tidings of the death of Mrs. Allen threw the college into terrible excitement. Officers were promptly on hand, and Arthur and Dick were subjected to the most rigid scrutiny. The coroner's jury would convene the next morning, and until then, at any rate, the two young men were prisoners. The detective who had charge of them was a good-natured fellow, and after asking all sorts of questions, relevant and irrelevant, as it seemed to his companions, he finally said with a chuckle:

"They may be pretty smart up here in this college, but they've got the wrong pigs by the ears *this* time. Say boys, come out for a walk! I can keep an eye on you just as well out-doors as in the house, and mebbe it 'll chirp you up a bit."

So out they went, the detective asking all sorts of questions, it seemed to his companions for no other purpose than to make conversation. As they drew near the lake, a large and very deep sheet of water, Arthur saw that Cary was out in his—Arthur's—tiny, shallow shell of a boat.

"He'll have to be more careful, or he'll upset, as sure as fate!" said Arthur, more to himself than to those about him.

"'Twould be a pity to have him drown now!" growled Dick. "Great heavens! there he goes!"

Arthur, who had been watching the boat and its occupant, threw off his coat and his boots, and, before the detective could lay a hand on him, he had plunged into the water, and was making with all his might for the drowning man. Cary, could not swim, and when Arthur reached him he had come to the surface the second time. It required almost superhuman strength to bring him in, but the brave swimmer succeeded, and for a moment Arthur lay panting and exhausted beside the inanimate form he had snatched from the water. A half an hour later, the still unconscious young man was borne to the college. Arthur, forgetting that he was a prisoner, did all in his power toward his enemy's restoration. As they removed his coat, a large Russia-leather pocketbook dropped to the floor, and this Arthur took into his own possession.

"You had better change your clothes at once, Hoyt!" a kind voice said, after all had been done. Arthur turned, and saw the President.

"All right, sir," said the young man, presenting Cary's pocketbook. I was afraid this might fall into improper hands, sir. It seems very full of papers."

"I hope I haven't wronged you," said the President, with considerable feeling.

"Rather hope that you have, sir," said Arthur, with a smile; "if you have wronged us, then we are innocent, you know; but, whatever the result, I shall always feel that you have acted according to your best judgment."

That evening, as Arthur, Dick and the detective sat in their room, waiting for they knew not what, a knock on the door was followed by the entrance of the President.

"Officer," he said, with trembling voice, "you can go to the parlor, if you please. These young men are not guilty, therefore they require no guard."

"I knew that afore," said the detective, as he hastily left the room.

"The pocketbook you gave me, Arthur," the President began, "has solved the mystery. There was but one student engaged in the miserable affair, and he has passed to his account," he continued, reverently. "He was joined by some young men from the city—what young men we shall probably never find out. I should have been more careful, boys," and now the tears rolled down the good man's face. "I have cleared your name before the whole college, and that is all I can do. Even with poor Cary dead upstairs, your friends and your enemies joined in a hearty cheer of goodwill when I told them what I thought necessary."

Somehow it came to pass from that day till the day Arthur Hoyt left college, he was never again called "A flat."—*Christian Union.*

LETTERS FROM BOYS AND GIRLS.

DEAR RURAL COUSINS.—I am sorry, indeed, to see so few letters from the boys and girls who *used* to write for the RURAL, therefore I repeat the question asked by Old Maid some time ago, "What has become of them?" I miss their spicy letters very much and am half inclined to side with Old Maid in the opinion that they have jumped the broomstick, so to speak, and forgotten us. Should this be the case, my dear Maid, I think we have been willfully slighted in not having been invited on that occasion. Autumn, my favorite season of the year, is now fast approaching, when the cool bleak winds of September sweep over our parched continent, cooling our feverish, aching brows, and fighting its battles with the much dreaded pestilence of the South. Now and then the wind becomes stronger, causing the waves to wash madly against the shores of the lake on which I spend the most of my spare moments. I love to sail on the water when it is rough, and the wind blows, and to hear the waves lap against the boat, when the sun is sinking to rest behind the dark gray mountains in the distance, casting its departing golden rays here and there between the giant oak trees whose huge boughs shriek and moan in a wild and wierd-like tone as they come in contact with each other. I enjoy all this as my boat lays rocking like a cockle shell upon the waters.

I love the winds continuous roar,
As it wildly shrieks from shore to shore;
I love the billows' frantic bound,
Old Ocean's wild and ceaseless sound.

I am glad to see that some of the cousins mention books in their letters, and should like to have them write and mention some of their favorite authors. I am myself a great admirer of books, especially the poetical works of Milton, Poe and Shakespeare. I think Lenora W. hardly did justice to our interesting correspondent from the Sandwich Islands. I am well pleased to hear that Mr. Schwyn liked my last letter, but I wish to remind him that I do not belong to the tender sex. Slayerofconceit the II. deserves thanks for his continued efforts to break the oppressive silence which prevailed when he first made his appearance in our circle; may he not be so short-lived as his far-famed predecessor. I should like to see more of those brilliant effusions written by Jumping Jack. Will Rural Lover come again? The remark I made in my last letter concerning her was not intended for an insult, therefore she will please not to take it as such. I ask myself over and over again, "Has Fern forsaken us?" and the only answer I get is the sad echo of my own voice. I should like to hear again from Cousin Empste, of Riverside, whose kind letters won at once my cousinly affection. And now, dear cousins, as I think my letter is becoming a fit candidate for the waste basket, I will close, bidding you all an affectionate good night. IVY.

Ivysrest, N. Y.

DEAR UNCLE MARK:—I have been reading the letters from the cousins with great interest, so I thought I would write too. I would like to be a member of the Horticultural Club, if there is yet room for me. I have a fine lot of house plants, of which the majority are Fuchsias. I also have a flower bed. They are nearly all in bloom now. I have the care of a good portion of our garden. Last year I learned budding. I budded several kinds of roses, and had good success. I am trying it again this year. If this does not find its way to the waste basket, I will try again. I remain

Your affectionate niece,

Wayne Co., Ohio. ANNA CROUSE.

DEAR UNCLE MARK:—I thank you for the bulb and seeds you sent me. The Gladiolus is 27 inches high and is just throwing up a flowering stalk. My garden is suffering some from drought, but I still give it my care and attention. I have not sold anything yet, but hope soon to sell some sweet tomato pickles. I will tell the cousins how I make them. Put ripe tomatoes (small sized are best) in two-quart glass cans, and cover with water sweetened with honey or brown sugar, and a few sticks of cinnamon. For home use we take stone jars of any size. Hoping to hear from our new aunt soon, I will close with good wishes for the "Club." Your niece, MARY E. WRIGHT.

Tuscola Co., Mich.

DEAR UNCLE MARK:—I am eleven years old, and would like very much to join the Horticultural Club. I like to read the RURAL, and especially the letters from the little folks. I have some flowers, and have raised a Pinus edulis from the seed you sent out last spring. It does not grow very fast. I planted it in the house. We have to dig ditches around our flower-beds to water them, as it does not rain very often here. Your affectionate niece,

Larimer Co., Colo. MARY NETTIE BLOUNT.

DEAR UNCLE MARK:—I am a little girl, only nine years old. I have always liked gardening, and for a number of years I have had a bed in the garden to care for. This year I have more. I have one flower bed, some Hubbard squash vines, carrots and other vegetables. I try to take good care of them all. I like the RURAL very much, especially the reading for the young. I would be much pleased to join the Horticultural Club. Your young friend, ANNA L. FARR.

Wyoming Co., N. Y.

DEAR UNCLE MARK:—I write to ask if I can become a member of the Horticultural Club. If I can be admitted place my name upon the list. I take the RURAL and like it very much. I am 15 years old and like to work in the garden. I have quite a large plot planted with pop-corn which is looking nicely. Hoping to see this in the RURAL

I remain yours truly. C. A. PORTER.

Stephenson Co., Ill.

DEAR UNCLE MARK:—Would you take a young Canadian into your Horticultural Club? If so, I would like to join. I like to read the RURAL and the letters from the Cousins. We have a small flower garden in which are Pæonies, Lilies, Pinks and Dahlias. If I see this in print I will write again, JOHN HORNE,

Ontario, Canada,

Sabbath Reading.

RINK RELIGION.

THE advent of Mr. Moody gave a great impetus to a kind of observance which was already prevailing in this country, and which has sometimes been styled rink religion. It is a well-known fact that religious services held in theatres, "colosseums," rinks and such like places have a strong attraction for a certain class of persons; and it is equally true that there is a class of Christian "workers" who have a penchant for carrying on services in these places.

The reasons why the "masses," as they are called, are fond of congregating in these places are not far to seek. In the first place, the unfitness of the place is attractive to many minds. A religious service in a church is a seemly and decorous thing; but a religious service in a rink or a circus-tent is something out of the common; there is a pleasing incongruity about it which to many persons is highly amusing. They attend such a service for the same reason that they go to see the five-legged calf or the two-headed nightingale.

These places are haunted not only by worshippers of the incongruous, but also by that large class of persons who have been happily described as "the camp-stool congregation"—those who always go where the newest sensation is, and who are never truly happy except when they are in a crowd.

Of these two classes there are enough in any considerable community to crowd the largest assembly room that can be found in the neighborhood. And when the crowd is gathered, it is easy to stir up a considerable amount of feeling. The persons who compose such an auditory are generally excitable; the lively music, the vigorous and pathetic appeals of the preachers readily affect them, and we often seem to see large numbers of them entering upon the religious life.

Such services, however, come to an end before many weeks, and then these new disciples find themselves suddenly set adrift. All their religious experience has been connected with the rink or the tabernacle; when that is closed they are not drawn in any other direction. The influence of locality upon the religious life is a great deal stronger than some persons think; the place where prayer is wont to be made, is the place to which those who have learned to pray love to betake themselves: the less cultivated the worshiper is, the less inclined is he to worship in a strange place; the more is he dependent for his religious enjoyment upon local associations. Though the churches all open their doors for these converts of the rink, very many of them will fail to enter the churches; or if they do go a few times, all the surroundings are strange to them and they soon cease to appear in the places where they would be welcome.

It was the observation of this fact that led Mr. Moody, during the last winter to seek to connect his work more directly with the churches. He has come to feel that it is far better to make use of the church as the instrument of evangelization than to create other machinery, simply because the results of his work are in this way so much more fully harvested and secured. The method which he followed last winter in Baltimore is less spectacular and striking than that which he had followed previously; but in the long run he thinks it will be more productive; and the adoption of it does great credit to his head and his heart. It shows that he possesses sound sense, and that he is not a selfish seeker after notoriety.

It is to be hoped that Mr. Moody's conclusion will be adopted by those who have been hitherto his most ardent disciples, and who have been inclined to do their Christian work almost wholly outside of the churches. It is true that there are destitute neighborhoods, in which there are no churches, and in which religious service of some kind ought to be held. For this kind of missionary work there is room and reason. But the practice of carrying on outside religious services of an intermittent character in the immediate neighborhood of churches is a practice which in the majority of cases ought to be discouraged. The people who are gathered into these places ought to be gathered into the churches; their religious life is likely to have a healthier and more fruitful development if it is "planted in the courts of the Lord" than if it springs up in connection with some sporadic religious service. It may be said that the people who attend these outside services think that they are not wanted in the churches, and will not enter them. If this is the case then the first thing to do is to disabuse their minds of this error, and make them believe that the churches are the very places where they are wanted. And if this is not altogether an error of theirs—and if there are some features of the church administration which are calculated to discourage their attendance—then the first thing to be done is to reform the church, so that it shall offer a hearty and emphatic welcome to those who most need the gospel. To one or the other of these labors those zealous Christians who are now devoting themselves to the propagation of rink religion might well turn their energies. If the time and money and zeal and tact that they now expend in keeping up religious meetings of one kind or other outside the churches in their neighborhood, were expended in gathering these outsiders into the churches and making the churches places into which all the people would delight to go, the results of their labors would be larger and more permanent.—*Sunday Afternoon.*

OUR moral power will be precisely in proportion to the measure of our grace: if we have little grace we shall do but little good; but if we are "filled with all the fullness of God," we shall exert a vast influence upon the interests of men.—*Dr. Peck.*

A BELIEVER studies more how to adorn the cross than how to avoid it.—*Wilcox.*

PERSONAL ITEMS.

Ex-Senator Chaffee, of Colorado, is said to be worth $6,000,000.

An Indianapolis man has been arrested for violating Indiana law by marrying his step-daughter.

A Wisconsin boy fired at what he thought was a scarecrow, and hit a tramp, whose ragged clothes were flapping in the wind as he crossed a field.

George Hoag gave a decision, as umpire of a Chicago game of base ball, that displeased one side's captain, who struck him a fatal blow with a bat.

Mrs. Kempt, of Bridgeton, Mich., named her boy Christ, not meaning to be sacrilegious. He grew up to be a bad man, and is now in prison for stealing.

Eben Waterbury, aged 72, fell in love with a young woman at Ellsworth, Ill, and gained her consent to marry; but his stern son interposed, and the old man committed suicide.

The London newspapers tell of a belle who paid $25 to have the initials of her lover's name tattooed on her arm, and later, having quarrelled with him, was offering $500 for a means of obliteration.

Lawyer Dembitz of St. Louis is invariably polite. A long and terrific roll of thunder stopped him in an address to a jury, and on resuming he said: "Gentlemen, pray excuse this interruption."

Major Fred. Nicholls, of the Memphis Avalanche, is the only member of the staff who has not fled from the city. He edits, sets type and prints the paper without assistance. He alone stood to his post during last year's epidemic.

About two years ago James Hartland was sent to jail in England, and vowed he'd murder one of the committing magistrates. On August 8 he kept his word by putting three bullets into the Rev. J. Rooker, for 32 years vicar of Gornal.

Bob McCorkle, lately hanged at Taylorville, N. C., was one of the few murderers who did not feel sure of going from the scaffold direct to heaven. "Kind friends," were his last words, "remember me in your prayers to-night, for I don't know where I'll be."

European rulers probably do not enjoy traveling. The Czar was lately hurried from Livadia to Moscow ahead of the appointed time, in consequence of the discovery of a plot to assassinate him on the way. King Humbert journeyed by night from Genoa, because he feared death at the hands of a revolutionary society, into which one of his spies had penetrated.

Thomas H. Stopfell and Helen Reed were married at Ebensburgh, Pa., against the Reed family's wishes, the bride's brother, particularly, having opposed the match. The young couple were at the village hotel, getting ready to start on a honeymoon tour, and the brother dashed into the room in great rage, and attempted to shoot Stopfell. The girl saved her husband's life by seizing her brother's pistol; but the excitement speedily caused her death.

H. F. Beecher, son of the Rev. H. W. Beecher, left Kern county, Cal., three or four months ago to superintend the driving of 18,000 sheep, the property of General Beale, to Salt Lake City. In crossing the Alkali desert, over which the drovers and their herds traveled for eight days and nights, finding no water for the animals, 10,067 sheep perished. General Beale was offered $15,000 for the herds at the start, but refusing, now finds himself the loser by some $7,000.

Mr. Montagu Corry, Lord Beaconsfield's secretary, is his *alter ego*. Lord Beaconsfield hardly ever even dines out without him, and he always accompanies his chief on his visits to Osborne. Mr. Corry is son of the late Right Honorable H. L. Corry, and first cousin of the Irish Earl of Belmore, who married Mr. Gladstone's niece. His mother was sister of the Whig Earl of Shaftesbury. The Corry family are red-hot Irish Protestants. Mr. Corry has considerable private means, enabling him to refuse the good places his patron has offered him.

Owen Wall, the famous negro banjo player of North Carolina, rode with a party of tourists through the mountains, near Rockingham, on Saturday, the gayest of the gay. He sat in his saddle Turkish fashion, carelessly picked on his banjo and sang "Dandy Jim of Caroline," the chorus of which runs:

"My ole marster tole me so,
Ise de bes' lookin' nigger in de countree, O!
I look in de glass and foun' 'twas so,
Jes as old marster told me, O."

Just as Owen finished the song, and while the gentlemen were applauding, he fell from the saddle, stone dead.

Oliver Dalrymple, the wheat king, lives at Fargo, Dakota. He may be seen anywhere and everywhere on his mammoth estates throughout the day. Afoot, on horseback or in carriage, he is always on hand to look after his own and his partner's interests, and every detail of the great business appears to him familiar. He is a tall, thin, pleasant-looking gentleman of about 45 years of age, and though he would not be picked out in an assemblage as a great man, any one who visits the Dalrymple farms, in the Red River Valley, and sees the monarch of the American wheat fields at home, cannot but come away enthusiastic in praise of an executive ability which may well be compared to that of the manager of a great military campaign.

A Russian Socialist, condemned to the mines of Siberia, desired to commit suicide, but the cell in which he was confined, at Odessa, contained nothing that could be used in any ordinary way against his life. So he tore off the top of his lamp, lighted the petroleum oil in it, and sat over it in such a way as slowly to burn to death. "Such was the man's determination," says a correspondent of the London Times. "that neither during the act nor at the hospital whither he was removed only to linger and die did he utter a word or give any sign indicative of suffering, and no one appears to be able to account for the strange deed."

Fair skin, rosy cheeks, buoyant spirits and the sweetest breath in Hop Bitters. See notice.

Attention, Owners of Horses!

THE ZINC COLLAR PAD is the only permanent and reliable pad or sore-necked horses or mules, that has ever been produced, and has been greatly improved since Jan. 1st, by being specially fitted to first-class tight and loose-fitting collars. The new pad of proper sizes will fit either. Being of smooth metal, they do not wear the mane, and always dispense, when needed, their medicinal virtues. There are over a million and a half of them in use. Pads made of other material can only temporarily have any curative properties whatever, and soon become worthless by abrasion in cleaning them. The Zinc Pads are sold by leading Saddlery Houses throughout the country, and harness makers generally. Ask your Harness Maker for them.
Manufactured by ZINC COLLAR PAD CO.,
BUCHANAN, MICH.

Horse-Powers,

For One, Two and Three Horses.
MACHINES FOR
Threshing and Cleaning Grain and Sawing Wood.
Patented, Manufactured and Sold by
A. W. GRAY'S SONS,
Middletown Springs, Vt.
The machines with the improvements are the result of more than thirty years' careful study and experiment.
The proprietors are the inventors, ever have been and still are the sole manufacturers.
We have labored from the first to produce machines that will be durable, tasty, compact, portable, and that will run with the least possible friction.
We believe that we manufacture the best machine of the kind in the country.
Our machines have never failed to receive the highest award at all competitive exhibitions.

Wit and Humor.

SHE SEWED ON HIS BUTTONS.

OLD Blummer is tight-fisted. Several days ago he said to his wife: "Maria, I want you to look over that broadcloth vest of mine and put new buttons on it, 'cause I'm going to a card-party to-night."

"But, Ely," answered Mrs. Blummer, "I haven't any buttons to match that vest, and—"

"Thunder!" broke in Blummer, "the idea of a woman keeping house as long as you have, and pretendin' to be out of buttons. By George! I b'lieve you'll ask me for money to buy 'em with next."

That evening Blummer hurried through his supper and began arraying himself for the card-party. Presently he called for the broadcloth vest, and Mrs. Blummer, with marvelous promptitude, handed it to him. He took it, hastily unfolded it, and then, as his eye took in his complete appearance, he stood as one transfixed. It was a six button vest, and there were six buttons on it, and the dazed optic of Mr. Blummer observed that the first, or top one, was a tiny shirt button, and the next was a brass army overcoat button with U. S. gleaming upon it, and that number three was an oxydized silver affair, and that number four was a horn button evidently from the back of one of the Puritan fathers' coats, and then came a suspender button, and then, as the dazzled eyes of old Blummer reached the bottom button—a poker chip (found in Blummer's pocket) with two holes punched through it—he gave a snort that made the chandelier jingle. There is, after all, a fine sense of humor about Blummer, and he laughed till he cried. And there won't be any button money grudged in that household hereafter.—*Cleveland Herald.*

ESTRANGED.—It was a warm afternoon, and young Cummagen did not go in the house, but sat down in the pleasant porch, as was his custom, after ringing the bell. Her little sister came to the door and looked at him with some curiosity. "Does your sister Mabel know I am here, Nellie?" he asked. "Oh, yes," replied the innocent prattler, "I guess she does; she told me to come out and see how shady it made the front yard when you put your feet up on the porch railing." He took them down and sat on them.

SMALL GIRL, very harshly, to her doll in a toy carriage, dolly having tumbled from her seat: "Set right up, you horrid old thing! Don't you dare to do that again, or I'll whip you." Seeing a passer-by, who had approached unobserved, she modified her voice, and continued in dulcet tones: "Now, sit up straight, darling, and be careful not to fall and hurt yourself."—*Lowell Mail.*

A NEW JERSEY firm is putting up a Hackensack brand of mosquitoes, and palming them off on the public as potted lobsters.—*Wheeling Sunday Leader.*

No comment is necessary on this assertion, excepting to refer to the fact that it is a *Sunday* paper which prints it.

"No, sir," said the gentleman from Pittsburg, "I was not in the war, but my brother was, and he was wounded." "Ah, indeed. Seriously wounded?" "Yes, sir; he was shot in the horse."

A POEM in a rural paper begins: "'Twere better far that I had died." After perusing the effusion, candor compels us to agree with the writer.

Various.

SARA BERNHARDT.

A PLEA FOR A PURE WOMANHOOD AND A PURE DRAMA.

EVERY woman who cares for woman's purity and manhood's honor will endorse the following words, written by Mrs. Helen M. Gougar, in her "Bric-a-Brac" columns of the Lafayette Courier:

It is a recognized fact among the amusement-loving people of the world that Sara Bernhardt is coming to America. This queen of the Comedie Francaise is an artist in more ways than one and the day she sets foot upon the American stage will be an important one in the history of our dramatic representation. The eyes of the whole refined world will be turned upon us, and we will be judged according to our reception of this gifted woman. An exchange says of her: "Sara Bernhardt, the world-renowned French actress, noted for her remarkable and varied intellectual attainments and eccentricities—a tragedienne who is a sculptress, a painter, a writer, a poet, and aeronaut; who has an insurmountable horror of fools, dresses in male costume, has a skeleton for a constant companion, and is a terror to authors and managers." Brilliant, so fragile that she says of herself; "Je suis toujours malade." aggressive, tyrannical, openly immoral; such is the character of the woman who will come to our shores as a "star," to leave her impress, not readily effaced, whatever it may be, upon the moral standard of the American drama.

The powerful influence of the drama has been felt by every nation, for good or for evil, and it is an agent second to no other in forming the character of the people. Upon our own it makes its influence felt more readily than upon any other, from the fact that we so hastily incorporate all that is new, exciting and entertaining, and fail to consider the results until they are actually upon us.

At present we may boast of a comparatively pure national drama. We point with pride to its growing influence, and to the fact that purity of character, in both the renowned men and women on the American stage is its crowning virtue. Upon such men as Booth, Jefferson, Forest, and to the high type of womanhood as shown in the private character of Lotta, Mrs. Landers, Modjeska, Cary, Kellogg, Litta and many others of as great note, whom the Americans love to honor because of their virtue as well as their talent, we look with the same commendable spirit. We cannot afford to cast a slur upon the estimation in which we hold the record of these men and women, by receiving with open arms this brilliant but decidedly immoral woman. With her success upon our stage will come the seal of immorality that has caused kings and potentates in power to exile theatrical representations from national patronage and social influence. With her success, a flood of French immoralities will pour in upon us to be dreaded by all good people, all those who hope to see the drama made a power for good instead of evil, a power arm-in-arm with the press and pulpit to educate and refine, rather than to corrupt and debase the thousands of people who so readily drink in its pure or impure draughts. If Sara Bernhardt is received as she and her managers expect her to be, it will be a blow to pure womanhood, and to a pure drama that it will take years for us to recover from if we ever do, and one to be deeply regretted at this period of our unsettled social condition and of our national history.

CHARITY BEGINS AT HOME.

Tommy—"WHAT BEASTLY WASTE!"

ZULULAND.

BEACONSFIELD is the author of two tragedies. "Alarcos" was written by him when he was a young man. It has just been performed in London and the papers speak of it as a mournful and sombre drama. His latest tragedy is of the same cast. It is being performed, but not in London. Here is a description of the principal scene in Beaconsfield's tragedy of "Zululand" as described by a South African correspondent. Speaking of the field of Isandula he says:

"In this ravine dead men lay thick—mere bones, with toughened, discolored skin, like leather, covering them, and clinging tight to them, the flesh all wasted away. Some were almost wholly dismembered—heaps of clammy yellow bones. Every man had been disemboweled. Some were scalped and others subjected to yet ghastlier mutilation. All the way up the slope I traced, by the ghastly token of dead men, the fitful line of flight. It was like a long string with knots in it, the string formed of single corpses, the knots of clusters of dead, where as it seemed, little groups might have gathered to make a hopeless, gallant stand and die."

USEFUL HINTS.

PERFUMES FROM ROSES.—Tincture of Roses.—Take the leaves of the common rose, place them, without pressing, in a large-mouthed bottle; pour some good spirits of wine over them, seal the bottle securely, and let them remain in a dry place for a month or two.

REMEDY FOR FRECKLES.—The following remedy has been found efficacious in Europe for freckles: Finely powdered sulpho-phenate of zinc, one part; oil of lemon, one part; pure alcohol, five parts; collodion, forty-five parts. To be mixed well together by trituration and applied to the skin.

TO REMOVE FRECKLES.—Scrape horseradish into a cup of cold sour milk; let it stand twelve hours; strain, and apply two or three times a day. Or, mix lemon juice, one ounce; pulverized borax, one-quarter drachm; sugar, one-half drachm; keep a few days in a glass bottle, then apply occasionally.

TO VENTILATE A ROOM.—To ventilate a room without draught, make a hole through the wall to the outer air, in a corner of the room just above the skirting. Through the hole put one arm of a tube three inches in diameter, and bent at right angles. The arm of the tube reaching to the outer air should be in length equal to the thickness of the wall, and the other arm should be two feet long, standing vertically in the corner of the room; if desired, it can be covered with paper of the same pattern as that on the wall. A tube of the diameter given above is sufficient to ventilate a room of moderate size.

THE USES OF THE LEMON.—A piece of lemon bound upon a corn will relieve it in a day or so. It should be renewed night and morning. The free use of lemon-juice and sugar will always relieve a cough. A lemon eaten before breakfast every day for a week or two will entirely prevent that feeling of lassitude peculiar to the approach of spring. Perhaps its most valuable property is its absolute power of detecting any of the injurious and even dangerous ingredients entering into the composition of so very many of the cosmetics and face-powders in the market. Every lady should subject her toilet-powder to this test. Place a tea-spoonful of the suspected powder in a glass, and add the juice of a lemon. If effervescence takes place it is an infallible proof that the powder is dangerous, and its use should be avoided, as it will ultimately injure the skin and destroy the beauty of the complexion.

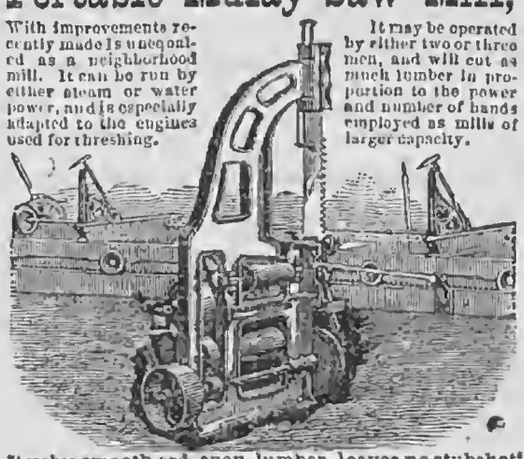
PREVENTING SEA-SICKNESS.—Of the many annoyances to which the traveling public is subject at this particular season sea-sickness is, perhaps, the most distressing. A perfect cure for this malady would rob ocean travel of half its terrors. No drug, however, has been discovered which acts as a specific. The cause of the sickness is largely, if not wholly, due to the involuntary and unexpected motions to which the passenger is subjected on board ship. These cause undue pressure upon the stomach and liver, and derange the action of those organs. To prevent this, attention has recently been called to an old plan, which is said to be very successful. It consists in regulating the act of breathing according to the pitching or rolling of the vessel, drawing in the breath as she rises, and breathing out as she falls into the trough of the waves. After a little experience the practice, it is said, becomes involuntary. When sea-sickness has fairly set in, the only thing to be done is to get rid of the extra bile thrown into the circulation, and to allay the irritation of the stomach. For the latter, brandy is the popular remedy, but cool effervescing drinks are preferable.

Easily Incurred, Terribly Obstinate,

is rheumatism. Even at the outset, the ordinary remedies are frequently powerless to cope with it. This is more particularly the case when a tendency to it is inherited. It should be combated before it becomes chronic. When the first twinges are felt, recourse should be had to Hostetter's Stomach Bitters, a depurent which expels from the blood those irritating principles which, by contact cause inflammation and pain in the muscles and joints. Poisonous medicines which are usually administered for this disease, but which, in a slight overdose, may terminate it by destroying life itself, should be avoided, and this safe and more effective medicine used instead. Those disorders of the bowels, stomach and liver which frequently accompany rheumatic and gouty ailments, are invariably removed by this excellent botanic corrective.

Portable Mulay Saw Mill,

With improvements recently made is unequaled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.



It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.

It makes smooth and even lumber, leaves no stubshot and will cut any sized log up to four feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to CHANDLER & TAYLOR, Indianapolis, Ind.

Mold's Ennobled Oats.

SEE ENGRAVING AND REMARKS.

NOTES FROM THE RURAL GROUNDS.

GENERAL REMARKS.

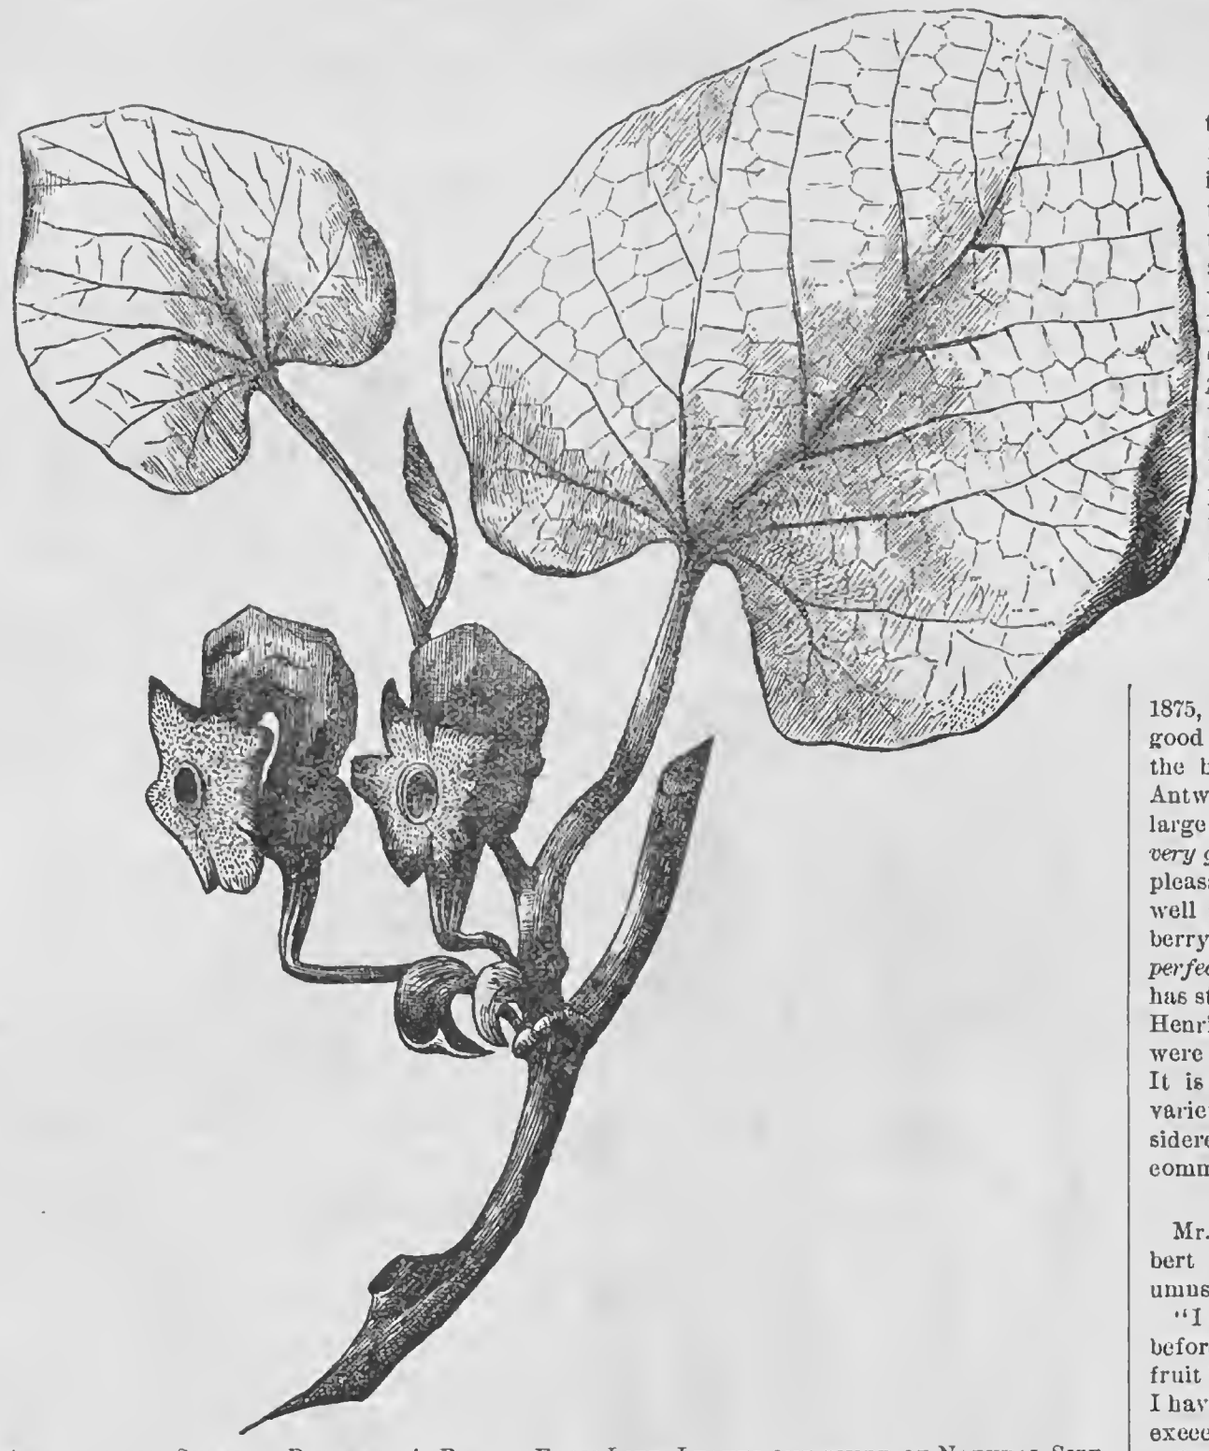
The experience of our late seed distribution has been a thorough but a costly teacher. The mistake which we made in that, viz., offering a *choice* of ten varieties from a list of twenty, caused an excessive amount of labor and a degree of confusion, which we hope entirely to avoid in the future. We shall offer no *choice*, but send the entire list to all of our subscribers who apply. A system of numbers and checks will also be adopted, which will enable us to send the seeds and plants to those who apply *in the order* of their applications, as well as to refer to the date of mailing, etc., should packages miscarry.

The success of our last seed distribution, and, indeed, of the RURAL NEW-YORKER, has been somewhat extraordinary. The paper is prosperous beyond its best hopes, and as regards standing, influence and the value of the articles with which its columns are filled, ranks to-day according to the published sentiments of our best men, and even of our contemporaries, as among the first journals of its class in the world. Our late free seed distribution has brought us thousands of thanks and expressions of approval from all parts of our country. The truth of our reiterated statements, that only the costliest and most valuable seeds of their kind would be offered, has been abundantly proven. The Beauty of Hebron potato to-day, is deemed the most valuable in cultivation, and the tubers from the thousands which we have sent out have been carefully saved for seed. As to Pearl Millet, we could fill our columns with what others have written as regards the immense amount of leaves and stalks which this plant produces under proper cultivation. While we have never thought so well of this as have many others, there seems to be no doubt that it will be cultivated in many parts of the North—as for years it has been in some parts of the South—as a valuable fodder plant. Blount's White Prolific Corn, which was sent to our subscribers as a supplementary distribution, has proven itself to be a more prolific variety of maize, and adapted to a wider range of country than *any other variety in cultivation*. No doubt, it would eventually have become as generally known as its merits entitle it to be. But the RURAL, by sending it to applicants free, has accomplished in a single season what would have required years had it been merely offered for sale in the usual way by dealers. We are not willing to conceal from ourselves or from the public that the introduction of this corn alone must prove of great benefit to the agricultural interests of the country. Defiance Wheat has proven of the highest value wherever spring wheats thrive, and we have ascertained by sowing a small quantity last fall that it may take a high rank as a winter variety. While we were distributing this free among our subscribers, dealers were charging from $15 to $20 per bushel for it, and it was in no case that we have heard of, sold for less than the first price. The Golden Rural tomato is conceded to be the earliest, most prolific and best of the yellow sorts. Of the many varieties of seeds of our finest hardiest shrubs included in our last free distribution, it is too soon to speak since most of them will not bloom until the second or third year.

We respectfully urge that the last free seed distributions of this journal have proven themselves of more value to our readers than the annual price of the RURAL NEW-YORKER, and we feel a right to insist that the entire management of the paper is proof of our sincere desire to advance the horticultural and agricultural interests of this country as our first aim. We call attention to the FACTS of the RURAL'S record under its present ownership—the strict exclusion of all unworthy advertisements; the enlargement of the paper; the reduction of price from $2.50 to $2.00; to our original engravings from life; to the writers the most distinguished of the United States, or of England, that have filled its pages; to its experiment grounds maintained at a considerable cost, and, finally to its free seed and plant distributions that, as to the actual value of the seeds as well as to the cost and labor of collecting and distributing them, have never been equaled by any other journal ever published, so far as we know. If acts speak louder than words, we refer to our acts without fear that our readers will not fully substantiate us, as proof that the RURAL is conducted with a benevolent and overshadowing desire to benefit the interests involved in the garden, farm and country home. In truth, with due respect, we would challenge our readers or our contemporaries, to show that the claims which we make are not strictly within the truth.

The proprietors for *themselves* cannot consistently ask for assistance from agents, readers, writers, subscribers or friends. To *render* assistance is precisely the object of conducting this journal, and the extent to which we are enabled to accomplish this is the measure of our reward. In this connection it may be said with propriety, especially as his name has never appeared in these columns, that the chief owner of the RURAL NEW-YORKER has not engaged in any active business, except, it may be, superintending farm operations, for many years, and that his circumstances are such as to place him beyond the need of any solicitude as to its pecuniary success. The success, therefore, which we crave is that the RURAL NEW-YORKER may attain to an unprecedented influence in the history of country-home journalism; it is the cause of agriculture and horticulture for which we beg assistance, and the owners are willing—nay, anxious—to spend the entire income of the paper so as best to subserve this worthy project.

At nearly one-half greater expense than last year we have secured plants and seeds for our next free seed distribution, and we assert that the value of the ten kinds offered would be, at a fair estimate, more than $2, the annual subscription price of this journal. Yet we claim that these are *not a premium*. It is our intention to send them to every subscriber that applies, but it is our *privilege* to do so, not our obligation. We do not offer them *for* new or *for* old subscribers. Our premium list offers compensation to all who are willing to assist in extending the RURAL'S circulation. All honorable enterprises of this kind intended to create or intensify an appreciation of useful or beautiful plants, must in the end reflect credit upon those who originate them. Should the distribution have the effect to add greatly to our present circulation, we shall have so much the more reason to congratulate ourselves. But were we positive that the increase in subscribers from this cause would not pay the cost of the seeds, we should send them just as freely, the same as in half-a-dozen cases we have sent new sorts of seeds during the past six months, to the members of our thrifty Youths' Horticultural Club. After the most careful consideration we could give to the subject, we have at length determined upon the following plants and seeds for our



ARISTOLOCHIA SIPHO. — DUTCHMAN'S PIPE. — FROM LIFE, LEAVES ONE-THIRD OF NATURAL SIZE.

Free Seed Distribution, 1879-80.

THE CUTHBERT RASPBERRY.—By reference to files of the RURAL NEW-YORKER, during the past eighteen months, and before we had ever thought of presenting plants of it to our readers, it will be found that we commended it as promising to be the most valuable of our hardy Red Raspberries. It has been tested by many impartial judges as well as by ourselves, and the following is a compilation of the most trustworthy information we can glean.

Rev. E. P. Roe writes us as follows:

CORNWALL-ON-HUDSON, N. Y., July 25, 1879.

EDS. RURAL NEW-YORKER:—I best express my opinion of the Cuthbert by stating that I planted, last spring, five times as many of this variety as of all others together, and that after seeing it in fruit once more, I am so pleased with it that I shall plant few other Raspberries this fall. Such definite, practical action counts for more than a whole dictionary of words. As far as I can now judge, it seems to me the most valuable Raspberry that has been well tested. I have taken pains to observe this Raspberry very closely. It is rather late in maturing, if this is a fault, and it may develop others. I state my opinion only up to the present time. E. P. ROE.

Judge Parry writes us as follows: This large and valuable Raspberry, which was originated a few years since by a gentleman of that name residing near New York city, has found a congenial soil in the State of New Jersey, where it makes a rapid and vigorous growth, is perfectly hardy, without protection of any kind, withstanding the extremes of heat and cold and producing abundance of very large, handsome, bright-red fruit, firm and delicious. We had berries this year that measured fully three inches in circumference, and the young canes are making a fine growth and now stand six feet high along the rows. I have seen them growing in several other places in New Jersey equally as well as in our own grounds, though on different kinds of soil, showing they do well where other Raspberries succeed.

In order to give them a fair trial with others, I planted, in a specimen lot, a few rows each of the following varieties, which came more or less highly recommended, viz.: Pride of the Hudson, Cuthbert, Norwalk Seedling, Henrietta, Early Prolific, Winant, Thwack and Reliance. We gave them all the same good treatment, and watched the result, which places the *Cuthbert* far ahead of all the others in abundance of large, handsome fruit and strong, vigorous canes and foliage. WM. PARRY.

Cinnaminson, N. J., July 28, 1879.

Mr. J. Kellogg writes us as follows:

JANESVILLE, Wis., July 26.

The Cuthbert is the best of the thirteen Red Raspberries I am now fruiting, for general cultivation. I have fruited it for two seasons. It passed through the winter of '78-'79 unprotected, with the Thermometer at 30 degrees below zero, uninjured, bearing a full crop, which at this writing is not all gathered. It is firm enough for shipment, good enough for any one, *vigorous, hardy and productive*. For general cultivation I would place the following in the order named: Cuthbert, Turner, Brandywine, Winant, Philadelphia. Of the above the last-named suffered most by the winter of '78-'79, while Henrietta, Pride of the Hudson, and Highland Hardy were all killed to the ground. GEO. J. KELLOGG.

Mr. T. S. Force writes us as follows:

NEWBURGH, N. Y., July 26.

I received this berry in the spring of 1875, and each year am more impressed with its good qualities. It is a good, thrifty grower; the berries are the shape of Hudson River Antwerp; they will average nearly or quite as large: the color is a trifle darker; the flavor is *very good*, not equal to Antwerp, but sweet and pleasant. It retains its shape in shipping as well as, if not better than, any other Raspberry. As far as my experience proves, it is *perfectly hardy*. It is the only one I have that has stood the past winter unhurt. The Turner, Henrietta, Brandywine, Thwack and others were all more or less injured; all fully exposed. It is very productive, more so than any variety I have met with yet. All things considered, no Raspberry can be more highly recommended for general purposes.

T. S. FORCE.

Mr. Charles Downing's opinion of the Cuthbert has already been expressed in these columns. He tells Mr. Roe as follows:

"I consider it the most promising Raspberry before the public as far as yet tested. The fruit is large and very firm, and the plants, as I have seen them, are vigorous growers and exceedingly productive."

Our correspondent, "Monmouth," whose opinions regarding small fruits we deem of special value, has expressed himself (see RURAL, August 2) in the following sprightly but direct manner:

The Cuthbert.

"The other day a fruit-grower remarked to me: 'Do you know of any *good*, reliable raspberry for market?' In answer to which I named the Cuthbert. 'Well," he questioned, "is it large?' 'Yes.' 'Is it handsome?' 'Yes.' 'O! is it *firm?*' 'Yes, very!' 'Is it of good flavor?—although that seems to make but little difference now-a-days.' 'Yes, nearly as good as the Antwerp.' 'It isn't a good grower and productive, then, is it?' 'Yes!' "Well, there! I almost forgot to ask the most *important* question, and I suppose that's the sticking point—Is it hardy?' 'YES!' 'It is! What *is* the matter with it, then?' To which I was obliged to reply that *that* was just the thing I had been looking for, and although I had fruited it two years, the one I had failed to find."

Space forbids a further consideration of what has been said regarding the Cuthbert. It needs only to be added that we have engaged Mr. J. T. Lovett, of Little Silver, New Jersey, known to many RURAL readers as well for his enthusiasm as for his fair-dealing in horticultural pursuits, to grow for us FOUR acres of this Raspberry, TWO PLANTS of which will be forwarded to every one of our subscribers who apply before April 1st, 1880, free of all charge. Our illustration is from a three-year-old plant growing in these grounds, somewhat reduced in size. The single berry represents only the average size. Next we offer

Telephone Pea.

In these grounds we have at one time or another tested nearly every sort of Green Pea that has been offered to the public, and reports have been made from time to time of their period of use, their fruitfulness, quality, etc., etc. Attracted by the advertisements of the Telephone Pea in English journals; by the extravagant engravings which appeared, showing thirteen immense seeds in a pod; by its high price and by the reports of those who

tested it, we imported a quantity of the seeds the past spring, sowed them, and have saved the seeds for this Distribution. The vines, growing about four feet high, are remarkably vigorous and prolific, and the peas ripen throughout a longer period than those of any other variety we have ever cultivated. One of our engravings is copied from the catalogue of Messrs. Carter & Co. (London), the producers; the other shows the pod and pea as we raised them. It may be that in rich soil their size would more nearly approximate the foreign portrait; but, like most other trade pictures, it is probably much overdrawn. As shown by our engraving, however, the pod is very large and is entirely filled by the peas, which average larger than any other peas we have ever seen. They are somewhat wrinkled and *said* to be of the first quality. As these peas, even by the producers, are not yet offered in large quantities, we needed both all we could import and all we could raise for our subscribers. Hence we did not cook any of them, and can only state "What Others Say," as to their quality. If offered at all by the trade in this country next season, they must necessarily be offered at a very high price, since in England they are at present held at $30 per bushel at wholesale. Green peas are everywhere justly esteemed as among the most delicious of vegetables, and we offer the Telephone merely as a new variety that *may* prove of superior excellence. It *may* prove in this climate an entire failure. Only a comprehensive trial can determine its value. The quantity of seeds of this which we shall send out will probably be small—not over 25 to each subscriber.

Mold's Ennobled Oats.

Little need be said of this variety which seems to be an improvement of the Black Tartarian. Mr. Mold is an English farmer who has devoted years to the improvement of wheat and oats. Of six new varieties of oats which were sown upon six-fortieths of an acre (33 feet square to each), at the RURAL's farm, this variety yielded most. We have not yet measured the yield but believe it to be at the rate of at least 86 bushels per acre. The engraving of the straw and panicle is of a selected plant.

Bebb's Aquilegia.

IN our last regular distribution, we sent out a crossed Aquilegia of our own, as far as it went. We now offer seeds of an Aquilegia, the origin of which is in part explained in the accompanying letter from Mr. Bebb. It bears the largest flower of any variety or species we have ever seen, the petals being yellow—sometimes white and the sepals rose or a light bluish-purple. The engraving is from life. By accident a bag of seeds of A. crysantha was emptied into our supply of the Bebb seeds. But they are well "mixed" so that a large proportion will be found to be of the latter sort:

FOUNTAINDALE, Ill.

DEAR SIR:—I did not produce the supposed hybrid Aquilegia of which you have received seeds from Mr. Falconer and Prof. Sargent.

Soon after Mr. E. Hull, of Athens, Menard Co., Ills., returned from his botanical excursion to the mountains of Colorado, in 1862, he sent me three young plants, seedlings of A. cærulea—I cannot say positively that these were raised from Rocky Mountain seed--but that is my strong impression. I believe that sufficient time had not elapsed since Mr. Hall's return, to enable him to have produced the seeds on his own grounds from which the plants were grown that he sent me. Two of the plants were A. cærulea pure—the other the peculiar one, of which I sent a root to Dr. Gray, (and came very near killing the original plant in making the separation.) I have this Aquilegia growing in a rock work, and last season a number of seedlings came up which I left undisturbed. A few of them have flowered—no two being just alike, nor any of them like the parent. One has yellowish petals and pink sepals. Yours truly, M. S. BEBB.

Magnolia Seeds.

We propose to send to subscribers seeds of the following Magnolias: Lennéi (see cut), Soulangeana, Fraseri, acuminata, glauca and Umbrella. It is not difficult to procure seeds of the last three or four, but the others bear seed sparingly and they are necessarily very hard to obtain in quantities large enough for our purpose.

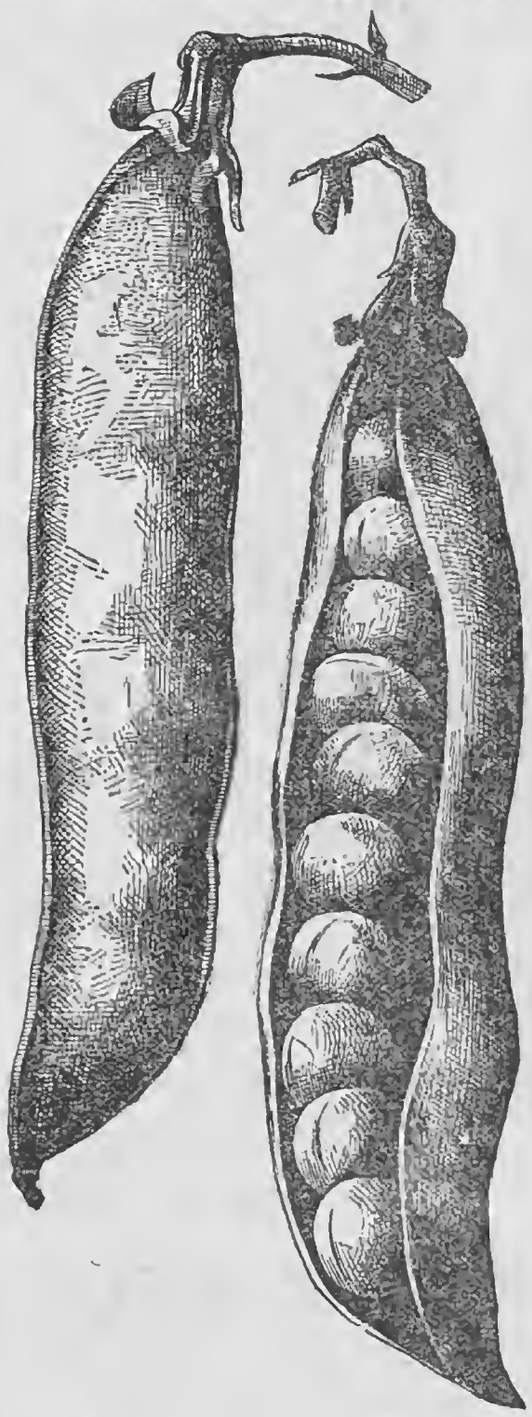
MAGNOLIA LENNEI originated some years ago in Italy, and is probably a hybrid between M. Conspicua and purpurea. Of all the Japan or China species, this is the showiest and with us, the hardiest. The trees will often bloom when but two years old from graft. The flowers are very large—at least six inches across—of a deep rosy-purple outside and nearly white within. It blooms in this climate about the latter part of April—(our drawing was made May 17, when the tree was half covered with flowers) and then, very often again in August. (We count to-day, Aug. 2, 15 buds, six of which are showing the petals.) The leaves are firm and leathery, of an obovate shape, acuminate at both ends and about eight inches in length, and generally suffused with a bronze color. The trees grow rapidly—four-year old plants being eight feet in hight. Ours have never been injured by frost.

M. SOULANGEANA is probably of the same parentage as Lennéi. Its appearance is much the same except that the outside of the flowers is purple only at the base. It is not so hardy, however, and, therefore less floriferous.

M. FRASERI, the Ear-leaved Umbrella-tree is found in Virginia and Kentucky, along the Alleghanies and southward, though but sparingly. This blooms in June bearing yellowish flowers, and sometimes again in autumn. It forms a small tree and is therefore well adapted to small lawns. The seeds are always scarce.

M. ACUMINATA.—This is a native of many States of the Union and attains to a size of 100 feet or more in hight. Thus, it is well adapted to grounds of large extent. This tree, however, may be cut back from year to year, much to its improvement in compactness, symmetry and size of leaf. The flowers appear in June—are of a pale greenish-yellow color with a slight fragrance. The fruit, about three or four inches long, resembles a cucumber—hence the name of Cucumber-tree. It gives the stock to nurserymen upon which most of the other species of Magnolia are worked.

M. GLAUCA.—This is the Sweet Bay and is nearly evergreen here and, like M. grandiflora, completely so in the South. It forms at best a small tree and bears wax-like white flowers, three inches broad, that perfume the air for miles about the swamps in which they bloom. It is found wild from Massachusetts to Florida near the coast, and though growing wild in



THE TELEPHONE PEA—FROM LIFE.

damp places, it thrives in any garden soil not too sandy and dry.

M. UMBRELLA OR TRIPETALA.—We should prefer Tripetala as the specific name, since it bears no resemblance to an umbrella, that ever we could discover. It is found in Penn., Va. and Ky. According to Dr. Gray, the leaves are sometimes three feet in length—we have often seen them at least two. It begins to bloom the middle of May, and continues through June. The flowers are large, loose, perishable with no fragrance. The fruit, however, is ornamental, being of a rose color four or five inches long, and of an ovoid-oblong shape. It is a very hardy species, grows to the hight of 20 feet or more, and, if encouraged to branch low, forms in connection with small-leaved deciduous or evergreen trees, an object of striking beauty. It grows very readily from seeds, and, what is unusual among the Magnolia family, transplants easily.

We have a seedling of M. Soulangeana that was three years old last winter. The seed was planted in a four-inch pot where it germinated in a few weeks, and was planted out in the open ground the following spring where it has since remained. It is now six feet high. The Evergreen Magnolia of the South is planted everywhere, and is everywhere esteemed one of the most beautiful trees that grow. But the Magnolias we have mentioned, though not evergreen, should find a place in every lawn, in the door yard of every farmer, in the garden of all who value our finest shrubs and trees. We hope that our "Distribution" may effectually assist to that end.

Abies Sibirica.

This tree which is as yet unknown in this country, except to a few arboriculturists and nurserymen, is destined, we believe, to become one of the most valuable evergreens in cultivation. Young trees in general appearance resemble the Balsam Fir, but the leaves are longer and darker, the habit more compact; they do not grow so fast, and, what is of the utmost importance, are among the hardiest conifers known. Those who know of the good qualities of the Siberian Spruce, would never again plant the popular Norway Spruce, European or Balsam Fir, as ornaments about their homes. Even young plants are entirely hardy. While with us the Norway Spruce, Nordmann's Fir, Silver Fir and the Austrian Pine have been injured by winter's winds and frosts, this has never lost a leaf. From all that we can learn, it is not, either, liable to a loss of its lower foliage which renders the Firs and Spruces above-named such ungainly objects after they have become 10 or 15 years of age. Of Abies Sibirica, Mr. Josiah Hoopes in his standard "Book of Evergreens," says: "It is an Asiatic species, from the mountains of Siberia and Altai, where it is found in large numbers, and forms whole forests of the richest, darkest verdure, reaching to an elevation of from 2,000 to 5,000 feet. It generally grows from 25 to 50 feet in hight, and is remarkably dense and compact in growth. We have found this species exceedingly hardy in all soils and situations, even when quite young, and do not hesitate to recommend it for general cultivation as one of the best of the smaller class of conifers."

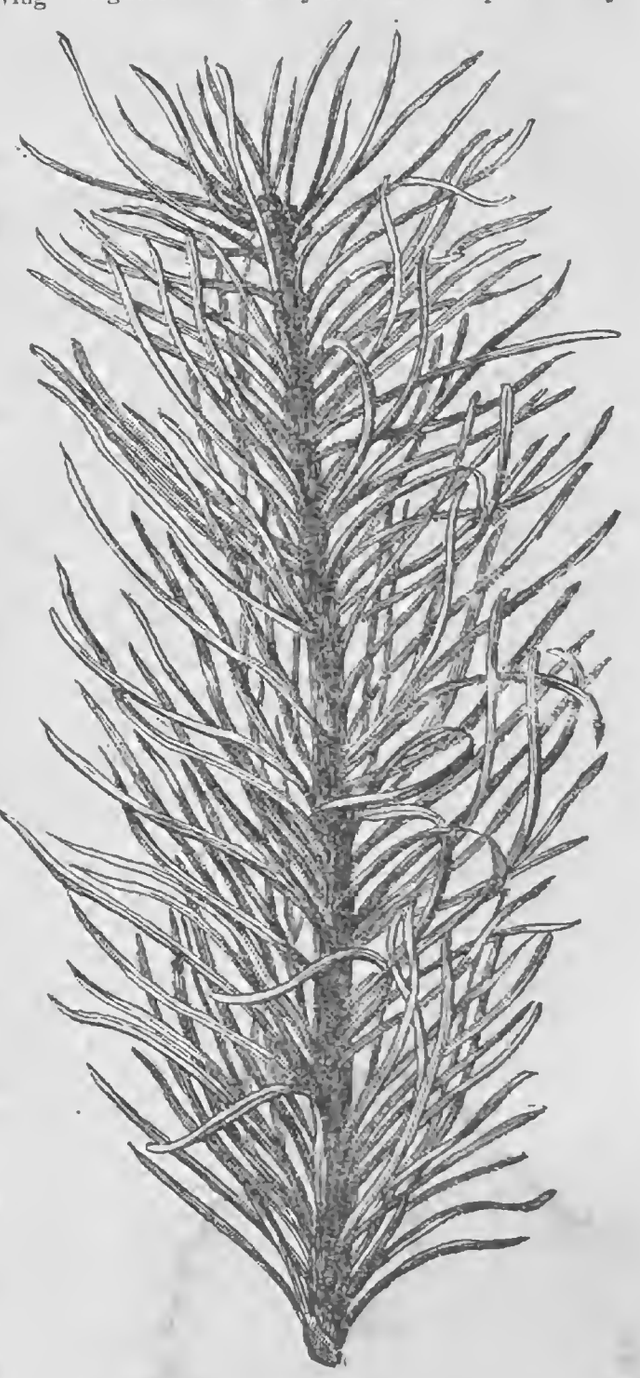
In reply to a letter of ours, that worthy veteran nurseryman, Robert Douglas, of Waukegan, Ills., says: "Abies Sibirica germinates as well as any Silver Fir. We have them standing side by side, and it is *all that could be desired* only, as you know, it is a slow grower. We prize this tree so highly, that we sowed 20 pounds of its seeds this spring. It is *one of the three Conifers able to endure the climate of St. Petersburg.*" We have not space to present to the reader all that may be said in its favor. It must suffice to say that we are glad of the opportunity we have embraced of distributing so valuable an evergreen; as we confidently believe that, years hence, it will prove itself one of the most valuable and permanent additions which have ever been made to decorative grounds. Our seed is imported from St. Petersburg, and has been, through an esteemed friend, saved specially for us. The engraving represents perfectly a twig of life size, cut off from our specimen Aug. 1st.

Penstemons.

Among the many species of hardy perennials now coming into fashion, there is no more showy genus than that of Penstemon. There are about seventy-five species found in the United States, and it is safe to say that ninety per cent. of them at least are worthy of cultivation, which is somewhat remarkable considering the size of the genus. Among the best species adapted for general cultivation, we will mention P. grandiflorus, P. Murrayanus, P. Cobæa and its variety purpureus, P. secundiflorus, P. Torreyi, P. venustus, P. glaber, P. Menziesii, P. Richardsoni, etc. The last two are shrubby species, and they have all proved hardy in the latitude of New York City without a particle of protection, and would undoubtedly prove equally hardy much further north. There are a number of Mexican species in general cultivation in Europe and America as greenhouse or bedding plants, but they are not hardy enough to withstand our winters, and so are not adapted to general cultivation like the hardy sorts. The Mexican species above referred to are P. Hartwegii, and P. campanulatus, and these have given us the many beautiful hybrids so common in greenhouses; they have large showy flowers two inches or more in length, bloom from July to October, and vary in color from white to deep crimson. Very little attempt has been made thus far to hybridize our hardy sorts, but from what has thus far been obtained from crossing P. grandiflorus with P. Murrayanus, we are led to believe that as fine and showy varieties may be obtained from the hardy species as from the tender ones. P. grandiflorus is found in a wild State from Wisconsin, southward to Kansas. It grows from one to three feet high, and produces large lilac-purple flowers one and a-half to two inches long in June and July. P. Murrayanus is from Eastern Texas, and similar in habit and growth to P. grandiflorus, but the flowers are deep scarlet, and not as broad as in that species. From crossing these last two species a well-known horticulturist and botanist has obtained an almost endless variety colors, many of them exquisitely fine and showy, and we have secured the entire stock of seeds for this distribution. The flowers most resemble P. Murrayanus in form, but their coloring is very different as they vary from deep scarlet to almost pure white. Their period of blooming lasts from early in June until about the 10th of July, and nothing in the way of hardy plants will attract more attention than these hybrid Pentstemons. They are readily grown from seeds; these may be planted in open boxes in the open ground in October, covering the seeds one-eight of an inch with fine mold, and then placing the boxes in

FRUIT OF ARISTOLOCHIA SIPHO.

somewhat shaded spot, and when freezing weather comes covering with an inch or two of leaves to prevent too frequent thawings and freezings. They are also readily grown if planted in March or April in pots or boxes placed in a warm sunny window. As soon as the plants have shown their second leaves they ought to be transplanted to other boxes, and then, as the weather becomes settled should be set in any ordinary garden soil, planting eighteen to twenty-four inches apart. They



TWIG OF ABIES SIBIRICA.

will not flower until the second year, but their great beauty will amply repay all waiting. They should be protected by covering with coarse litter or leaves in autumn, and will then continue blooming year after year.

Ipomœa Leptophylla (Man-Root)

This is comparatively a new plant in cultivation, and it is certainly a very remarkable one. The engraving is from a branch of a plant growing here, the seed of which was planted last year. A description of this plant was first published by Dr. Torrey, in his account of the plants collected by Col Fremont during his first expedition across the Continent in 1841. It was also found by Lieut. Emory's party in July 1846. So says Professor Meehan in his valuable work of The Native Flowers and Ferns of the United States. Subsequent collectors, according to the same authority, have found it in various localities in Western Kansas and Eastern Colorado, in the dry, sandy and barren region watered by the Platte and Arkansas rivers, and as far South as Northern Texas. It is called by the hunter "Man-Root" from the similarity of its root in size and shape to the body of a man. It is esculent and serves to sustain life in some of the many vicissitudes of hunger and privation to which men who roam the prairies are subjected. According to a communication handed to Prof. Meehan by Dr. Lamborn from a person in Colorado who had engaged to have one of the roots dug for the Centennial, "it took two men working with picks and crowbar a full day to do the job." The flower possesses a satin-like luster and a very delicate rose color. The leaf and stem remind us of those of the Salix rosmarinifolia, except that its habit is prostrate. For sandy, dry banks or rockeries it must prove an almost invaluable plant, while for any garden border, it would prove equally desirable, except that it grows with great rapidity and spreads over a large surface.

BEBB'S AQUILEGIA.

Iris Lævigata (Kæmpferi).

In speaking of this, Mr. Falconer has said in these columns (see RURAL, Aug. 2): "Iris lævigata (Kæmpferi), indigenous to Eastern Siberia, Northern China and Japan, is hardy and thrifty and bears its very deep purple blossoms in June. But the varieties of Lævigata that have been recently introduced from Japan, eclipse in size or showiness anything in the way of Irises we ever knew. The flowers are flat, from five to seven inches across, and of every shade of color from the purest white to the deepest purple, and they are also most gaudily variegated—penciled and blotched. These varieties are among the most showy of all known hardy herbaceous plants, and they come into bloom from two to four weeks later than the typical species, than which, also, most of them are far more robust."

We have secured enough of the seeds of this Iris to enable us to place it as one of the kinds in our free seed distribution. It is conceded that as regards purity, richness and depth of color, this species is not equaled by any other of the entire genus. We are, ourselves, delighted with this happy selection, and are confident our subscribers will also be pleased—the more as they learn of its surpassing beauty. It will grow quite readily from seeds, and the seedlings may be relied upon to produce an endless variety of colors and marks. Our seeds are saved from *seedlings* of Iris lævigata—the engraving is an accurate copy of one blooming here July 15th.

Aristolochia Sipho.

This noble vine, so hardy, so rapid in its growth, so striking for its immense leaves, which so thickly cover the rubber-like stems as to remind one of shingles upon a roof, is rarely seen in our Northern gardens. Its leaves are no less remarkable for their tropical breadth, firmness of texture and heart shaped outlines than the flowers are odd in shape and color. Our engravings of the flower and fruit are from life; the leaves, which often measure a foot in diameter, we can scarcely afford the space to portray.

Aristolochia is the name of a plant mentioned by Dioscorides as of great value in the complaints attending childbirth. It is derived from *ariston*, best, and *lochia*, parturition. *Sipho* has reference to the siphon-like tube of the flower, or rather calyx, as it has no corolla properly. It is often called, in other countries, Siphon Birthwort, or Aristolochia, but is here best known as Dutchman's Pipe, of which "implement" it is certainly suggestive. The stems of this vine, which often measure six inches in circumference, are yielding and pliable, like India-rubber tubes, so that, while they never break, they conform themselves readily to whatever support is provided. Even the green petioles bend and twist like the stems, and when once the vine is established, it so holds upon the nearest object that tying is rarely necessary. There is not one of the many kinds of vines growing in these grounds that we would part with more reluctantly than with this. It covers trellises, arbors and stumps completely, and being perfectly hardy (we have never known it to be injured), when once established, it needs no other care than an occasional cutting back to keep it within desired bounds. It may readily be trained upon a temporary frame-work in the form of a grotto or oval arbor, when the frame-work may be removed and the arbor of Aristolochia alone remain. The firm texture of its large leaves overlapping one another, the little care required to keep it in health, its comparative freedom from insect depredations, render it especially desirable for covering piazzas, or, indeed, wash-houses, henneries, fences, or any other structures where a cooling shade is desirable during the heat of summer. In company with other hardy vines, such as Honeysuckle, Clematis, Akebia, Trumpet-Creeper, Canadian Moonseed, Periploca Græca, Virginia-Creeper, the great tropical leaves of the Dutchman's Pipe stand out in bold and beautiful relief.

Many authors might be quoted to show the high estimation in which this vine is held. London says: "Striking from the magnificent appearance of the leaves, and remarkable for the form of its flower, which is bent like a siphon; for the trifid border of the flower, and for the very large bractea placed on the middle of the peduncle."

Scott, in his not-half-appreciated "Suburban Home Grounds," says: "This is a twiner and climber. Its great heart-shaped leaves, from seven to twelve inches in diameter, borne with tropical luxuriance, make the finest exhibition of massy foliage for covering isolated artificial structures of anything we know of."

A. J. Downing says: "One of the most picturesque climbing shrubs or plants which we cultivate is the Pipe-vine, Aristolochia Sipho. It is a native of the Alleghany mountains and is one of the tallest of twining plants, growing on the trees to the hight of 90 or 100 feet, though in gardens it is often kept down to a frame four or five feet high. The leaves are of noble size, being eight or nine inches broad and heart-shaped in outline. The flowers, an inch or more in length, are very singular. They are dark yellow, spotted with brown, in shape like a bent siphon——etc."

Aristolochia sipho begins to bloom from the middle to the latter part of May and continues in bloom about three weeks, when the fruit forms (if at all), forming a naked six-valved pod and flat seeds. The seeds germinate very freely, as a number of our subscribers can testify to whom we have already sent a few, and seedlings make strong plants the second year. Whether it is hard to procure seeds in the native habitat of this plant, we cannot say. But we *do* know that the seeds are at present very scarce and sold (if sold at all) at a very high price.

The Entire List

will be forwarded to each and every one of our SUBSCRIBERS who applies, *and to them* ONLY to any address in the United States or Canada. Of the postage expense, we prefer to bear a small part ourselves. This is to prevent the possibility of a suspicion that we receive in *any form* the slightest compensation for our labor or for the heavy cost of the undertaking. We shall require for the nine kinds of seeds a two-cent stamp; for the Cuthbert Raspberry a four-cent stamp. Each kind of seed will be put up in a strong envelope, the name printed thereupon—not upon slips as heretofore—and all will be packed in a strong bag of suitable size which will be folded and riveted. Two strong plants of the Cuthbert Raspberry for each subscriber will be so packed in moss as to insure safe carriage to the remotest parts of the country. Each letter of application will be NUMBERED when received, and the seeds and plants will be sent in that order. *It will save us trouble, and it will save our subscribers trouble and expense if they will make their application for the seeds and plants in the same letter in which they renew their subscriptions.* We would also thank them merely to say: "SEND SEEDS." Those two words will convey all the instructions we need. All questions appertaining thereto should be written on *separate slips of paper*, otherwise there is a chance of their being entirely overlooked, or, at least, of not being promptly answered.

Finally, in order to provide against the possibility of mistakes, disappointment or any dissatisfaction, we agree to duplicate all orders that from any cause may have failed to reach their destination at the close of the Distribution. The most careful details of instruction as to the treatment of the seeds sent, will be given in future numbers of the RURAL NEW-YORKER.

CONCLUSION.

So, good readers of the RURAL NEW-YORKER, we have now presented you with a list which shall comprise our next Free Seed Distribution. Applications may be made from now until the 1st of April, unless due notice of modification be given.

W. B. JONES,
BIRDSVILLE SEED AND STOCK FARM,
(VIA) HERNDON P. O., GEORGIA.
Producer and Dealer in Choicest varieties of Southern acclimated Field and Garden Seed. Special attention given to Forage plants. Drop a postal for circular and price-list.

FLOWER and VEGETABLE, all the SEEDS, finest kinds, UNEQUALED in QUALITY. Packets well-filled with FRESH SEEDS, sure to grow and give satisfaction. Illustrated FLORAL GUIDE and REDUCED PRICE LIST of 38 pages, FREE. Address, COLE & BRO., Seedsmen, Pella, Iowa.

BEE KEEPERS!
Send to H. H. BROWN, Light Street, Col. Co., Pa., for price list of Italian Bees, Queens, Nuclei and Apiarian Supplies.

E. & J. C. WILLIAMS, Montclair, N. J., have all the new and leading kinds of
STRAWBERRIES.
Sharpless and Pres. Lincoln, 60c. per doz.; $3. per 100. Centennial Favorite, Forest Rose, Miner's Great Prolific, 50c. per doz.; $2 per 100. Cre-cent and Chas. Downing, 25c. per doz.; $1.25 per 100. Brandywine Raspberry Plants, at $1 per 100; $5 per 1,000. Gooseberries, Currants, Grapes, &c., &c., at popular prices.
No plants of our New Raspberry "MONTCLAIR" for sale until autumn of 1880

Farm Economy.

A SUMMER FALLOW.

DR. JOHN BENNET LAWES, OF ROTHAMSTED, ENGLAND.

To restore the fertility of a soil by means of rest is a very old operation. A soil exhausted by the removal of crops is said to recover its fertility by means of a summer fallow. In some localities two or three plowings during the summer months and the absence of a crop, constitute a fallow, while in others the application of a dressing of caustic lime is added. In either case the soil is capable of growing a larger crop of grain at the expiration of the fallow than it was previously, or, in other words, the fertility of the soil is restored. Several explanations of the action of the fallow and of the lime application have been given; but the general supposition has been, that silicate and alkalies are liberated from the *soil*, while fertilizing properties are absorbed from the *atmosphere*.

A summer fallow has been subject to experiment at Rothamsted, where, about 28 years ago, two half acres of land, side by side, were placed under alternate wheat and fallow, both being plowed in the autumn; but while one-half was sown with wheat, the other was left without a crop and again plowed two or three times during the summer. In the autumn this part was sown with wheat, and the portion which had grown a crop was fallowed: we had therefore half an acre in wheat and half an acre in fallow every year, and no manure whatever was applied to the land.

In the adjoining field, wheat has been grown on the same plot of land every year for the same period (28 years) and some years previously, also without manure. For a number of years the yield of the two experiments was equal, that is to say, assuming that the land in permanent wheat yielded 14 bushels per acre every year, the half acre of the fallow land in wheat yielded 14 bushels, or at the rate of 28 bushels per acre; the conclusion therefore appeared to be that, whether the land was sown with wheat every year, or every alternate year with a fallow intervening, the produce would be the same. This, however, has not been the result, for of late years a change has taken place in the relation of the produce of the wheat on the fallow ground, as compared with the crop on the continuous wheat land, in a direction which probably few would have expected; for, although the produce of the wheat grown on the same land year after year has declined to some extent, the produce upon the alternate fallow and wheat land has declined much faster, the yield of the half acre of wheat after fallow being very much less than that of the acre growing continuous wheat.

The probable explanation of this somewhat remarkable fact is based upon scientific investigations of recent times, quite independent of agriculture; but of great importance to it as enabling us to explain some of its processes.

A little more than ten years ago Muller, a German chemist, suggested that nitrification was due to the action of a ferment; Schlosing further proved that in the absence of such ferment, or by the destruction of it when present, nitrification did not take place. In my laboratory, Mr. Warrington has confirmed these results, and in a paper published in the July number of the Journal of the Chemical Society, has increased our knowledge on the subject. An examination of our wheat and fallow land in the autumn shows that the fallowed portion contains a much larger quantity of nitric acid than the portion which has grown the wheat. During the summer months nitrification takes place in both soils; but where the wheat has been sown the nitric acid is used up for the growth of the plant, while in the fallow it accumulates, and as we have no rains in the summer months, as a general rule, sufficient to wash the nitric acid from the soil, the wheat sown in the autumn takes a portion of this accumulated nitric acid, while another portion is washed out of the soil, and it is to this larger loss by washing on the fallow than upon the land under the permanent wheat crop that we must attribute the greater exhaustion of the soil and consequent decline in produce in the fallow.

Although not yet absolutely proved, it is extremely probable that more nitric acid is liberated on the land under the fallow than upon that under the permanent wheat, and it is evident that of this larger quantity more would be lost to the soil by winter rain. A fallow is from this point of view a process by which the dormant elements of the soil are by means of a ferment brought into an active condition, which is accompanied, doubtless, with some loss and reduction in the fertilizing capital of the soil.

Mr. Warrington has shown that nitrification goes on very slowly, or ceases altogether in the absence of calcareous matter, inasmuch as the nitric acid found must have some base with which to enter into combination, and on soils which do not contain much lime, its application is essential to nitrification, while practice has long ago shown the great value of lime when applied to a certain class of clay soils, as also to soils containing much peaty matter. In the process of nitrification by means of a living organism, we have a rational explanation of the beneficial action of lime, and as a further confirmation of these views with regard to the action of lime, it is a remarkable fact that Dr. Frankland, in his analyses of the water passing through the peat soils in Scotland, found there no nitric acid, although they contain more nitrogen than any other class of soils.

Field Crops.

THE CULTIVATION OF WHEAT IN ENGLAND.

PROFESSOR J. P. SHELDON, CIRENCESTER

By the exercise of extreme care and the greatest nicety, a close study of the principles which govern vegetable reproduction, and an unsparing use of money and labor, the cultivation of wheat in the British Islands may be said to have been brought to the condition of a fine art, and the result is seen in an estimated average yield of twenty-eight bushels per acre, which is more than twice as large as the average yield in the United States. It cannot be said that the climate of Britain is favorable to wheat growing, or even that the soil is the best for that purpose; both are alike too variable and in many cases too cold and wet; and it is by sheer force of untiring industry and of slowly accumulated skill that the wheat-yielding capacity of land in England, Scotland and Wales has been raised to so high a state.

It is probable that the systems employed in this country would hardly be applicable to other countries, and particularly to the soils and climates which are found on the American Continent, without more or less modification, and yet it is sure enough that wheat cultivation in other countries would be improved if more care and attention were bestowed on it. Whether or not the extra yield would pay for the greater care is a matter which can be best decided by comparative experiments. It may, however, be said that American farmers have an enormous advantage over those of this country in at least two important things—cheap land and a virgin soil; to which may be added, a better climate for the growth of wheat.

In England we find that wheat does best in a firm soil. We are in the habit of sowing as much of our wheat as we can in the autumn, at such a time as will allow the plants to be well out of the ground before winter comes on; but we are at the same time careful not to sow it so early that it will be too far advanced and the connection between the seed and the plant severed; and we find that with our wet and bitter winters the young plants throw themselves out of the ground and lie prostrate, and in many cases dead, on the surface, if the soil in which they grow is a loose one. Therefore we think well of a firm seed-bed, and our stiff clays, if properly cultivated, yield in many cases the heaviest crops of wheat, though they are not by any means the most profitable ones, because of the greater expense of working and cleaning them. It is necessary to make the seed-bed friable in all cases, whether the soil be stiff or not, in order that the drill may work fluently and the seed may be both evenly deposited and well covered; and to bring our heavy soils into this state is in most years a tedious and costly process, particularly if we do not take them in the nick of time after a shower of rain. If we get on them too soon after the rain, they are hopelessly sticky, and if we let them get too dry, they are stubbornly hard; but if they are caught at the right moment, they work almost as freely as a loose, dry soil. Brought into the proper tilth, these heavy soils do very well for wheat; for the seed goes in nicely and the soil forms a firm seed-bed about the roots, so that the plants are held securely *in situ* when thaws come after frosts. In the case of soils that are naturally dry, light and loose, the difficulty is overcome by passing a heavy roller over the land soon after the young plants show themselves above ground. This may be repeated later on if necessary; and yet again in the spring, if it is found that the winter frosts have loosened the soil too much

We find also that wheat is more prosperous if sown in a stale soil; that is, in a soil that has been plowed up and exposed to the air at least a month prior to sowing the seed. Sown on a freshly-turned-up furrow, the crop is usually deficient, and it does best of all, particularly on heavy land, if the soil has been "summer-fallowed." Summer-fallowing consists of plowing the land over five or six times during the summer months. If it is free from couch-grass—Triticum repens—plowing alone will be found sufficient, repeated at intervals of about three weeks; this will be enough to kill all the minor weeds; but couch-grass requires more drastic treatment, and, in addition to the plowing, it is found necessary to cultivate and to harrow so as to bring the roots of the grass to the surface to be killed by the sun. By this system of summer-fallowing, the soil becomes thoroughly exposed to the summer's sun, and in the autumn is in the best state possible for wheat-sowing. But summer-fallowing is too costly in this economic age; we cannot afford to leave the land without a crop of some kind through the summer, and this needful economy has changed our whole system of cropping. The fallowing and cleaning of the land is now got through in time to put in a

root-crop on those soils that are suitable to the growth of turnips or mangels; barley is usually taken the following year, next after the roots, because barley likes the loose state into which the cultivation of the roots has reduced the soil, and with the barley the land is seeded down with clover and Italian rye-grass. The following summer the clover and rye-grass are either mown off for winter forage or are grazed by sheep, and the clover-root, as the land is then termed, is plowed up about the end of July or in August, and the wheat is sown on it six or eight weeks later. If the land at this stage is found to be foul with weeds, the steam-tackle is set to work on it, and it gets a thorough knocking about and cleaning before the sowing time comes on, providing the weather is suitable. This plan, however, is a costly one, as may be thought; but it is necessary if the land is foul, for weeds impoverish the soil and choke the crop.

Our time for drilling autumn wheat is usually in the end of September and sometimes in October The time depends, however, on several conditions and cannot be stated in a hard-and-fast manner. I have known wheat sown in November to do well, providing only that it has been well got in, in suitable weather, and with the land in a proper condition. We seldom sow wheat broadcast or by hand; the drill is used almost everywhere. There are two great advantages in using the drill:—less seed per acre is required, and it is all deposited at an uniform depth; whereas by hand-sowing some of the grain is one inch and some three inches beneath the surface, and the result is that the crop comes up irregularly, and is ripe at different periods. The drill also deposits the wheat in rows and this is indispensable to facilitate the process of weeding in the following spring. The rows are usually nine inches apart, so that the horse-hoe can pass freely down between them, cutting up the weeds without injuring the wheat. A well-managed field of wheat where the land is free from weeds and the rows of wheat plants are clearly defined, is a sight which no lover of agriculture could fail to admire.

But wheat-growing in Britain is a losing game. It is becoming each year increasingly difficult for us to compete with the cheap and virgin soil and the rough-and-ready farming of the Western States of America, and with wheat at five shillings a bushel, our farmers are on their beam ends. The outlook for wheat growers is serious enough, and those of them who can, are laying down their land to permanent pasture, where the land is suitable for that purpose; and where it is not, they are throwing up their farms in despair. We are on the edge of a serious crisis, the result of which will probably be a great change in our systems of land tenure. In the meantime, farmers are losing capital, landlords are losing income, and land is diminishing almost as rapidly in value as it is in your Empire State. Steam is the great leveler of the present age, and all kinds of products are approximating in value, no matter where they are found, on the basis of cost of transit. It will be very interesting to watch the progress of events in the agricultural world in the next four or five years.

NOTES FROM THE RURAL FARM.

The Culture of Wheat—Result of Experiment.

We have had during the past year a good deal to say as to the cultivation of wheat. Last October 1st, we prepared a piece of land 165x33 feet or one-eighth of an acre. It was plowed, harrowed twice, then broadcasted with bone flour at the rate of 500 pounds per acre, raked in by hand, marked off 18x12 inches and three grains of Clawson wheat planted at the intersections. As soon as the blades were distinguishable, two plants were pulled up, leaving only the middle one. Thus there was left but one plant for every one-and-a-half square foot. The plants tillered remarkably, as engravings in our issue of June 7, have already shown. The straw was very heavy and the heads nearly twice the size of those of our five-acre field sown broadcast, as our engraving of an average-sized spike will show. But many of them were poorly filled; many of them, while in the milk and subsequently, were broken over owing to an apparent weakness of the stem near the spike, as if there alone the stems were not strong enough to support its weight during high winds. From this plot of one-eighth of an acre we harvested but one bushel and-a-half, or at the rate of *twelve* bushels per acre, while our average upon the broadcasted field of five acres, was 27½ bushels. So far, therefore, as may be judged by this one experiment, there is little to be said in favor of the cultivation of wheat. It may be that other varieties or other land would produce better yields. It may be that if the wheat were planted closer together, a larger yield might result.

Yellow Missouri, Silver Chaff and Swamp Wheats.

These were sent to us by Gen. Le Duc, our Commissioner of Agriculture, to be tried. The first is a new variety of wheat which originated in Gasconade County, Missouri, in 1875 "by crossing the Blue Stem with the Mediterranean." It was badly winter-killed. Ripens with Clawson. There is an average of three spikelets in the length of one and one-sixteenth inch and an average of seven ranks of spikelets. Generally there are two grains in a spikelet. Small kernel. Beardless. It was sown in drills 12 inches apart on one-third of an acre. Yield, 149 pounds, or about 20 bushels to the acre. (See cut.)

Silver Chaff was introduced, we think, about three years ago by Mr. Rennie of Toronto, Canada, and has since been offered by several of our own seedsmen. It originated in York County, Province of Ontario. It is said to withstand the severest frosts and to be "not liable to disease or rust." The culms, leaves and ears are of a very light, silvery-green color, so that it could be detected among our several varieties as far as it could be distinctly seen. It is not bearded. There is an average of three spikelets in the length of 1½ inch, and an average of eight spikelets to an ear. The spikelets have three grains oftener than two. The kernels are long and plump, and of an amber color. The yield is at the rate of 16 pounds or about 16 bushels per acre. We are much pleased with this wheat, nevertheless, and shall cultivate it more extensively in the future. It was sown in drills six inches apart.

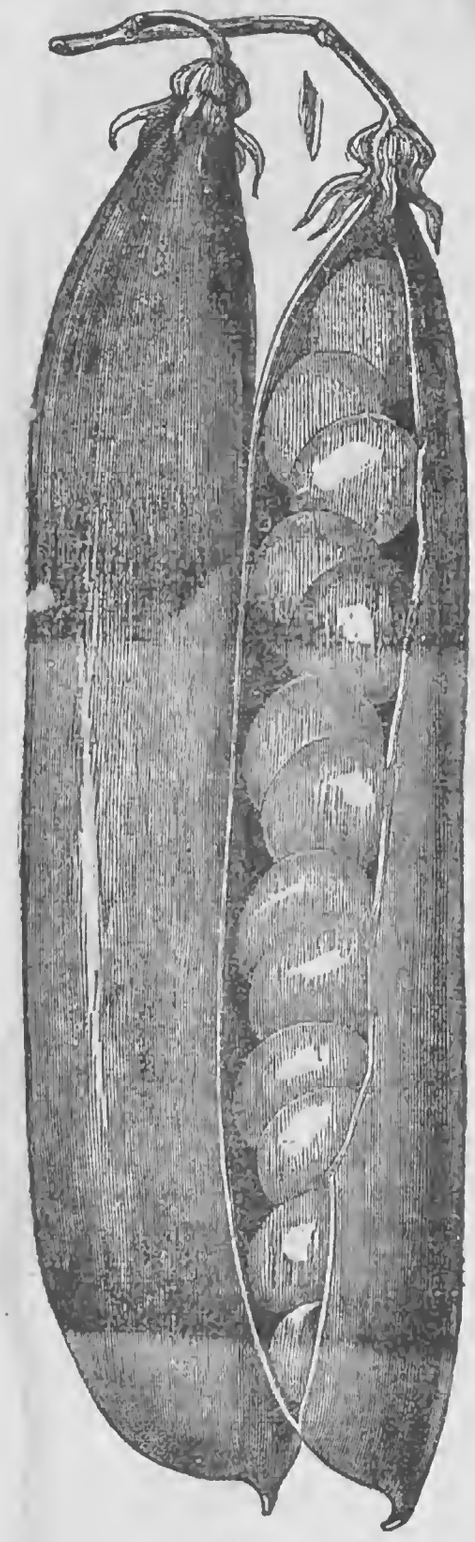
Swamp.—This was grown in Scioto County, Ohio, and is said to make flour of an excellent quality. The heads are bearded, the beards, or awns, being rather longer than the rachis The ears are very short, the kernel reddish, long and narrow. It is the *earliest* wheat we have ever cultivated. Yield at the rate of 123 pounds or 16½ bushels to the acre. (See cut.)

Horticultural.

A VISIT TO THE RURAL GROUNDS.

C. C. GEORGESON.

To readers of the Rural New-Yorker the Rural Grounds have become so familiar a term as to be almost a household word. The frequent reports that appear in the Rural, under the heading of "Notes from the Rural Grounds," are too valuable and given too disinterestedly not to merit the readers' appreciation, and a wish to please them is my excuse for offering this brief description of the place. Several visits to this lovely and hospitable spot have created a desire on my part to give this sketch, and at last, though reluctantly, it has been granted a place in the Rural.



"TELEPHONE," AS SHOWN BY CARTER, ENGLAND.

The Rural Grounds is the name given to the home of the Editor-in-chief of the Rural New-Yorker. He named it thus because, putting heart and soul into the work in which he is engaged, he intends not only to make the place his home, but to devote it, as well as his time and talents, to the interests of the readers. The place is located in Bergen county, New Jersey, about 17 miles from New York. From the Metropolis it can best be reached by way of the N. Y. and N. J. R. R. Alighting at River Edge, a station on the Hackensack river, and following for about a mile a road running almost directly west, scaling in its course a range of lofty hills, the visitor finds himself in Spring Valley, the pleasant and favored nook of the earth in which the Rural Grounds are situated. The valley runs north and south, is about half a mile wide, and is bordered on each side by a high range of hills. The lay of the land is undulating, the soil rich and well suited to farming and horticulture.

The whole extent of the Rural Grounds is but a fraction over two acres, though the manner in which the place is laid out and the variety of interesting objects it contains cause it to appear much larger. The place has the general form of a trapezoid, one side of which abuts on the road running through the valley in a northerly and southerly direction. Along the same road are several handsome dwellings, belonging to well-to-do farmers and city business-men, the latter preferring, like the proprietor of the Rural Grounds, to live in the country. Here, in a retired position, about 120 feet from the road, stands the neat and spacious dwelling-house. It is built in cottage style, and, though plain, its large bay windows and the conservatory on the front side give it an elegant appearance.

To conduct the readers inside and give them a glimpse of the admirable lady of the house, would be a violation of sacred hospitality, and for this reason I must refrain; but I feel assured that they would be delighted to hear more of one with whose pen they are already well acquainted, and whose influence is felt through almost every number of the Rural. The house is new, having been built seven years ago, when the place came into the possession of the present owner. The site it now occupies was originally the lowest spot on the grounds, but it has been filled so as now to be the highest portion of the lawn.

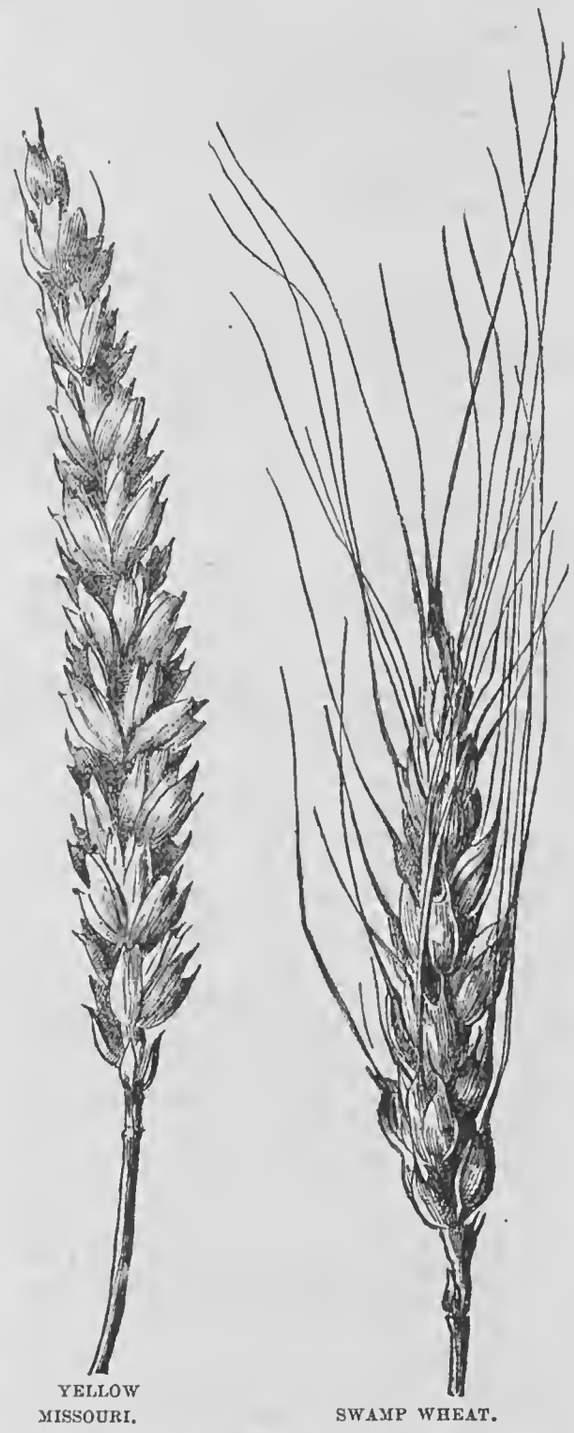
The conservatory forms a part of the house. It is small, but as it is not the proprietor's object to keep a large stock of show plants on hand, but rather to test new varieties of stove and greenhouse plants, it affords quite enough space for this purpose, and, small as it is, it contains an interesting and highly varied collection of novelties.

The Lawn.

The passers-by often stop, half involuntarily, to survey the beautiful lawn; for it is a strong contrast with the neglected "yards" that are commonly seen surrounding country homes. These very primitive lawns too often consist of a weedy grass plot over which are scattered a few evergreens, with a straight path leading to the front door, and without any other pretense to floriculture than a Peony or an Aquilegia here and there struggling to reach above the tall grass.

The Rural Grounds furnish an excellent model for small places. The graceful walks meander about the house and through portions of the lawn where they at once add variety to the scenery, and admit of reaching points of interest most conveniently. The shrubbery is so grouped that there are constant variations in the view:—now one stands before a group of flowering bushes, while a few steps to either side open a view over a little plain of grass or bring a captivating flower-bed in sight. On small places where landscaping, in the proper sense of the word, cannot be attempted, such variations must be provided by art. If all is beheld at a glance, the scene soon becomes trite and loses in interest. Here every tree and plant bear evidence of individual attention, and all tell plainly that to direct and watch their growth is a pet employment of the proprietor. With the exception of a few Oaks and two or three Willows, the trees are all small; and, owing to the large number of novelties that every fall and spring are sent by nurserymen from all over the country, to be tested, the grounds are as full as good taste can well permit. The proprietor informed me that to try all that were sent him, he was yearly obliged to dig up and give away many valuable specimens that were already established, in order to give place to the new-comers and enable him to report upon their value through the Rural. These reports, with which the readers are well acquainted, are valuable not only because they are given impartially by one who has no interest in the introduction of the articles, but also, because, owing to the situation, in a valley, the place is subjected to early and late frosts and exposed to the severity of the winter weather. This circumstance renders the reports more reliable, as anything that has here been tested and pronounced hardy, is sure to prove hardy in latitudes much farther north.

The variety of lawn trees is very great and not more than one-fourth of them is found in common cultivation elsewhere. All over the lawn is scattered beauty in profusion. Here stands a purple-leaved Hazel, making a pleasing contrast with a Golden Spiræa. There is a small group of the choicest low evergreens, such as Golden Arbor-vitæ, Retinospora, Cupressus and many others. Here stands a solitary Purple Beech and there a graceful vine hangs luxuriantly over an old Cedar trunk. Several varieties of the very



YELLOW MISSOURI. SWAMP WHEAT.

handsome Japan Maples are on the grounds. These little trees cannot be praised too much for a small place. They are hardy, and the graceful, cut foliage, which may be found in all shades from dark purple to light yellow, makes an agreeable contrast with the prevailing green of the lawn. There are numerous varieties of Beech, Birch, Elm and Oak upon which I cannot dwell. Fine specimens may be found of Magnolia Leuncl, cordata, auriculata, Solangiana, macrophylla, hypoleuca and of several other varieties. The collection of evergreens is large and varied. A handsome specimen of Abies Siberica has a prominent position near the entrance. It is singular that this superior conifer is not more generally planted than is the case. If I were a prophet I would venture the prediction that this tree will not only receive more attention in the future, but that in time it will supersede even the Norway Spruce for general lawn planting. Abies Engelmanni, A. Gregoriana, A. Alcoquiana, the curious dwarf variety A. Canadensis macrophylla are met with on the grounds besides Pines and Arbor-vitæ in great variety. Near the north-east corner of the dwelling house is

The Rockery,

built of rough stones in the form of a semi-circle and half inclosing a summer-house. Here many choice stone plants are grown, while the summer-house is covered with a thick blanket of foliage from no less than ten species of vines among which the Dutchman's Pipe—Aristolochia Sipho—Clematis and Virginia Creeper are conspicuous. Some handsome Willows, Liquidambars and numerous other trees deserve to be mentioned, but the space already occupied warns me to hasten on to

The Lake,

and the experiment garden beyond it. A beautiful stream of water, mostly from natural springs, originally ran through the grounds, and having fall enough to admit of being dammed up and collected in a considerable body, this basin was formed with much labor and expense. Its outline is very irregular, and on both sides the grass sod runs clear to the water's edge. A rustic bridge thrown over it at the north end, leads to the barn, poultry yard and experiment garden, while at the south end is a dam some 70 feet long. The clear water teems with a multitude of perch, catfish, and pickerel, and around the edges are in some

places planted water plants, such as Pond Lilie's Pontederia, etc. At the south end, where the ground is low and damp, is a wild garden, where many of our handsomest native shrubs and herbs are growing in wild profusion. They have been planted there with a view to learn their habits and to test their value for general lawn planting. Far from being imposing, still this small body of water so perfectly harmonizes with the surroundings that it leaves nothing to be wished for; the landscape is complete. Passing the bridge to the other side, we come to

The Experiment Garden.

This is but a small plot, perhaps a trifle over half an acre, but to those who cherish the progress of horticulture it is of great interest. The soil is a rich loam well adapted to grow all kinds of vegetables. The proprietor, who is a skilled and enthusiastic horticulturist, spends many a leisure hour here, not idly, indeed, but with spade and rake in hand, personally doing much of the work, and no plant set out for trial escapes his notice. Here are 60 to 70 Grapevines in almost as many varieties, pruned and trained on different systems. Here are also all the new Strawberries, Raspberries and Blackberries that have lately been introduced to the public. Tried side by side, their merits and peculiarities are easily contrasted and reports of the facts given in the RURAL. New vegetables and flowers are also tried here. Original researches and attempts to produce new varieties from seed are constantly under way, such as seedling Grapes, potatoes, cross-bred Pelargoniums, Hibiscus, Gladioli, and others of which it is premature now to speak. No farm crops are tried here, however. All such extended experiments are performed at the Rural Farm, which is situated on Long Island, some 18 miles from the Metropolis, and owned by the RURAL NEW-YORKER. I hope that at some future time I shall have occasion to say something about the farm, which I have also had the pleasure of visiting.

The Rural Grounds may well serve as a model after which to fashion small country places; but especially should agricultural journals copy this example. The farming interests of the land would be immeasurably benefited if all of the many journals that offer information on agricultural and horticultural topics had similar grounds at their disposal, and were thus enabled to substantiate their statements with the weighty assertion, "we have tried it and found these to be the facts." The aim of the proprietor of these grounds, if I may take the liberty to express an opinion, is to be able to furnish his readers with reliable information upon topics immediately connected with their welfare, while he at the same time can add to his stock of knowledge and enjoy a beautiful and interesting home. [See cut on first page.—EDS.]

SMALL TALK ON SMALL FRUITS.

BY "MONMOUTH."

THE season of small fruits now having ended for the year, with the exception of grapes, which I will leave until another time, it occurred to me that my observations of the newer varieties might be of interest to the readers of the RURAL. To begin with what is first in importance as well as in order of ripening, I offer notes on some of the

Newer Strawberries.

CRESCENT SEEDLING, I am compelled to state has greatly disappointed me. It is wonderfully productive, to be sure, and this is about all I can say in its favor. The berry was so soft I could not ship it to market, and as it is too poor to eat, of what use is it after one gets it?

CRYSTAL CITY was literally the "earliest of the earlies" with me, but not so large or so firm as desirable on the few plants I had in bearing. It was not a fair trial, however, and it will take another season to determine definitely how it means to behave in these parts.

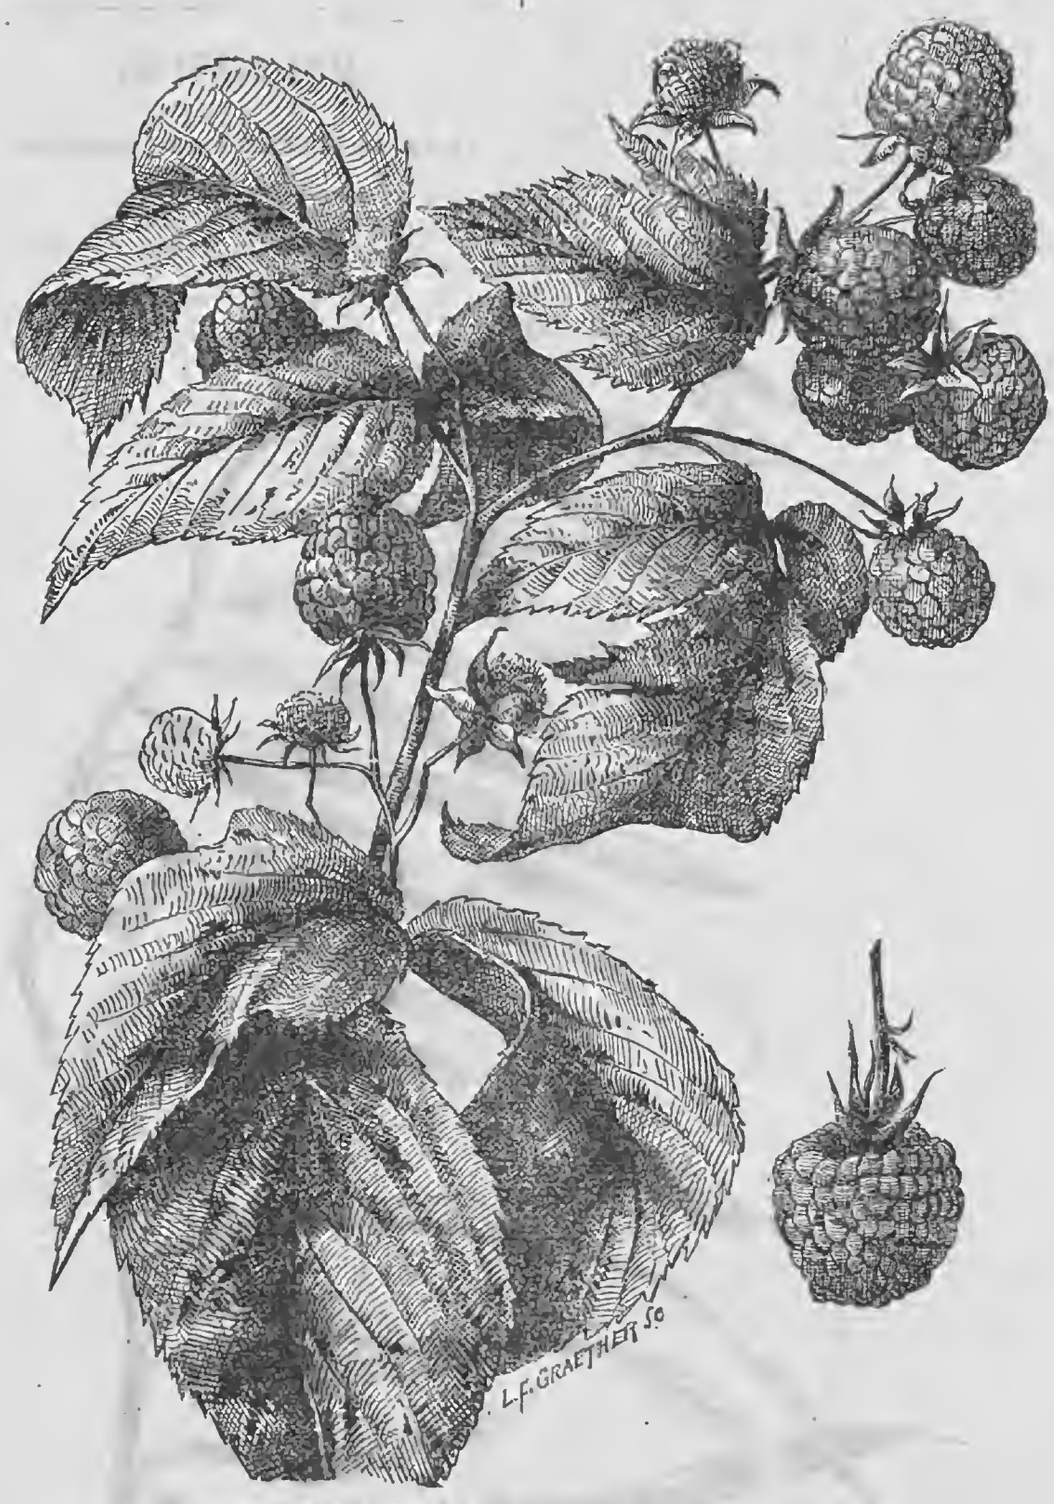
FOREST ROSE has borne out the flattering description of its introducer very well, the berry being large, firm, beautiful in form and color, of high flavor, but the vine is not so prolific as desirable. It did not scald or burn as much as last year, owing, no doubt, to the absence of showers followed by hot sunshine, which occurred so frequently during the season of '78; still it did scald quite perceptibly; but not enough to be regarded as a serious fault. It is a fine variety for the amateur, certainly; but I doubt if it will ever become a standard.

GREAT AMERICAN, in Monmouth County at least, must be regarded as a failure. Under extra-high culture it is both fine and productive; but under ordinary care and on anything else but very heavy rich soil, the plant is a poor grower and decidedly unproductive. As there are now others as good *without* petting as the Great American is *with*, I, for one, consider it not worth planting.

SHARPLESS has sustained the elaborate encomiums and stunning descriptions bestowed upon it by its introducers to, I might say, a remarkable degree. It averages the largest in size of any strawberry I have yet seen; is of fine appearance and of good, though not high, quality. The plant is the largest and most robust of all, the fruit, plant, fruit stalks and blossoms being well proportioned.

PRESIDENT LINCOLN, in fruit, resembles the Sharpless quite strongly, but with me the plant is not an extra good grower. I esteem it a fine variety, however, and one that would be of much value, were it not that the Sharpless is better. [It is a feeble grower with us.—EDS.]

MINER'S PROLIFIC was one of the very best either new or old, all things considered. The plant is immensely productive; the berry large, of good flavor and fine appearance, the only question being; is it sufficiently firm to bear shipment to market? It appears to be quite firm, but on being shipped to a distance in quantity it may prove otherwise. It is late in ripening.



CUTHBERT RASPBERRY, SLIGHTLY REDUCED IN SIZE.

DURAND'S BEAUTY sustained its good reputation, but it must be given good culture and soil.

PIONEER, for so early a berry, is certainly a fine one. It is large, handsome and good. Thus far it is the best of Mr. Durand's Seedlings of recent introduction.

CINDERELLA was a great disappointment to me. Having seen it in its original home, most prolific and beautiful, I expected much from it. With me the plant proved to be a poor, feeble grower and the berries, although fine in every particular, were produced so sparsely as to render it of little value.

CONTINENTAL.—The same may be said of this as of Cinderella, with the exception that even what few berries *were* produced, were quite inferior in appearance and flavor.

RUSSELL'S ADVANCE is a large, fine, early and good berry. I do not know but it is the best *early* sort for *home use*. It is not sufficiently firm to bear shipment.

GLENDALE is, so far as my observations go, the most valuable of all the new varieties. Its strong points are its lateness and firmness, in both of which it fully equals any variety I have yet seen. Added to this, it is of good size and appearance and of *good*, though not *high* flavor. The plant is very prolific, and a robust and vigorous grower.

MR. JONES'S SEEDLINGS, namely, Burr Oak, Early Adela and Laurel Leaf, do not thus far promise to be of much value.

There are a number of other new sorts that fruited with me, but as they did not show indications of value and have not been heralded to any great extent, I do not occupy space by noting them.

NEXT in order, and among which there seems to be few novelties, are the

Currants.

LEE'S PROLIFIC BLACK.—Persons with plants of this will be apt to think, until they fruit, that they have been unfairly dealt with, and have only the well-known Black Naples, which it is very like in appearance and growth of plants. In bunch and berry it is, however, considerably larger and finer, ripens a week to ten days in advance of, and is even more prolific than that prolific variety. It is a decided improvement on Black Naples of which it is most surely a seedling.

Raspberries.

GREGG has disappointed me much, being described as the largest, finest, and of best quality, strong, hardy and prolific, "fifty per cent. larger than the Mammoth Cluster;" while one nurseryman had the audacity to call it "early." It is a distinct variety, and, while a strong grower, prolific, hardy and good, I find it no more so than the "old reliable" Mammoth Cluster, with which it ripens.

FLORENCE is a hardy, strong grower, prolific and the largest Yellow Cap I have yet seen.

CAROLINE is another Yellow Cap, said to be a hybrid between Brinckle's Orange and Catawissa. It so closely resembles the Brinckle's in appearance and flavor as to require an expert to distinguish them, and is quite hardy without protection, although not entirely so the past winter. From its superior quality, this, I think, a valuable addition for the amateur, but of little value for the market.

RELIANCE may be a slight improvement on the old Philadelphia, of which it is a seedling, but it too closely resembles it to ever become popular, I fear.

PRIDE OF THE HUDSON loses its leaves during the growing season, as do all the Antwerps in this part of New Jersey, which so enfeebles it as to cause it to winter-kill to the ground.

CUTHBERT.—For many years we have been looking for a good reliable Red Raspberry—one that must be hardy, a good grower and prolific, with large, bright, handsome berries that would be firm enough to ship long distances. I, for one, have bought dozens of new kinds in hopes of getting the desired sort, many of which from their descriptions in the catalogues, seemed to be just what I was longing for. In none had I anywhere near realized my hopes until I fruited the Cuthbert. This seems to "fill the bill" entirely; in fact, it seems to leave little to be desired as a market berry. In addition to its other good qualities, it is of excellent flavor, which is certainly remarkable for a berry that is firm. Many of the berries measure three inches in circumference, and I selected a few that measured three and a quarter. In firmness it nearly or quite equals the insipid Brandywine, and so firm and handsome is it that I am inclined to think the gentlemen in Delaware, who have the "Queen of the Market," which is being so lavishly praised in some quarters, had the Cuthbert, and forgetting its name, gave it this appropriate title. At any rate, I can detect no difference in fruit or plant between the two varieties.

The Vineyard.

OUR NEW GRAPES.

D. S. MARVIN.

In discussing the subject of new seedling Grapes, if the names of the originators were mentioned, it would be a delicate task to avoid giving offence to their over-sanguine owners. It will be better, therefore, to discuss the leading rules and principles that should govern our choice in making our selections. This plan will enable those who are not conversant with the subject to make their own selections, without arousing any ill-feeling against those who present to the public the results of careful experience.

Grape culture is like any other business—it must be made to pay. Nurserymen give high prices for new vines, and propagate them as rapidly as possible, without stopping to fruit them to test their value. In the Atlantic States this industry commenced with the importation and trial of varieties of the Vitis vinifera, or European vine, and proved a hopeless failure, except for amateurs and hot-house purposes.

The next trial was made with varieties of our Labrusca class of Grapes, native to our South Atlantic seaboard, the Catawba and Isabella. This was a great advance, but these were at length found not well adapted for general culture in our more northern States, the Catawba mildewing and both proving more or less tender. The next and more hopeful trials were made with some of our Æstivalis Grapes, such as Norton's Virginia, Cunningham, etc. In the meantime our northern Labrusca Grapes, such as Concord, Ives's Seedling, etc., were introduced, and soon became very popular; also our Cordifolia class, the Clinton, Taylor's Bullet, etc., while upon the South Atlantic seaboard still another, the Vitis vulpina, or Scuppernong class, became popular in its own locality.

Amidst such heterogenous materials all except the specialist is more or less lost. In this rapid survey the wealth and abundance of the classes and varieties of our new Grapes form the one promising feature. I cannot stop now to look into the further complications produced by the introduction of varieties and classes still wild or seldom cultivated.

From the long list of Grapes already in cultivation we must reject all kinds found to be worthless or unsuited to our climate. First, then, we must reject all European Grapes, and generally their hybrids with our natives. Except for amateur or hot-house culture, no sort of mixing has ever eliminated their defects for our climate. We can next throw out the Scuppernong class, as only valuable in the maritime districts of the South. This leaves us three classes for the Northern States—Vitis Æstivalis, Vitis Labrusca and Vitis Cordifolia, valuable in the order in which they are named. There are numerous varieties of each, as well as hybrids of known and unknown mixture. More than half, however, belong to our northern Labrusca class and its hybrids. The last will probably come from our Æstivalis class and their hybrids with Labrusca and Cordifolia classes.

Labrusca Grapes are most subject to mildew; the other classes differ but little in their liability to the attacks of this sort of dangerous diseases. Nearly all our native Grapes, and especially our Cordifolia and Labrusca classes, are defective in their fructifying organs, the stamens being usually more defective than the pistils. Persons originating new varieties should study these several defects and liabilities to disease, and aim to avoid them and combine the good qualities of the best classes and varieties. This task will be difficult, but by working through long periods of time, we are enabled to control the occult forces of nature. Hybrids of Grapes, like hybrids of domestic animals, cannot usually be depended upon to perpetuate or intensify increased excellences; to do this we must go back to seedlings crossed upon the best parent class. No seedling, for instance, of the Delaware—and they are numerous—has ever been found equal to its parent. We should not so often compare our native with the European Grapes—each kind has its merits and uses. Owing to stronger potency, ours can alone be grown for field culture. We must, then, select from our native sorts, and the best varieties of these are not inferior to the Grapes of Europe.

The following is a botanical classification of

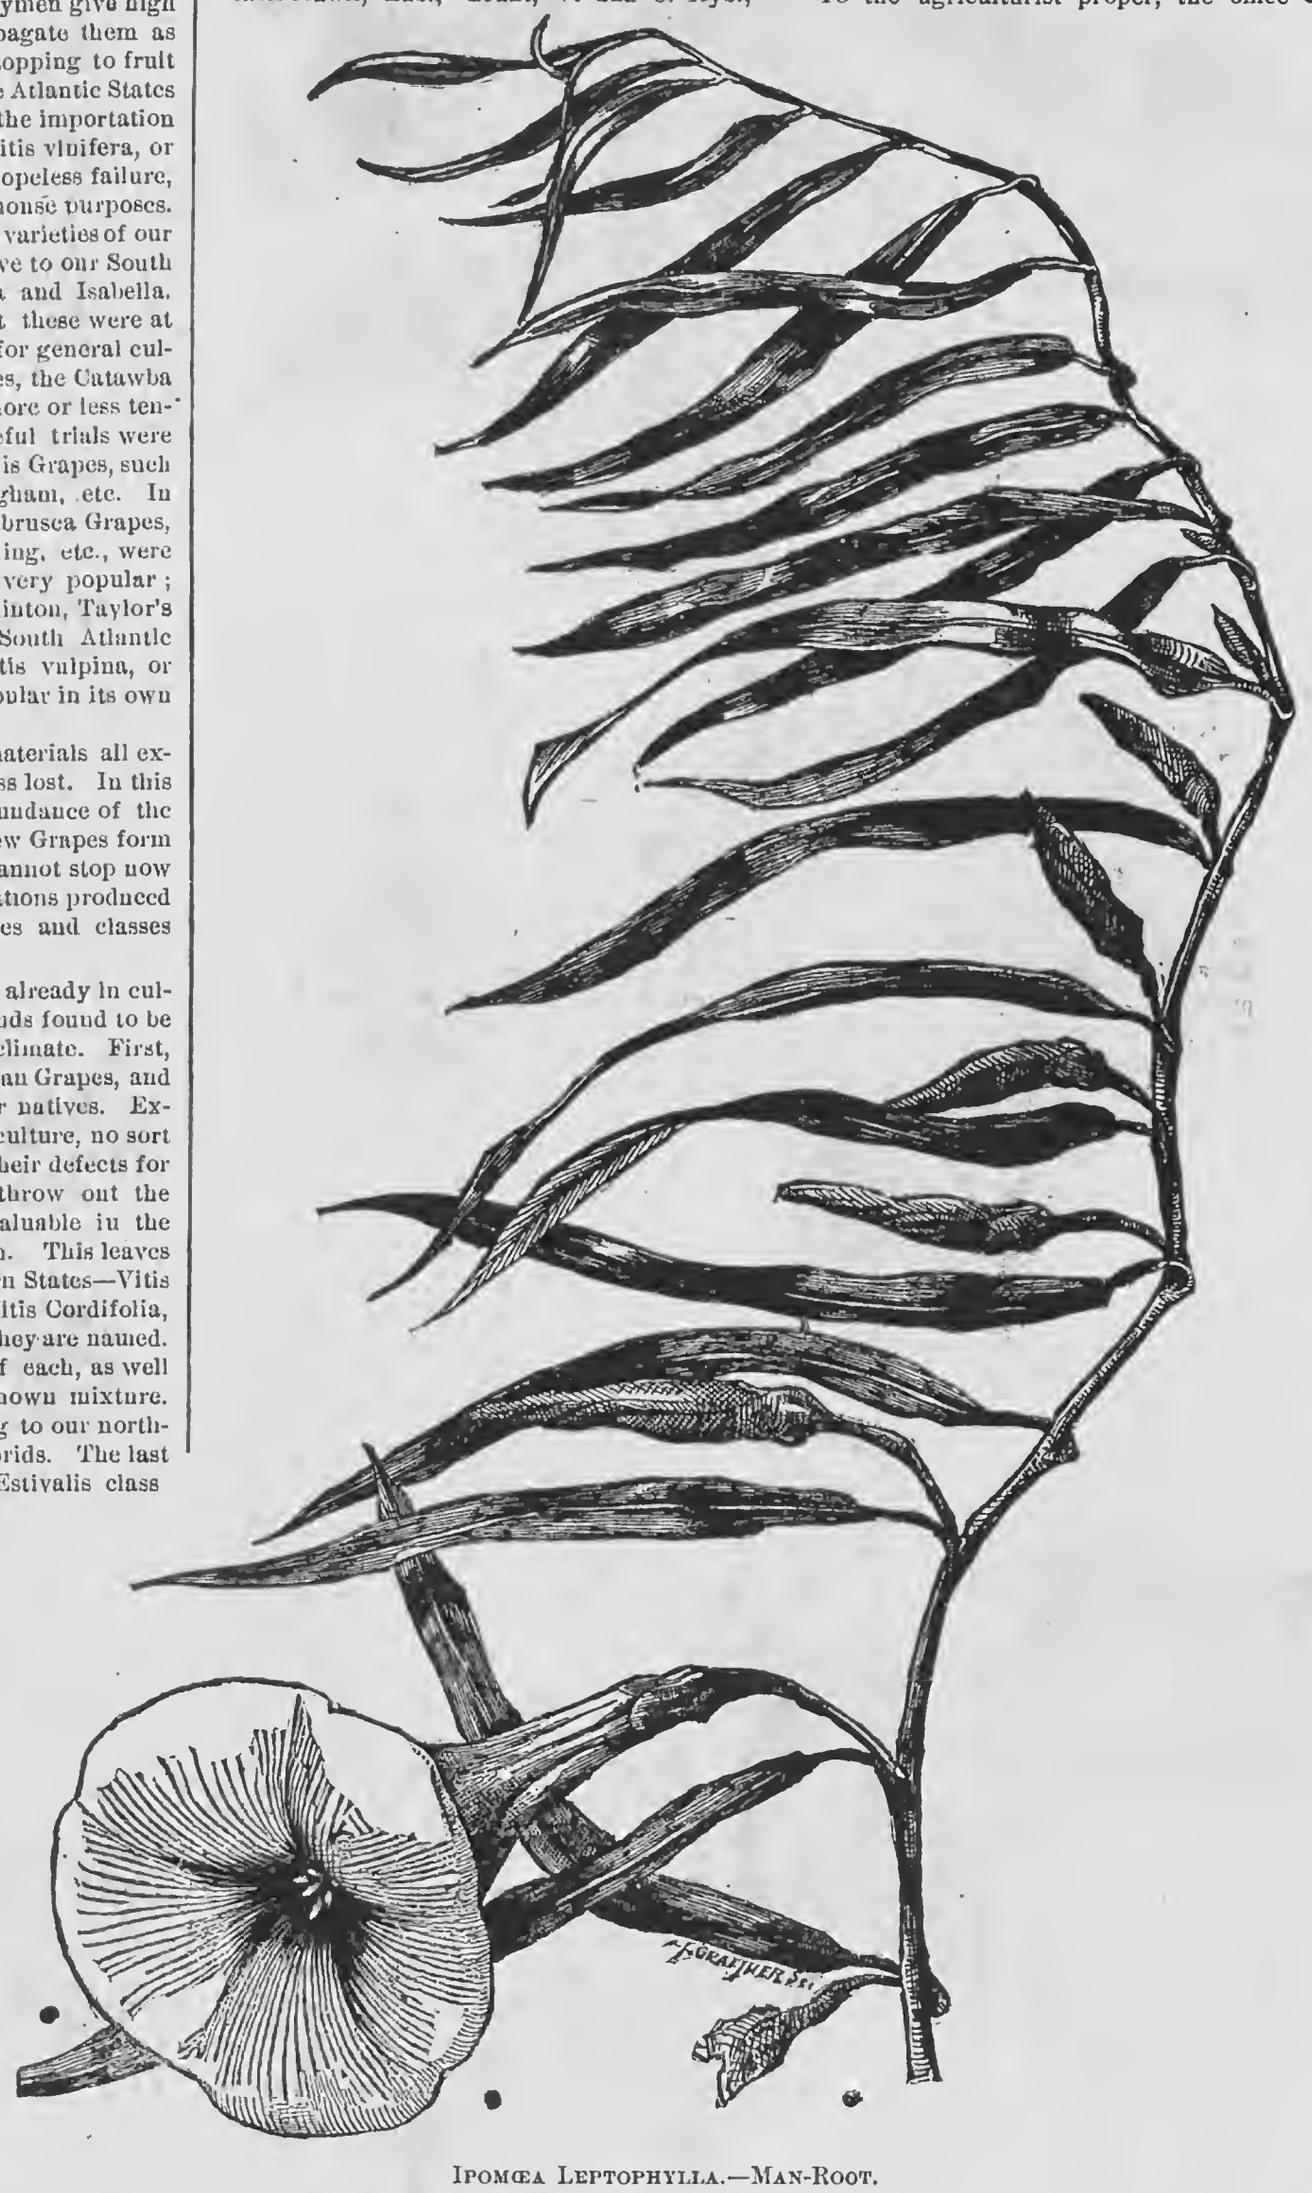
Grapes.

[Æs. means Æstivalis; Cor. Cordifolia; Lab. Labrusca; V. and L. Vinifera and Labrusca, Hybrid; C. and L. Cordifolia and Labrusca, Hyb.; V. & C. Vinifera & Cordifolia, Hyb.]

Adirondac, Lab.; Agawam, V. and L. Hyb.; Autuchon, V. and C. Hyb.; *Brighton, V. and L. Hyb.; *Champion, Lab.; *Croton, V. and L. Hyb.; Creveling, Lab.; Concord, Lab.; Cottage, Lab.; Delaware, C. and L. Hyb.; *Eumelan, Æs.; Hartford Prolific, Lab.; Iona, Lab.; Israella, Lab.; Janesville, Cor.; *Lady, Lab.; Martha, Lab.; Mary Ann, Lab.; Merrimac, V. and L. Hyb.; Massasoit, V. and L. Hyb.; Northern Muscadine, Lab.; Othello, N. and C. Hyb.; Rebecca, Lab.; Salem, V. and L. Hyb.; *Senesqua, V. and L. Hyb.; Union Village, Lab.; Wilder, V. and L. Hyb.; *Walter, C. and L. Hyb.; *White Delaware, C. and L. Hyb.; *Whitehall, Lab.; *Worden, Lab.; *Advance, C. and V. Hyb.; Alexander, Lab.: Adelaide, V. and L. Hyb.; Aletha, Lab.; Albino, Lab.; Allen's Hybrid, V. and L.; Alvey, Æs; Amanda, Lab.; *Aminia, V. and L. Hyb.; Anna, Lab.; Barry, V. and C. Hyb.; Belvidere, Lab.: *Black Defiance, V. and L. Hyb.; *Black Eagle, V. and L. Hyb.; Black Hawk, Lab.; *Brant, V. and C. Hyb.; *Cambridge, Lab.; *Canada, V. and C. Hyb.; Cassidy, Lab.; *Challenge, V. and L. Hyb.; *Concord Chasselas, V. and L. Hyb.; *Concord Muscat, V. and L. Hyb.; *Cornucopia, V. and C. Hyb.; *Diana Hamburg, V. and L. Hyb.; *Don Juan, V. and L. Hyb.; *Elvira, Cor.; Hermann, Æs.; *Hine, Lab.; *Humboldt, Æs.; Huntington, Cor.; *Irwing, V. and L. Hyb.; *Ithaca, V. and L. Hyb.; *North Carolina, Lab., *Othello, V. and C. Hyb.; *Secretary, V. and C. Hyb.; *To Kalon, Lab.; *Triumph, V. and L. Hyb.; *Highland, V. and L. Hyb.; *Amber Queen, V. and C. Hyb.; *Una, Lab.; *Moore's Early, Lab.; *Eva, Lab.; *Black Pearl, V. and C. Hyb. The minor Grapes are all Lab.

I have purposely avoided either recommending or condemning any new Grape, but in this rapid survey I have glanced at facts and principles that will, I trust, enable the readers of the RURAL to select their new vines intelligently. Before ordering a new Grape refer to the above list of botanical classes; see whether the Grape you are thinking of ordering is a foreign, a native, or a hybrid; find out its parentage; judge of the class, or classes, to which it belongs, as to hardiness and tendencies to mildew; ascertain the character of its reproductive organs; see that these are not defective, and if the order be discreetly made, the selected vines will usually give profit and pleasure to their owners.

*The ones marked with a star are all new, the others not.



IPOMŒA LEPTOPHYLLA.—MAN-ROOT.

Pomological.

FAIRS AS EDUCATORS IN POMOLOGY.

PRESIDENT T. T. LYON.

To the agriculturist proper, the office of fairs may be assumed to be to give a more just and expansive idea as to the possibilities of his chosen profession; and, at the same time to furnish him information of a practical and reliable character, as to the relative usefulness or profitableness of different classes of product; together with some proper idea of the comparative values, for cultivation, of the several varieties of each, which may come in competition for the popular favor. I omit the consideration of exhibits of animals, implements, machinery, and the thousand and one other attractions that go to make up an ordinary agricultural fair, as having little direct bearing upon the subject to be considered.

In few if any of the particulars of an ordinary agricultural fair is mere correctness to name a matter of special importance, since with little actual loss of either money or time, the error may generally be corrected. On the other hand, in pomological exhibits we are at once confronted with the fact that correctness to name is of the very highest moment; since the number of the varieties of fruits is immense, and their variations of character exceedingly diversified; while the correction of an error in nomenclature in many, if not in most cases, may almost be said to be the work of a lifetime. From these facts we deduce the inference that, in a pomological exhibit, after providing the best possible means of studying the peculiarities—economically considered—of the products exhibited—and that, as far as possible, in connection with their known tendency to variation—it becomes of almost if not quite equal importance, that the observer be correctly taught in the matter of nomenclature.

To provide the means for such education has, for the past quarter of a century or more, absorbed a very large portion of the labors of our National Pomological Society, together with those of the almost numberless affiliated societies scattered over our country. To the mass of even our fruit growers, proper, these accumulated stores of knowledge and experience are, and perhaps ever will be, a "terra incognita;" and if they are ever to profit by them, such profit must doubtless arise from the efforts of the better-informed to bring deductions from such accumulations, to bear upon the practice of the masses.

In our State, as a means of rendering the exhibits at our pomological fairs as effective as possible in this direction, it has for some years been the study of some of our pomologists, to devise more effective means for the advancement of this subject. In so doing they have established certain fundamental ideas as a basis for action, among which are the following:—

1st. As soon as practicable after exhibits are in position, the nomenclature must be examined and corrected where needful.

2nd. No exhibitor should receive an award based in any degree upon a variety of fruit to which he has failed to attach the correct name.

3d. Large and showy but comparatively worthless fruits shall be regarded by committees as a discredit to a collection.

4th. Committees shall base their awards:—1st, upon the value—for the purpose specified—of the varieties in each exhibit, which shall be correctly named by the exhibitor; 2nd, upon the color, size and evenness of the several specimens of each variety; 3d, upon their comparative freedom from blemishes.

5th. Market and dessert or amateur collections shall not come into competition for the same premiums.

6th. The collections most correctly named by the exhibitor shall be awarded an additional premium for nomenclature.

7th. Committees are required, in their reports, to specify, in the order of their value, as estimated by them, the varieties in the successful collections, that have influenced their decisions. As a means of securing these particulars, printed blanks, for reports, are issued to each committee.

8th. As a means of learning how varieties are relatively esteemed, by both exhibitors and committees, premiums are offered, severally, for the best twenty-five varieties of apples for amateur or home purposes; also for the best twelve, the best six, and the best single variety of market apples. Similar offers are also made in the other classes of fruits.

Several of the above requirements have now been in operation for a series of years, with eminently satisfactory results.

Grand Rapids, Mich.

The Garden.

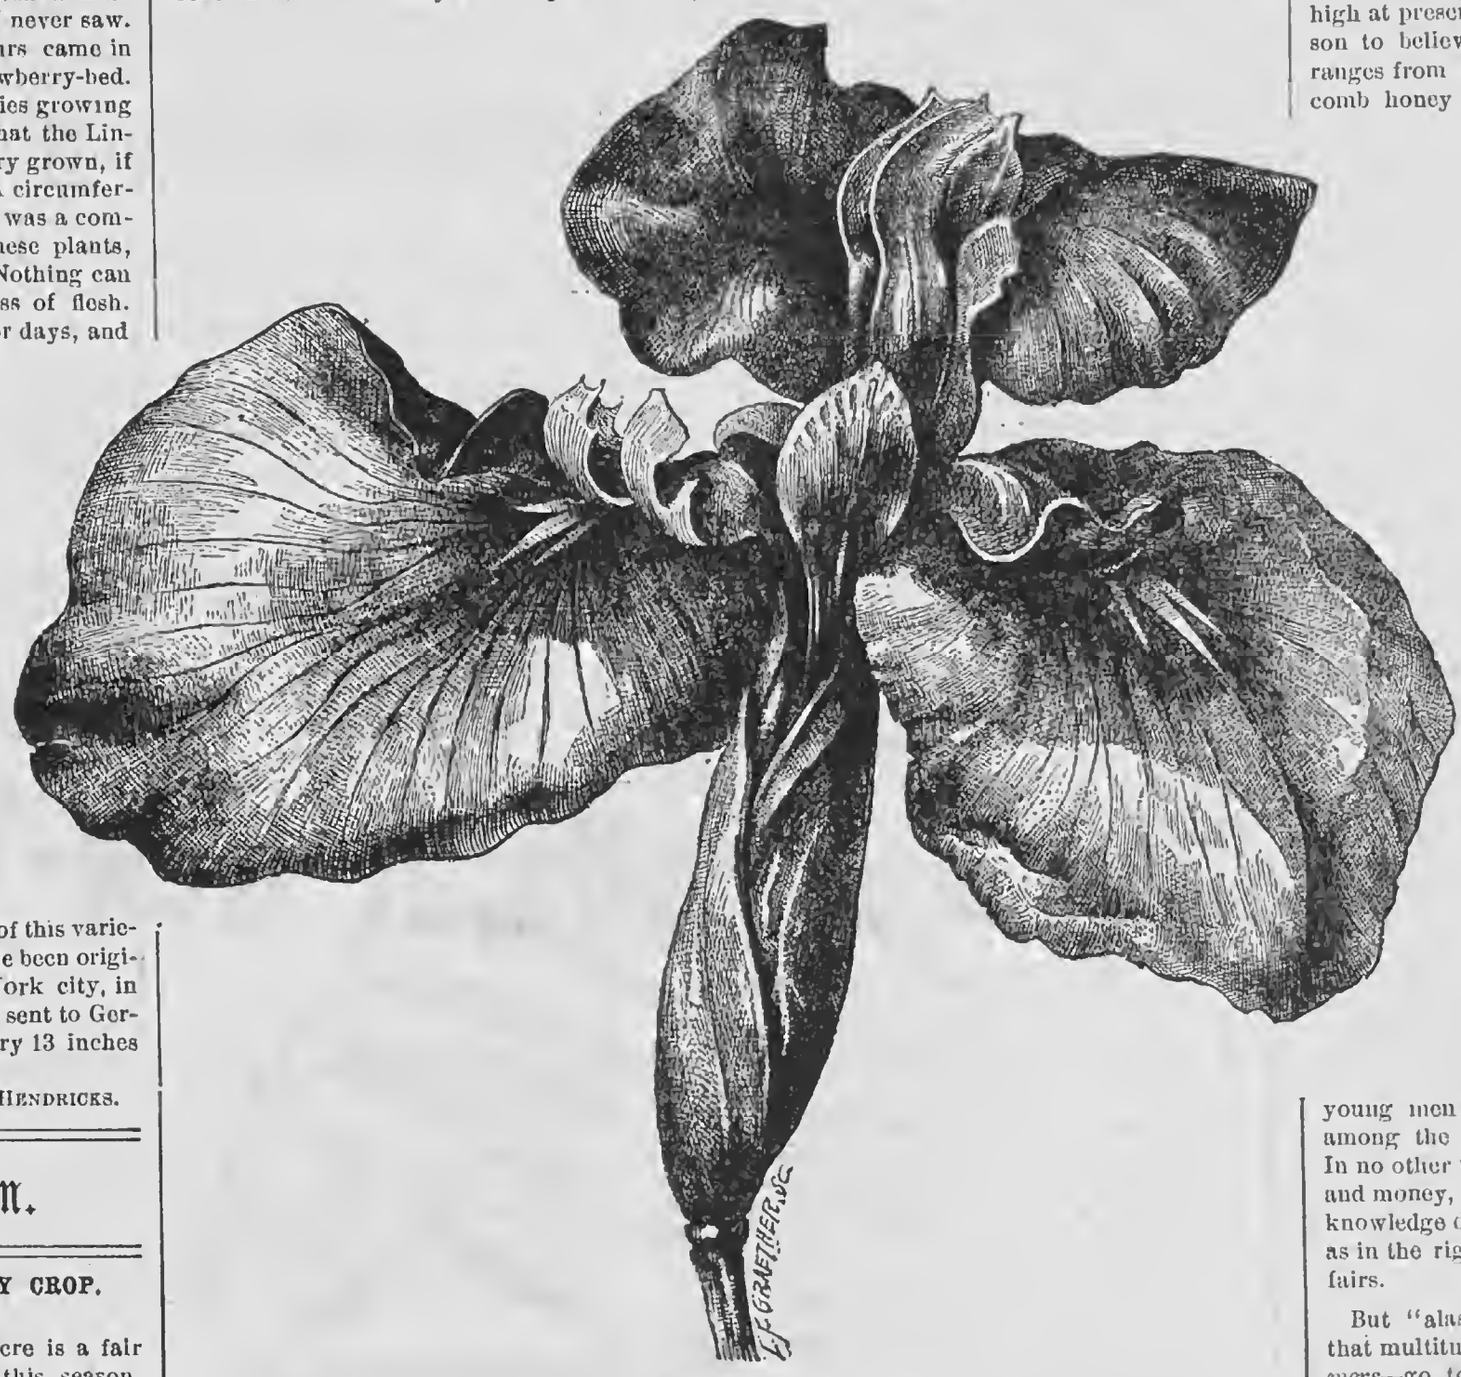
THE PRESIDENT LINCOLN STRAWBERRY.

The specimen of this new strawberry, from which the engraving on page 569 is made, is believed to have been the largest single strawberry ever grown in this country; at least we have no record of its equal here, although one of the same variety, measuring 11 inches in circumference, as claimed, was shown at the New York Horticultural Society's exhibition last year. This one measured fully 11⅛ inches in circumference, and was a perfectly solid and continuous berry throughout, in spite of the curious and irregular lobes which the engraving correctly represents. This cut is made from an accurate photograph, and is designed to represent the actual size of the berry. The stem, as will be seen, is flat, and ribbed longitudinally. This is a common peculiarity of this variety, especially in all the large specimens. This berry grew in my city garden here, on a plant eleven months old, set in August, 1878—an ordinary runner plant received by mail from a Connecticut nursery.

The soil is a low, dark, sandy loam, and no manure was added. In the freshet last fall my

whole bed was two feet under water. Only ordinary clean garden culture was given. I had fifty plants of this variety, and a finer show of fruit than they presented I never saw. Various fruit-growers and amateurs came in to look at my eleven-months' strawberry-bed. I had some thirty other new varieties growing in the same bed. I am satisfied that the Lincoln is now the largest strawberry grown, if not, indeed, the finest and best. A circumference of from five to eight inches was a common average of the berries on these plants, and there were no small ones. Nothing can exceed them in flavor or in firmness of flesh. I had them on exhibition here for days, and while others would soften and rot, these would merely dry up. Their color is bright, glossy crimson. In shape they are inclined toward the Coxcomb, and are somewhat irregular, as shown in the cut, being similar to the Triomphe de Gand, especially the fruit ripening first; later on the berries are more uniform. The texture is fine and solid. Some have objected to this irregularity in shape; for my own part, I am content to sacrifice this point for the many other excellent qualities which I have thus far been unable to find in so large a degree in any other variety. My plants seem entirely hardy, strong and vigorous, and very productive so far. The season of this variety is medium early. It is said to have been originated by a Mr. Smith, of New York city, in 1875. In 1877 a few plants were sent to Germany, where, it is claimed, a berry 13 inches in circumference was grown.

Kingston, N. Y. H. HENDRICKS.



IRIS LÆVIGATA SEEDLING.

The Apiarian.

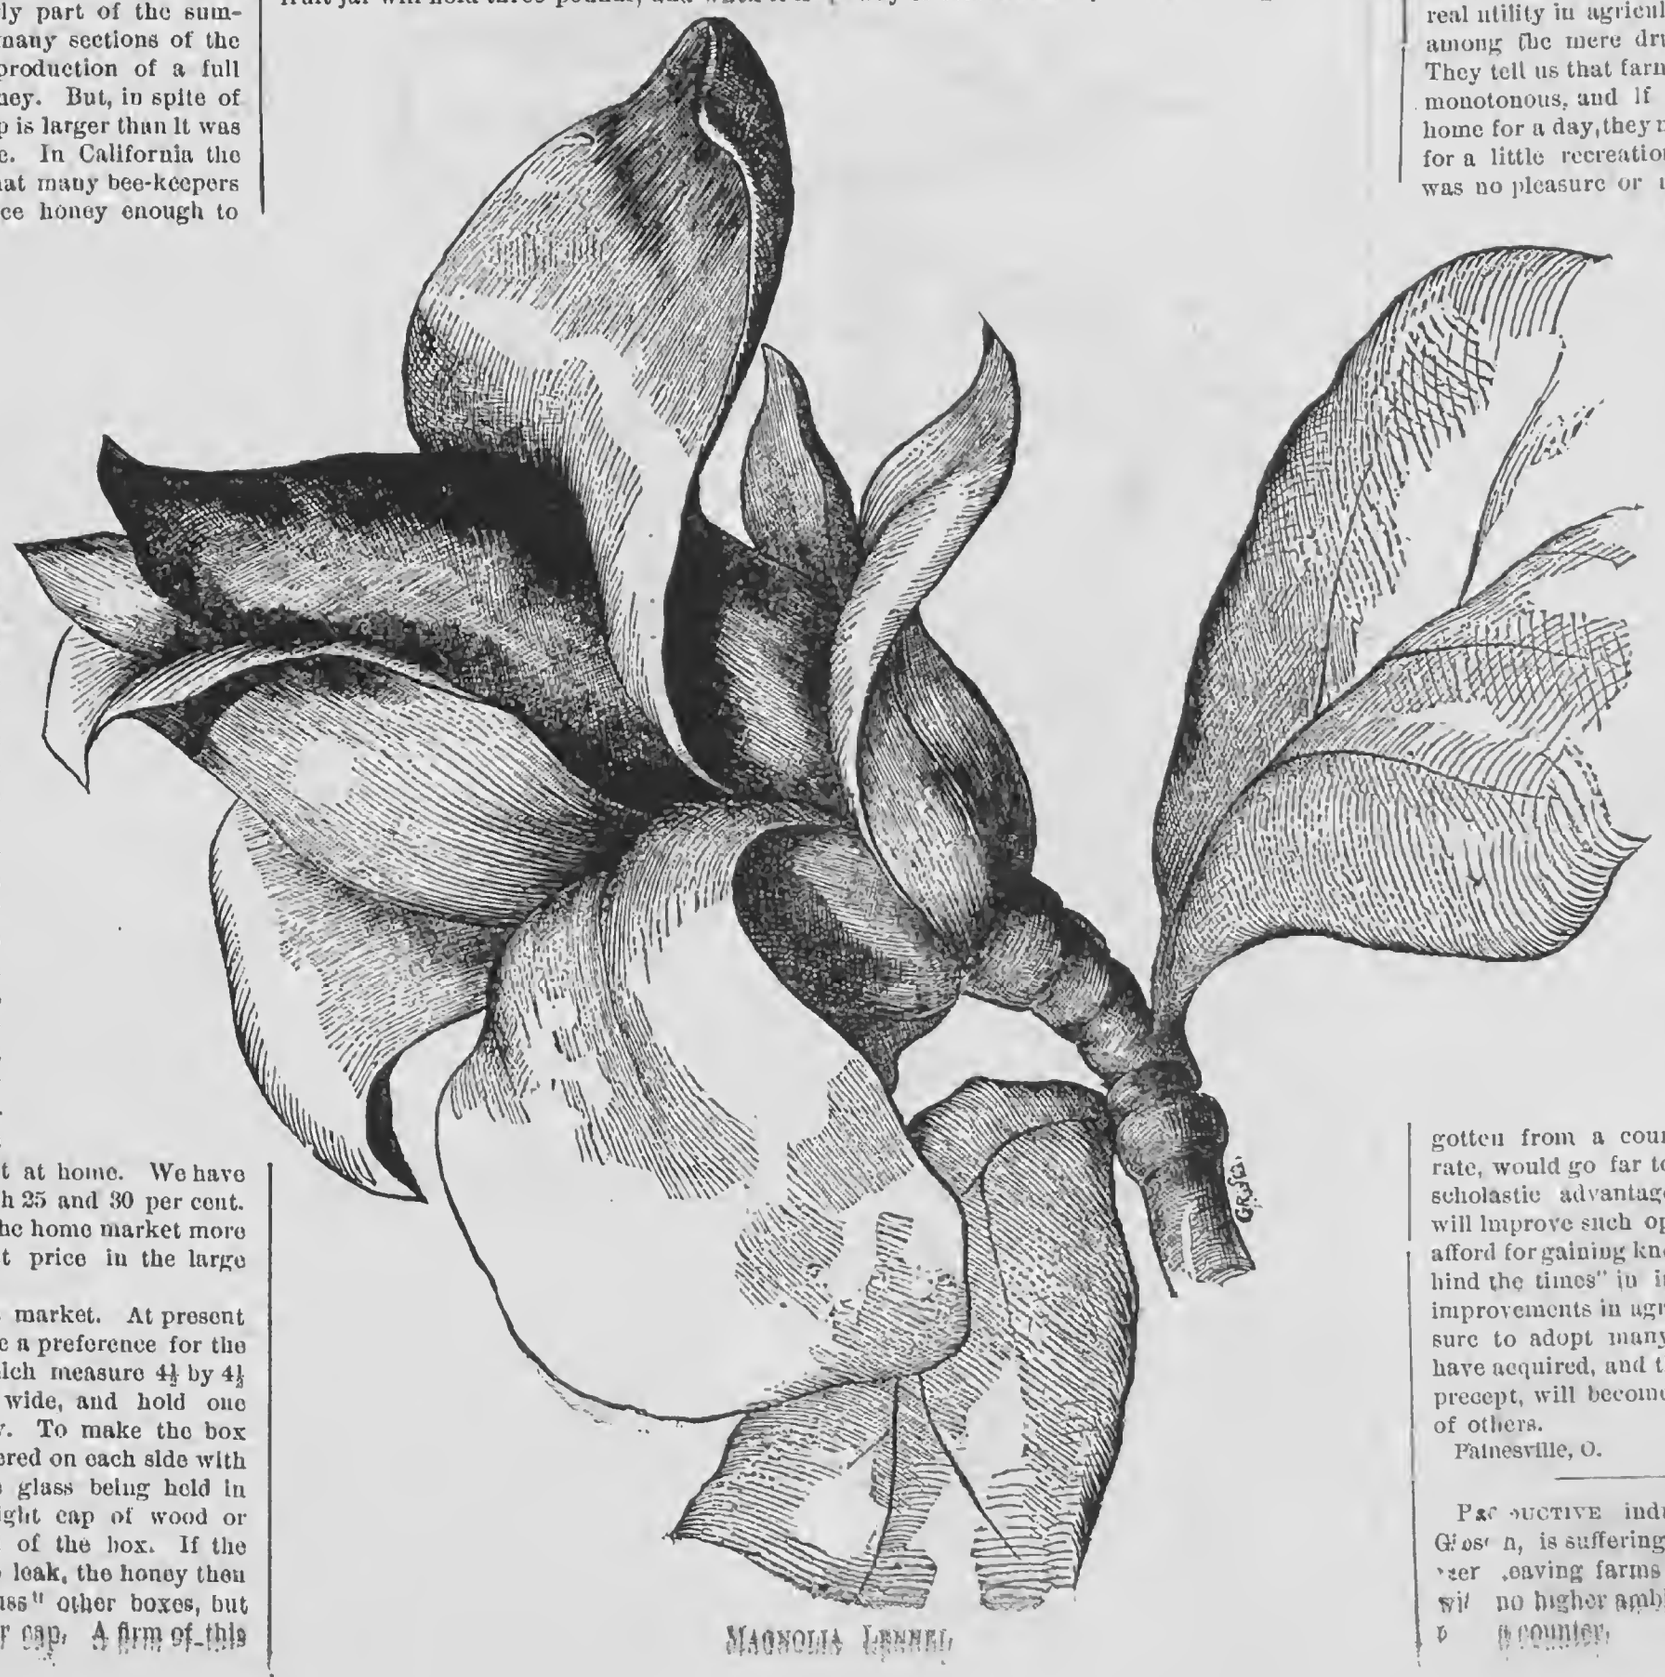
DISPOSING OF THE HONEY CROP.

REPORTS now indicate that there is a fair crop of honey to be marketed this season, though it is far from being as large as the crop of last year. There are two main causes for its diminution:—the stock of bees was greatly reduced by the almost unparalleled mortality that prevailed last winter among these busy little workers, and this season bee-keepers have been obliged to pay special attention to the increase of colonies, rather than to the production of surplus honey. And again, the drought which in the early part of the summer was severely felt in many sections of the country, prevented the production of a full crop of white clover honey. But, in spite of these two causes, the crop is larger than it was at one time expected to be. In California the drought was so severe that many bee-keepers hardly expected to produce honey enough to carry their stocks through the coming winter, but later rains increased the flora and now the crop is said to be good. In most localities the honey yield is now over, and the market is opening.

To dispose of the crop at the greatest profit, close attention should be paid to the wants of the market, and generally it is best to choose a near market in preference to a more distant one. Endeavor to create a home demand. This can be done by advertising the product and occasionally making judicious presents of small quantities of the best honey; by making the packages as attractive as possible, and by taking pains to suit the whims of the customers. Small producers especially should never send their honey to distant markets if there is a possibility of selling it at home. We have known instances in which 25 and 30 per cent. per pound was paid in the home market more than the quoted market price in the large cities.

Study the wants of the market. At present consumers seem to have a preference for the small section boxes which measure 4½ by 4½ inches and two inches wide, and hold one pound of capped honey. To make the box more attractive, it is covered on each side with a plate of thin glass, the glass being held in place by a close-fitting light cap of wood or pasteboard, at each end of the box. If the comb should happen to leak, the honey then cannot run out and "muss" other boxes, but will collect in the lower cap. A firm of this city, that sells immense quantities of honey on commission, informed us recently that they sold more comb honey in one-pound boxes, emptied it can readily be utilized in the household. Much is also sold in tin cans, holding from one to five pounds, but this is not an attractive form, and honey thus put up cannot command a high price.

Label every box, jar and can with neatly-printed labels, giving the name of the producer, the place where he lives, and the quantity and quality of honey. This is the only way to establish a reputation among the consumers, and to dealers in an article that is so easily adulterated, a good name brings a good trade. The wholesale price of honey is not so high at present as at one time there was reason to believe it would be. Extracted honey ranges from six to eight cents a pound, and comb honey from ten to twelve cents, extra-fine going as high as fifteen cents. Though there is a fair crop, there is but little danger that the market will be overstocked, and the demand is likely to be as great or greater than last year; the taste that has been acquired and stimulated under the influence of low prices has not vanished. We apprehend, therefore, that prices will rise later in the season, and bee-keepers should be in no hurry to market their surplus honey.



MAGNOLIA LENNEI.

Miscellaneous.

YOUNG FARMERS AT THE FAIRS.

The use of agricultural fairs as educational agencies is not as generally appreciated as I think it should be, especially by young farmers. It is very gratifying to notice some of this class at our large fairs each year making careful observations, with note-book and pencil in hand, jotting down whatever strikes them as most interesting in each department of the exhibition. Such young men will be sure to be found hereafter among the leaders in agricultural progress. In no other way, at so little expense of time and money, can a young farmer gain so much knowledge directly relating to his profession, as in the right use of his opportunities at the fairs.

But "alas, 'tis true, and pity 'tis 'tis true" that multitudes of young men—even young *farmers*—go to these fairs as they would to a circus, simply to see the crowds and be amused! We see them thronging around the horse ring for hours together, watching the trots or races and listening to the useless talk of town loafers and gamblers. They are also attracted to the various side-shows by the cheap music and noisy clatter, where time and money are spent without any valuable return. These young men, and such older farmers as can see no real utility in agricultural fairs, are sure to be among the mere drudges of the profession. They tell us that farm life is very toilsome and monotonous, and if they can get away from home for a day, they must take the opportunity for a little recreation. Just as though there was no pleasure or recreation for them in the acquisition of knowledge and in witnessing the evidences of the world's progress!

In my experience as an editor, or correspondent for agricultural papers, it has been my practice to observe and take notes of all that was new or of special interest in each department of a fair, and to obtain facts of interest to the public from the various exhibitors and committee-men. I have often wished that hundreds of our young farmer would try the experiment of going through a good State fair, annually, for a few years in this way, just as though they were employed to give full and progressive reports thereof for some prominent journal. The information and mental training thus gained, would be of as much benefit to them in after life as is sometimes gotten from a course in college; or, at any rate, would go far to make up for any lack of scholastic advantages. Young farmers who will improve such opportunities as these fairs afford for gaining knowledge, will never be "behind the times" in intelligence respecting the improvements in agriculture; and they will be sure to adopt many useful ideas which they have acquired, and thus by example, if not by precept, will become teachers and benefactors of others.

M. B. BATEHAM.

Painesville, O.

PRODUCTIVE industry, says Hon. W. K. Gibson, is suffering to-day because of young men leaving farms and crowding our cities with no higher ambition than to sell tape by the counter.

Dairy Husbandry.

THE DAIRY—STATE OF THE INTEREST.

PROFESSOR L. B. ARNOLD.

THE course of events in the dairy interest has been altogether unique during the current season. Heretofore no rural industry has been so unvarying and reliable in its results as the business of making butter and cheese or producing milk. But its customary even tenor has now become disturbed, and it has sunk to a position it has never reached before. Fairly good butter is now (August 1st), selling in many localities for 10 cents and even as low as 8 cents, and cheese of a fair quality can be bought as low as 4½ cents a pound at wholesale. Finest qualities sell a little higher Very little, at any price now being paid, returns the farmer the cost of production. This state of things has been brought about by two principal causes. One of these is the very large crop of last year, which still lingers in the markets and blocks the way for the new crop. Large quantities of cheese, in particular, of last year's make, are yet crowding the British markets, and New York city is still not clear of the old cheese. More butter and cheese were produced last year than ever before in the country in one year, and more than could be consumed in the markets we are accustomed to send it to.

The other cause lies in the changed condition of our principal consumers. The great bulk of our exported cheese is eaten by the laboring classes in the British Isles, and the financial embarrassment, not to say distress, under which they have labored for the past year, has prevented the usual consumption of American cheese. The large exportations of American meat have also affected the consumption of cheese abroad. Cheese is an animal food which has the same nature as meat, and must compete with all classes of flesh-forming food, whether flesh, fish, or fowl. The markets are too much crowded with such kinds of food to give any considerable relief the present season. But the blockade in dairy products cannot be maintained forever, and circumstances are even now tending to its relief. The crop of butter and cheese for the year will fall below the consumption of the year. There will be no such surplus to carry over as was left last year. The production this year will be largely reduced. In central New York the yield will be nearly the same as usual, but in all other localities I hear from, it is falling considerably short of an average. In districts which have been long and exclusively occupied with dairying, very little change in the number of cows kept has been, or is likely to be soon made. Dairymen there are not prepared to make a sudden change to any other mode of farming. In other districts, as in Pennsylvania, in much of the West, and in Canada, dairying is but part of a system of mixed husbandry, and can be diminished without any shock to the business of the farm. The cows which were turned off last fall by those carrying on mixed farming, were, to a large extent, not replaced last spring, and unless prices improve considerably hereafter, a still greater reduction will be likely to occur next spring, and so on till the supply is reduced to the demand.

Since prices for butter and cheese have been so low, milk has been turned to a considerable extent to other uses. Last spring a much greater number of calves was raised than usual, and milk was fed to them and to pigs so freely that, outside of the most exclusively dairy sections, the yield up to the first of June, did not exceed half of what it was last year, and the make for June and July will fall short 15 to 20 per cent. At the present date I learn from the cheese-makers, whom I am daily meeting, that some of their patrons are feeding a part, and some of them all of their new milk to their pigs, and think it equally profitable and less troublesome than sending it to the cheese factories. I think they are quite right in this conclusion, and that it would be better for all concerned if more were utilized in the same way. In 1875, when the price of pork was but little different from what it is now, Israel Boies found it profitable to pay 25 cents a hundred for sour milk to feed a large drove of hogs. This is as much as a good deal of new milk nets the farmer now. Professor E. W. Stewart, of the National Live Stock Journal, found by feeding sour milk to thrifty calves and pigs, he could get a pound of live weight for every 15 to 16 pounds of milk fed. One of the German experiment stations found similar results, and from experiments with feeding new milk, made twice as much weight as from sour milk. With pigs at four cents a pound for live weight, this would be equal to seven cents a pound for cheese, if we allow two cents a pound for drawing the milk and making and selling the cheese. Selling cheese for 4½ cents a pound is equal to 25 cents per 100 pounds to the producer for the new milk, and is just what an equal weight of sour milk would be worth to feed to pigs.

Feeding good new milk to swine seems a good deal like using good corn for fuel, but it is pretty clear that where the animals are thrifty, and especially where farmers have not plenty of cheaper food, a larger return can be realized from feeding than from making milk into poor butter or low-priced cheese, besides contributing something toward relieving an over-crowded market. That dairy products will not long remain in their present depressed condition is evident enough, because the supply will soon regulate itself to remunerative demand, and it is not worth while for dairymen to be so discouraged or frightened as to change their business too suddenly. From the diminished product up to this date, and the rapid shrinking of cows, and the promptness with which products have moved forward, leaving a comparatively small stock in producers' hands, it is evident that dairy products, especially cheese, will not be abundant enough to keep prices down much longer. But the high prices of former days cannot be reasonably anticipated, because of the immense extent of cheap lands on which it is now well known that dairying can be successfuly prosecuted. But with fair quality, fair and steady prices can be safely counted on by those who have courage to endure a depression common to all industries.

The Herdsman.

THE TRUTH ABOUT IT.

[THE object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—EDS.]

THE VALUE OF A HERD RECORD.

What is there in a pedigree? This is a question upon which people are somewhat divided in opinion. During some years past the making of Herd Books has seemed to have no end. Cattle, horses, sheep, pigs, and even poultry have had Herd Books or Records, and the pedigree business has been worn threadbare. Last of all has come the secretary of the most aristocratic and high-toned of all the cattle breeders' associations, viz: the Jersey Cattle Club, and has rudely awakened sleeping suspicions by writing an article warning the public against purchasing "worthless brutes" which have the ear-marks of the Jersey Cattle Club Register upon them. And one and all have asked themselves "Can such things be?" What is a Herd Register if one cannot buy a good cow on the strength of it?

Now we ought to know the truth of this. Is it a fact, that when we have a Jersey or any other animal offered to us with the certificate of Herd-book record, we have any surety that we may be getting an animal superior in any degree to a common scrub? And the truth of it is we have no such security whatever. There are good, bad and indifferent animals in the Herd Record just as there are out of it. Pedigree is of no value whatever unless the ancestors of an animal have been better than usual. The only value of a record of descent then is that we may ascertain from the record what the antecedents of a registered animal have been; and to derive any value from the record, a purchaser should know a good deal about the stock he is dealing in and the reputation of the owners as well as of the animals, else he is buying in the dark as much as the person referred to in history as having once bought a "pig in a poke." This being true and beyond refutation, there is evidently something wanting in the Herd Books to make them of any general value.

This desideratum is a record of performance or merit. For instance, if we see in a Herd Book an authenticated record that Milkmaid's Delight yielded 30 pounds of milk, and 1½ pound of butter per day and that her dam and granddam did as well or better, and that her sire's dam was also a good cow, we may then have good reason to believe that Milkmaid's Delight's calf will make a good cow; but to know merely that Delight 3d was out of Delight 2d by Jersey Boy, gives no intimation whatever of what the calf may be.

Are we then to abandon all faith in Herd records? The writer has had a large experience in this respect and a large acquaintance with Herd-book animals, and with thoroughbred herds, and he would say decidedly that the purchaser who puts confidence in them without accurate and extensive knowledge to back up his faith, will be more likely to be deceived than otherwise. He runs a chance, with the odds against him, equal to the large proportion of poor or ordinary cattle compared with the good ones. Probably it will be five or ten to one that he gets an ordinary cow that will be no better than a scrub bought at a rural vendue on the auctioneer's recommendation. It is hard to say this, but it is the truth of it. How then shall a person proceed to make himself safe; for Herd-book—that is pure-bred—cattle have a value above the common herd, if they are good? Let the purchaser beware! "*Caveat emptor*" is a legal maxim which means simply that; for in buying Herd-book animals, as one may easily get a "worthless brute," the buyer must use his judgment just as much as when buying common animals. Let him investigate and search the history of the parents of the animals for a few generations back.

A BREEDER.

The First Horticultural and Agricultural Authority in America.

THE ACKNOWLEDGED HEAD OF THE RURAL PRESS.

250,000 Packets of the Choicest Seeds, equalling in value the yearly subscription price, have been sent to subscribers this year.

The present Free Seed Distribution is the most costly and valuable ever offered by any Journal in the World.

THE MAJORITY OF THE SEEDS CANNOT BE PURCHASED OR PROCURED ELSEWHERE.

THE ORIGINAL, INDEPENDENT, CONSCIENTIOUS

Rural New-Yorker.

Enthusiasm throughout the Country--10,000 Congratulatory Letters.

Third Year of its Present Management, 31st Year of its Age.

EXPERIMENT GROUNDS OF 82 ACRES OWNED BY THE RURAL NEW-YORKER AND WORKED IN THE INTERESTS OF ITS SUBSCRIBERS.

CHARLES DOWNING: "*I am glad for the public as well as for yourselves that the Rural has so much improved.*"

DR. E. LEWIS STURTEVANT, Editor of the Scientific Farmer: "*The Rural New-Yorker has the best list of contributors of any paper of its class in the country and is doing a noble work.*"

For the Country, Village and City; for everybody that loves his home and desires so to elevate agriculture and horticulture that they shall be recognized as the noblest pursuits of men.

For the market gardener, the florist and nurseryman, the fruit grower, the small fruit culturist. For the largest farms, the smallest flower plots. For the herdsman, the dairyman, the apiarian, the scientist, everywhere. No sectional prejudices.

PROFESSOR W. J. BEAL, of the Michigan Agricultural College: "*The Rural New-Yorker is now the best paper.*"

PROFESSOR E. M. SHELTON, of the Kansas Agricultural College: *The Rural New-Yorker has more influence and is more quoted than all the rest put together.*"

PRES. T. T. LYON: "*The Rural is the best paper I see.*"

The most vigorous and able combination of practical writers ever before collected together in the columns of any journal. ***ORIGINAL ILLUSTRATIONS*** from life by our best artists, of fruits, architecture, farm helps, shrubs, trees, agricultural implements, etc.

IT WILL HELP YOU TO MAKE MONEY AND TO SPEND IT JUDICIOUSLY.

"I cannot afford to do without it," is the comment of hundreds of our subscribers.

B. PICKMAN MANN, of Cambridge: "*For years I have taken the leading agricultural journals and they all seem tame when compared with the Rural New-Yorker.*"

SUBSCRIBE FOR IT AS A MEASURE OF ECONOMY.

C. M. A., Galen Co., Ohio, says: "*The Rural saved me* $500 *last year.*"

D. H. H., Caldwell, Texas, says: "*The Rural has already saved me* $100, *owing to my taking advantage of hints contained here and there in it.*"

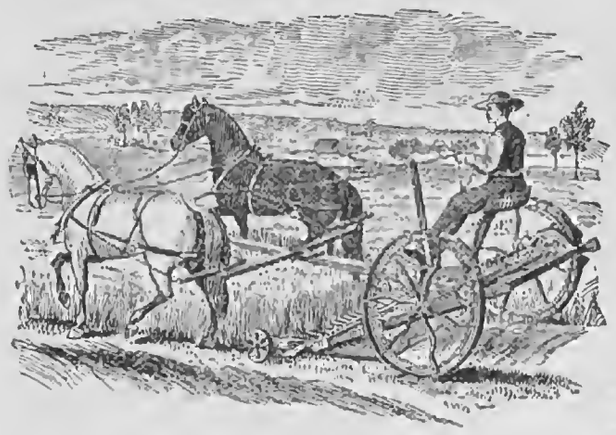
SUBSCRIBE NOW!! A $4.00 PAPER FOR $2.00 PER ANNUM. NO CLUB PRICE.

We desire that all may have the opportunity of comparing it with other journals: its mechanical execution, its matter and illustrations: in proof of which specimen copies will for the present be sent free to all applicants.

It will interest and instruct every member of the household, and it is the earnest desire of the management that it shall in every way prove worthy of the unqualified trust and respect of its readers.

N. B.—Our Farm and Experimental Grounds of 82 acres are devoted to experiments of all kinds appertaining to plant life and the best agricultural and horticultural methods. New plants of all kinds adapted to the climate are tested and reported upon according to their merits. We cordially invite—indeed solicit—our subscribers to communicate ANY facts which they may deem of interest to the general reader.

Address all communications *RURAL NEW-YORKER,*
78 Duane Street, New York.



WILBER'S

Direct Draft

EUREKA MOWER.

The Largest! The Cheapest! The Best!

Grass cut by the Eureka cures one-third quicker and more evenly than after any other mower.

LIGHTEST DRAFT. GREATEST CAPACITY.

A Six-Foot Swath cut with less draft than the average side-cut mower uses in cutting four feet.

TESTIMONIALS.

The Eureka is superior to any side-cut machine I ever saw in use. HARRIS LEWIS.
Pres. N. Y. Dairymen's Ass'n.

The curing of the grass cut with the Eureka Mower is more even and rapid than after the side-cut machines. GEO. W. HOFFMAN.
Pres. Farmer's Club, Elmira, N. Y.

The Eureka Mower is the very best we ever saw, and there is no side-cut mower that can compare with it in any respect. V. E. PIOLLET,
State Grange Lecturer, Wysox, Pa.

I have not found the place where I do not like the Eureka better than any side-draft machine I ever saw. As far as I have tried the Eureka it gives the most absolute satisfaction.
W. I. CHAMBERLAIN, Hudson, Ohio.

Mr. Chamberlain has a national reputation. He speaks from experience.

The Eureka six-feet Mower is the best mower manufactured at the present time. We use it in preference to any other. POMEROY BROS., Bankers, Troy, Pa.

Pomeroy Bros. are large farmers—paying close attention to farm work.

Correspondence Solicited.

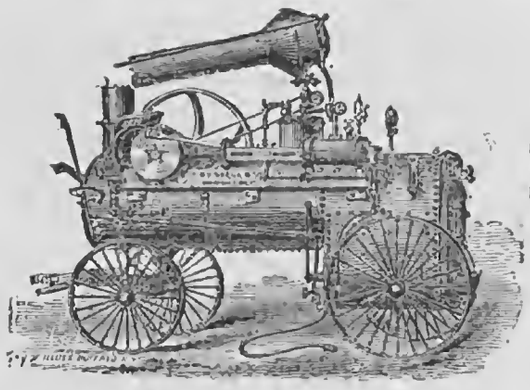
Force Feed Grass Seed Sower, Patent Rear Hoe Shifter, and the only Perfect Fertilizer Distributor. Order one from the nearest agent or factory and give it a trial. Mention this paper, and send for catalogue and prices.

FARMERS FRIEND MANUF'G CO., DAYTON, OHIO.

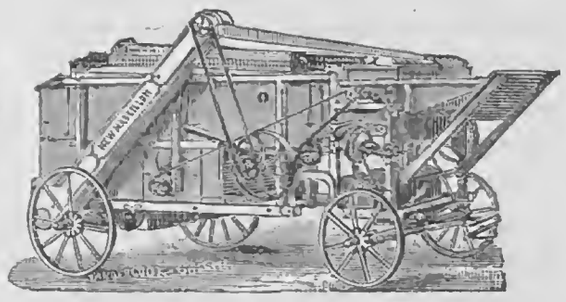


Office of RUSSELL & CO.,

MANUFACTURERS OF

PORTABLE & TRACTION ENGINES

AND THRESHING MACHINES.



Massillon, O., Aug. 14th, 1879.

Messrs. Editors:

Please say to our friends and patrons, through the columns of your paper reserved to us, that we have to use our Machines which we hoped to exhibit at the Fairs to fill orders. The demand has exceeded anything we have ever known, and we have been kept busy night and day filling orders and keeping up the supply as nearly as we could. The following letters, received as we write, are samples of many; they explain our inability to keep pace with orders, better than any words of our own could.

Respectfully,

RUSSELL & CO.

Steam Corners, Ohio, August 12th, 1879.

Messrs. RUSSELL & CO.

* * * * * I have been very busy. I am just knocking the socks off of all the machines in the market in our County. I have more work than I can do. The Machine (a "New Massillon, No. 7,) does such complete work in all kinds of grain. There were two men to see it to-day, and it took their eye so that they wanted me to write to you and see whether you had any more machines the same as mine, and what they could buy one for.

J. H. YEAGER.

Shingle Creek, Minn., August 7th, 1879.

The "New Massillon" Thresher we bought of you we have run three days. We are well pleased with it because of the lightness of draft and capacity. We have threshed 110 bushels per hour, which we consider big work for a 30-inch cylinder. Then it cleans first rate; wheat being hauled from it without fanning and taken for No. One. We have run several of the different makes of Machines and think this is the best we ever used.

M. J. SULLIVAN, DAN SULLIVAN, CHAS. BOHANON.

Speryville, Va., August 12, 1879.

Messrs. RUSSELL & CO.,

The Machine (a "New Massill n," No. 7,) I bought of you acts splendidly, gives me entire satisfaction. I think it the best machine made. * * * *

A. A. SWINDLER.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

TERMS for 1879-80 yearly subscription price:

Postage prepaid	$2.00
Six months	1.10

The above terms are invariable. The reduction from $2.50 to $2.00 makes the RURAL NEW-YORKER the cheapest paper of its class in the world. We have therefore no club price. The price is the same to all, whether a single copy or one hundred copies be ordered. Any of our friends who are willing to act as agents, will find our terms fully stated in our premium lists which will be sent free to all applicants. Agents will be supplied with canvassing outfits on application. Our advertising rates will be found on page 581.

Our readers, friends and agents are invited to send to us for as many copies of this Fair edition of the RURAL *as they would be willing to hand to their friends. They will be at once mailed without charge. Secretaries also will be supplied with any number of copies they may desire to have distributed at their respective Fairs.*

TO OUR FRIENDS—THE READERS AND SUBSCRIBERS OF THE RURAL NEW-YORKER.

WE need scarcely request you to read the several columns under our "Free Seed Distribution," since it concerns you as much as it concerns us. Our seed is all secured beyond a question—at least we believe it to be—and the kinds offered have been selected with little regard to their cost, but with the greatest regard to furnishing you with the most valuable seeds that could be selected. They are fresh seeds, and true to name—*we guarantee it.* Most of them may be easily raised by the amateur; and for those requiring special treatment, we shall furnish plain and ample instructions. It is our interest as well as our pleasure to furnish the choicest and rarest seeds. Thus we secure your thanks and kindly wishes—thus we benefit the horticultural and agricultural world. With the assistance of one of our first seedsmen, we have estimated the retail value of our seeds and plants as follows:

Cuthbert Raspberry, two plants to each subscriber	$0.25
Mold's Ennobled Oats	.10
Telephone Pea	.25
Abies Sibirica	.25
Magnolia Seeds (ass'd, including Soulangeana Lennei, &c.)	.25
Iris (seeds from seedling I. Kæmpferi)	.25
Hybrid Pentstemons	.50
Bebb's Hybrid Aquilegias	.25
Aristolochia Sipho	.25
Ipomœa Leptophylla	.10
	$2.45

The above figures ($2.45) for novelties or rare seeds, are entirely within all proper limits, as may be seen by glancing at the catalogues of our prominent seed merchants. Those who desire the seeds we offer, if they could be purchased at all, would be obliged to pay at least the sums we have attached to them. We offer them to our *subscribers* free of all cost, except postage—a part of which, as in all of our previous seed distributions, we ourselves bear. Assisted by our experience in putting up over 250,000 packets of seeds during the early part of this year, we hope to avoid all mistakes, or, should any occur, to remedy them promptly.

With cordial greetings to you kind Readers and Subscribers—with the hope that you and we may live long enough to serve with telling effect the great and noble cause of agriculture and horticulture, we subscribe ourselves,

Your obedient servants,

THE EDITORS AND PROPRIETORS
OF THE RURAL NEW-YORKER.

READERS, PLEASE NOTE.

IT will be useless for any persons to apply for our seeds or plants unless they are yearly subscribers. The reasonableness of this restriction will appear without further remark. We might be willing, or even desirous, to supply our seeds to all who read our announcement; indeed, we would be glad to do so since there is no more effectual way of promoting the interests which the RURAL has at heart. But this is obviously impossible. Hence, we strictly limit our distributions to subscribers.

We desire to make it plain, also, that our seed and plant distributions are in no sense *premiums.* As it is optional with us whether we offer them or not, it is our privilege to state when the distributions shall begin and when they shall be discontinued, so long as we liberally fulfill every obligation to which we commit ourselves. We had it in mind to offer other plants or seeds, or both, during next year, the same as we have done during this year. But exigencies which it is impossible to foresee at present may prevent. We, therefore, make no promise.

As regards postage: There may be some of our subscribers who do not care for Raspberries, or who have no place for them. In such case a TWO-CENT stamp only will suffice for all the others, leaving out the two plants of Cuthbert. If, therefore, our subscribers send us a two-cent stamp, we shall know that they order all except the Cuthbert. If six cents' worth of stamps be sent us, we shall know that the entire collection is ordered. In other words, we charge our patrons two cents postage for the nine sorts of seeds, and four cents postage for the Raspberries. The rest of the postage, as well as the entire cost of raising, purchasing the seeds and plants, and the cost of putting them up, printing, envelopes, &c., &c., *are borne by us.*

In conclusion, we would say that in due time we shall give the most explicit directions as to the treatment of our seeds, so as to insure germination and healthy growth. We respectfully urge our friends to follow such directions as closely as may be.

EXPERIMENT GROUNDS OF THE RURAL NEW-YORKER.

AS MOST of our readers are aware, the Experiment Grounds of the RURAL NEW-YORKER consist of a fraction over 82 acres. Of these 80 acres are the Rural Farm, situated in Kings County, Long Island, 20 miles from this city, and within sight of the ocean. Here we test all sorts of seeds and plants which appertain rather to agriculture than to horticulture. The remaining two acres and a fraction are designated in these columns as "The Rural Grounds." They are situated about 17 miles from New York, in Bergen Co., N. J. Here we test all kinds of shrubs and trees which are said to be hardy, as well as grapes, all small fruits, novelties in vegetables, &c., &c. Hence it is we are enabled to state from experience the probable value or worthlessness of the hundreds of high-priced novelties which appear from season to season, for the benefit of those who read this journal. The sketch of the Rural Grounds (see page 565) is by our regular artist, and as accurate in details as its size permits. The vegetable and small fruit plots and the vineyard are not shown for want of space. By reference to this picture the article by Mr. Georgeson ("A Visit to the Rural Grounds,") will be read more understandingly. In these days of "Garden Parties," we wish it were possible to have all of our subscribers visit us at the same time. No doubt the "interchange of ideas" which would be a pleasing feature of the gathering, would prove of "mutual benefit." As this, however, is quite out of the question, we constantly endeavor to place the RURAL and its appendages as familiarly before our readers as possible; and it is to this as much as any cause we attribute the freedom with which they reciprocate by their ever-welcome letters and communications.

THE WORLD IN WAX.

AN artificer in wax has recently constructed a terrestrial globe, with all the prominent geographical points laid down in wax. At first thought this merely strikes an observer as an ingenious selection of material for ease in working. But when we hear the man's story, a new idea, which is well worthy of general application, presents itself. It is but two months since the artist was able to complete his work, in consequence of the constant new discoveries of boundaries of sea and land; hights and localities of mountains; courses of rivers; alterations of political boundaries, and other reasons for changes in the contour of his work. Even now, after two short months only, a new set of changes is needed, and so it will go on, never ceasing while the forces of nature are at work, or the knowledge or intelligence of mankind is defective. There are many blank spaces, too, where "unknown" may be written, for all the enterprise and effort of man have been as yet unable to penetrate the mysteries of many parts of the earth's surface.

What an illustration is here afforded of human knowledge. Thirty centuries ago Solomon wrote, "there is nothing new under the sun; that which hath been is now; and that which is to be hath been already." Since then men have thought likewise, and that "wisdom would die with them." But in our present light, how evanescent seem to be the boundaries of our knowledge! Were we to map them in any less plastic material than wax, which can be molded, pressed together, cut off here, added to there, spread out or taken in, the work would have to be destroyed daily, and our map-maker would be kept steadily at work demolishing to-day what he made yesterday, and continually laying out a new plan.

We all work in wax. Let no man think that he has attained the end of all knowledge, even in the small affairs of his own occupation. Else, his work, being in wax, a bright ray of sunlight bringing in the warmth of a new fact, will melt the edge from a jutting point, and where there was a mountain of certainty laid down, lo! there may be a sea of doubt, of unknown depth, whose sounding is yet to be accomplished. This has two bearings; one that shall make the man of knowledge modest, thoughtful, tolerant of others' opinions, always remembering that his own work is as wax; the other, that shall make him diligent to search for the weak points of others' work, exposing it to the warmest investigation, testing it, and never thoroughly basing his own standing upon it until he is satisfied that it may bear the weight and warmth of full criticism. It has one general application, which is that we should always be ready to listen to the expression of others' opinions; always prepared to learn; ever on the watch for information, and ready to turn this to practical use; to be tolerant of others' mistakes; to be never ashamed to change an opinion when there are good reasons for it, and to be cautious of expressing crude ideas, lest some hasty person may plump down a lump of wax on his map and call it a landmark.

Cultivation of Wheat in England.—Dr. J. B. Lawes, of Rothamsted, in reply to an inquiry, writes us in a private letter as follows:

"No one here cultivates wheat, nor has thin seeding ever made much way. At the present moment the great bulk of the wheat grown in this country is drilled in rows about five inches apart, and the seed used is about two bushels per acre. It stands to reason that if one plant of wheat has possession of one or two square feet of soil, its power of growth must be increased; but except upon garden soil, or upon farms in excessively high condition, I feel sure that thin seeding will never be successful."

BREVITIES.

FAIR play.

DOES Farming Pay? See page 577 for answer.

IS Queen of the Market another name for the Cuthbert Raspberry?

DISPARAGING your neighbor's exhibit at the fair will not help your own.

SECRETARY Garfield says that committees too often "guess the pulp before they cut the peel."

"I LEFT better at home" says the grumbler at the Fair. Why didn't you bring them Mr. Grumbler?

SEVERAL of our most prized articles, prepared expressly for *this* number, are crowded out much to our regret.

OUR usual departments of Markets, News, Floriculture, The Woman's Club etc., etc., are crowded out of this issue.

ALL who intend to apply for the seeds and plants of our present Distribution will do well to keep this number for reference.

THE unfairest part of many fairs is the almost indiscriminate manner in which premiums are awarded. That should be the fairest part of fairs.

A SPECIAL Wheat number of the RURAL NEW-YORKER will follow this Fair number. Our next special thereafter will be a Potato number.

SIX subscriptions ($3.00 each, our only price) will entitle the sender to one copy of the RURAL NEW-YORKER for one year. This only to Jan. 1st.

PLANT Raspberries and Blackberries, Currants and Gooseberries, Strawberries and Grapes. They will cost you little; they will help you much.

AGENTS, or those who are willing to act as such, are invited to send for our new Premium List which will be found to offer them unusually liberal compensation.

OF all the varieties of Strawberry we are now cultivating, "Shurpless" is the most vigorous. Plants of this can be determined at once by their fine fresh appearance, large stools and big leaves.

BLOUNT'S White Prolific corn and the Beauty of Hebron potato, distributed among our subscribers this year, have, so far as heard from, given great satisfaction. The best yields of corn will be published later, and due notice given of our premium awards.

A NOTE just received from Rural Farm says: "From 245 pounds of Beauty of Hebron potato we have dug 86 bushels—the yield will be at least one-third greater than that of Early Rose planted beside them, and treated in the same way. Our Pearl Millet will be a failure."

THE London Garden gives with each issue a colored plate of flowers. The Clematises Mrs. C. Jackman, white; Robert Hanbury, purple; Fair Rosamond, pink, are the subjects of the last. The Clematis is a beautiful flower and should find a place in every garden.

A GOOD county fair, says Dr. Hoskins, among all its other merits, is an evidence of thrift on the part of the farmers of the county. A poor farmer cares nothing about the fair. He has nothing to exhibit, and he dislikes to attend, for he is reminded by the elegant products which his neighbors display what failures he and his farm are.

OUR new premium list will be ready in a few weeks. There is scarcely a reader that will fail to be interested in it. It will offer valuable presents to all who send us subscribers, whether two, a dozen or a hundred. We have made these presents more valuable than ever before, desiring to reward those who increase the RURAL'S influence as liberally as we can afford to do.

ONE of our first pomologists writes us: "We should aim to make our premium lists and reports more truly and effectively *educational,* and to compel committees not only to judge carefully, but to give in their reports the true *reasons* for their conclusions; aiming also to discourage the time-honored practice of tempting the eye with enormous, overgrown and worthless sorts, by discrediting collections containing such."

THE Royal Agricultural Society's instructions to judges are: "As the objects of the Society, in giving the prizes for neat cattle, sheep, and pigs, is to promote improvement in breeding stock, the judges, in making their awards are requested NOT to take into their consideration the present value to the butcher of the animal exhibited, but to decide according to their relative merits for the purposes of breeding." Size and fatness seem to guide *our* judges.

"FROM an impartial and unprejudiced standpoint the New York State Agricultural Society, in the management of its annual fairs, is without a peer on this continent, and furnishes a model well worthy the imitation of the numerous societies in other States. The New York society seems to be conducted for the sole purpose of the advancement of agriculture," so says the Cultivator. Such is the general belief among those who attend this fair, no matter what State they come from. And yet horse-racing is not permitted.

THE request often made by publishers that readers will mention their journals when answering advertisements, seems to us a very reasonable one. Such mention is a helpful and friendly act to the journal mentioned and enables the advertiser to determine which journals are the best advertising mediums. Reference to our advertising columns will show there is not one advertisement of an exceptional or ambiguous character admitted. In so far as this is possible we hold ourselves responsible for their high standing and trustworthiness.

ESQUIRE WEBB, a farmer near the Rural Grounds, presented the writer with a nutmeg melon measuring two feet, nine inches in its largest circumference and weighing 12½ lbs. This was raised on a side-hill patch without extra cultivation. From time to time we have tested all sorts of musk-melons and we return to this as the very best for our soil and climate, whether for market or home use. Different kinds of melons cross so readily that many new varieties are announced in catalogues every year as possessing superior qualities. Though so easy to produce new varieties, they are generally short-lived because inferior. Hence it is that 50 new names could be mentioned that have been announced during the past five years, not one of which is worth a second trial.

T. T. LYON remarked last year before the Michigan State Pomological Society, of which he is the worthy president, that he was acquainted with a man in his county who had some little pears that at one time he considered of very little value. They would hardly sell in the market, and he had to give them away one year. But finally he could name his own price; people found out their excellence—they were Seckels. It is a matter of considerable surprise to us that people are so slow in demanding better quality in market *strawberries.* In the case of pears, however, it is comparatively easy for the purchaser to recognize varieties, while the generality of purchasers can not tell one sort of strawberry from another, and are, therefore, more at the mercy of the seller.

Literary Miscellany.

IN FOLLY'S NET.

CHAPTER I.

JEAN McLEOD.

"Who is the girl in white, with diamonds at her throat and in her hair, Kingston?" said Mr. Blair to his friend, Harold Kingston, as they stood together among a group of gentlemen, assembled at the entrance to Lady Kergenven's ball-room, one night when the London season was at its meridian, and every one was still in town.

"Lots of girls in white and diamonds, my dear fellah," said Mr. Kingston, contemplating the living picture before him with that insufferable assumption of indifference which some people think the hight of good breeding and refinement. "Which one do you mean?"

"I mean the girl opposite, talking to Algernon Murray," said Mr. Blair, rather impatiently. "Very good style, and good-looking to boot."

"Very good style! I should think so," said Mr. Kingston, with as much enthusiasm as it was possible for him to evince. "Why, that's the McLeod."

"The McLeod!" repeated Mr. Blair. "You talk as if she were the head of some clan or tribe, Kingston. Be more explicit, I beg, and recollect that I have just come from the Antipodes, and am not yet *au courant* with your fashionable slang, or the young ladies who queen it in this Vanity Fair of yours."

"I'll be as explicit as you like, Blair," replied his friend. "You shall know all about Miss McLeod before you are five minutes older. First and foremost she is a great heiress, worth ever so many thousands a year; she is of age, for she made her *debut* three years ago, when she was nineteen; as you say, she is good-looking, to use a very mild term, exceedingly clever, a wee bit of a flirt, and no end of a jolly girl. No nonsense about her, you know; not prudish, but frank and outspoken; a regular 'bonnie, sonsie lassie.'"

"What a tempting description," remarked Mr. Blair, laughing. "Do you know her sufficiently well to introduce me?"

"Rather," answered the other, confidently. "But I must warn you that she is already appropriated."

"Oh! what a confounded bore!" ejaculated Mr. Blair. "Who is the lucky man?"

"No less a personage than the Earl of Ivor, a countryman of hers and yours, *mon cher!*"

"Ivor!" An expression of anger, black as a thunder-cloud, crossed Mr. Blair's handsome face for a moment. "Indeed."

"Yes; they have been engaged a few weeks only."

"When does the marriage take place?"

"Not till Christmas; for Miss McLeod is still in mourning for her brother, who died in the spring of last year, and I suppose she enjoys her liberty too well to be in haste to relinquish it."

"Does she care for his lordship? Or is it the title which tempts her?"

"Not a bit of it; she has refused better chances; might have been a Duchess last season if she had chosen. She is spoony on Ivor, of course, and he is awfully gone on her."

"'Gone on her,' means in love with her, I suppose," said Mr. Blair, rather sarcastically. "Well, Harold, I am going to singe my wings like a poor moth, you know; so come and perform the ceremony of introduction, like a good fellow."

"You are rash, my dear friend. She is the most fascinating little woman in London, so be careful," added Mr. Kingston, as they began to make their way towards the young lady in question—the young lady watching their progress towards her with a gleam of amusement in her bright, brown eyes.

"May I have the pleasure of introducing my friend, Andrew Blair, to you, Miss McLeod?" said Mr. Kingston, desperately, over the head of a little swell who was entreating the honor of Miss McLeod's hand for the next waltz. "He is not long returned from Australia," he added, as, having dismissed the first claimant for the honor of a waltz, Miss McLeod turned her attention to the new-comers; "and for the last half hour has been worrying my life out for this honor."

"We found it very difficult to get to you, Miss McLeod," said Mr. Blair, in a deep musical voice, which took a soft, tender key as he spoke.

"Yes," she answered, with a frank laugh, "I saw you making signals of distress over the heads of all these people."

"Assembled here for business," he said, laughing also; "for you can hardly call that kind of thing pleasure."

Jean McLeod glanced at him rather approvingly as he turned his eyes from her face to the ball-room with its dancers, and ornaments, and gay hangings, and she slightly moved the rich folds of her white silk dress to give him an intimation that he might take a seat beside her—an intimation which Andrew Blair was not slow to perceive and take advantage of.

"I hardly dare ask you to give me a dance," he said, sinking on the cushioned seat by her side, and looking admiringly at the lovely, laughing face. "The last time I danced was before I went to Australia, when you were a little child, I should imagine, Miss McLeod; and I should think they are not dancing the same waltz now as they did then."

Design by W. H. H. DOES FARMING PAY? Drawn by Cronin.

"Very likely they are," she answered lightly. "You know waltzes are like everything else: if you keep them seven years they will grow useful. But I hope you won't ask me, Mr. Blair, for I am not fond of dancing, and I should not like to refuse you on so short an acquaintance."

"But you will sit this one out with me?" he said, eagerly. "Thanks, very much."

Andrew Blair was a tall, unusually handsome man, midway between thirty and forty, and consequently in the prime of manhood. His manner was pleasant and frank, and its charm was increased by the bright smile which showed the strong white teeth; and by the rich, deep, musical voice. With a few, however, he was not a favorite; some people look very deep into things and faces, and read in the latter what others do not; and one physiognomist said that Mr. Blair was deep, crafty, unscrupulous, and revengeful; quick to resent, and slow to forget—a man who would treasure up an injury, and revenge himself for it years after.

Jean McLeod was one of those persons whom he favorably impressed; and she was rather in the habit of taking people on trust, and was too frank herself ever to suspect people of being other than they seemed. How bitterly, and at the cost of how much suffering she expiated that trust in after years, our story will tell; she bought her experience at the cost of much happiness and almost of her life.

The young Scotch heiress had bright, laughing, wine-brown eyes, shaded by long lashes darker than her hair, which was of a rich, sunny, golden brown; her complexion was brilliantly fair and lovely; the soft bloom on her cheeks had not been spoilt by the dissipation of her London seasons, and men were wont to quote Miss McLeod as the perfection of healthful beauty.

She was a flirt and yet no flirt. She met men with their own weapons; laughed, chatted, danced and sang; let them talk nonsense, and repaid them for it in their own coin; but she was never known to lead a man on, and then throw him over, regardless of his pain. Her flirtation was partly unconscious, partly careless, but never with the intent to gratify her vanity at any cost. As Harold Kingston said, "she was a bonnie, sonsie lassie, with no nonsense about her." Add to this that she rode to perfection, was a capital "whip," a tolerable oarswoman, that she danced like the Muse of dancing herself, and sang with a voice fresh and sweet as a lark's, and you have a tolerable epitome of Miss McLeod's acquirements.

"I hope I am not preventing you dancing," said Mr. Blair, in a moment, speaking in that perhaps unconsciously lowered tone some men use whenever they address a woman.

"Not at all. My performance is over for to-night, I believe. I have got through my duty-dances, and Lady Sholto has given me my liberty for the next half-hour."

"Lady Sholto!" remarks Mr. Blair. "Is she your chaperone?"

"Yes; do you know her?"

"No; but if her husband's name is Arthur Crawford, we were at Eton together."

"Then her husband's name is Arthur Crawford," said Jean, with a gay laugh. "I am sure he will be delighted to renew his old acquaintance with you, for he is the most sociable of men."

"He was a jolly fellow as a boy, I remember," said Mr. Blair.

"And equally a jolly fellow as a man," said Miss McLeod, merrily. "I believe you are a countryman of mine, Mr. Blair?"

"Yes; although for some years I have lived abroad. My place is not many miles from Sholto Hall, and my father was a great chum of the late lord, who was living when I left England."

"He died about six years ago," Jean said. "We are all going to Sholto next month, I believe, or the month after," she added.

"Then as I am going to Blair Gates for the shooting season, I hope I shall have the pleasure of meeting you," Mr. Blair said, with a winning smile.

"I hope so," Jean said, with a laughing glance out of her brown eyes. "Don't you find it very warm here?"

"Yes. May I take you into cooler quarters?" he said, eagerly, half rising as he spoke.

"Where will you find them?" she asked laughing.

"In the conservatory," he answered, readily. "I am sure you will find it pleasanter there."

Jean rose, and slipped her little gloved hand through his arm.

"How shall you get there?" she said, laughing. "It is rather a difficult matter to pilot a train like mine through this crowd."

"I will brave the difficulty," he answered, in the same gay tone. "I will steer you through if you trust yourself to me."

"Very well, I will submit to your guidance," she rejoined, "and hold you responsible for the damage."

He laughed as he skillfully led her from the ball-room into the softly-lighted, deserted conservatory which was built out at one end, and which was quite empty when they reached it. Having placed Miss McLeod on a seat, Mr. Blair threw himself down beside her with a long-drawn breath of pleasure and relief.

"Admirably done," Miss Jean said, approvingly, as she glanced down at the long, rich folds of ivory silk which trailed beside. "One would think you had been used to crowded ball-rooms in the bush, Mr. Blair."

He laughed.

"You will submit to my guidance again, I hope?" he said, bending his head over her.

"Most readily," said Jean, lightly.

"I wish——" Mr. Blair began, then stopped suddenly. "I beg your pardon," he added in a moment; "I was going to say something foolish."

"I am used to hearing foolish things," Jean said, saucily. "Most people are in this sublunary sphere, Mr. Blair."

"Am I to consider that as an encouragement to say something foolish?" said Mr. Blair, bending his black eyes upon her with unmistakable admiration in their depths.

"No, certainly not," laughed Jean. "Only as a warning that such things are the *monnaie courante* of society, and that if you wish to be considered anything original you will not indulge such a propensity."

Mr. Blair sighed a little ostentatiously.

"Mr. Kingston is an old friend of yours, I think you said?" said Jean.

"An old friend?" he repeated, rather absently. "Harold Kingston? Oh! yes; I must apologise, Miss McLeod; I had forgotten all about him for the moment."

There was an implied compliment in his tone and words which made the corners of Jean's pretty mouth curl in a little smile. She was an excellent professor in the art of flirting, was Miss Jean; and Mr. Blair was also a tolerable adept. She glanced at him, and their eyes met; hers laughing, saucy, and a trifle mocking; his full of an almost fierce admiration under which Jean's long lashes drooped.

"Do people ever flirt in the bush, Mr. Blair?" she asked, demurely, playing with her fan.

"I think that people flirt everywhere, Miss McLeod," he answered, smiling. "It is such a charming pastime that one is sure to find its votaries in all climes; but," he added, "am I unfortunate enough to be so dreadfully awkward and boorish that you have made up your mind that I have come straight from the bush?"

"You are a clever angler, Mr. Blair," laughed Jean; "but you will not catch the compliment you are desirous of obtaining this throw. You said you came from Australia; that always means the bush, does it not? The bush or a sheep farm?"

Mr. Blair laughed.

"You acknowledge that they are two separate things then," said he, gaily. "When did you leave school, Miss McLeod? because you must have forgotten your geography if you believe that Australia only contains two species of inhabitants—sheep-farmers and bushrangers."

"I forgot convicts," said Jean, laughingly, "Ah? Mr. Blair, it is quite evident that you have been a long time abroad, or you would know that geography forms no part of the education of a young lady of the present day. I assure you if you were to put me through the capitals of Europe I should not be able to answer you correctly."

"Nay, that I am sure is a libel, Miss McLeod," said her companion. "I must even take your parry against yourself."

"When you know me better you will find that I am not at all in the habit of detracting from my value," answered Jean, with her sweet laugh. "My friends say that no one knows better, or understands more thoroughly *l'art de se faire valoir*."

"Then I will wait until we are friends before I form any judgment, Miss McLeod," he answered, adding, almost immediately, "that is if I ever *dare* be your friend."

Jean lifted her eyes a little haughtily; but her cheek deepened in color a little, and she became suddenly intent on the fastening of one of her bracelets.

There was a moment's silence, which Mr. Blair broke.

"That is a pretty waltz they are playing," he said. "The last time I heard it was at a ball at Adelaide."

"Ah! then they have balls there," exclaimed Jean, with the prettiest gesture of triumph. "I thought you were not a novice in the art of steering, Mr. Blair. I believe you can waltz equally well if you like. By-the-by, that reminds me that while I am lying *perdue* here, any unfortunate wight to whom I may have promised a dance, will be hunting for me in a state of distraction."

"But you are not going to dance again?"

"No; but I have promised to do so ever so many times."

"Do you ever keep promises?" he asked, laughingly.

"Sometimes," answered Jean, in the same tone, "when it is not inconvenient."

As she spoke, the sound of a footfall, coming along the Indian matting, with which the conservatory was carpeted, made Mr. Blair utter an exclamation of annoyance.

"I thought this paradise could not last much longer," he said, in a low, regretful tone. "Here comes some one to disturb us. I hope you are a little sorry, Miss McLeod?"

"It is Lord Ivor," said Jean, quietly, with the softest gleam of light coming into her lovely eyes. "Will you allow me to introduce you to each other?"

Mr. Blair bowed, and muttered something about "most happy," and "honor, I am sure;" but the same thunder-cloud passed over his handsome face as he waited for the intruder's approach.—*To Be Continued.*

BRIC-A-BRAC.

ONLY A PIN.

Only a pin; yet it calmly lay
On the tufted floor in the light of day;
And it shone serenely fair and bright,
Reflecting back the noonday light.

Only a boy; yet he saw that pin,
And his face assumed a fiendish grin;
He stooped for a while, with a look intent,
Till he and the pin alike were bent.

Only a chair; but upon its seat
A well-bent pin found safe retreat;
Nor had the keenest eye discerned
That heavenward its point was turned.

Only a man; but he chanced to drop
Upon that chair, when, fizz-bang-pop!
He leaped like a cork from out a bottle,
And opened wide his valve de throttle,

Only a yell, though an honest one,
It lacked the element of fun;
And boy and man, and pin and chair,
In wild confusion mingled there.

[*Poems of Places.*

JOSH BILLINGSISMS.

If a young man hain't got a well-balanced head like to see him part hiz hair in the middle.

I don't take any foolish chances. If I wuz called upon to mourn over a dead mule I should stand in front ov him and do mi weeping.

There is no man so poor but that he kan afford to keep one dog, and I have seen them so poor that they could afford to keep three.

I say to 2-thirds of the rich people in this world to make the most of your money, for it makes the most of you. Happy thought.

I never argy agin a success when I see a rattlesnaix's head sticking out of a whole; I bear off to the left and say to miself that hole belongs to that snaix.

I thank the Lord that there is one thing in this world that money kant buy, and that iz the wag ov a dog's tail.

I notiss one thing, the man who rides on the kars every day is satisfied with one seat, but he who rides once a year wants four.

Flattery is like colone water; to be smelled of, not swallowed.

The man whom you kant git to write poetry or tell the truth until you get him haff drunk, ain't worth the investment.

THE STUDENTS OF EASTMAN'S BUSINESS COLLEGE are the recipients of many valuable favors through the generosity of the management. Among these are courses of lectures. The following extract is from "Crises in Life," a lecture delivered by Rev. Wm. Lloyd, before the College:—

In every human life critical periods occur, and it is an exceedingly easy thing to mistake or even miss them when they come. According as the choice is made at such times, life becomes invested with happiness or mantled in misery. Much of future character and destiny is wrapped in decisions then made.

The first crisis is the choice of a business or a profession. Sometimes it seems to be perfectly easy to decide the question, what shall be the business or the profession in which a man shall engage.

Especially this is the case where a young man's father and perhaps his grandfather have been engaged in a given line of business or in a certain profession. An old bachelor being asked why he was a bachelor, answered that he did not know unless it was because his father was a bachelor.

THE school-boy, Prince Victor Napoleon, recapitulates the history of his ancestors:

Number 1, died at St. Helena, a prisoner of the English.

Number 2, died on foreign soil.

Number 3, died in exile.

Number 4, died in exile, and in the service of England, the jailer of Number 1.

"And they propose," murmurs the school-boy, sadly, "that I shall continue the figures in this fatal series? Thanks! I would a hundred times rather stay here in the school of Charlemagne, until I am seventy years old, than be their Number 5!"

IF a musket ball be fired into the water it will not only rebound but be flattened; if fired through a pane of glass it will make a hole the size of the ball without cracking the glass; if suspended by a thread it will make no difference, and the thread will not even vibrate. Cork, if sunk 200 feet in the ocean, will not rise on account of the pressure of water. In the Arctic regions, when the thermometer is below zero, persons can converse more than a mile distant. Dr. Jamison asserts that he heard every word of a sermon at the distance of two miles.

Boots of great men all remind us,
We can make our souls sublime;
And, departing, leave behind us
Footprints that are seven by nine.—*Tennyson.*

VERILY there is nothing in this life wholly good or wholly bad.—*Boston Transcript.* Ain't, eh? You forget the egg.—*Count Joannes.*

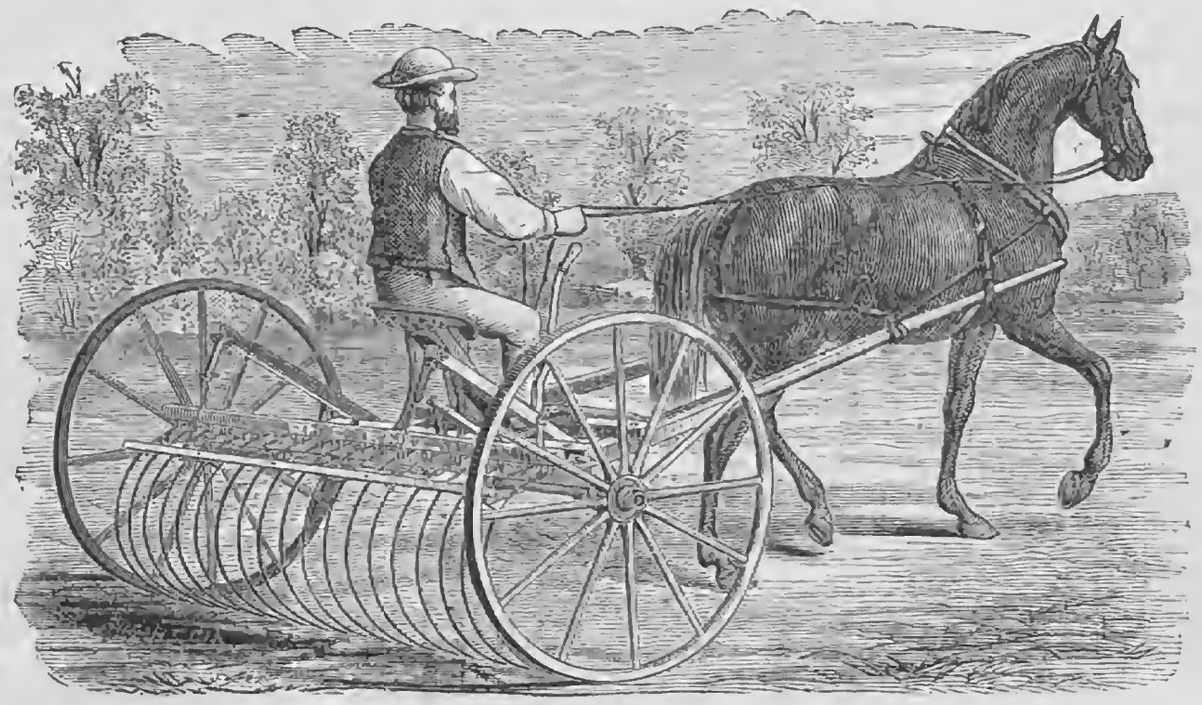
THE "THOMAS" RAKE.

Remarkably Light Draft.

Driver's Weight Dumps It.



Simple, Strong, Durable,

Free From Repairs.

THERE WERE MORE THOMAS RAKES SOLD DURING THE SEASON OF 1879 TO FARMERS IN THE UNITED STATES, THAN OF ANY OTHER RAKE.

It is an easy matter to call any rake the "best," and most manufacturers do so, no matter how poor the rake. The place to show whether a rake is *the best* is on trial *in the field*. We claim that the Thomas Rake does not require *one-fourth* as much repairs as others; that it works easier, takes up the hay in better condition, and our agents are always ready to prove these things to be true on trial *in the field*, with any other rake made. If these things are true, the "Thomas" is what every farmer should have. If they are NOT true, no farmer should buy them. The largeness of our sales show our claims to be true. It is sold by reliable agents *everywhere*.

If there is no agent in your town, send for illustrated circular to

J. H. THOMAS & SONS, Manufacturers,
Springfield, Ohio.

1,000,000 FARMERS WANTED

TO TRY THE CELEBRATED DEXTER SPRINGS!

The Easiest, Cheapest and Most Durable Carriage Spring Known.

THE DEXTER SPRING CO.'S QUEEN Is admitted to have more good points than any other vehicle in use. The use of the *diagonal lower springs*, with the *parallel top springs*, form a combination of great merit, as attested by the increasing orders for *DEXTER QUEENS*. In the Queen we use for shackles, stays, &c., only the best drop forgings, and in our spring manufacture continue to use only our celebrated brand of *Dexter Crucible Cast Steel*.

We also continue to manufacture our standard goods, the reliable old *DEXTER* and *DEXTER KING*, with Improved Wrought Wheel. We claim that all persons using the combination of diagonal and parallel springs, arranged as in our Queen, are infringing our patents, and we are pressing test suits with all possible vigor. If there is no agent or dealer in your neighborhood, we will send complete set of Springs to you direct, at a very low price. Every Spring fully warranted to be as represented.

PERSONAL ITEMS.

The estate of O'Brien, the California mining speculator, turns out to be worth $9,000,000.

Leland Stanford, ex-governor of California and president of the Central Pacific Railway, is going to Europe. Mr. Stanford is a Hercules in size, and is a great lover of horseflesh. He is very much troubled by the political prospect in California, and so is every other capitalist in California, and not a few outside the Golden State.

Mr. W. H. Vanderbilt does not "point with pride" to his record as a Staten Island farmer. He says that the only thing he raised successfully was the fever and ague. All which shows that a bad farmer may become a successful money-making machine in the form of a capitalist: but it has not yet been shown that a bad business-man can make a good farmer.

Miss Perkins, of Ebondale, Iowa, used her artistic skill in drawing caricatures of gawky Mr. Filer, who had offended her at a ball. These pictures were displayed in the window of a store, to the great irritation of Mr. Filer. He was perplexed as to a means of retaliation, but finally decided to whip Miss Perkins's brother, and did it so thoroughly that the sufferer was for a week confined to a bed.

CAUTION.—The *National Dispensatory* says of Tonka Beans: "They are usually covered with a "crystalline efflorescence or coumarin. Given to "dogs in the dose of from seven to ten grains, "this substance produced great and even fatal "depression; and in man in the dose of from thirty "to sixty grains it occasioned nausea, giddiness, "depression, vomiting and drowsiness." Many of the spurious compounds purporting to be pure Extract of Vanilla are prepared principally from Tonka Beans.

Housekeepers who study their interests will demand of their grocer strictly pure vanilla only, and refuse to accept of an adulterated compound, which may render the dealer a better profit.

Burnett's Extract of Vanilla is prepared from selected vanilla beans, and is warranted entirely free from Tonka or other deleterious substances.

Kidney and Urinary complaints of all kinds permanently cured with Hop Bitters.

In the European harvest just closed the most distinguished honors seem to have been awarded to an American Harvesting Machine—the Buckeye. The grand Gold Medal offered by the Agricultural Society of France was awarded to the Buckeye Self-Binding Harvester. The only other American competitors for this prize were the McCormick, Wood, and Osborne Self-Binders. The Buckeye also took the first prize and carried away the Gold Medal offered by the Royal Agricultural Society of Spain for Self-Binding Machines.

Buckeye Reapers and Mowers are also distinguished by a long list of first prizes and medals, in various parts of Europe, showing at once the thoroughness of the introduction and appreciation of this famous American machine.

THE season for contracting that disagreeable and really serious disease, Catarrh, is at hand. Dr. Sykes, of Chicago, has a remedy that he offers this week, in which he has the greatest confidence. He has the most positive assurance of those who have tried it that it will do all that is claimed for it.

Murray & Lanman's Florida Water is one of the surest and speediest of cures for every form of nervousness. It relieves headache when other applications completely fail. It reinvigorates the fatigued and overtaxed body, and it imparts force and buoyancy to the mental powers.

Sour stomach, sick headache and dizziness, Hop Bitters cures with a few doses.

Cures Garget, Sore Teats and Bags, and all Sores and Swellings in Cows and Oxen.

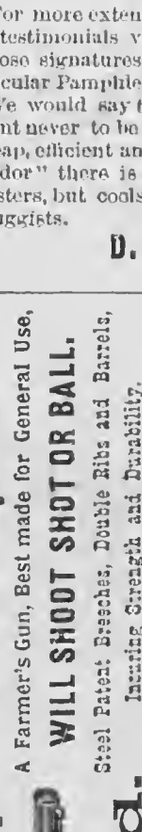
For more extended remarks and for a large number of testimonials voluntarily sent to us by the persons whose signatures are attached, we refer you to our Circular Pamphlet around bottle.

We would say to Livery Stable Keepers, make it a point never to be without this great remedy! It is a cheap, efficient and sure medicine. With this "Dermador" there is no such word as "FAIL." It never blisters, but cools. Price 25 and 50 cents. Sold by all druggists.

D. RANSOM, SON & CO.,
BUFFALO, N. Y.

NO. 99 NEW MODEL GUN. MUZZLE LOADING DUCK, BIRD OR SQUIRREL.

$16, Freight Paid.



A Farmer's Gun, Best made for General Use,
WILL SHOOT SHOT OR BALL.
Steel Patent Breeches, Double Bibs and Barrels,
Inserting Strength and Durability.

The above gun is made of U. S. Springfield Rifle Barrels, bored perfectly smooth inside, and dressed outside to the usual double gun. The locks are of an entirely new pattern, simple, plain, strong, and never get out of order, and the parts are interchangeable, so that should any part break or wear out, we can send a new piece by mail, free of cost that will fit exactly. The stock is of Walnut, Oil Finish. The new Patent Break-off Joint is always tight, and the barrels never get loose. Hickory Ramrods. Brass Rodhead, Dirk Stained Barrels.

THE WHOLE GUN IS DURABLE, STRONG AND SAFE, and for all purposes of shooting, from a light wing gun, to the largest size for Ducks, is unequaled.

THE PRICE OF THE GUN IS ONLY $16. A sample sent, securely boxed, express paid, anywhere, on receipt of price, or $5 to insure C. O. D. and privilege of examining before paying any more. This is the Best Gun for the price in the World.

A Powder Flask, Shot Belt, Box of 200 Waads, 100 Water Proof Caps, sent free with each of these Guns. Satisfaction guaranteed or money refunded. The guns are now ready, and all orders filled at sight. Not one ever returned. Agents ordering SIX Guns at once, get the Seventh Gun free; That is, seven Guns and all fixtures, freight paid, for $96. Remit by Bank Draft, P. O. Order, Registered Letter, or by Express at my risk, and send nearest express station. Persons who do not wish to risk their money with strangers may send the amount to Geo. M. Petty, Cashier Diamond National Bank, Pittsburgh, with instructions to pay me when the gun has been shipped. This gun is bored on scientific principles, for the concentration of shot at long range. Full directions for loading sent with each gun. Send stamp for our 68 Page Catalogue.

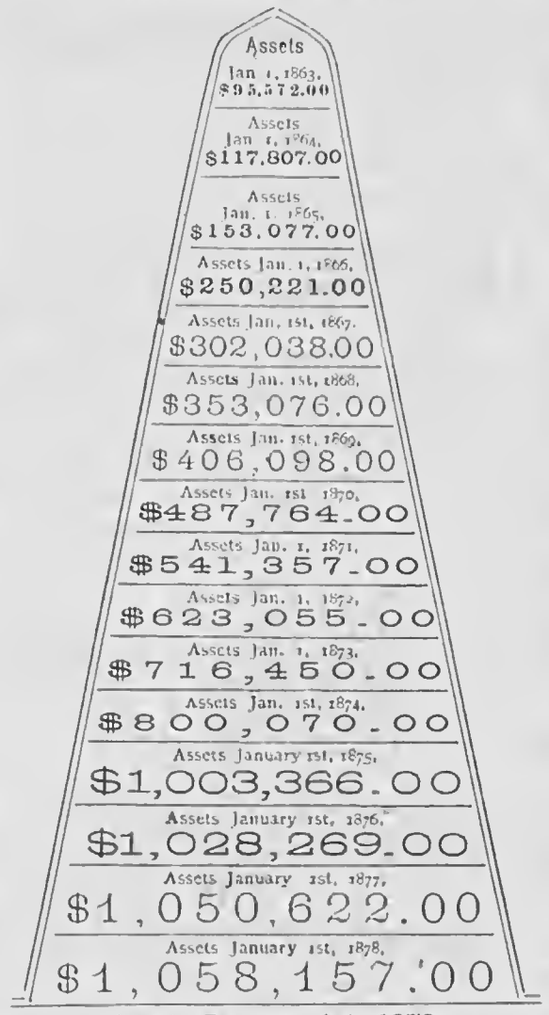
INDIANAPOLIS, IND.

THE PROGRESS OF A
SUCCESSFUL COMPANY.
The Agricultural Pyramid.



Assets January 1st, 1879,
$1,098,623.00

The attention of owners of Farm Property and Residences is invited to the pyramid above, which shows the uniform and sure growth of the AGRICULTURAL INSURANCE COMPANY of Watertown, N. Y., during sixteen of its 26 years of existence. The figures represent the amounts set apart at the dates given for the

PROTECTION OF ITS POLICY HOLDERS.

Twenty-six years of patient toil has made this the strongest and largest Company doing an exclusive Dwelling Business in the United States, if not in the world. *It now issues 45,000 policies a year.* No other like Company can show such growth and increase.

The history of this Company proves that a LARGE business, well scattered, managed with prudence, can be *done with a very small profit from each risk*, and afford perfect security, which

Will Grow Stronger Every Year.

While nine-tenths of the "Mutual" fire insurance companies, and many of the stock companies have failed on account of reckless or extravagant management, or doing too small a business, the

OLD AGRICULTURAL,

by economy, energy and prudence, has every year added a substantial amount to its Assets for the indemnity of its patrons, and it now occupies a position in the confidence of the public second to none.

From year to year it spreads the base of its Pyramid and gains strength.

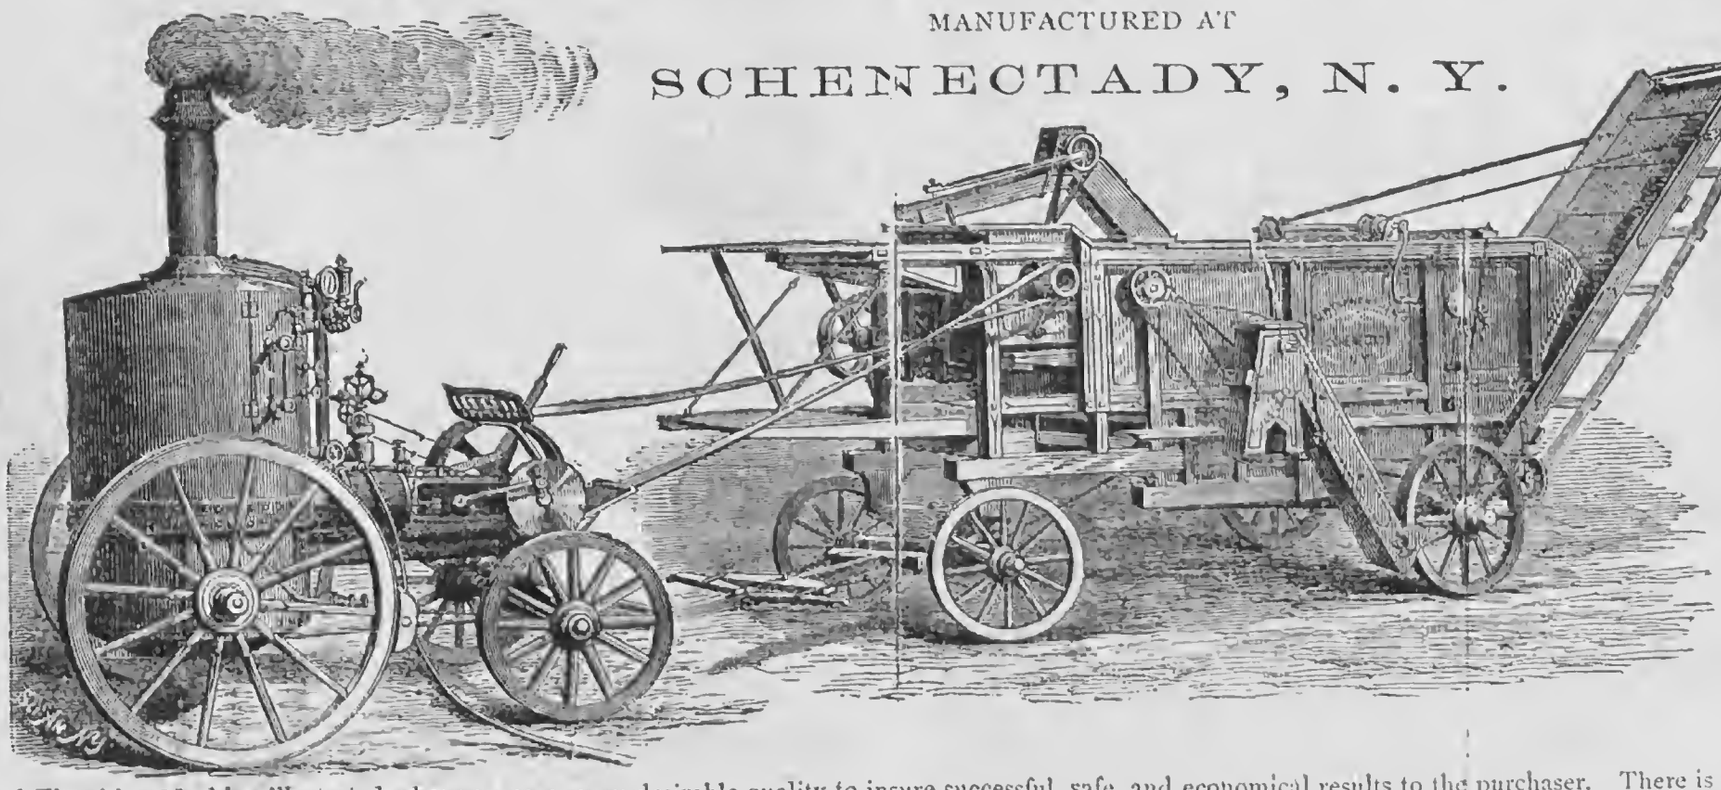
The Westinghouse Agricultural Engines,
HORSE POWERS, AND GRAIN AND CLOVER THRESHING MACHINES.
MANUFACTURED AT
SCHENECTADY, N. Y.



The Engine and Threshing Machine illustrated above possess every desirable quality to insure successful, safe, and economical results to the purchaser. There is no experiment needed to establish their merits for they have a reputation already made second to none in this country. The Engine of 10 Horse Power, weighs but 3,800 pounds; has horizontal tubes, an improved anti-Condensation and Spark Arresting Jacket, and every appliance necessary to safety, convenience and economy. The Grain Threshers may be regarded as unequalled in threshing, separating and cleaning. The Combined Clover and Grain Machine is perfectly adapted to both the purposes which its name implies. As a Grain Machine it is not excelled, and as a Clover Machine it must not be classed with those having an attachment connected with the ordinary Grain Threshing Cylinder, but as having a distinct and effective Hulling Cylinder with which the seed can be obtained from clover and saved. Horse Powers of both Lever and Endless Chain Patterns of all the usual sizes are made in connection with the foregoing machines, and we are thereby enabled to furnish a Complete Steam or Horse Power Threshing Establishment from our own works. For Catalogue and Price List, address,

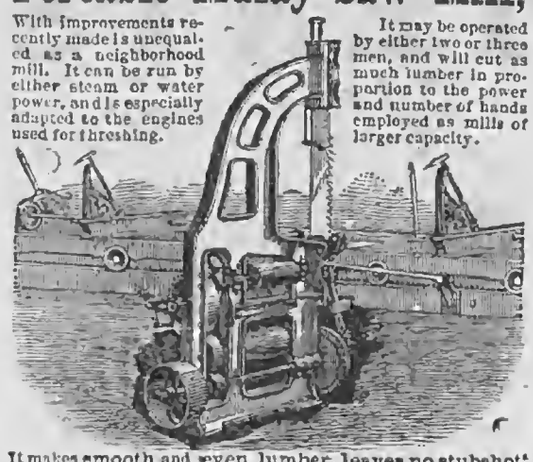
Portable Mulay Saw Mill,

With improvements recently made is unequaled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.

It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.



It makes smooth and even lumber, leaves no stub shot and will cut any sized log up to four feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to CHANDLER & TAYLOR, Indianapolis, Ind.

Also manufacturers of the **Phoenix Threshing Engine** and the **Eureka Drain Tile Machine.**

JONES OF BINGHAMTON,
Binghamton, N. Y.

Attention, Owners of Horses!

THE ZINC COLLAR PAD is the only permanent and reliable pad for sore-necked horses or mules, that has ever been produced, and has been greatly improved since Jan. 1st, by being specially fitted to first-class tight and loose-jointed collars. The new pad of proper sizes will fit either. Being of smooth metal, they do not wear the mane, and always dispense, when needed, their medicinal virtues. There are over a million and a half of them in use. Pads made of other material can only temporarily have any curative properties whatever, and soon become worthless by abrasion in cleaning them. The Zinc Pads are sold by leading Saddlery Houses throughout the country, and harness makers generally. Ask your Harness Maker for them. Manufactured by ZINC COLLAR PAD CO.,
BUCHANAN, MICH.

To Cider Makers.

The celebrated **Jersey Apple Grinder** and **Champion Cider Press**, constitute the essential outfit of every first-class cider mill. Any neighborhood where cider is made without the aid of these improved machines is a good locality for an enterprising man to start a new cider mill. For illustrated circulars, address,

INVALIDS

AND OTHERS

Seeking Health,

STRENGTH

AND ENERGY,

WITHOUT THE USE OF DRUGS,

Are earnestly requested to send for

THE ELECTRIC REVIEW,

A LARGE ILLUSTRATED JOURNAL, WHICH IS PUBLISHED FOR FREE DISTRIBUTION.

IT TREATS upon HEALTH, HYGIENE, and Physical Culture, and is a complete encyclopedia of information for invalids and those who suffer from Nervous, Exhausting and Painful Diseases. Every subject that bears upon health and human happiness, receives attention in its pages; and the many questions asked by suffering invalids, who have despaired of a cure, are answered, and valuable information is volunteered to all who are in need of medical advice.

The subject of Electric Belts versus Medicine, and the hundred and one questions of vital importance to suffering humanity are duly considered and explained.

The Electric Review exposes the unmitigated frauds practised by quacks and medical imposters who profess to "practice medicine," and makes plain the only safe, simple, and effective road to Health, Vigor and Bodily Energy.

The present edition of 500,000 copies of the REVIEW, will be mailed and distributed FREE throughout the United States, Canada and the Provinces. Call or send your address on postal card for copy, and in information worth thousands will be sent you. Address

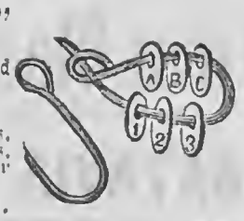
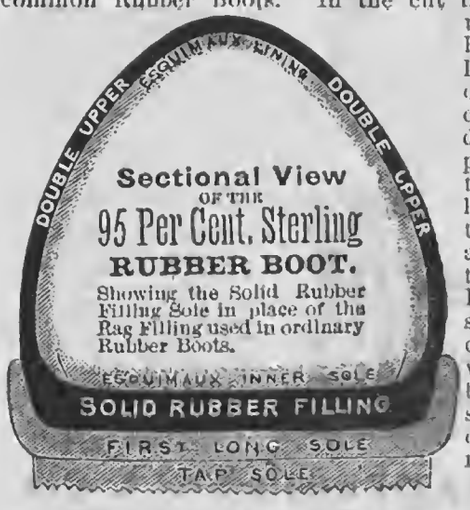
The Combined Stock Marker and Hog-Ringer.



One hundred marked Disks, Initial Letters, or Numbers, sent for 35c. Ask your dealer to send for them.

Ninety-Five per cent. Sterling RUBBER BOOT.

Made to supply the popular demand for an All-Rubber Boot, and as pure as can be made. Upper and legs double thickness of Rubber, the fiber or grain of which is crossed at right angles, whereby separation of the fibers or "*cracking*" is made impossible. Ordinary Rubber Boots invariably wrinkle, leading to cracks, besides chafing the feet and ankles, and wearing out the stockings. All this is obviated by the Double Upper and Leg. The bottoms are of *Solid Rubber*, half inch thick, and not filled with Rags, like common Rubber Boots. In the cut below, the black part marked "Solid Rubber Filling." In ordinary Rubber Boots is made of ground up scraps of cloth, and is neither durable nor waterproof; but in the "Ninety-Five Per Cent. Sterling Boot," when the tap sole and long sole are worn through, a third sole—all solid Rubber—presents itself, and gives 100 per cent. additional wear without increase of bulk or weight. These soles will outwear two or three pairs of common Rubber Boots.



Warranted Three Months,

And that there may be no question as to the time, the patent binding, as seen in cut, provides a space for every day, month and year, so that the retail dealer when making a sale, can punch out the date thereof, and the Boots will in themselves bear permanent record of that date. (See warrant in large circular.) Every Boot bears the warrant in Rubber letters on the leg.

Retail price. $5.00

Although seemingly high priced, are more economical than a Boot of less cost, and with proper care will render good service from Fall until Spring.

The Poor Man's Boot!

We will send these boots by express, on receipt of the price, or C. O. D. if desired. Sizes are numbered from 6 to 11, which correspond with the sizes of the Leather Boot worn.

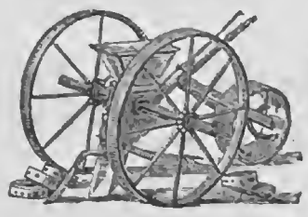
THE MONITOR SEED DRILL.



This is the most complete and positive Seed Drill ever invented. It is radically different from and superior to all others. It is the **only** machine which measures and drops the seed with a positive motion, and exactly the same amount at each foot or yard. It has been tested by 5 years' use in Massachusetts, and was awarded the highest prize at the "Centennial." The "Monitor" has been thoroughly tested during the season of 1879, and heartily endorsed **as a First-Class Machine** by Prof. Geo. Thurber, of New Jersey, and by Jas. Vick, of Rochester, N. Y.

☞ **Agents Wanted.**—For full descriptive circular and testimonials address

THE MERRIMAC MACHINE CO., Newburyport, Mass.

YOUNG MEN, BOYS & MIDDLE-AGED MEN.

TRAINED FOR A

Successful Start in Business Life.

A SPECIAL AND ORIGINAL SCHOOL.—Purely American, and characteristic of the age and times. Established and conducted to meet a ***particular demand*** for a more practical, useful and ***profitable*** education of Young Men and Boys—teaching them, by a short, direct, reasonable course of study, those things that will best aid and encourage them to start in life in some profitable industry, "to earn their own bread," get a good living, make money for themselves and others, and to win honors as enterprising, valuable American citizens.

EASTMAN COLLEGE, POUGHKEEPSIE, N. Y., is the only school devoted honestly and earnestly to the above ***specialty***, and is to-day the largest and most popular private educational institution in this country. Refers to patrons and graduates in every State.

YOUNG MEN starting in life for themselves or assuming the business of a father or relative, and wanting the best preparation to assure success;

MIDDLE-AGED MEN desiring to change their course of life, or seeking places and business more satisfactory and remunerative;

PARENTS AND GUARDIANS wanting their boys to be useful, prosperous citizens; and

ACADEMIC AND COLLEGE GRADUATES desiring a practical and profitable finish to their theoretical and unprofitable education, will find ***The New***, short, practical course of study here, most invaluable.

Board and tuition fee for prescribed course, $100 to $115. Applicants received any day. For College Journal of particulars, or special inquiry, address EASTMAN COLLEGE, Poughkeepsie, N. Y.

THE POPE MFG. CO.,
88 Summer St., Boston.

"IT IS THE LIFE OF THE AGRICULTURAL FAIR."—Sec'y.

COOLEY CREAMER.

Supersedes large and small pans for setting milk.

It requires no milk room. It requires capacity for one milking only.

Impure air, dust or flies cannot reach milk set in it.

It makes more butter, because it raises all of the cream, and the quantity is never lessened by unfavorable weather.

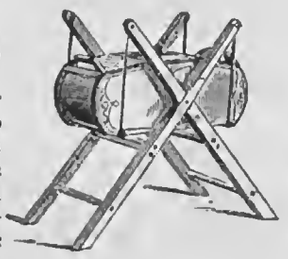
It makes better butter. It requires less labor. It is cheaper.

Butter made by this process took the HIGHEST AWARD at the INTERNATIONAL DAIRY FAIR—held at New York in December, 1878—and at the Royal Agricultural Exhibition held in London, England, beginning June 30, 1879.

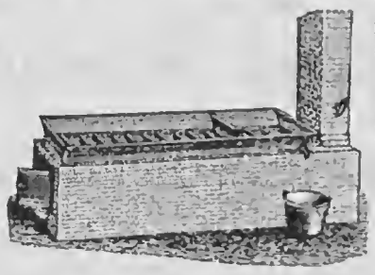
Butter made by this process brings the highest price in all the great markets.

DAVIS SWING CHURN.

AWARDED FIRST PREMIUM AT THE INTERNATIONAL DAIRY FAIR, DEC., 1878, IN COMPETITION WITH ALL THE LEADING CHURNS IN THE WORLD.



The box contains no floats or inside gears, which mash the butter globules, no corners in which the cream can lodge, to be washed into the buttermilk, and lost when the butter separates. The butter gathers in beautiful granules, in the best possible condition for washing in the churn with cold water and brine. Hon. X. A. Willard saw the churn tested at the late Dairy Fair, and remarked that he "never saw butter come out of a churn in better condition."



BUTLER'S SUGAR EVAPORATORS

Make the sugar that will sell several cents above that made in the old way, with less than half of the amount of fuel.

Examine into the merits of this evaporator, and you will use nothing else.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

BRIEFLETS.

The cure for gossip is culture.

Never reprove servants before any one.

A sick person should not be contradicted.

Perfumes should be used in the strictest moderation.

Baking soda ought not be dissolved in *boiling* or *hot* water.

When you go to the fair, don't forget your sun umbrella.

Do not tilt your soup-plate for the last spoonful.

If you take your children to the fair be sure and provide them with comfortable shoes.

It is more civil to take the last piece on a dish, if you wish it, than to refuse it.

"Nagging" will make sour the sweetest temper and wear even love threadbare.

The wheels of domestic life as well as those of society, need the oil of civility to make them run smoothly.

If you go to the fair to *see* and *learn*, that's one thing; if you go to *see* and *be seen*, that's another.

The eating of plenty of ripe, acid fruit is suggested as a preventive of malarial difficulties.

Children often have an insatiable desire to see the side-shows at fairs. If respectable, we think the children should be gratified.

MRS. ENDICOT'S JOURNAL.

At the fair; pincushion cover; shoe-pocket; fruit, bread and cake; style of dress.

I am tired and worn out, but I think with Barton and the children that we have been paid for our efforts. This has been "Fair week," and in more than one sense. The weather, for a wonder, was delightful; not even dusty roads. I had thought at first that baby Katy and I would stay at home, but the prospect of a delightful drive was not to be resisted. Barton and Harry had been over the day before to take Harry's chickens, and a basket of tomatoes from his garden. Mr. Endicot also took over a pair of horses, and some honey. I had intended to be represented, but one pair of hands cannot do everything. We entered the grounds about ten o'clock, and found them well-filled with people. There was some stock to be on exhibition in the ring at about that time, which Barton wished to see, and as he offered to keep the children in the carriage with him, I was glad to accept of his kindness and take that time to see what the ladies had been doing. The hall was not as yet crowded, so I could look at my leisure. Of course, there was the usual number of quilts, rag carpets, and worsted-work monstrosities, and there were also some specimens of fine needle-work. There was one cover for a pincushion that I intend to copy. The cover was six by eight inches long, of white bobbinet, embroidered with fine tidy cotton; any pattern suitable to work on Java canvas would answer. It was finished around the edge with a narrow Italian lace. The cushion was made of blue silk, but mine will be of crimson wool-delaine. Another thing that I examined closely meaning to make one like it, was a shoe-bag. I should think this was the way it was made. A circle, about three feet and four inches in diameter, had been cut from a square of strong brown linen, and the edge bound with scarlet braid. It was then marked off into eight uniform divisions, and folded, each one being turned the same way, then opened and the ends turned nearly to the center and stitched securely. A small design was braided on each section and a loop of braid was fastened in the center by which it was suspended from a hook. The canned fruit and jelly looked beautiful. They will certainly tempt some one's appetite next winter. The bread, white and brown, and cake, all looking so nice under the glass cases, excited my wonder as to how anyone could decide *which* was the best.

As the children and I rested in the carriage I could not help noticing and thinking to myself, as the crowd passed to and fro, how much better and more ladylike it looked to be dressed plainly and quietly at such a public place.

CANARY BIRDS.

An objection, and a very great one, to hanging canaries in the sitting-room or parlor, is the litter they make with their sand, seed and feathers. After suffering considerably in this way, and having had our dining-room newly painted and carpeted, we determined if possible, to prevent master "Birt" from giving us further annoyance. A cast-off vail—a drab gauze one—a yard and a quarter in length and a trifle over half a yard in width, was sewed together and a drawing string run in at top and bottom. One string was tied snugly around the under part of the cage, the other just above the seed and water cups. It is the work of but a minute to remove the gauze when the cage is to be cleaned, and those who keep canaries will, after a trial, appreciate the value of so simple a contrivance. We would recommend the use of white or drab thin goods, as the more highly colored might injure the bird were he to pick at it.

DOMESTIC RECIPES.

Peach Fritters.

Sift a quart of flour into a large bowl, stir in sufficient warm milk with one-third of a teacup of home-made yeast to make a stiff dough, and let stand until light; then work in three beaten eggs, two tablespoonsful of melted butter, two of sugar and a sprinkle of salt; knead, adding a little flour, for 10 or 15 minutes. Prepare some peaches by paring, halving, removing the stones and pressing the pieces together again. Take pieces of dough as large as an egg, flatten with the rolling-pin, put a peach into each piece, pressing the dough over, making round balls. Put to rise on a floured pan, not allowing them to touch each other. They should be light in from one hour to one and a half. Fry as you would raised doughnuts, and serve with liquid sauce. MARY B.

Apple Sandwich Pudding.

Pare and slice thinly some mellow, acid apples and butter some thin slices of light bread. Into a buttered baking dish put, first, a layer of bread and butter just moistened with warm water, then a thick layer of apples, sweetened and seasoned with cinnamon. Repeat these layers until the dish is full, but the last layer should be bread buttered on both sides Cover with a plate and bake one and a half to two hours in a slow oven. Remove the plate two or three times and baste the top with a few spoonsful of butter and water. Should the apples be very dry, it will be necessary to pour in a little water at the side of the pudding. Half an hour before the pudding is done, remove the plate and let the crust brown nicely. Eat with cream and sugar.

MRS. L. BRAYTON.

Fish Chowder.

Take five pounds of any hard, white fish, cut into small pieces and free from skin and bone. Boil and slice eight common-sized potatoes. Fry until crisp four thin slices of salt pork in the kettle intended for the chowder. Take out the pork, slice two onions into the fat and fry brown. Cut into slices two more raw onions and split open a dozen of butter crackers. Take the onions out of the kettle, pour off nearly all the fat, put in a layer of fish then a layer of potatoes with some of the onions, both raw and fried, and a little pepper and salt. Repeat until half of the ingredients are used, then scatter over half of the fried pork cut into bits and cover with a layer of crackers. Layer the remainder of the chowder as before with the pork and crackers on top. Cover once and a half with cold water and boil slowly one hour. Stir in a cup of cream or rich milk just before serving. It is best to use both salt and pepper sparingly while seasoning the layers, as they can be added if needed when done. A. E. M. B.

QUESTIONS ANSWERED.

Watermelon Preserves.

MRS. H. S. asks how to preserve the rind of watermelon.

ANS.—Select the rind from a ripe melon but one not soft, pare off the outer skin and cut into strips. Let stand over night in water sufficient to cover, in which a teaspoonful of alum to a quart of water has been dissolved. In the morning set over the fire and let come to a scald but not boil. Draw to the back of the stove and in an hour or so turn off and pour over boiling water to rinse off the alum flavor. Then throw the pieces into cold water. When cold, drain, weigh and measure out a scant pint of white sugar to each pound of fruit. Make a sirup by adding a half pint of boiling water to each pound of rind, boil, clarify and add with the melon the juice and thin peel of three lemons. Boil until the rind looks clear. Take out into jars, boil the sirup until quite thick and pour over. If the flavor of ginger is liked, a little of the root may be boiled with the sirup.

L. W. S., Chenango Co., N. Y.—Your question was answered under Domestic Economy in RURAL of June 7.

NOTE.—For want of space other questions will be answered next week.

Please address all communications intended for the Domestic Economy Department, to Emily Maple, RURAL NEW-YORKER, 78 Duane St., N. Y.

BALTIMORE, Md.

HORSFORD'S

SELF-RAISING

Bread Preparation

The Healthful and Nutritious,

BAKING POWDER.

Invented by E. N. Horsford, late Prof. in Harvard University.

It is better and healthier than ordinary Baking Powder, Cream Tartar or Yeast.

The cost of raising Bread, Biscuit, etc., with it is only about half as much as by ordinary Baking Powder, and the result is much better.

It restores the nutritious elements which are taken from the flour in bolting. No ordinary Baking Powder or anything else used for raising bread does this.

Universally used and recommended by prominent Physicians.

Put up in packages containing 11 ounces, just enough for 25 pounds of flour.

A sample sufficient for one quart of flour sent post paid on receipt of a three cent stamp. For 35 cents, in stamps or currency, we will send, post paid, a regular package, sufficient for 25 pounds of flour.

Everywhere.

RURAL SPECIAL REPORTS.

CONN., Guilford, New Haven Co., Aug. 23d.—Most of my Blount's corn was destroyed by the heavy storm that swept this place on the 18th inst. I had a fine promise of a good crop and a fair show for a premium. I planted 100 kernels from which 99 stalks came up, some of which had nine sets apiece. The Beauty of Hebron potatoes are rightly named. I had eleven hills which I dug on the 13th inst., and had 24½ pounds of tubers. One weighed 15 ounces, and quite a number, 14 ounces. I cooked two and I do not hesitate to say they are superior to the Early Rose and Early Vermont. J. A. P.

NEW YORK, Orient, Suffolk Co., Aug. 25.—We are having a very wet season hereabouts. We have had showers about once a week for the last six or eight weeks. The ground is now too wet for corn on our heavy land. The stalks are well grown and well set for ears; but if the wet weather continues the latter will not fill. Now we want a month of hot dry weather to insure a good crop. Potatoes are looking exceedingly fine, especially the Burbank Seedling. I have a field of four acres under this crop, and it promises to be excellent. I planted a bushel of Beauty of Hebron potatoes, having cut them to one eye apiece. The vines kept pace with Early Rose, and the tubers of both will mature about the same time. I also planted one peck of the Trophy potato; this will be much later, as the vines are green yet. Onions are doing exceedingly well this season. We have a very fine soil for this crop. Of course it needs manure, and it pays to use this plentifully. Some of our farmers are purchasing largely of horse manure from New York, and it seems to be just the thing for the crops of different kinds that we raise. A great deal of sea-weed—or "creek-mud," as we call it—is used for corn, and it seems to answer a good purpose. Turnips are looking well, and there is a large breadth of land sowed with them. The show for apples is poor, but pears are promising a good crop. Some of our farmers have commenced digging Early Red potatoes, and they report a yield of from 250 to 300 bushels per acre. S. L. T.

NEW YORK, Clinton, Oneida Co., Aug. 20th.—My Beauty of Hebron potatoes were dug to-day; there were 12 eyes in my seed potato, so I made 12 hills which yielded 13½ pounds of good-sized potatoes, there being but very few small ones. I planted the 12 eyes in the middle of April. Of my flower seeds only three kinds came up; of the Bronze Ricinus I have three plants; of the Aquilegia, seven, and of the Hibiscus Syriacus, twelve. The Voorhis watermelon is growing very much; from one vine there are two large melons and some smaller ones, none of which are ripe yet. The Golden Rural Tomato is growing finely and is begining to ripen. It is an earlier sort than the common red tomato. I think very much of my Rural seeds and of the RURAL NEW-YORKER as an agricultural paper; every department is full of instructive reading for old and young. G. B. E.

N. Y., Burtonville, Montgomery Co., Aug. 25th.—Most of the farmers are through harvest. Crops generally are good in this vicinity. Corn promises a good yield. My Blount's corn is doing splendidly. It was planted the 20th of May, and now the stalks are from nine to eleven feet high, and six inches in circumference, with from three to eight ears on a talk. It beats anything in the corn line that I ever saw. Pearl Millet is a failure with me; I do not think it worthy of its name. I have had Acme tomatoes from seed sent by the RURAL for two weeks; they are the best tomatoes I ever raised. A SUBSCRIBER.

NEW YORK, Yorkshire, Catt. Co., Aug. 25th.—Corn and potatoes are looking well and large crops are expected. Oats are better this year than they have been for several seasons. The wheat crop is light. The Blount's corn which the RURAL sent us is worth seeing, the stalks being from six to ten inches in circumference and 10 to 12 feet high. The ears are just beginning to set, from two to six on a stalk. The Beauty of Hebron potato did not do very well. Defiance wheat is looking well—what there is of it, the hens having destroyed about one-third of it. The apple and pear crops are light here in the valley; but on the hills they are good. W. A. B.

N. Y., Sherman, Chaut. Co., Aug. 24—Blount's corn is doing well now, but I fear that it is too late in ripening for our short season. Some of it stands eight and ten feet in hight, to the top of the tassel, with from four to six ears just set. It beats all the corn I ever saw in this part of the country to grow. Farmers in this section are paying more attention to corn and wheat, and less to oats, which has been our principal grain heretofore. I think its a move in the right direction. A. E. B.

N. Y., Sherburne, Chen. Co., Aug. 20th.—The Beauty of Hebron potato sent me I cut to single eyes which made nine pieces, put them in a pan of dirt in the house till the vines were six inches high, then I set them out, one eye in a hill. I hoed them twice and dug them last Monday. I had 55 good-sized, nice-looking potatoes weighing 11 pounds. My Blount's corn is nine feet high with no tassels yet. W. H. S.

N. Y., Ithaca, Tompkins Co., Aug. 26th.—Not more than one half of my Blount's Prolific corn came up, and that has a sickly appearance. I am confident it will never amount to anything in this section. My Beauty of Hebron potatoes are not ripe; the tops are still green, though Early Rose potatoes by their side begin to color. F. D. S.

N. J., Middletown, Middlesex Co., Aug. 22d.—Blount's Corn astonishes the natives. My Beauty of Hebron potatoes have done finely. Most of the seeds the RURAL sent me came up and the plants are doing well. J. N. R.

PA., Buena Vista, Alleghany Co., Aug. 24th.—Harvest is over and fall plowing has commenced. We have good crops in this section. Wheat is good and well filled, but the straw is short. Oats are good, yielding 40 bushels per acre. Potatoes are plentiful, but small. Corn is an average crop. Apples are a poor and peaches a good crop. Pears and other fruits are abundant. D. E. H.

PA., Morris Cross Roads, Fayette Co., Aug. 11.—The wheat crop was good; but not much was sown here. Corn is fine and promising. Oats and barley look good; there was but little of the latter sown. All kinds of fruit look well, excepting apples. Potatoes are a better crop than has been seen for many years. Farmers are preparing to sow a large crop of fall wheat. J. L. G.

OHIO, Attica, Seneca Co., Aug. 23d.—Harvesting is over and thrashing has commenced. The average wheat crop for this year is: Lancaster, 20 bushels per acre; Fultz, 30; Clawson, 25 to 30 bushels; oats, 30 to 50; corn will be an average crop. The Blount's Prolific is doing very well; it is 12 or 14 feet high; some stalks have seven or eight ears on, though it seems to two or three weeks behind the common corn planted in the same field. Flax is very poor on account of the dry weather last spring. Potatoes are a very fair crop. Fruits are a failure this year except grapes. W. S. S.

OHIO, Atlanta, Pickaway Co., Aug. 24th.—We have had good growing weather for the last two months. Wheat is above the average; the yield in this county is estimated by our county paper at 1,000,000 bushels. A large acreage will be sown to wheat this fall. Corn is good—better than last year. Oats are short. Grass is good. So are potatoes. Fruit and hay are both scarce. Eggs bring only eight cents per dozen; butter, 10 to 12½ per pound; corn 35 cents per bushel; wheat, 95 cents; horses, $50 to $125 per head; cows $20 to $40; cattle, $3 to $4.50 per 100 pounds; hogs, $3 to $3.50; sheep, $3 to $4. A. L.

MICH., Bear Lake, Manestee Co., Aug. 22d—The plants from some of the seeds sent me by the RURAL are doing very well, especially the Moscheutos and Hollyhock. The dry weather injured the Ricinus. All the seeds germinated, but some of the plants withered shortly after making their appearance above ground. I have, however, still seed enough to try again. With regard to the corn, it is nine or ten feet high, and still going up. You should send some tassels and ears as well as a ladder to enable me to climb to the top of the stalks to tie them on. M. E. A.

MICH., Adrian, Lenawee Co., Aug. 22.—The "Blount White Prolific" the RURAL sent out is just *immense;* not having room to plant it where it could not mix, I gave it to a neighbor; and some stalks are 12 and 14 feet high with five and six ears on a stalk. *Will* find room for the next free seeds. F. G.

MICHIGAN, Muskegon, Muskegon Co., Aug. 24th.—Peaches, pears and grapes are extraordinary crops here. Apples, plums and cherries are 50 to 75 per cent. of a crop, and all trees and vines have made an uncommon growth. Corn and potatoes are extra. S. B. P.

COLORADO, Bennet, Arap. Co., Aug. 20th.—The RURAL tomato has done very well. Blount's Corn is better than I expected. We have had three hail-storms which cut it very badly. I lost all my watermelon plants and half the flower seeds, but then we do not fret about it, for we are trying to enjoy the lots of flowers that we have, and expect to do better next time. J. W. S.

TEXAS, Luling, Caldwell Co., Aug. 20th.—The remark "it is very dry," which was lately chronic, is now heard no more, for during the past week we have had abundant rains. Corn, of course, could not be benefited by this tardy downpour, as a good deal of it had been already gathered; but it gives cotton a good chance to make a "top crop," if the army-worm does not put in an appearance. Corn, which went begging at 20c per bushel this time last year, is now worth 75c to $1. The crop will not average 10 bushels per acre in the county, but the prospects for cotton, both as to price and yield, are good. T. J. E.

WELLS, RICHARDSON & Co's PERFECTED BUTTER COLOR.

Gives Butter the gilt-edge color the year round. The largest Butter Buyers recommend its use. Thousands of Dairymen say it is Perfect. Ask your druggist or merchant for it; or write to ask what it is, what it costs, who uses it, where to get it. WELLS, RICHARDSON & CO., Proprietors, Burlington, Vt.

YOU CAN CURE YOUR CATARRH

By the Same Means We Cured Ours.

Catarrh of Head and Bowels, Deafness, Etc.

167 THIRTIETH ST., CHICAGO, Jan. 1, 1878.

DR. C. R. SYKES—*Dear Sir:* I was a great sufferer from Catarrh for about twelve years previous to March, 1876. The disease located mainly in my head and bowels, causing painful ulcerations in my nose, and I could scarcely breathe through that important organ. During the last two years of that time the catarrhal condition of the bowels resulted in ulceration, and the discharges and other appearances were much like a chronic diarrhea.

The stomach was also involved, and this organ, together with the bowels, would at times become so distended as to become terribly uncomfortable, then relax, until "I feel all gone," is the best expression I can give for it.

My eyes were badly affected, but, worse to me if possible than all the rest, was a deafness that nearly disabled me for business. It came to be so bad at last that at church I had to take a front seat, and even then, with my hand spread out back of the ear to catch and concentrate the sound, I seemed to miss about half the sermon.

My memory was also greatly impaired. I shall not attempt a description of my sufferings; you, from your own knowledge of the disease, can well judge what they must have been.

In March, '76, I heard of and tried your "SURE CURE," and took it according to directions. I experienced great satisfaction from the first bottle, and, after about four bottles were used, my hearing *suddenly* cleared up; I was in church at the time, and it seemed as if a new revelation had been opened up to me.

I discontinued the medicine gradually, the ulcers in my head and bowels healed, the chaos in my brain was restored to order, in fact I could hear, and smell, and breathe through my nose, and have been free from the disease since that time. I cheerfully recommend your "SURE CURE" to all like sufferers, and have known several cases of catarrhal colds that yielded promptly to the remedy.

Wishing you a "Happy New Year" in your noble work, I am respectfully and gratefully yours,

A. C. DAVIS.

Hearing, Sight and Memory Restored.

FACTORYVILLE, Cook Co., Ill., March 22, 1877.

About the first of last February I got one bottle of your Sure Cure and Insufflator. I had been suffering about three years with Catarrh. I am now using the third bottle, and have used one of your Ear Specific; and words cannot express how good I feel. I am a new man entirely. My head, which had been completely stuffed up, is now as clear as can be; the swelling has all left my nose; my eyes, which had been for two years dead and watery, are now as bright as diamonds. I was so deaf that I was completely stupid, and I could not remember anything; now my hearing and memory are as good as ever.

Before commencing with your remedies, I called on Dr. ——. He said I had catarrh in its worst form, and, if I did not have it cured immediately, I would lose my hearing entirely. He said he would cure me for forty-five dollars. So you see I have saved over forty dollars, as your medicine has cost me only about four dollars, and I could not expect more from it if it had cost me four hundred. You can use this as you wish with the greatest pleasure. WM. MURRAY.

To Dr. C. R. Sykes.

Eight or Nine Years' Catarrh, Dyspepsia, Loss of Smell, Etc., Cured.

I think no man ever had the Catarrh much worse than I had for *eight or nine years.* The discharges from the head were perfectly awful, especially in the morning. Anything cooking or burning *I couldn't smell,* and I suffered dreadfully from the DYSPEPSIA, that I am sure proceeded from the foul Catarrh.

Over a year ago I used five bottles and a half (got six) of Dr. Sykes' Sure Cure, and his Nasal Tube, and it *cured me perfectly sound.* I have no Dyspepsia since; my eyes are stronger; ears are free from ringing; head clear, and *no trace of Catarrh.* I can smell sharp as ever, and never was so well in all my life as the last six months. My advice is: "*Go and do likewise.*"

WILLIAM SHURR, Press Foreman,
Chicago Newspaper Union, 181 Fifth avenue.
CHICAGO, Oct. 31, 1872.

P. S.—Mr. Shurr is still in the employ of the C. N. U. Co., and has remained *perfectly well* ever since his cure in 1872.

Another Wonder—Chunks and Bones.

SUBLIGNA, CHATTOOGA Co., Ga., Sept. 21, 1877.

I write to thank you for the wonderful cure you have wrought on me by your medicine—the "Sure Cure." No words can explain the severity of my case or express the gratitude I feel, for I am sure your remedy has saved me not only unspeakable suffering but from the very verge of the grave. My neighbors and physicians (I had tried a dozen doctors) look upon my cure as being almost miraculous.

For four years past I had suffered from Catarrh, Headache, Neuralgia and occasional lung troubles, so severe at times as to be confined to my bed. During last November my ears and nostrils became so tender I had to cover them with flannels even in this warm climate, when I went out doors. In January I had neuralgia thirty-six hours so severe I was in perfect agony; then my nostrils began discharging a blue, offensive corruption, growing gradually yellow and thick. I felt weak and diseased all over. My nostrils finally closed up so I could not breathe through them, and if I went to sleep it was to be awakened every few minutes with strangling and suffocation. I had not a minute's ease in months, and my sufferings were indescribable. It was in this condition, after having tried all the remedies and physicians in my reach, that I began taking the "Sure Cure." It relieved me in eight hours so that I slept nearly all night, and in the morning I felt like a new man. The third day the matter began coming away in large lumps, and the quantity passed in three days was simply incredible. This continued at intervals for about forty days, when, in trying to clear my head, the whole thing seemed to break loose in the upper part of my head and fall into the air passages, nearly choking me. By means of a crooked instrument I succeeded in breaking it up into small lumps and pulling and hawking it out. When I got it all out, there was a gill measure full of the tough, hard lumps and softer matter. I will send you some of these excretions and bits of bone that worked out of my nose. Your Ear Specific has given me equal satisfaction with the "Sure Cure." It is now over a month since I reported the fact of my cure to you. I inclose money for two of my neighbors. Their symptoms are described on a separate sheet. Our doctors have failed to help them.

My wife and children join in gratitude to God and to you as an instrument in His hands for restoring to them a husband and a father. God bless you.

GEO. R. PONDER.

Blood and Corruption—Came Home to Die, but Returned Cured.

CHICAGO, Jan. 4, 1879.

DR. SYKES—*Dear Sir:* I have been written to several times to find out if your statement of my case was true, and now as I am here I wish to write my own case and cure, and have you publish it, if you will, for the good of the public.

I had been living in Colorado about four years when my head gave out. I employed a good doctor, who treated me for Erysipelas; then others, who called it Cancer, and, for two years before I came home, they doctored me nearly to death, some for one thing and some for another, but finally decided that I had the dreadful Catarrh in its most dangerous form, and this is how I was, as nearly as I can write it.

I had taken some heavy colds, and the fine dust that blows there like snow had made my nose awful sore inside; the nose got inflamed, swelled very large, was red and very painful, and the redness spread very badly over my face. It also got a sore spot right on the nose up toward the eyes, and so was sore outside and in, and finally eat a hole clear through, which at last got about as large as a pipe stem.

My palate also got very sore and enlarged, and, after a while, it *came off;* then two holes eat through above it that looked like canker-sores, and, spreading fast, they both broke into one, and when you first saw me it was *larger than the end of my thumb,* and still eating. My throat and the back part of the mouth was one mass of canker and scabs, and *I could not talk*—only a hoarse kind of whisper. The matter from my throat and the sore through the nose was perfectly awful, and my breath the same—a person couldn't sit or stay near me.

I had a very bad cough; my lungs were very sore, and my stomach all out of order; I *could hardly eat,* my throat was so sore and my stomach so bad. My weight had gone down to eighty pounds. I had nearly lost my hearing, and I *could not smell* anything at all. I had been in such agony that I could not lie down to sleep. I often took a washbowl in my lap (for I could not stand) to wash out my head, and the blood and corruption would come from my nose and mouth in streams.

During this time I was confined to my bed sixteen weeks, and I had paid out all my earnings, about $500, to my doctors, and grew worse all the time. One doctor made me give him $50 before he would do a thing for me, and not a bit of good came from it. I wanted to get home to my mother in Chicago, but the doctors and all my friends said I could not live to get here, but I did.

I supposed I had *come home to die,* but, after resting about a week, my mother, who had heard of you and your "Sure Cure," took me to your office on the 11th of September, 1877. A big patch was on my nose to cover the hole eaten through it, and I was in the condition above described, and had given up all hopes of ever being any better. You said if I would be faithful in following directions you thought you could cure me, and I promised.

I felt a good deal better in about three days, and continued to gain rapidly. In six weeks the large hole in my palate was entirely closed up, and also the one in my nose, but it left a bad scar and my nose is sunken in some. My breath got perfectly sweet; my lungs got sound and free from soreness and pains, and my cough disappeared, and in that six weeks I had gained twenty-two pounds.

Your treatment—the "Sure Cure," "Insufflator," "Blood Medicine," and an "Ointment," all pleasant to use and take—was all I required, and I think I *was the happiest woman* that ever lived. I soon after returned to Colorado and went to work, and was not troubled with the catarrh again. My old doctors and friends there declared my cure was a "miracle." I took three bottles of the "Sure Cure" back with me, but gave one away, and I continued to gain in flesh until I weighed 135 pounds, making over fifty pounds that I had gained.

And now I have another cure to relate. Last summer I was taken with another trouble—a tumor under my left arm, in the arm pit, probably from a hurt. The pains from it extended into my heart, breast and left lung, and were terrible to endure, and my weight got reduced again to ninety-three pounds. The swelling grew rapidly and finally seemed *nearly as large as my fist,* and all the doctors could do for it had no effect; it made me down sick. My left arm lost all feeling in it—seemed to be dead. The doctors in Denver and Pueblo finally said the Tumor would have to be cut out to save my life, and told me there was danger from it, for I might bleed to death.

I said: "No; never. I will start for Chicago, and Dr. Sykes will cure me." I came, and when he examined it he said it would never do to cut it out, and there was no need to do it, for it could be cured without. He furnished me the necessary remedies, and in about two months the Tumor had disappeared altogether with the pains in the chest, and I got the perfect use of my arm and hand, and picked right up again, and now weigh 136 pounds—the heaviest I ever was in my life, and am still gaining in weight.

Let the afflicted make a note of this. *I owe my life to Dr. C. R. Sykes*—not only once, but twice—and as long as I live I shall always endeavor to tell and help those that are afflicted and have thrown away their money as I did. This is every word true, and I write it for the benefit of the sick and suffering, and who are in despair. My home is now with my mother, at 88 Larrabee St., where I can be seen or addressed by any one who wants to know or to see such a wonderful cure.

MISS ANNIE E. GREEN.

Could Hardly Talk or Swallow—Deaf, Etc.

DR. C. R. SIKES—*Dear Sir:* I have for a long time felt it my duty to others, who may be suffering as I was, to write a brief history of my case for their benefit.

Three years ago last spring, when you first saw me, I was suffering from one of the worst throats that ever anybody had. It was so badly ulcerated that I could hardly talk or swallow. Then the roof of my mouth was attacked in the same way, and finally a hole eat through on that part above the palate. This kept spreading until it got to be nearly as large as a twenty-five cent piece. This made my speech so bad that people could hardly understand a word I said.

The soreness and difficulty then worked up into one ear, with such awful pains in it that I was nearly distracted; and, after a while, I lost my hearing in that ear. I could do no work, and was confined to my bed most of the time; had no desire for food, and was very poor in flesh, and, really, life seemed a burden to me.

My case is so different now that I can hardly realize the great change. I am more than sixty pounds heavier; my hearing is so perfect that I almost forget which ear was deaf, until I stop to think, and that large hole is completely closed up, except about the size of a pin's head; but, by drawing up the palate in healing, it leaves my speech a little imperfect.

My throat is in perfect condition, and now, for nearly three years, I have enjoyed splendid health, and have done hard work at dressmaking, as any one can see by calling on me at my house, No. 127 W. Madison street.

After waiting so long, I am sure that the cure is a permanent one, and I write this in hope that others may profit by my experience.

I am sincerely your patient,

MRS. P. HUMPHREY.

"Dr. Sykes' Sure Cure for Catarrh,"

Is an internal and local remedy, and if rightly used, is as sure to cure Catarrh as Sulphur is to cure the Itch. I had Catarrh 24 years, and after expending over $1,200 in vain, originated this plan of treatment which cured me in 1870, and the number of cures since is simply wonderful—the above are only given as specimens. The Sure Cure is within the reach of all; can be sent by mail or express. Price Complete, with Insufficator, $1.40. If afraid to risk the money—to a stranger—send 10 cents for a book of full information, worth ten times its cost. Postage stamps are good as cash. Address

C. R. SYKES, M. D., 169 Madison St., Chicago.

☞ Please mention this Paper. This advertisement will not be repeated.

The Eclipse Engine.

POPULAR, ECONOMICAL, GUARANTEED AND EXCELLED BY NO OTHER.

ON THE ROAD.

THE ECLIPSE ENGINES ARE BUILT

on wheels, on sills (or not mounted, for stationary purposes) for driving Grain Separators, Cotton Gins, Saw Mills, Printing Presses, Machine Shops, Factories, &c., &c. Best improvements.

Durable Powerful, First-Class, Economical and Universally Recommended.

Ever since 1874 it has been in competition with other Engines at State and County Fairs, and taken the highest premiums—at the Industrial Exposition, Cincinnati; at the Maryland State Fair, Baltimore; at the Va. State Fair, Richmond, in 1874; at the Pa. State Fair, Lancaster; at the Del. State Fair, Middletown; North Carolina State Fair, Raleigh, in 1875;

At Centennial Exhibition,

Diploma, Medal and Award, with Judges' Report of "BEST RESULTS," at Field Trial in **1876**; State Fair, Westminster, Md., in 1877; at Staunton, Va., over three other engines; at Winchester, Va., over two other engines; at Hagerstown, Md., over two other engines; at York, Pa., over one other engine; also at Reading, Pa., in 1878, and numerous other places.

The Eight-horse Eclipse Engine (Cylinder 7 inches diameter.) is ample for the largest Separators requiring Ten-Horse Power. Engines with the seven inch Cylinder are rated by some Engine builders at Twelve-Horse Power, and they sell them as such. Purchasers should examine sizes of Engines, Cylinders and Boilers before buying.

THE ECLIPSE TRACTION ENGINE.

After several improvements and experiments, the Traction Attachments are found to be superior to others. The July number of the Eclipse Era, published by Frick & Co., gives a description of the Eclipse Traction, and tells what it has lately done in competition and severe tests. It is a decided success. The attachments are simple and cheap compared with the advantages gained. When done threshing, it is ready for starting by removing a lever only to throw it into gear. Send for circular giving description, illustration, &c. Address

FRICK & CO., Waynesboro, Pa.

70 miles West of Baltimore, on W. M. R. R.

THE GEISER SEPARATOR,

WITH ITS

MANY IMPROVEMENTS,

Through a period of Twenty Years Stands in the Front Rank of

Farm Machinery.

THE MOST SUCCESSFUL THRESHING MACHINE

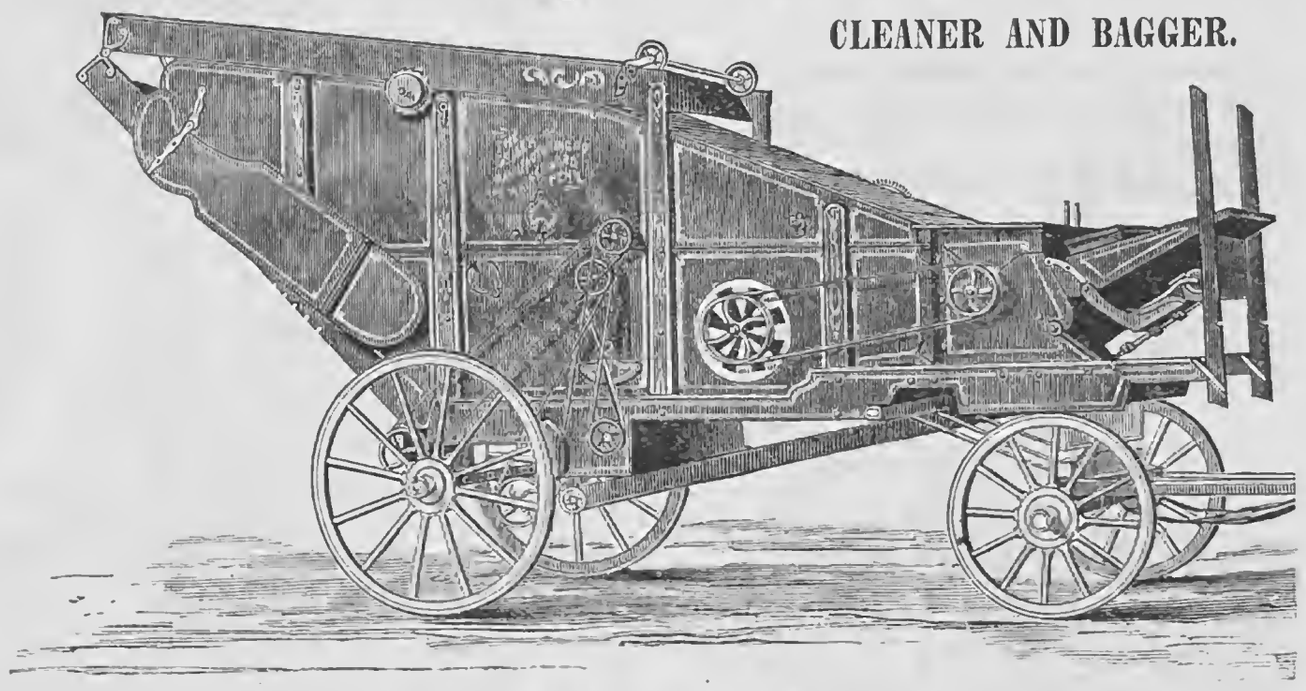
At the Great Field Trial, July 18--25, 1876.

At Centennial.

These Separators are noted for the superior manner in which they separate and clean the Grain ready for market, and also for the smooth-running movements, there being so little jar or shake about them, that the brakes will hold them steady, not even blocks being needed at the wheels. In order to accommodate the Public they are put up in five different sizes from a 36 inch Cylinder with 50 inch Trunk, down to 25 inch cylinder, with 29 inch Trunk.

The Geiser Self-Regulating Grain Separator.

CLEANER AND BAGGER.



AS SEEN ON THE HIGHWAY.

MANUFACTURED ONLY BY

THE GEISER M'FG. CO., Waynesboro, Franklin Co., Pa.

GARDEN ENGINE and Fire Extinguisher. For Washing Windows, Carriages, etc., Protects Buildings, from fire and trees, vines, etc., from pests. Throws water 50 feet. Easily carried. No dwelling country home or factory should be without the Fountain Pump. Send for large Illustrated Circular. Agents wanted.

J. A. WHITMAN, Providence, R. I.

The Voice of Worship,

For Choirs, Conventions and Singing Schools.

BY L. O. EMERSON.

This splendid book is now nearly through the press, and will be in great demand. Full collection of the best Hymn Tunes and Anthems for Choirs, numerous Glees for Social and Class singing, and a good Singing School course. Its attractive contents, with the low price ($1.00 or $9.00 per dozen), should make it the most popular of Church Music Books.

THE TEMPLE. *For Singing Schools. Conventions and Choirs.* By W. O. PERKINS, will be ready in a few days. First class book for Singing Schools, with large collection of Glees, and plenty of Hymn Tunes and Anthems. Price $1.00 or $9.00 per dozen. Although Singing Classes are especially provided for, both the Secular and Sacred Music render it one of the best Convention and Choir Books.

FATINITZA. The new and very favorite opera, is now ready, with words in three languages, all the Music and Libretto complete. Price $2.00 paper. $2.25 boards.

PINAFORE. Price reduced to 50 cts. The same elegant edition heretofore sold for a dollar. Complete Words, Libretto and Music. All ready for the stage.

Any book mailed for retail price.

OF THE

NEW YORK INFIRMARY

128 SECOND AVENUE, Cor. 8th St., New York.

REGULAR SESSION of 1878-'79 will open October the 1st. A thorough course of three years' instruction by Lectures, Clinics, and practical work in Laboratory, Drug-room, and different wards of the Infirmary.

For Catalogues, &c., address the Sec'y of the College, MERCY N. BAKER, M.D., 128 2d Av., N. Y. City.

Trinity Hall, Beverly, N. J. Established 1867.

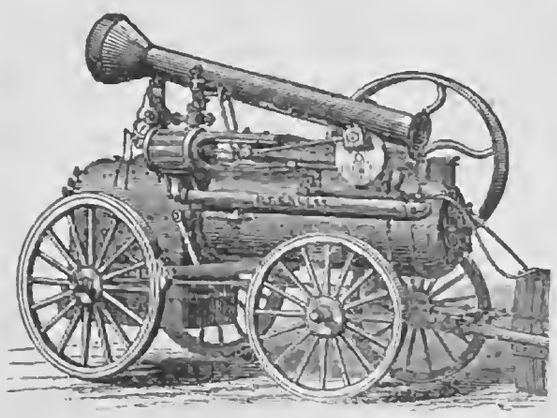
An attractive Home-School for Girls. Varied advantages of the highest order. Fall term begins Sept. 18. For circular address

Miss RACHELLE GIBBONS HUNT, Prin.

A FINISHED MUSICAL EDUCATION. THE NEW ENGLAND Conservatory, Boston, employing 75 eminent Professors, Has a reputation unequaled for furnishing a COMPLETE MUSICAL EDUCATION at merely nominal rates, combined with RARE collateral advantages. For prospectus address E. TOURJEE, Music Hall, Boston, Mass.

WANTED.—Wide-a-wake, agents, in all parts of the country, for our splendid book, "*The Lives of the Presidents*," complete in one vol., steel plates, and many other illustrations. A grand book for the fall and winter. Address, B. B. RUSSELL & CO., Publisher, Boston, Mass.

The Peerless Portable and Traction or Self-Propelling Engine.



Rides entirely on Steel Springs, making it very easy on the engine in transporting over rough roads.

The only Engine in the Market attached to the Boiler having cold bearings.

All parts are interchangeable. Hardened connecting pins, and convenient to operate. Also the DOMESTIC SEMI-PORTABLE ENGINES for light power. Send for catalogue to

FRANCIS HERSHEY, Successor to F. F. & A. B. LANDIS.

Wit and Humor.

WHY had Adam only one name? Because when he was put in the Garden of Eden he had no syn-on'im.

A DRUNKARD stopping at Rye Beach said he was a geologist seeking specimens, and came there for quartz.

A STORY is going the rounds of the press called "A son turns up after twenty-five years absence." We have seen a son turn up after an hour's absence often, and never thought anything of it.

THE only real bit of "tears," says some one "are those shed in soli-tude." You may bet your life that philosopher never saw a ten year-old boy coming out of the woodhouse in company with his father and a skate-strap.

SHE introduced Mr. Peters to all her circle, and when her daughter Kate sweetly lisped "Mither Peters!" he softly said, "Why don't you call me Peet?" "Oh, not on so short an acquaintance," she blushingly replied. "But," said he, "my name is Peet, not Peters."

BOYHOOD is candid, and middle age, though it may think the same things, is reticent. "What part," asked a Sunday-school teacher, "of the Burial of Sir John Moore do you like best?" He was thoughtful for a moment and then replied, "Few and short were the prayers we said."

SEEDS That may be depended upon

Such persons as have not regularly received our catalogues, we shall be glad to furnish with the same, and by kindly sending their address, they shall be placed upon our list in order that they may receive each new publication. Our NEW DESCRIPTIVE CATALOGUE OF AGRICULTURAL, VEGETABLE, TREE AND FLOWER SEEDS to appear in January, 1880, will contain a full list of all the novelties and improvements of the year.

BENSON, MAULE & CO., Manufacturers.
24 Church St., Philadelphia, Pa.

"GOOD PENMANSHIP is very desirable in whatever station in life you are placed, and we are pleased to note that the system of American penmanship introduced by Prof. G. A. Gaskell, of Manchester, New Hampshire, United States, is very popular in London, and is used in many of the leading commercial houses. It is called 'Gaskell's Compendium,' and is simpler and more easily learned, and may be written with greater ease and rapidity, than any of the old styles. Trubner & Co., Booksellers, 57 & 59 Ludgate Hill, have it for sale."—*Pall Mall Gazette*, London, England.

"The salient advantages of Gaskell's system are its legibility, rapidity and beauty. There is no style of writing, plain or ornamental, business or epistolary, for lady or gentleman, which is not included in this admirable system. And we think that if anything at all could fire an indifferent writer with a desire to become an expert and elegant penman, an inspection of Mr. Gaskell's system would do so."—*New York Daily Witness.*

SELF-TEACHING PENMANSHIP.

THIS SYSTEM has been prepared expressly to meet the wants of those desiring to change their present handwriting to a more EASY and BEAUTIFUL style, by home or office practice, without a teacher.

It is the only American system used in the commercial offices of London, Eng., and in New York, Boston, Philadelphia, and other cities of the United States.

GASKELL'S COMPENDIUM

CONSISTS OF

Business, Ladies', and Ornamental Penmanship, in all varieties: Movement Exercises, Alphabets, Ledger Headings, Bills, Model Signatures, Corresponding Styles, Album Work, Card-Writing, Pen-Drawing and Shading, German Text, Old English, Off-Hand Flourishing, &c., &c.

All the above are in the form of *written* and other *pen*-exercises, and accompanied with a small BOOK OF INSTRUCTIONS, giving a complete analysis of every capital and small letter, with full directions for Position, Pen-holding and Movement.

IMPROVEMENT OF THOSE USING IT.

Having had a sale of over **75,000** ample opportunity is afforded for testing its value. For the past year we have given in each number of SCRIBNER'S MONTHLY and ST. NICHOLAS, a full page showing the improvement of those using it, as received from month to month. The following have never been equalled by any other system, school or teacher. They are perfect reproductions of the original writing.

AMERICAN DRIER CO.,
Chambersburg, Pa.
U. S. A.

8th. That it is the only original inclined flue machine thoroughly protected by letters patent, and the only one which can guarantee protection and safety in its use against costly litigation and royalties. (See catalogue.)

9th. That owing to the quality, appearance and market value of its products, it is the only cheap machine.

10th. That no farm implement will pay its cost so quickly, nor as many times over in a season as it will. Always ready and the daily wasting fruit suggesting its use and reminding us "It is not what we make but what we save that accumulates wealth."

11th. That owing to the almost universal practice of sun and oven drying of fruits, &c., the market for that kind is overstocked and does not pay, while choice evaporated fruits always command good prices.

12th. That it is the only portable evaporator the manufacturers of which offer a market for their patron's product.

13th. That the American Drier Companys' evaporated fruits, having an established reputation and market value, and sold distinctively as such, under our trade mark, and in our own uniform packages, inures to the advantage of our patrons, from whom we get all our stock. (See catalogue.)

THE JOHNSTON HARVESTER COMPANY

OF BROCKPORT, N. Y.

Point with Pride to the

GREAT ACHIEVEMENTS

OF THEIR

HARVESTING MACHINES

For Many years past, especially to the im portant fact that they received the

FIRST AND ONLY PRIZE

AGAINST

Thirty-five Competitors

At the great trial of the

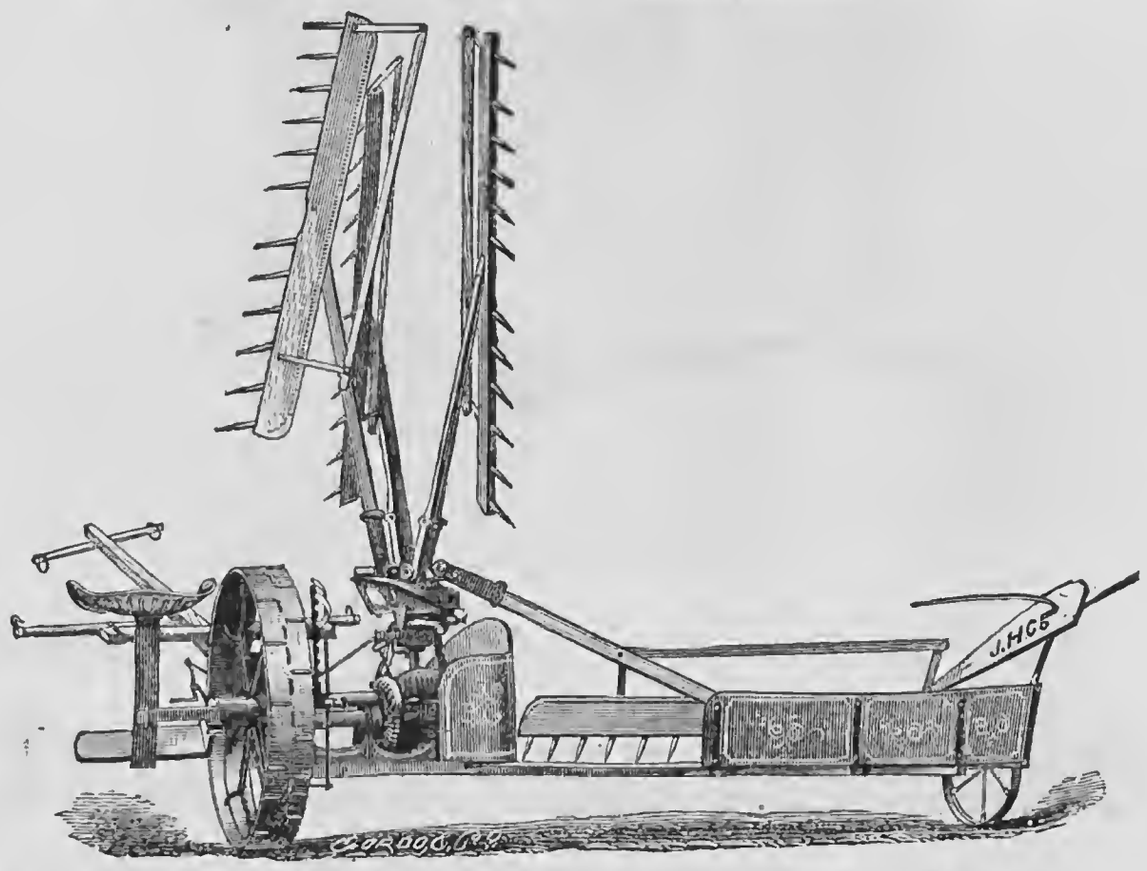
PARIS EXPOSITION, 1878.

The year 1879 has found this company fully up to their previous record and

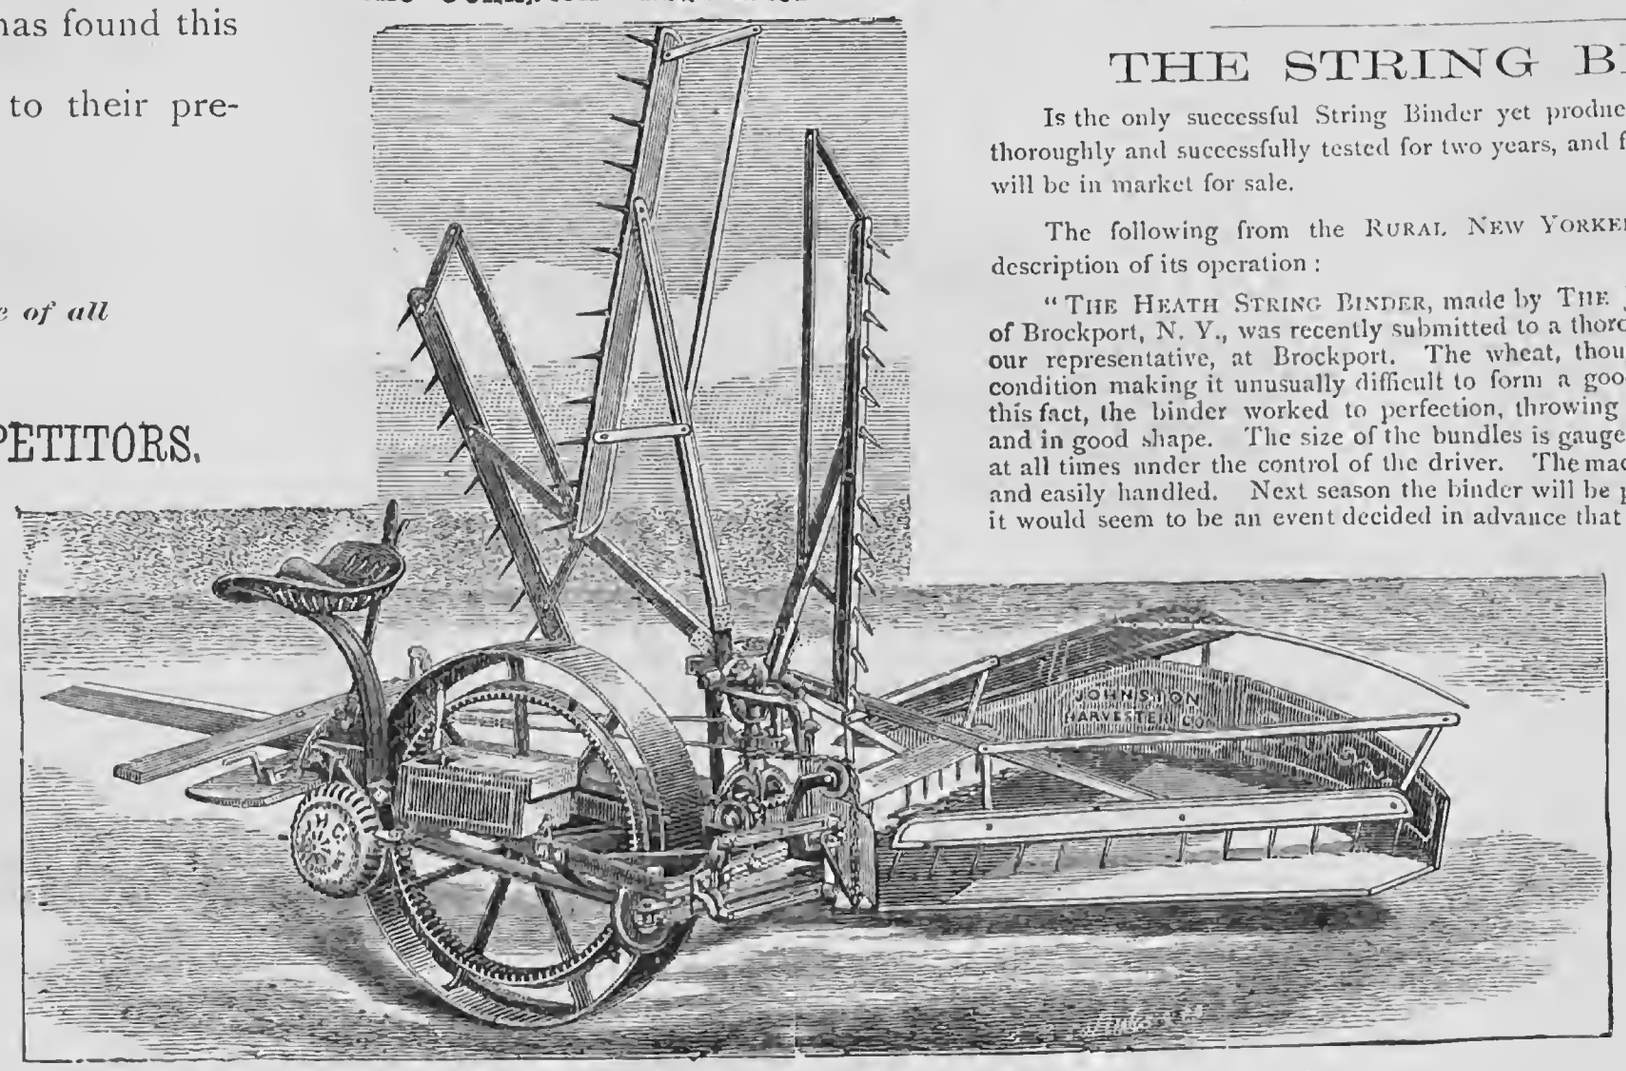
In Advance of all

THEIR COMPETITORS.

The Johnston Harvester Co.'s Automatic String Binder.



The Johnston Harvester Co.'s Continental Reaper.



The Johnston Harvester Co.'s Wrought Iron Harvester.

On this page are shown cuts of three of their

SUPERB MACHINES.

THE CONTINENTAL

IS THE

Most Successful Light Reaper Made.

It has been three years in market and is pronounced for rough and hilly land, the

BEST MACHINE IN USE.

It works equally well in all kinds and conditions of grain.

The Wrought Iron Harvester

IS THE

PREMIUM MACHINE

OF THE WORLD.

It has worked its way through the most

Difficult Fields of Grain

and in all parts of the

Grain Growing Countries

of the world, and always with the same

SATISFACTORY RESULT

THE STRING BINDER

Is the only successful String Binder yet produced. This machine has been thoroughly and successfully tested for two years, and for the season of 1880 they will be in market for sale.

The following from the RURAL NEW YORKER, of July 26th, is a brief description of its operation:

"THE HEATH STRING BINDER, made by THE JOHNSTON HARVESTER CO., of Brockport, N. Y., was recently submitted to a thorough test in the presence of our representative, at Brockport. The wheat, though well filled, was short—a condition making it unusually difficult to form a good bundle. Notwithstanding this fact, the binder worked to perfection, throwing off the bundles well-bound, and in good shape. The size of the bundles is gauged by a foot lever, which is at all times under the control of the driver. The machine is light, well constructed and easily handled. Next season the binder will be placed upon the market, and it would seem to be an event decided in advance that the sales will be large."

Field Crops.

Wheat Number.

WHEAT RAISING No. 2.

H. L. WYSOR.

Varieties of Wheat.

It is, perhaps, needless for me to remark that what I said in the RURAL of July 26 and what is to follow, have reference to winter wheat only. Spring wheat does not succeed here, because it is too much affected by the droughts which frequently occur in June and July, and because it ripens too late.

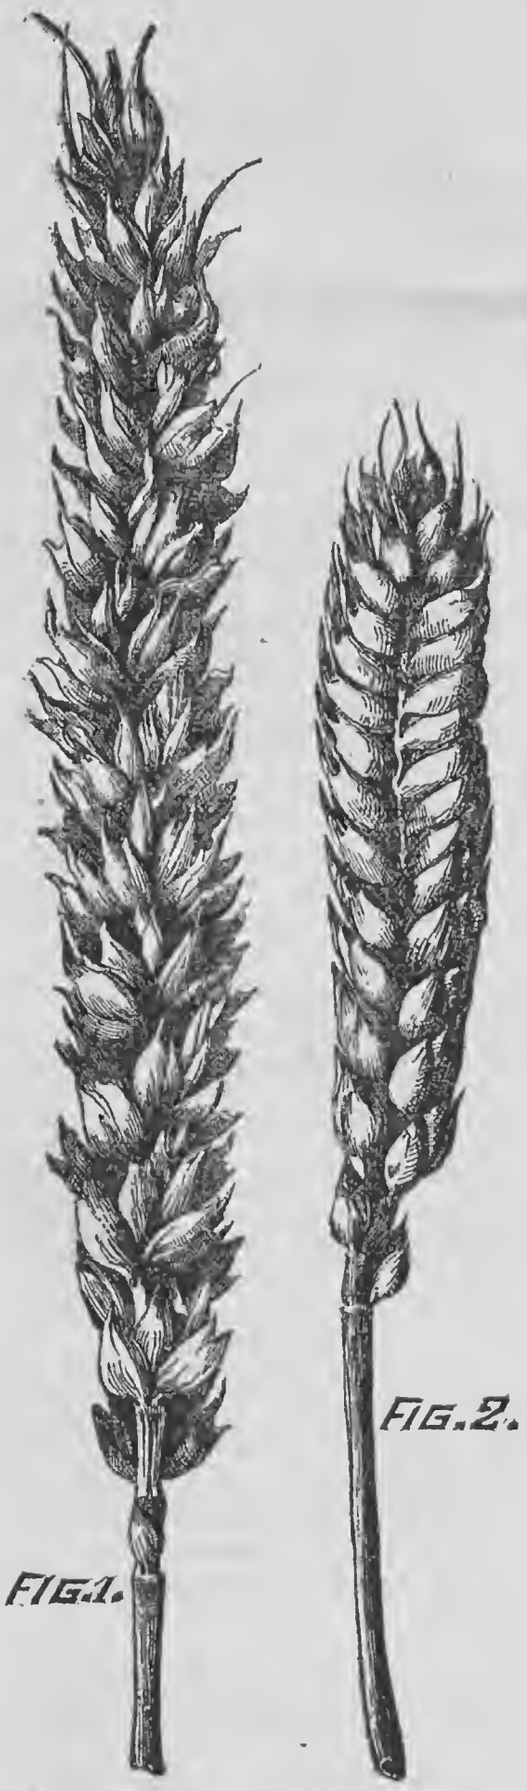

FIG. 1. FIG. 2.

SILVER CHAFF. ENGLISH SQUARE HEAD.

Winter wheat may be classed in two general divisions—bald and bearded. Each of these may be again classed as red and white. The sub-varieties coming under these two last heads, are innumerable. I am asked whether a bearded variety will gradually turn into a bald variety, and *vice versa*. Without knowing anything positive about it, I would answer that I do not think either would turn into the other,

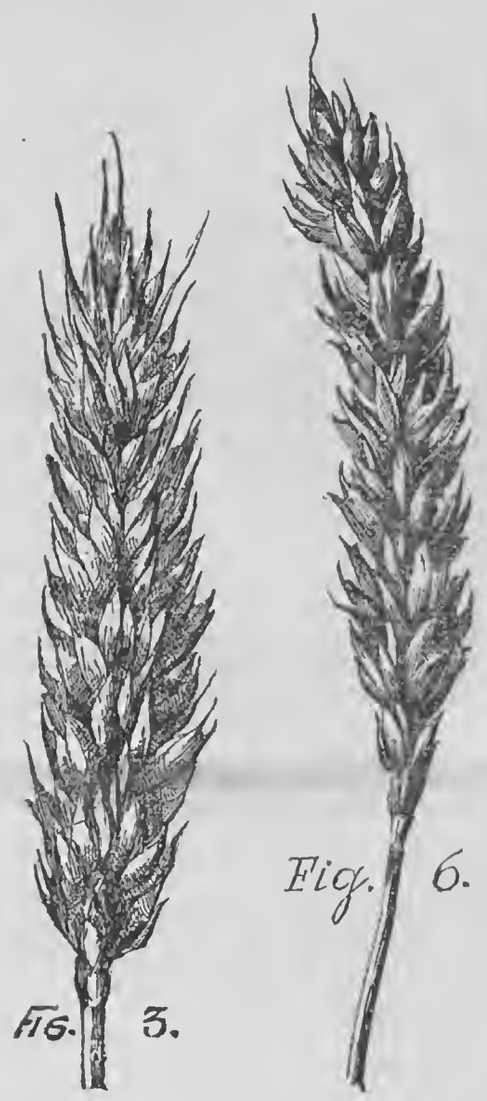

FIG. 3. Fig. 6.

ARNOLD'S GOLD MEDAL. SANDOMIRKA.

after having assumed a fixed character. I will say, however, that in the season of '78, I found in the "Gold Dust" wheat—which, by the way, when I received it of the Agricultural Department was badly mixed with all sorts of wheat, both smooth and bearded—an ear with which I was very much pleased and which appeared to be a sport of the "Gold Dust." I selected 20 of the best grains and planted them. At least one-third of the product consisted of bearded ears. There were nine other rows planted with as many varieties alongside the one containing the grain above mentioned, but I am certain that not one of these contained a bearded variety. The RURAL, however, has, I think, guessed what this wheat is—I sent on a handful of grains—for I am asked whether I know of a variety called Wick or Wycke. I remember seeing in some seedsman's catalogue, several years ago, a description of a variety spelt, if I mistake not, Week's, which was said to be partly bald and partly bearded. It is very probable that this wheat and the one to which I refer are the same. The three varieties principally sown throughout this State are, in the order in which they are now esteemed, Fultz, Lancaster, and Boughton.

THE BOUGHTON, sometimes called Tappahannock, was first introduced here about twenty years ago, and is too well known to need description. It is, beyond question, the earliest wheat cultivated in the United States, ripening here from June 18th to 20th. It is, unfortunately, not as hardy, nor does it tiller as much as some other varieties.

THE LANCASTER is a red-chaffed, bearded, Mediterranean variety, very hardy, and adapted to very thin soils. It ripens from June 25th to July 1st.

THE FULTZ—Fig 7—has now been sown here some six or seven years, and has proved very popular. It is next in earliness to the Boughton, ripening from June 19 to 25th. It originated in Pennsylvania, a head of it having been discovered in a field of Judge Fultz of that State. It is very hardy, close-chaffed—which makes it difficult to thrash clean—of an amber color, and yields well.

THE CLAWSON is sown to a very limited extent, as it does not do well, except on favored situations. It is a very beautiful, large-grained, white wheat, but is not flinty like the Boughton. The millers say that it is too soft to make a rich flour. It ripens with the Lancaster

THE SILVER CHAFF, purchased in Canada last fall by the Agricultural Department, is represented at fig 1. I received eight quarts of it, which I sowed broadcast about the last of September. It was badly winter-killed, and stood so thin that it would not ripen. It was cut July 3rd still green, and yielded three bushels of indifferent wheat. It is too late for this climate, but I think it will succeed in New York or in any of the more northern States.

SQUARE HEAD, an English variety, is shown at Fig. 2. English wheats have been tried repeatedly in different parts of the United States, but always without success. They will not mature here before the middle of July, by which time the rust has ruined them. The one in question stands the winter as well as any of our native kinds, but, although I have tried it twice, it has failed to fill both times. It runs less to straw than our varieties, and would yield remarkably, if it were not so late.

ARNOLD'S GOLD MEDAL, is represented by Fig. 3. This was obtained in Michigan, by the Department of Agriculture and was distributed in the fall of 1877. In the summer of that year

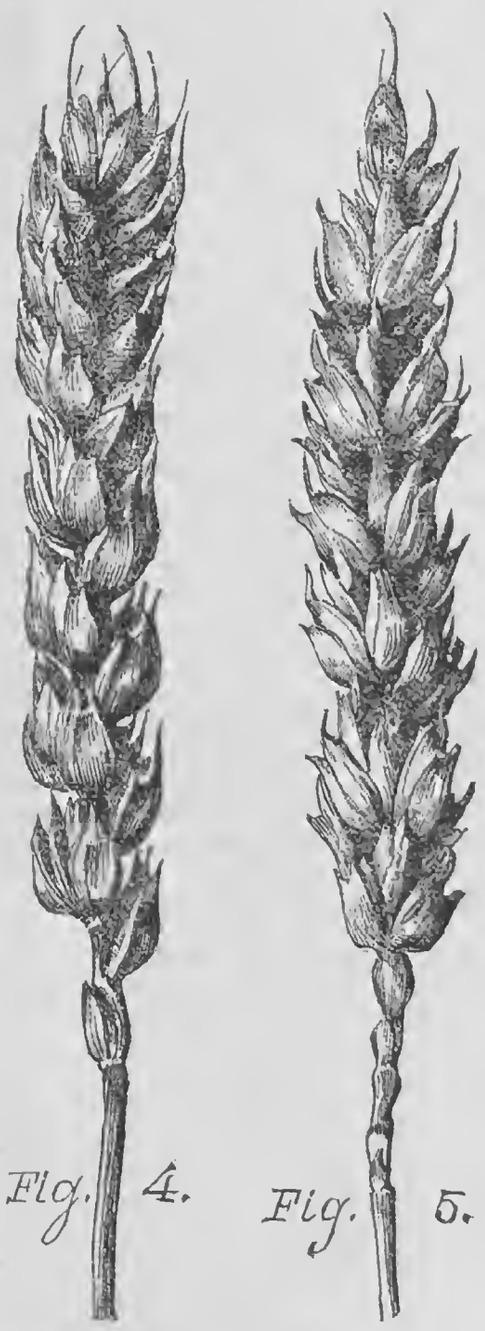

Fig. 4. Fig. 5.

CROSSES BETWEEN FULTZ AND CLAWSON.

I had been digging a basement under my house, and had carted the earth, which was full of saltpeter, on a piece of sandy land, containing, as I afterwards ascertained, 36,000 square feet. This earth—mostly clay—was scattered thinly over the land, which was then plowed, harrowed and laid off in rows ten inches apart. I took a small garden drill and sowed the whole piece with one peck of the Gold Medal. The drill bunched the wheat too much in the rows, and sometimes skipped places. The

FIG. 7.

FULTZ, CULTIVATED AND NOT.

wheat was sown on the 2d of September, and by the 1st of December one would have thought that instead of a peck, two bushels had been sown on the land. The whole surface was green and perfectly covered. My object in having the plants in rows was to work them with the hoe, but for want of time I failed to do so. I cut this piece on June 25th, at which time it was badly straw-broken, the Hessian fly having attacked it the preceding fall and injured the vigor of the plants. The yield was six bushels. There were sixty dozen sheaves, and as two dozen sheaves of good wheat will make a bushel, the yield should have been thirty bushels but the ears were not well filled The year before this I had sown three quarts of Gold Dust wheat in drills ten inches apart on about one-sixth of an acre of gravelly land which had been twice used as a hog pen, and had been in potatoes before the wheat was sown. I worked between the rows twice in the spring with the

hoe. The yield was ten bushels of as firm wheat as I ever saw. The ten bushels were sown broadcast on eight acres of rich bottom in the fall of 1877, and 400 dozen sheaves were harvested the following summer, which gave only 45 bushels of shriveled wheat. The same land was sown again the succeeding fall with the same variety, and this year the yield is 100 bushels of good wheat, or 12½ bushels per acre. Both the Gold Medal and the Gold Dust are hard white wheats. The latter was obtained by the Department in Oneida County, New York, and is said to have originated in Kentucky.

A HYBRID OF FULTZ & CLAWSON, obtained by myself by crossing the former with the latter, is shown at Fig. 4. It is one among four or five kinds which resulted from this cross, and as I was trying to develop the variety represented by Fig. 5, I paid no attention to it for the first year, but rejected it. I planted 25 grains of it last fall, and the yield is one pint.

FULTZO-CLAWSON is the name I have given Fig. 5, and I claim that it is the largest-grained wheat we have in this country. It takes after both of its parents, resembling the Clawson in the shape, and the Fultz in the color of the grain. The chaff is of a golden-yellow color, that of the Clawson being red, and that of the Fultz, white. In the season of 1876, I fertilized, as before stated, a head of the Fultz with pollen obtained from the Clawson, and found that 15 grains had been crossed. I planted these in squares 12 inches apart, both ways, one grain in every square. The piece had been covered with powdered mortar obtained from an old chimney which had been torn down. I worked it several times during the fall and two or three times the next spring. The plants tillered wonderfully, some of them producing as many as forty stems from a single grain. Some of the ears measured six inches, but none of them contained over two grains to the spikelet. The product was one quart. Owing to the many variations which this wheat has undergone, I have not been able to advance with it as I could have wished, and have at present only four bushels.

SANDOMIRKA, a wheat obtained by the Department from the Polish province of Sandomir, is represented at Fig. 6. It is said to make the best flour in Europe. The ear is short, straw soft, chaff red, and the color of the grain is a light brown. The whole amount obtained by the Department was turned over, in the fall of 1877, to a gentleman in Maryland who was to raise it for the Department to distribute in 1878. As raised by him, it was of a very inferior quality, and I received eight quarts of it. I had this sown on upland early in the fall, but it did not ripen till about the 4th of July. It is too late for this climate. The yield is two bushels of very good wheat.

I am inclined to believe that if even the ordinary care given to the selection of seed corn were bestowed upon the selection of seed wheat, results would be much more satisfactory than they are at present, and the older varieties would not so soon "run out," as the phrase is. Of the newer kinds, the great majority are no better than the older ones; they appear so because of the extra care and attention given to them. Hardiness and earliness are the two things mainly to be sought after in the choosing of wheat for seed. As to the

Cultivation of Wheat in Drills,

I have no doubt that an average of 50 bushels per acre may be obtained in favorable seasons, and occasionally more than that. But our present system of agriculture will need to be greatly changed before a general resort can be had to this method. The acreage both of this crop and of corn must be greatly reduced in order to allow the time requisite for their adequate cultivation. If, however, under the system proposed, one acre can be made to produce as much as ten under the present system, the advantage would be great indeed, to say nothing about the immense saving of seed. If an acre be laid off in ten-inch squares, it will take, in round numbers, 67,500 grains to plant it, or about one gallon of wheat. If we say that every grain produces twenty ears and every ear, twenty grains, and allowing 600,000 of these to the bushel, we have a product of 45 bushels per acre. This, I think, is a very moderate calculation. A better plan than this would be to lay off the rows from east to west, ten inches apart, and plant the grains three to four inches apart in the rows. This method would require about one peck of wheat. I propose planting one acre in this way this fall. In order that success may be assured, the ground must be made rich, or the plants will not tiller sufficiently. There is no question in my mind that the cultivation of wheat will have as great an effect on this cereal as the cultivation of corn on it.

I omitted to mention that out of a gill of grains planted four inches apart last fall, not one was lost from winter-killing, while at least one-half of that sown broadcast on the fields was so killed.

Pulaski Co., Va.

WHEAT ON CLAY SOILS.

W. I. CHAMBERLAIN.

IT is a common impression in some quarters that sandy or gravelly soil is necessary for the successful growing of wheat, and that a stiff clay soil is not fit for it. Hence large tracts, counties or portions of States of the latter soil have been given over almost exclusively to pasturage or meadow land; the plow has been used scarcely at all, and wheat has been a "foreign product." This impression or belief I deem incorrect and injurious. It is not the sand or gravel that wheat needs, but the pulverization, warmth and drainage secured by such soil. If these can be secured on clayey soils, good wheat can be raised there. The plant-food is there, or can be furnished by manuring, and so is sufficient silica for the straw; they only need to be made available. Wheat cannot grow in the water or in the mud. It will winter-kill or die of consumption under such conditions. Nor can its roots pierce huge clayey lumps. These must be pulverized and *kept* mellow. Our clay soils are not lacking in fertility. Our forests are magnificent, and the leaf mold of centuries has left a fine dark soil about six inches deep above the clay. Our newly-cleared land has always produced fine wheat. Decaying roots help to secure both drainage and fertility, and the leaf mold is still rich and unexhausted. What our lands longer cleared need most is *drainage*.

Good wheat can be raised on clay soil without under-draining by plowing in narrow lands, about a rod wide, with deep dead-furrows, and by using a heavy top-dressing of manure. This secures warmth and drainage, but at great loss of manure by wash. The deep dead-furrows, too, are a great inconvenience in cutting the wheat with a reaper. It is, therefore, found that

Tile-Draining Clay Soil

is the only means by which wheat can be successfully and profitably raised on it without frequent failures. And it is found that when tile-drained, the clayey soils, both of this country and of England, produce better wheat crops than the sandy or gravelly. I could mention many farms in this country and in England that prove this.

Preparing the Soil.

Supposing the clay soil, then, to be thoroughly tile-drained, say 33 feet apart and 2½ to 3 feet deep, the next point is its thorough pulverization and proper enrichment. By the former I mean that the entire soil, down to the "hard-pan" clay, should be mechanically stirred; by the latter, that the manure should be thoroughly mixed through the whole soil, so that the roots can reach it at the very first. Both these results are secured by a properly managed summer-fallow, that is, by manuring broadcast in May, harrowing the manure *fine*, plowing it under, cultivating the ground to keep weeds down in summer, replowing the ground in August, and cultivating enough to pulverize and "firm" the soil before sowing in September. But this involves much labor and the loss of an entire season's use of the land, and I think I shall never practice it again. If it be said that the land needs rest, I should say food will, in part, supply the place of rest. A well-fed team works better *every day* than a half-fed one *every other day*. Feed the land with enough manure or bone or superphosphate, and it will not often need a year's rest. The very best preparation I know for wheat on clay is to plow under the winter's manure, as described above, all the better if rather loose and strawy, as that helps to loosen the soil. Then, instead of summer-fallowing, sow Hungarian grass; cut it in August and replow and work the ground as if it had been summer-fallowed. Hungarian grass is one of our best crops for hay. It costs little labor, and on good soil will yield three tons per acre of thoroughly cured hay, fully equal, I think, to the best timothy hay as feed for milch cows. Then the thick shading of the ground by the crop keeps down all weeds and promotes fertility in various ways; while a mere summer-fallow, kept bare, is wasteful of fertility. This, at least, is the opinion of many of our best farmers. Then, too, the roots of the Hungarian grass seem to pulverize the soil. I never knew it to plow up, immediately after cutting the hay, otherwise than very light and mellow for the wheat.

Exhaustion of Fertility.

This crop is, however, a rank grower, and it is the common impression that it exhausts the soil badly. But if cut quite green, as soon as it fairly heads out, I am confident, from experiments, that it does not exhaust the soil nearly so badly as a crop of oats *left to ripen*. This *ripening* of any crop—oats, corn, timothy, etc.—seems to be the thing that most exhausts the soil. Hence, if the Hungarian is cut quite green, as it should be to secure the best hay and prevent the seed from shelling and wasting, it does not seem to exhaust the manure much, for when plowed up and thoroughly mixed with the soil, it seems to have its full effect on the wheat. And this grass is a far more profitable crop, net per acre, than oats, and might well take the place so generally filled by the latter in most systems of rotation.

Applying Fertilizers.

The general rule would seem to be that the fertilizer, whether bone, stable manure, or superphosphate, should be applied as near to the seed wheat as possible. This gives the wheat a vigorous start, secures a stocky growth and makes it cover the ground before winter sets in. Hence, bone or phosphate should be sowed *in the drill with the wheat*. This is nicely —I may say perfectly—done by the "fertilizer attachments" now found on our best wheat drills. If the phosphate or bone is sowed broadcast before the wheat is drilled, only a small portion comes where the wheat roots can lay hold of it *at the first*. The same principle holds true of stable manure. Where applied as described above, with the Hungarian grass crop, it becomes thoroughly and evenly worked through the entire loose soil. The wheat roots strike it at once, find it wherever they penetrate the loose soil, and even when they pierce the tough subsoil they find some of its soluble parts washed down before them by the summer rains, and awaiting their arrival. If, however, the manure has not been thus applied to a previous crop, and must be applied directly to the wheat, it should be worked well down into the soil. From my experience I should say, if you care most for the *timothy* or *clover* catch, then top-dress and harrow in; if most for the *wheat*, plow the manure under. Nor will the manure be found all at the bottom of the furrow. That is the worst plowing, for clay soil at least, that turns the furrow exactly bottom side up. Each furrow should "lap half," like one clapboard on another; and if the manure is thoroughly harrowed before plowing, say with a Thomas' harrow, and a jointer is used on the plow, the manure will be found all through the soil. The drill in mellow soil will put the seed down at least three inches below the general surface; and its roots will at once strike the manure and not need to wait for it to be washed down from above. This waiting may be a great detriment; for sometimes we have dry weather for two or three weeks after seeding, and no rain to wash the manure down. Last year I tried both modes of applying manure, side by side. When plowed under, it gave far the best wheat; where used as a top dressing it helped the grass catch most. If, however, the wheat must be sowed broadcast and harrowed in, then top-dressing will be best both for the wheat and the grass catch.

Mode of Sowing.

Drilling the wheat is, however, in most, or in all cases, far better than broadcast sowing. It scatters the seed more regularly, puts it to a better and more uniform depth, gives better chance for the economical application of phosphate, bone, etc., and guards better against winter-killing. The wheat plants are at the bottom of V-shaped grooves, and the same frost and thawing that heaves and exposes the wheat, crumbles down the dirt from the sides of these grooves, and covers the roots again.

The Harvesting

is now done far the most cheaply by the self-binding harvester. It can be hired in most wheat-raising localities now for about $1 per acre, and the cost of wire is slight, not as much per acre as that of the clothing worn out in binding by hand; for hand-binding is not only the hardest and most disagreeable farm work, but the most ruinous to clothes. The wire bands are an objection, however. It is almost impossible to cut and remove them fast enough for these all-devouring steam thrashers; and so a large part is apt to pass through the machine and the pieces are found both in straw and wheat. Strong magnets in the spouting at our mills, remove the bits of wire from the wheat, but no means have yet been devised to remove them from the straw. But those who have once tried the self-binders will be slow to go back to hand-binding, and Yankee ingenuity must remove the wire from the straw, and substitute straw or twine for wire as bands.

INTER-CULTURE OF WHEAT.

CONRAD WILSON.

THE practice of cultivating the wheat crop after the method usually applied to corn, has recently been growing in favor among practical men, and if the principle is sound, it must largely and favorably influence the yield per acre and the cost of production. As this cereal is the leading bread crop of the world, the problem of its yield and cost cannot be too closely examined by farmers. According to the light we now have on the subject, the indications are in favor of the new method. But the final decision of the question will be more surely reached after a series of experiments more extended and systematic than the most of those that have yet been tried.

Reasoning from the analogy of corn and other hoed crops, and judging from the testimony given in actual trials, the present presumption is clearly in favor of inter-culture. Yet it now appears that some recent experiments conducted by careful and capable men, have given results that are far from confirming this presumption.

Probably no journal during the last two years has done more to encourage this method than the RURAL NEW-YORKER and its efficient editor. When, therefore, the conductor of this journal, with a candor that gives weight to his opinion, announced that his latest experience in the after-culture of wheat has weakened his faith in the practice, it is time for the rest of us to re-examine our belief, and test still further the ground on which it rests.

But so far as I understand the points in the latest RURAL experiment, the discouraging facts were mainly two: first, the breaking down of the heads of the wheat, either from excessive weight of grain, or from lack of vigor in the stem, or from the violence of the wind; and, second, a deficiency of grain in many of the heads, tending to reduce the yield of the crop.

Now is it not possible that both of these results may have arisen from a deficiency of some element in the soil, which, had it been present in more abundance, would have counteracted the evil? Supposing this to be so, then is it not also possible that if either salt, or lime, or magnesia, had been added to the soil, the result in both of these cases might have been very different. So, also, if the variety of grain had been different.

It must be remembered, however, that as the RURAL editor, in this trial, had but one special object in view—to test the question of inter-culture—he naturally confined himself to that point. But it is now, I believe, understood to be his purpose to extend his experiments another year, so as to include a wider range of factors and conditions, and thus make the trial more exhaustive, and perhaps conclusive.

In the meantime it only remains for farmers to hold themselves open to conviction and push steadily forward in quest of new facts and more light, and thus at the end of another year we shall all be wiser men. But one thing is certain: if it shall finally be found, after more rigorous trials, that the method of inter-culture really warrants the claims advanced by those who have tested it the longest and most thoroughly, then the effect will be to give to this cereal an increase of yield, and a margin of profit that will cheer desponding farmers in the Eastern States, and restore to many abandoned fields the verdure of returning wheat crops, and the promise of a new husbandry that means more bread for consumers and better prices for the farmer.

It was certainly a significant fact, and something more than guess-work or accident, when Mr. Heiges of Pennsylvania was able, by this method, to increase the yield of his wheat crop, not once only, but in repeated trials, from 23 bushels per acre to 50, or over. It was also perhaps equally significant, when Mr. Groff of the same State, obtained by using the horse-hoe, a yield of 61 bushels; when Mr. Blount, in Tennessee, got 67 bushels per acre by cultivating in drills 16 inches apart, and when the yield of Mr. Perkins, of Iowa, by the same principle of special culture, was at the rate of 80 bushels, while other progressive farmers, both here and in England, have reached similar results by a similar process.

Now, as the further trials to be made the coming year by the RURAL and perhaps by other parties, will be more comprehensive, and include a wider range of factors than hitherto, they will doubtless be more than usually important, and of great interest to farmers. There is, therefore, still room for faith in the inter-culture of wheat. If it will give, on a general average, anywhere near the increase for this cereal that it gives for corn or for carrots, for mangels or melons, for potatoes or pumpkins, then it will richly reward the efforts of the earnest men who are working out the problem. If the principle is established, it will show not only that wheat culture pays, but that systematic experiments also can be made to pay, and that if farming is ever to be made an exact science, it will be mainly through field trials when guided and controlled by the clear light of intelligent thought.

SOME FACTS IN REGARD TO WHEAT GROWING.

HENRY STEWART.

IT is a notorious fact that wheat-growing in the Eastern and some of the Western States has been abandoned by many farmers for the alleged reason that it does not pay, and that it is cheaper to purchase flour. This excuse would be a valid one if it were true, but it is not true, at least in the great majority of cases. The frequent allusions in agricultural papers to keeping accounts have put farmers

to thinking, and while some have thought to good purpose, some have been led astray for want of figuring reasonably. It is easy to figure up almost anything, and make the most untruthful results appear, notwithstanding "figures never lie." For instance, a farmer with pencil and paper figures in this way.

DR.	
Plowing 2 acres	6 00
Harrowing 2 "	1 00
Manure—25 loads	25 00
Seed—3 bushels	3 00
Sowing and harrowing	1 50
Rent of 2 acres	10 00
Taxes	50
Harvesting and drawing in	5 00
Thrashing 25 bushels	2 50
	44 50
CR.	
25 bushels wheat	25 00
Loss	19 50

He concludes that it will never do to grow wheat at that rate, and he buys five barrels of flour for $35 dollars to last his family through the year.

These figures lie grossly, as may be shown. Let us figure up reasonably. In all this list of cost there is but one item of actual money expenditure which ought really to be counted; and that is for the seed, $3.00. Every other item would remain as a charge upon the farm, although the land remained unsown. If the ground were not plowed, the farmer and his team might be idle; or, if the manure were not used for this special crop, it would either remain in the yard and depreciate, or it would go to some other crop, where it would do no more good than if used to grow 30 or 40 bushels of wheat. In short no reasonable farmer will deny that he could put in two acres of wheat the present week, if he had the seed, without knowing that he has spent one dollar. The figures might then be put in this way:

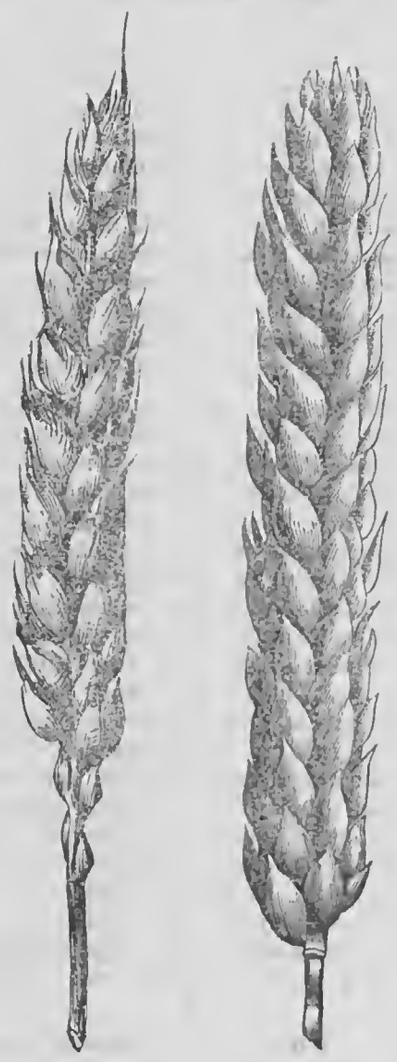
DR.	
Cost of seed	3 00
CR.	
40 bushels of wheat	40 00
Money saved by not purchasing flour	35 00
	75 00
Profit for labor, &c.	72 00

and an invaluable amount of satisfaction to boot. These may be thought two extreme cases, but the extremity of the former is far beyond that of the latter case.

THE CULTURE OF WHEAT.

COL. F. D. CURTIS.

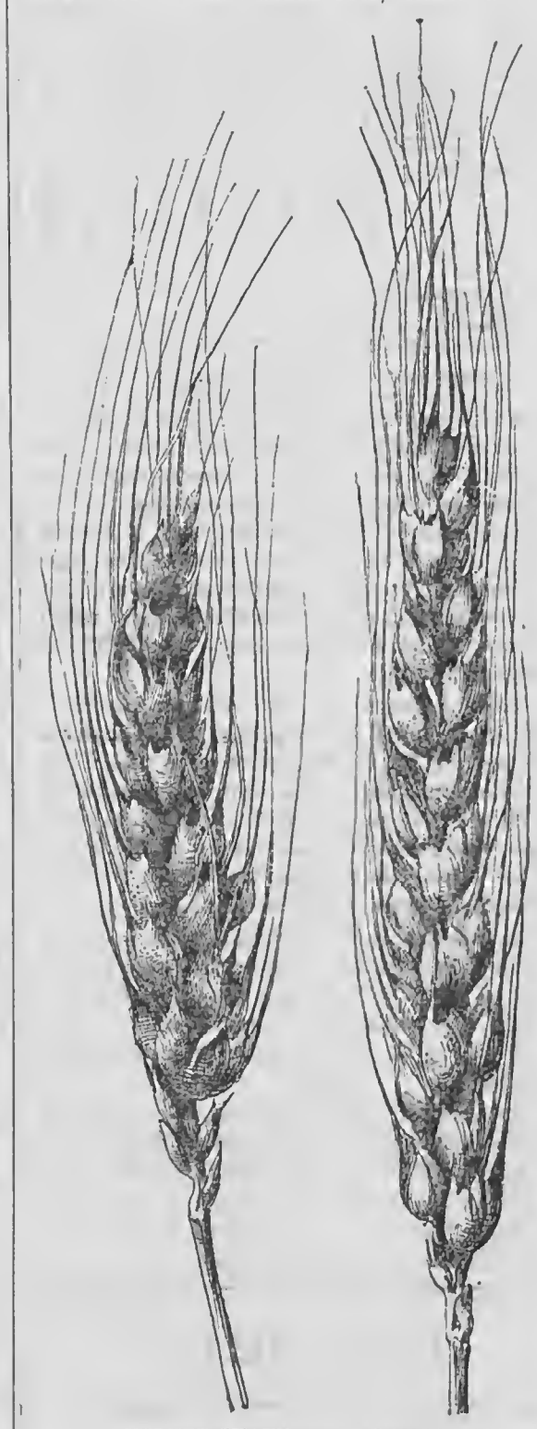
We are undoubtedly entering upon a new era in the growing of wheat. In the older States its culture was generally abandoned about thirty years ago, owing to the ravages of weevil and the Hessian fly more than any other insects, but chiefly because the soil seemed to be depleted of the properties which insured a good crop. A few clung to the idea of raising their own bread, and by care and plenty of manure continued to grow fair crops. From their experience we learn that painstaking is essential to success. Wheat also has



POWERS. DIEHL.

its peculiarities which must be considered. The long rest which has been given to the land has resulted in restoring its wheat-producing ability, not to the degree of newly-cleared land, but to a degree which will warrant the general culture of this most important cereal. In some countries, and in some parts of our own, where the soil is naturally adapted to wheat, successive crops have been grown for long periods. This is where both soil and climate are especially favorable, and the demands of the crop have been carefully heeded. These demands must be attended to, or else failure will be sure to follow.

No crop goes through a more trying ordeal than winter wheat. It has nearly a year of combat with all sorts of enemies, animate and inanimate. A half dozen foes, either as in-



VELVET CHAFF. LANCASTER.

sects or maggots, prey upon its vitals, beginning in the autumn and renewing their attacks in the spring and summer. The elements combine either to favor or to destroy it. It has to pass through the rigor of winter and the trials of summer. It must endure the destructive frosts and the trying droughts. No crop calls for more intelligence in its management or furnishes a more necessary reward than wheat.

The Soil for Wheat

must have substance, or, as some farmers would term it, body. Clay loam comes the nearest to the perfection of wheat soil; sand is the farthest away. There must be compactness and a degree of mellowness. Wheat will produce well on clay land, if the surface is made mellow, and manure will do this. The clay lands in early days produced large yields of wheat; but that was when the vegetable mold was abundant and the clay was lightened by it. Clay soils manured on the surface, will grow good wheat now, if they are worked when in a condition to be friable and not to pack. They must be under-drained so that the water will drain off freely; for clogged and water-soaked land will not produce wheat. At the same time a moist soil is friendly to wheat, such as the loams. Gravelly loam and sandy loam, unless too poor, will produce fine wheat. Such soils should be well manured and always on the surface, and then pressed down as compactly as possible with a heavy roller. This should not be done when the soil is wet, but when it will pack without sticking. This work should be done after the ground is fitted for the seed and before the seed is put in. Wheat wants a mellow surface, but the ground under that must be compact. The roots then take a firm hold and the winds and frosts and heavings do not so much affect them. A mellow surface should be somewhat uneven, which will afford protection better than when rolled smooth. By rolling just ahead of seeding, the good effects of the roller may be had in the soil, and its bad effects on the surface, avoided. A drill will leave the surface in a condition to check the snow before the wind and secure the protection it may afford. The same desirable results may be obtained by broadcast sowing, provided the seed is covered with a cultivator, as it always should be. Harrowing in does not cover deep enough. When harrowed in, the rooting is too near the surface, and the young plant is far more liable to be thrown out by the frosts, and also to become exposed by the winds blowing the dirt away from it. This is a trial the crop is liable to in the early spring—hence deep rooting is important. Some farmers used to plow their wheat under in order to secure a deep rooting. This was before drills and cultivators were in use. Standing water is destructive to wheat; all the hollows should have an outlet to allow the surface-water to run off freely.

Treatment of Wheat.

Early sowing, take one year with another, is best. When sown with a drill on rich land, a bushel of seed is enough for an acre, and a bushel and a half when covered with a cultivator. This gives room for tillering, which is helpful to a good crop, as it prolongs, somewhat, the blossoming time and makes a more complete impregnation of the grains. When harrowed in, calculation is always made for seeds not well covered and not covered at all, and two bushels of seed are required. More seed is always required when the land is lumpy and full of clods or stones, and much is lost on these accounts.

A stone, a lump of dirt or a clod of any sort is a wasteful covering for seed of any kind. It is an excellent plan to soak the wheat in brine for a few hours before sowing, to destroy the germs of smut or the eggs of insects, which may be clinging to the kernels. Rolling in plaster will fit them for sowing, and at the same time furnish a stimulant for the young plant. The preparation of the ground is all-important. The old-time farmers used to think it wise to summer-fallow the wheat ground. A sod was turned over in the early spring and replowed twice afterwards. This was done to get the land into a fine tilth or condition of mellowness, and to clear the land of weeds. They also had the idea that the frequent plowing made the land richer. It did, so far as it caused the decay of all the living vegetation and put the soil in a condition for more complete absorption. The same result may be obtained now after a crop has been gathered—and the use of the land, for one season, will not then be lost—by plowing immediately after harvest and then dragging the ground, and, before the time of sowing, plowing it again, and, if required, cultivating it with a two-horse cultivator at the time of sowing the grain. Another cultivating to cover the grain, or going over it with the drill, will give all the good results of the old summer-fallowing, besides an extra crop. Thorough subduing and pulverization are requisite, and these are obtained by the newer method with the improved machinery farmers now possess.

The Manure

should be well rotted and fine, so as to mingle with the soil and be immediately available as plant-food. It must be prepared beforehand, and should be kept, if possible, under cover, and have been forked over so as to be well broken up and mixed. The manure spread upon the surface should be harrowed in so that the plant can reach it as soon as it puts out its roots. This will cause the rootlets to grow strong and to take a rank hold in the ground. Barn-yard manure will supply all of the requirements of a wheat crop, and by barn-yard manure is meant a combination of the refuse of the vegetable materials gathered at the barn, and the droppings of the animals fed upon them and grain. The more there is of the latter mingled with the manure, the better for the wheat.

Wheat may be grown by the sole use of commercial manures, provided they are genuine, and really contain a large percentage of the stimulants and fertilizers that are claimed for them, and if the soil has a natural strength; barn-yard manure gives strength to the soil. Commercial fertilizers stimulate this strength; hence wheat-growing should be based upon barn-yard manure.

A good growth of clover is an excellent preparation for a good crop of wheat. The clover may be pastured the fore part of the season and then allowed to grow up, to be plowed under at sowing time. A clover sod, from which the hay has been taken off, is desirable for wheat, as it usually puts the ground in a mellow condition, and the decay of the roots, and the litter from the tops supply a liberal amount of enriching substance for the crop. Clover and wheat are natural friends and may follow each other with mutual benefit. The wheat crop is the best sort of a bed to sow clover-seed upon for a sure catch.

A common practice is to turn over an oat stubble for the wheat crop and cover the ground with manure. This is the custom of many of the best farmers, rotating with corn, oats, and wheat, and then going back to sod again. Forty bushels of wheat have been grown on one acre. A field well fitted for wheat will show the effects for years, as the thorough tillage and the manure make a strong grass crop, and this in turn insures good crops to follow.

Varieties.

The best and most successful wheat for growth and yield, is undoubtedly Clawson. It cannot be so generally recommended for bread-making. It is the hardiest and is adapted to more varieties of soil and climate than any other wheat now known. Millers do not agree as to the cause of its making poorer bread than other kinds. Some of them say it is because it contains too little gluten; others that it is a coarse-grained wheat; others that the bran is so thin that they cannot separate it from the flour.

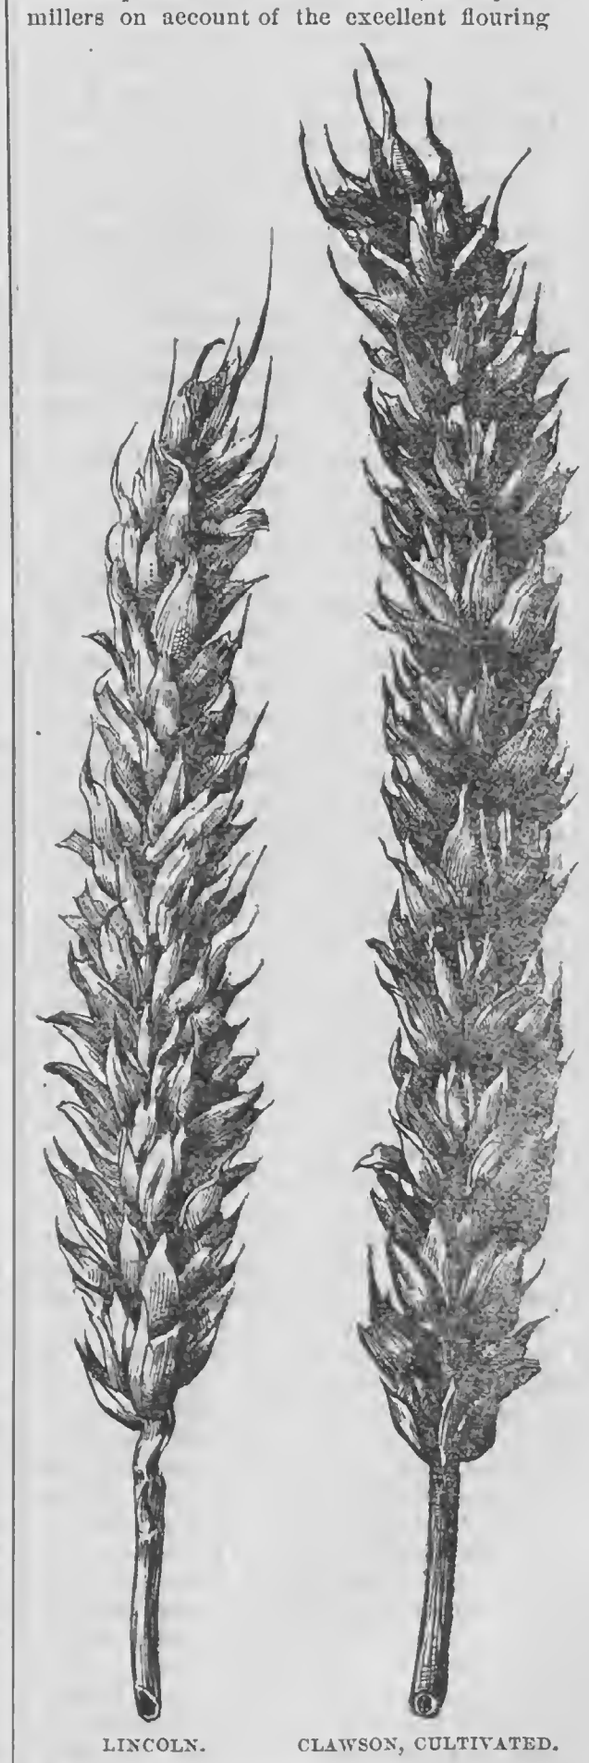
The chemical constituents of this wheat do not seem to be evenly combined, and it does make a kind of flour different from the best brands. A careful chemical analysis might determine its precise character. It will not bear close grinding and bolting like harder varieties, but when plenty of coarse flour is returned by the miller, the smaller quantity of fine is of good quality, and in the hands of skillful bakers will make good bread.

The Fultz has not been cultivated in this region, but is commended as excellent in quality, but not equal to the Clawson in hardiness or in yield. The old standard varieties of wheat which make first-class flour, and which have done well in this latitude, are Michigan White and Canada Flint.

The past season all kinds of wheat have yielded light crops, owing to the drought in May. Rye, also, suffered equally. Twenty bushels of wheat to the acre are more than an average yield, one year with another. This season the yield has not reached more than half this amount; still the breadth of wheat sown will be largely increased. A bin of wheat makes a farmer nearly independent, and home-made flour will help, on account of its lack of extra fineness, to keep away dyspepsia and to build up more stalwart men and women.

DIFFERENT KINDS OF WHEAT.

The Velvet Chaff wheat has been grown for years in southwestern Ohio, where it is much esteemed by the farmers on account of its freedom from disease, earliness in ripening, and comparative stiffness of straw; and by the millers on account of the excellent flouring



LINCOLN. CLAWSON, CULTIVATED.

character of its grain. Its name is derived from the numerous short hairs covering the outer glumes, and giving them a velvety appearance. It ripens in this vicinity by the 25th of June.

The Golden Straw originated in Tennesee, and was distributed by the Department of Agriculture. The straw is short, stiff and of a beautiful golden yellow color; the grain is

plump, white and very heavy, but somewhat soft. It ripens here by the 27th of June.

THE LANCASTER is an old, red variety, which so closely resembles the Mediterranean as to be almost indistinguishable from it. Like the Mediterranean, it has an extremely soft straw, but the grain is of excellent quality. It is a day or two later in ripening than the Golden Straw. In productiveness the Velvet Chaff and Lancaster have so far been superior to the Golden Straw, on this farm; the difference, however, has been partly due to the greater tendency to tiller manifested by the former varieties, making it necessary to sow a larger quantity of seed of the latter.

THE TREADWELL and DIEHL (see page 591) are white varieties which have been cultivated for some years in different sections. The former has a long, open head, with a white chaff, partly bearded and partly smooth; the latter is remarkable for the compactness with which the grains are crowded together, making the heads appear very short. This variety would probably yield large crops under favorable circumstances, but in one single trial it has been both late and disposed to lodge badly.

THE LINCOLN and POWERS (see page 591) are new varieties of white wheat, originating, I believe, in Michigan. Our sample of the former was so badly mixed that we cannot speak of the quality of the wheat. The latter has a very white, hard grain, and promises to be of value. We have not tested the four varieties last named sufficiently to speak with authority of their comparative productiveness. C. E. THORNE.

Ohio State University.

THE "NEW PROCESS" OF FLOUR-MAKING.

THE so-called "New Process" of grinding wheat is one of the most important technical improvements of the present century, inasmuch as it adds at least one dollar to the market value of every barrel of flour manufactured under it, besides producing from every bushel of wheat several pounds of flour more than can be obtained by the ordinary method of grinding. It is claimed that the process is not intrinsically new, but that it has for some time been in use among Scotch, French and German millers, and that the flour of which the celebrated Vienna bread is made, has for a long time been ground in this fashion. But if the process has not been recently invented in this country, great improvements in connection with it have already been made here beyond dispute; an extraordinary amount of attention has been directed to milling operations since its introduction, and there is, therefore, a strong probability that still more valuable improvements will be devised in the near future.

The most suitable kinds of wheat for this process, are the hard spring sorts, such as those grown in Minnesota, although all kinds are used with more or less satisfactory results. The cleaning of the wheat before grinding is much more essential here than in the ordinary method of milling. For this purpose the grain before reaching the garners, passes through a screen or sieve, a separator, a decorticating machine and a smutter. It is then run through "French burr" stones with a peculiar "dress" which is not so sharp as for ordinary grinding. The stones, too, are farther apart, the running one being raised more than usual, hence, the term "high grinding" applied to it. This takes off the bran without cutting it up or removing the fuzz from one end of it, and leaves the grain broken up into granules, technically known as "chop" commercially "Graham." This passes directly into a bolting chest furnished with three successive bolting cloths of different degrees of fineness.

Here the flour is sorted into No. 1 and No. 2 "family" flour, 26 per cent of the produce of the wheat going into the former and 13 per cent into the latter, in some of our Eastern mills; but in the West the proportions are generally considerably smaller. The remainder of the "chop" passes into another bolting chest, where the bran is separated from the "middlings" and thence the latter pass into the purifier, a machine intended to get rid of all impurities lighter than the farina, by means of a draft of air which lifts them from the sieve. The "purified middlings" are then reground, and the flour in passing through another set of bolts, yields a certain proportion of New Process flour. In some of our Eastern mills this amounts to only 13 per cent., but in the West by separating the stones more, as high as 60 per cent. of the wheat can often be made into "middlings," from which alone the New Process flour is manufactured. In that case, however, the residue is very poor indeed, so that it has been found most profitable to make only 30 per cent. of "Patent" or "New Process" flour, an arrangement that leaves the remainder a fair grade of "family" flour. After the separation of the New Process flour the remainder of the "chop" is again reground, and the product separated into No. 3 flour, No. 1 feed and a small percentage of screenings and waste.

The Patent or New Process flour contains an unusually large proportion of the phosphates and nitrogenous portions of the grain, and is therefore more nutritious as well as purer, whiter, finer and more valuable than ordinary flour. Another important advantage of this method of grinding is that it brings into more profitable use the enormous quantity of spring wheat raised in the northwestern States and Territories, and adds at least 10 per cent. to what the value of the crops would be if ground by the ordinary process. Before the introduction of this method, these wheats were more or less neglected and depreciated, but now it is found that they make the best quality of flour by the New Process. This is therefore a benefit alike to the farmer, the miller and the consumer.

THE WHEAT GRAIN.

FIG. 1 is a tranverse section of the coats of a wheat grain, magnified 184 times; a, is called the epicarp; b, a slight membrane underlying it; c, is the exterior of the seed which is variously colored in different varieties, and determines its white, amber or reddish color. From e to f is a matrix of gum, and this extends up the veins through the starch granules, g, g.

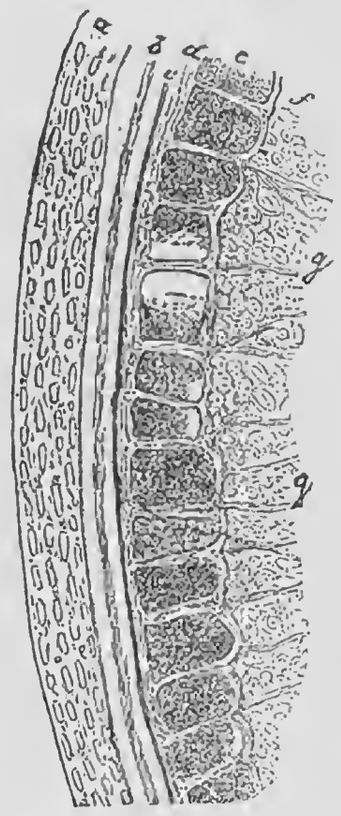


Fig. 1.

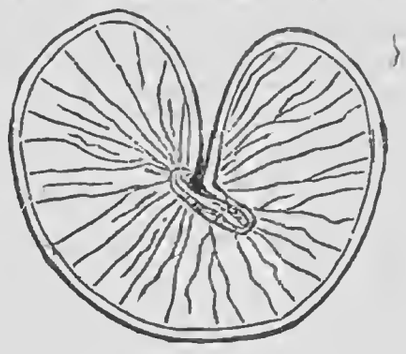

FIG. 2.

Fig. 2 is merely a section of a grain cut through near the middle, the form of which, of course, varies in different varieties.

WHEAT NOTES.

IN comparing the prices of wheat now with those of the last 17 years, it should be borne in mind that the present rates are in specie, while the former rates were in depreciated greenbacks. The crops of 1864, '66 and '67, for instance, brought unusually high prices, averaging in Illinois, according to the Illinois crop report, $1.55, $1.93 and $1.97 per bushel respectively, while the present crop is selling for an average of about 87c. But in July, 1864, a dollar greenback was worth only 38.7 cents, so that $1.55 a bushel amounted only to 60c. in coin. At the same date in 1866 the soft dollar was equal to 66c. specie, and $1.93 amounted only to $1.28 in hard money. In 1867 the greenback dollar was equal to 71c., and $1.97 was about $1.41 in coin. Moreover, the crops of the two last years were very short, so that what our farmers gained by high prices they lost by scant sales.

The produce exchange of this city is preparing to adopt the cental system in dealing in agricultural produce. Instead of 8,000 bushels of wheat, the present boat-load, they will buy 4,800 centals, and instead of 10,000 bushels of oats, they will trade for 3,200 centals. Bids will also be raised or lowered by tenths of a cent instead of by quarters or eighths, as at present. The system is already in practice in California, and its adoption here will greatly simplify business transactions.

"Arnold's Gold Medal Wheat is apparently our best cropper here," writes to us Professor C. E. Thorne from Columbus, Ohio. "Next come Velvet Chaff and Silver Chaff. We are much pleased with the latter on account of the stiffness of its straw, hardness of its grain, and its freedom from disease. The Clawson has ranked third in the list this year. Its straw seems to be growing softer, but its grain appears to be improving in its flouring properties."

PROXIMATE COMPOSITION OF WHEAT.

Where Grown.	Albuminoids	Starch	Gum and Sugar	Fat	Bran Crude Fiber	Ash	Water	By Whom Analyzed.

In Illinois the acreage and yield of spring wheat have declined greatly this year. In 22 counties not an acre of it was sown; in 11 counties less than 50 acres were sown, while 7 more counties have had less than 100 acres apiece. Only three counties produced no winter wheat. The total quantity of spring wheat is estimated at only 3,376,400 bushels, while the winter wheat is put down at 42,041,252 bushels.

Careful calculations by two of England's best agricultural statisticians, Thomas Scott and Arthur H. Savory, go to show that English farmers cannot continue wheat-growing at the market prices of the present season. Their figures show that the average cost of home-grown wheat was $1.47¼ per bushel, while the price of it was only $1.21.

The English Board of Trade makes all its returns of agricultural products by weight, in cwts. of 112 pounds, so that each cwt. of wheat equals two bushels of 56 pounds each, while the ordinary English bushel of wheat contains 61 pounds.

The acreage under wheat in Great Britain for the last three years has been: 1877, 3,168,540; 1878, 3,218,417; 1879, 2,890,136 acres.

In view of recent heavy rains in England, the Mark Lane Express predicts an early advance in the price of breadstuffs.

Miscellaneous.

WHAT OTHERS SAY.

HESSIAN FLY—EARLY VS. LATE SOWING, ETC.—From late discussions of the Elmira Club, we take the following, as reported in the Husbandman. W. A. Armstrong said: There were hundreds of wheat fields ruined by the fly last year, and with its presence this year there would be similar loss. Late sowing appears to be the only way to prevent the fly from continuing its depredations. The rule is to wait until after a killing frost before sowing the seed. The fly lays its eggs on the wheat leaves in the fall, they hatch there if the weather is suitable, the larvæ descend to the roots of the plants, and in the following spring develop into flies that lay eggs to hatch in turn, but the larvæ burrow in the stalks above the first joint usually, and arrest the ascending sap, thus destroying the crop. Now with all these conditions met, this course would be repeated year after year, and wheat-raising would be attended with loss. Last fall there was general apprehension that the fly would destroy the crop this year, so a new condition was provided to prevent its work. After a severe frost it does not deposit eggs, or if eggs are laid they will not hatch. So most farmers sowed later than usual, and if they have poor crops there is compensation in the fact that they are rid of the fly, and they may console themselves farther by the reflection that a poor crop is better than no crop, which would be the certain result of the fly's continuance.

G. S. McCann—I don't believe in late sowing—fly or no fly. Early-sowed wheat is always better. In my judgment, the recommendation to sow late has cost our farmers thousands of bushels of wheat. Wherever you find a good yield of wheat this year, you may find also that the seed was sowed early.

Col. Piollet—What do you call late sowing?

G. S. McCann—Seed sown in October is late. I prefer the last week in August. If I might set a limit of time, I would never sow later than the fifth of September, and with other chances equal, I should never fail to get greater crops than my neighbors who adopt the practice of late sowing. Even when the fly is troublesome, fuller success will attend early sowing. I know this is true by my own observation.

A SIMPLE WAY TO ANALYZE WHEAT FLOUR.—Any one may, in a small but correct manner, analyze wheat flour in a very simple way, says J. B. Killebrew. Make a stiff dough of a given quantity of flour, put it in a linen bag, and let the linen be thick. Then knead it in water until the fluid that runs out ceases to have a milky appearance. Let the water settle and you will have the starch of the flour. The gluten remains in the bag, as water only swells it, but without dissolving it. Let the water stand and a white sediment will settle to the bottom. This is the starch, the principal ingredient of flour, and of all meals. Separate the water from the starch and boil it, and it becomes turbid and flocculent. This is vegetable albumen. Separate this from the water by filtering, and boil the water remaining until it becomes a thick syrup, and then add alcohol; the alcohol will take up the sugar, but not the gum. Filter the alcohol, and the gum remains. Evaporate the alcohol and you have the sugar. Of course these are not chemically pure, as the saline matters remain. Let us go back to the bag that contains the mass. Here are the vegetable fiber and the gluten. Gluten is vegetable fibrine, and corresponds to the fibrine or muscle of animals. It is also seen in the clot of blood, while albumen is the serum or watery part of blood. Thus we have in this little grain all the elements of nutrition: fibrine or muscle-food; starch and albumen, fat or heat-makers; cellulose, the same as starch chemically, but insoluble except by digestive fluids. It is this cellulose that envelopes the starch germ, etc., and is also called vegetable wool. It is the pith of wood, the fiber of cotton, hemp, flax, etc.

WHOLE WHEAT FOR FOWLS.—"There is more solid nutriment," says the Poultry World, "in whole wheat, as a feed for poultry, than in any of the cereals, weight for weight. It is an excellent kind of grain for this use, though somewhat more expensive than other sorts; but too much of this hearty feed is detrimental, particularly when carelessly fed to Cochins, Brahmas, etc. Fowls are very partial to wheat. It helps the laying capacity of hens, but it should not be used except with discretion as to the quantity allowed them daily. An excess of this raw grain will induce a looseness in the bowels very frequently. It is easy of digestion, and should be furnished in moderation, as a needful and most desirable *variety*, in conjunction with other dry grains, such as cracked corn, oats, etc. If not more than one-third or one-fourth of wheat is allowed with the other cereals mentioned, for ordinary purposes in the laying-season, hens will do quite as well, and they can thus be kept in better average condition than by a greater allowance. We have proved this by frequent practical experiments in feeding."

HESSIAN FLY AND PHOSPHATE.—"My opinion," says Mr. George A. Green, in the New York Tribune, "is that we have not yet gone far enough with our experiments to recommend a farmer to borrow money for the purchase of phosphate. It is claimed by some of our best farmers that the Hessian fly, which has been very destructive this season, does not work so disastrously in fields fertilized with phosphate. My observations have shown that where any fertilizer has been used liberally, this insect has done less mischief.

"'Is wheat our most profitable crop?' 'Yes,' say nine out of ten farmers; 'if we want to raise money, nothing can be found that will bring in so much in a lump.' But I say—no! Wheat has not paid so well as corn, barley, beans or potatoes, taking the average for many years past. Corn does not seem to bring in much money, for the reason that we consume it at home, the profit appearing in big manure piles, in fat cattle, sheep and swine; whereas every bushel of wheat depletes our soil of much fertility, the straw being of but little value except as an absorbent."

WHITE RUSSIAN WHEAT: Of this variety of wheat referred to by our contributor to "Everywhere" from Chenango Co., N. Y., a correspondent of the Farm and Fireside, writing from Prince George Co., Va., says that last spring he procured a package of this wheat containing a wine-glassful. He selected a piece of poor land of medium soil, manured it heavily with hog-pen manure, swamp mud and ashes, and after thoroughly plowing and harrowing, sowed the wheat broadcast and harrowed it on the fourth day of March. In a few days it came up, looking very green and thrifty, and soon commenced branching. He never saw wheat branch to such an extent before; he counted twenty seven heads of wheat produced from one grain, and some of the heads six inches long. On the first day of July he harvested it and obtained one hundred and fifty-eight wine-glassfuls, or one peck and nearly two quarts of wheat.

SALT ON WHEAT.—The Montreal Gazette says that in an interesting series of experiments recently made on the farm of the Royal Agricultural Society of England, the manure value of salt was unmistakably indicated. An acre of wheat dressed with 300 pounds of common salt, yielded 39 bushels of grain, with its proportionate amount of straw, while an adjoining acre left unmanured, produced only 29 bushels per acre, with the straw imperfectly developed.

WHY MILLERS DO NOT LIKE FULTZ.—"The percentage of gluten is too small," says the Indiana Farmer, "and the starchy matter is too great to make the best grades of flour. Gluten tends to strengthen the flour and make it absorb water and hold it in the gases of the yeast when making bread."

SPRING WHEAT.—Home & Farm (Louisville, Ky.,) says: For all countries and regions but those having cool summers, the spring wheat crop is a delusion and a snare, and should, in every case, be cast aside as utterly unworthy of spending time and money upon it.

AMOUNT OF SEED.—Jared F. Pond says, in the Ohio Farmer, that his best crops have been where one and a half or one and three-fourths bushels were sown. He is satisfied that thin seeding has cost him more than a hundred dollars, or perhaps two hundred.

MANURE.—"Waldo" says, in the Ohio Farmer, that he has rarely if ever seen a wheat crop on manured land materially injured by fly, rust, chinch bug, or any of the insect enemies that so often ruin the crop on impoverished lands.

FRUIT VS. PORK.—If more fruit and less pork were eaten, especially during the summer months, there would be less bilious fevers, less doctors' bills to pay.—*Mich. Pom. Soc.*

B. K BLISS is "confident that Champlain and Defiance, as winter wheats, will soon supersede all other varieties now sown."

THE TRUTH ABOUT IT.

[THE object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—EDS.]

PRICES OF FERTILIZERS.

IN the RURAL NEW-YORKER of July 12, the following editorial appeared. So many of our readers and friends objected to it as unjust to our best dealers in fertilizers that we forwarded a part of the correspondence and the objectionable editorial to Prof. S. W. Johnson, of the Connecticut Agricultural Station, asking him for his views which are appended.

The editorial was headed "Prices of Fertilizers," and said: "We consider artificial fertilizers to be a prime necessity in the pursuit of agriculture. No farmer can hope to procure the highest profit from his business without their use to some extent. At the best, a farm that is worked on the self-supporting system as regards manure, must lose its fertility to some extent; slowly, more or less, it may be, but surely. But there is small encouragement held out by manufacturers of fertilizers for farmers to use their wares. The prices exacted for them are excessive. This is shown by the irregularity in the price lists. One entirely respectable and responsible manufacturer may offer superphosphate at $25 per ton, and another may ask $40 for an article which may be no better.* The basis of the market rates of fertilizers is fixed, in a measure, on the prices of Peruvian guano.† But the trade in this article is a huge monopoly. The Peruvian Government has hypothecated its guano and nitrate deposits to its foreign bondholders, to pay the interest on large debts, and it exacts a large price. To make these articles the basis of the price of nitrogen in other fertilizers (such as sulphate of ammonia, which is a by-product of gas works), is monstrous. So with potash salts, which are a refuse of the German salt mines, and dried blood ‡ and flesh, § which are the refuse of the large slaughter-houses, and were formerly disposed of by flowing or dumping into rivers. Before farmers can be induced to use these fertilizers to any large extent, the prices must be reduced." ‖

On these views Prof. Johnson comments: "Judging from my knowledge of affairs in Connecticut, I should think that those who object to the above have a real grievance. I know of no good superphosphates that are sold for less than 35 to 40 dollars per ton. Articles offered for less money have been correspondingly—usually more than correspondingly—inferior in value. Peruvian guano is no longer the standard for the price of nitrogen, but its nitrogen really undersells that from most other sources when the states of division and solubility are equal. The reputable superphosphates now on the Coun. market, give the farmer an active fertilizer, mostly prepared from domestic or native raw materials that are of themselves nearly worthless for his purposes until submitted to chemical and mechanical treatment, and these fertilizers are, I believe, sold at as fair prices, as rule in case of merchandise generally. The $25 superphosphate is either a new departure or, as I think it most probable, is of quality much inferior to the $35 and $40 goods."

* To this it is objected that no responsible manufacturer can make a good superphosphate to retail throughout the country at less than from $35 to $40 per ton.

† The price of Peruvian Guano has nothing to do with the price of superphosphates, is the objection to this.

‡ Good dried blood, containing 14 per cent. ammonia such as they use here is worth for export to-day, from $32 to $36 per ton.

§ Azotine is worth to-day, in New-York, wholesale, from $30 to $35 per ton.

‖ This paragraph is considered very damaging to manufacturers of good phosphates, as well as to farmers who may thereby be induced to buy a low-priced fertilizer which, in the end, they will find to be a very dear article.

AN APPRECIATIVE CRITIC.

EDITORS RURAL:—On taking up the last RURAL my eye fell on the benign countenance of our friend Charles Downing, which I recognized before seeing the reading matter. The likeness is admirable, though showing a little more fullness in the face than when I last saw him.

His prompt negative to your request for permission to publish his likeness is characteristic of a man, so quiet, modest and unassuming that even proper credit and the prominence due his eminent services in the field of horticulture and pomology, are distasteful to him; but one must sometimes yield to others' wishes and I doubt not your thousands of readers will sustain and thank you for giving them this excellent *souvenir* of this revered veteran horticulturist. The biographical sketch of Mr. Parsons is excellent. That a kind Providence may prolong the life and faculties of our venerable friend for years to come, is the wish of W.

JUDGING AT FAIRS.

HOW CAN TEN PLATES OF GRAPES be compared, that are fifty feet apart, with a whole orchard of fruit between them and oceans of people standing by to draw the attention of the committee? It is of the greatest importance that articles competing with each other in the same class, should be in close proximity. Still the exhibitors object to this on the ground that they want all their own things together. If a man is making an exhibition of articles as an advertisement simply, let him take a space and put his things together if he likes, even if he enters bulls and bedquilts, a thrashing-machine and a chromo; but if he enters for competition the authorities should compel him to show his articles in connection with others with which they compete. This should be insisted to the end that perfect justice be done. S. Q. LENT.

A PEACH CORRECTION.—In the issue of the RURAL for August 30th, I notice that an error has been committed in setting up my article on peaches. Referring to the Early Beatrice and Early Louise as deserving a place on the rejected list, the new peaches, Downing and Wilder, are also spoken of as meriting similar treatment. This was not my intention. A period should have been inserted after Early Louise, and the following sentence should read "Downing and Wilder ripened here about the same time as the Alexander, but are not so large." W. C. BARRY.

Rochester, N. Y.

PAMPHLETS AND CATALOGUES.

FIRST BIENNIAL REPORT for 1877-8. Kansas State Board of Agriculture. Alfred Gray, secretary, Topeka, Kansas. This contains numerous statistical exhibits, with diagrams of the agricultural, industrial, mercantile, and other interests of the State. It also contains a colored outline map of the State and sectional maps in colors of each organized county, showing their relative size and location, railroads, towns, post offices, school houses, water powers, etc., etc. This is a really valuable work, gotten up with much care and ingenuity and containing a vast amount of minute statistics that can be found nowhere else. It is especially serviceable to those who intend to settle in Kansas or desire information about the State.

CATALOGUE of Dutch Bulbs and other Flowering Roots; also, seeds and plants for autumn planting, and house decoration in winter; offered by D. M. Ferry & Co., importers and dealers in seeds, bulbs, etc., Detroit, Mich.

ANNUAL DESCRIPTIVE CATALOGUE of Bulbs and other flowering roots, with directions for their culture and management, offered by J. M. Thorburn & Co., 15 John street, N. Y.

H. H. BROWER, Light Street, Columbia Co., Pa., sends us his circular of Italian Bees, Queens, Colonies, Comb Foundation, Honey-Knives and other apiarian supplies.

DESCRIPTIVE PRICE LIST of Strawberries for the autumn of '79, offered for sale by Ellwanger & Barry, Mount Hope Nurseries, Rochester, N. Y.

CATALOGUE OF STRAWBERRY PLANTS, pot-grown and ground layers, for sale by P. M. Augur & Sons, Spring Grove Fruit Farm, Middleton, Conn.

DESCRIPTIVE CATALOGUE and Price List of small fruit plants for the fall of 1879 and the spring of 1880, by N. Olmer, Dayton, O.

WHOLESALE PRICE LIST of J. W. Wunderlich, seed merchant and grower, Frankfort-on-the-Main, Germany.

The Poultry Yard.

THE POULTRY DEPARTMENT OF OUR AGRICULTURAL SHOWS.

THE management of this division of the live-stock exhibitions in our agricultural fairs is not always satisfactory to those who exhibit, and we have become so accustomed to the grumbling of disappointed exhibitors that it hardly receives any other attention than a doubtful smile or open ridicule. It has been so customary for the non-premium-takers to growl, that it is looked for as a matter of course; still there frequently occur occasions when the growl becomes too deep and long-continued to be ignored. This is more often the case in our county fairs than in the State exhibitions; in the former it receives only local attention, but in our State exhibitions it becomes a matter of general importance, and when there is just cause for complaint the attention of the officers of the Society, as well as of the general public, should be so directed to the case as to effect a cure of the cause of the complaint.

The importance of the poultry interest is now too great to be ignored, nor do our agricultural societies, as a rule, overlook it. Most of our State exhibitions have a goodly list of premiums offered for poultry, and have provided good and suitable accommodations for showing the fowls. This is notably the case with the New York State Agricultural Society, which not only offers a large amount in premiums, but has large and secure accommodations, and also selects competent judges, who are paid for their services.

In strong contrast to this is the management of the New Jersey State Agricultural Society. The premiums offered by this Society are fair and not to be complained of, but the accommodations are wretched. Hitherto it has been the prevailing custom to restrict these to a canvas tent of only medium size, in which the fowls are stacked, three tiers high, in the same coops or boxes in which they have been shipped, with little or no regard to classification, and with no attention paid to sanitary measures. The superintendent of this department has seemingly been selected *not* for his business capacity, but for his known favoritism to the *members* of the society and their personal friends. The judges, also, were men who had raised chickens for market all their lives, and knowing a Bantam from a Brahma, were, therefore, in the opinion of the appointing committee, competent to decide the merits of exhibition fowls also.

For years the awards in this department have been a perfect farce. In 1877 the writer was asked to assist in judging, and was told that other and *competent* parties would be appointed with him. Arriving on the ground, he found the other *judges* to be three in number: first, the superintendent (ex-officio); second, a gentleman who had raised poultry for market all his life; third, a friend and neighbor of one of the largest exhibitors, who acknowledged he knew nothing about poultry—except in a culinary way—and accepted his appointment simply to comply with the request of his friend. It is hardly necessary to chronicle the result. The first three judges invariably voted together, and the awards were placed as *they* decided.

I commented pretty severely on the matter in one of the poultry journals, and as a result, in 1878 I received a very courteous letter from the secretary, asking me to give the society the names of a few parties who were competent and who would act as judges in the poultry department; also, if I remember rightly, stating that the society would bear their expenses. I forwarded the names; the judges were selected from that list, accepted and served, and I presume, *for once*, the premiums were correctly awarded. The judges were treated to a cold lunch, and upon presenting their bills for expenses and services, were met with a demurrer as to the amount. After considerable delay, they received the munificent offer of $3 each for their traveling expenses and time. Their railroad expenses were not less than $5 each, and the cost of breakfast (for they left home by daybreak) and supper had to be added to that. (Possibly I may be in error as to above amount, but I am quite certain that was the sum mentioned by my informant, one of the judges).

I have drawn the following conclusions from this matter: either the managers were contemptibly mean, or the interested *home* exhibitors cooked up this job with a view to preventing the Society from afterwards getting competent judges to serve, thus leaving the field open for their mongrels to win. In justice to the secretary, I must say that I do not believe him to have been a party to the above action, and I think him to have been in earnest in his attempt at reform in this department; but he was either overruled or outwitted by those personally interested in the matter.

It is with reluctance that I have referred to this matter. As I am not in any way interested in it, never exhibiting fowls or pigeons, and having no interest in any that were exhibited, I cannot be accused of being a "disappointed exhibitor," or a "sore-head." But, as the judges of last year were nominated by me, and were seemingly aggrieved at my getting them "into the scrape," and as others who did not serve last year may be asked to do so this, I wish to publicly notify them of last year's action. Further than this, and still more important, is my desire to arouse the attention of the honorable members of the New Jersey Agricultural Society—and there are many such—to the way in which the poultry department has been managed. The poultry interest in the State of New Jersey is far too important to be neglected, or worse, by a Society which should in every way foster and encourage its growth. And, last but not least, for the sake of the good name of the State Society, there should be a thorough overhauling of such "ways that are dark and tricks that are vain." A. M. HALSTEAD.

Horticultural.

PRACTICE WITH RASPBERRIES IN THE FIELD.

MY experience agrees with that of Mr. Thomas and the Gardener's Monthly on the subject of removing Raspberry and Blackberry plants as soon as the picking is over; and there is more in the philosophy of leaving the canes till the season is ended than appears at first thought. The order of nature with these fruits is, as I have observed, to make the main growth of successional plants early in the season; and if this growth is not thus made, there cannot be a full crop the succeeding year, for the reason that an aftergrowth is always winter-killed. The young plants are, and should necessarily be more or less troublesome to the pickers. This is especially the case with the Blackberries.

The practice has been in the Antwerp section on the Hudson, as soon as the picking is over, to cut up the old canes, remove the stakes, plow out the patch and pull the weeds remaining about the hills. Two injurious results follow:—We know that the rich descending sap from the old canes, instead of forming alburnum, as in tree growth, adds to the strength of the roots from which have already risen the young plants for future bearing. Therefore, when we cut away the old cane in full leaf, we commit a waste.

The removal of the stakes and canes admits light and heat, injurious to the young plants, because it excites to a pushing of buds which should lie dormant until spring. This is specially true with the Antwerp Raspberry. When the dormant buds have been broken by the extra nourishment of a warm sun and a loosened soil, they die. Although apparently alive when laid down in the fall, they are as dead as we always hope the ennuli will be in spring. A. A. BENSEL.

Orange Co., N. Y.

Industrial Topics.

A REALLY practical manual-delivery binder attachment, to a self-rake reaper has been a problem that has engaged the attention of every thinking manufacturer of this class of machinery. It cannot be said, we believe, that anything very practical or efficient has, until lately, successfully met a thorough test. Our representative in Syracuse has, recently, sent us an account of the trial of a new device of this character, that is one of the latest achievements of Messrs. Bradley & Co., the well-known implement manufacturers of that city. Although simple, it would be difficult to give a lucid description of the binder without the aid of illustration. In this case it worked admirably, delivering the gavels squarely into the binder's lap where he sits on the machine. He saw inexperienced men who were not used to any such mechanism, after a few minutes' work, bind and throw off from eight to ten bundles per minute. This was done in a series of trials showing that it can be operated by any man who is a fair binder in the field. We congratulate "Chris" in his success.

THE evidence of travelers points to the superior accommodations of the Wabash Line for quick transit to places this side and beyond the Mississippi River, and as the road is able to make its record for quick time and skillful management of passenger traffic, it is equally successful as a fast freight route. As some of the important State Fairs are held very near together in point of time, the freight question becomes a leading one. Our experience would suggest that all eastern shippers that propose to reach the State Fairs at Springfield, Ill., and St. Louis, Mo., avail themselves of the "Great and Only Wabash," as they can intercept it at Toledo by any of the Eastern trunk lines, and ship exhibits through without breaking bulk. Mr. E. J. Burritt the General Eastern Agent, whose headquarters are in New-York is indefatigable in his endeavors to oblige the patrons of the road, and it is to his efforts mainly, that the "Wabash" is popularized among those who have not yet personally tested the route.

Everywhere.

THE HARVEST IN CALIFORNIA.

Now that the wheat and barley have been gathered, and much of the crops thrashed, we can compare the yield with that of last year when the amount of wheat exported was 580,000 tons. There is a partial failure on the San Joaquin, which will diminish somewhat the aggregate production. But this is, in part compensated for by the increased product of the countries of Sonoma, Lake, and other Northern parts of the State, which had too much rain last year.

For all purposes Club wheat is deemed the best. This sort succeeds more generally than any other under all the varying conditions of soil and climate. It is a large, plump grain, and furnishes the magnificent staple, with hard and glutinous berry, that commands the highest price of any in foreign markets. There it is in demand by millers for mixing with the softer kinds for grinding. Here it cannot be manufactured without turning on a small stream of water during the process. I witnessed this, shortly after last harvest, in the grinding of our grists which had been hauled from the pile of sacks left in the open field after thrashing. It is an accepted theory that grain is lighter and drier then than six months later when the weight has been increased by absorption. Many think it pays interest to hold a crop twelve months, and strange as it may seem to Eastern eyes, there are substantial reasons for the belief. From about the first of May until the grain is thrashed, not a drop of rain falls on it, as a rule, though, some years there are very light showers in May. The ground is shaded and kept moist by the plants, while the grain fills out plump and dry and hard. It may be, and often is, removed within fifteen days from the field, in sacks, to the holds of the largest vessels and shipped around Cape Horn, passing the torrid zone, both on the Pacific and Atlantic, without the least danger of heating, protected by its capacity for absorption. The dry climate is, perhaps, the cause of this excellence in quality, otherwise I do not see why some of our best sorts of wheat would not do well in the Atlantic States. The writer has forwarded many samples to friends in the East, but he has never learned of their working any revolution or change of seed. On the other hand, seed wheat from every part of the world has been tried here, so far as we know, without at all rivaling our favorite sorts. The Mediterranean, once so popular with you, was long ago introduced here, and has been discarded. The yield was inferior, and the color of the flour dark. The white winter wheat of the hills of Ohio and Kentucky, is the only berry I ever saw comparable in size and quality with the California Club.

Now that our best soils are becoming exhausted with wheat after wheat, year after year without rest or alternation, the average yield per acre is running down to seventeen bushels. Vast ranges of half-tilled fields do not grow that much with the gang plows and slovenly methods prevailing. But there are many small ranches where mixed farming is adopted, and more labor is bestowed on the land with better results. I have seen 54 bushels an acre from summer-fallowed upland—but, "one swallow does not make a summer." The ranch of Mr. James Hugill, near the Mokelumne River, is virgin soil reclaimed from the tules. One hundred and thirty acres were sown to wheat of the Propo variety. The reported yield this harvest is 60 bushels per acre. This is certainly encouraging for tule lands, of which there are great wastes undrained. This alluvial formation, the deltas of our rivers, is the finest garden land in the world.

The four great barley-producing States are New York, Michigan, Wisconsin and California. Our crop of 1879 is very little under the average. In this locality it is better than last year. The price is very low—60 to 80 cents per hundred. As this is not much of a corn-growing region, barley supplies its place for feed.

The climate is so even on this coast, and the weather so uniformly warm and clear, that we calculate with certainty on exemption from rains after their cessation in the spring, until about the first of October. On most of the great ranches the harvest hands sleep in the fields or in the straw. They are fed like Gypsies and worked like mules. During the harvest time the ranch is a busy hive; but when thrashing is done, it is deserted until plowing begins in October. As a consequence, the houses and other improvements are usually of the meanest sort. In a land which the world cannot rival for the variety and flavor of its fruits, none is grown. The proprietors of these principalities sow grain and nothing else, up to their door steps; and when the header has finished its work, the family goes away to the nearest city, leaving a lot of worked-down mules to wander over the premises until the rainy season.

Along the coast, within the belt of fifty miles subject to sea breezes and fogs, the tillable land is more rolling and thickly settled. There are permanent homes, many of them built with taste and surrounded by the comforts of life. More attention is paid to fruit-growing and dairying. Even there, there are many signs of the nomadic tendencies of the population, and it takes but a slight hint for almost any head of a family to pack off on a jaunt to the mountains. In such an excursion made up of grown people and children, with horses, guns and dogs, the wagons are without covers, and the party without tents. The soft climate is responsible for much of our shiftlessness. There are no winters to prepare for, and, but for the rains, the winter months are the most delightful of the year. It is the season of seed sowing, after which most of the lords of the soil take their ease until harvest. J. B. A.

Santa Rosa, Cal., Aug. 1879.

RURAL SPECIAL REPORTS.

MAINE, Bolster's Mills, Cumberland Co., Aug. 25.—Corn is looking well. We had some hard winds that blew it down twice, but most of it has straightened up again. Potatoes are looking well. Apples are quite plentiful. Some of the seeds I received from the RURAL are doing fairly; Defiance wheat looks well, and so do the Beauty of Hebron potatoes. Blount's corn is growing very tall. R. S. P.

VT., Cornwall, Addison Co., Aug. 29.—Instead of our hay being half a crop, as predicted in my last report, subsequent rains have made it rather better than an average. The Beauty of Hebron I planted alongside Early Rose; they ripened about the same time, and I do not see much difference in their yields. I planted about five ounces of the Beauty, which gave 35 hills, with one eye in each hill, and those five ounces yielded me just 49 pounds of very nice-looking potatoes. Of the other seeds received, the tomatoes are doing finely; the watermelons were injured by drought; the Pearl Millet was very successful as a failure; the Defiance wheat was nasty and shriveled, and of the flower seeds, none has thriven except the Ricinuses, which are looking nice.

W. M. E.

RHODE ISLAND, Providence, Aug. 30th.—I started Acme, Golden Rural and Early Conqueror tomatoes at the same time, in boxes in the greenhouse. The plants were set out at the same time, about July 1st. The first Acme and Early Conqueror were picked about the 18th of August, though the Conquerors were a little in advance of the Acme. To-day I have found the first and only Golden Rural ripe. The vines are loaded, however with green fruit. The Acme is the most perfect fruit in color and form, that I know of. Cook's Smooth Red is the favorite market tomato around Providence, though the Acme has been raised considerably this year. The Japanese Persimmon is a *dead* sure thing here, though we can raise the Virginia variety every time, and have had nice fruit from them in winter for years. E. T. D.

N. Y., Seunett, Cayuga Co., Aug. 27.—Farmers about here are busy plowing for wheat, while some are sowing it. I think the acreage to this crop will be larger this year than last in this section. A great many of our farmers have finished thrashing. Wheat averages only about half a crop; for while some have as high as 25 bushels per acre, others have only ten. Wheat is now worth $1 per bushel with no prospect of a rise right-away. Oats bring from 35c. to 40c., and are an average crop. Corn is earing pretty well, and if we get rain enough, it will fill satisfactorily. This is quite a famous country for beans, but this year they are blight-stricken and I cannot tell how they will come out yet. The yield of potatoes is going to be very good. The tubers are now worth 25c. per bushel. With regard to the RURAL seeds; the flowers did not come up very well, while the Pearl Millet didn't show itself at all, although I took pains to pick out the best ground for it and top-dress the place. My Blount's corn came up first-rate and grew well for two weeks, when the ants got at it and destroyed every spear of it, except one which is now five feet high. I'll try it again, however. The Acme tomatoes are growing nicely, but they are rotting before they get ripe. My Beauty of Hebron potatoes are doing best of all. I have 19 hills, all looking first-rate. They will be fit to dig in about a week. W. B.

N. Y., Elmira, Sept. 1st.—As summer closes we must acknowledge it to have been an unfavorable season for farmers in this locality. Late frosts, cool weather, and severe droughts have been decidedly unfavorable for nearly all crops, and a considerable falling-off in the yield has been the result. Occasional light showers, during the greater part of the summer, kept vegetation in a fair state of growth; but we have been especially unfortunate in having had no rain for the past two weeks, as good crops in corn and tobacco depended upon a rainfall. Pastures are very poor, and as we have had no heavy rains since spring, much complaint is heard of low streams and dry wells. We have had every indication of rain and copious showers have fallen at points not far distant, but it has cleared off again, and the prospects for rain are poor at present. Tobacco growers have been busy the past week harvesting their crops and the weed will be nearly all housed by the end of the week. Some farmers are plowing for wheat, but more are waiting for rain to soften the ground so that better preparation can be given it and that at less expense. Corn cutting has already commenced on some farms, and it will be generally begun this week. G. G., JR.

N. Y., Greenport, near Hudson, Aug. 28.—Corn and potatoes in this vicinity are splendid. I have 58 hills of Blount's White Prolific, which is now from 10 to 11 feet high. The stalks are thrifty, but the ears do not indicate a large yield. They are inferior to those of the ordinary field corn. The Beauty of Hebron potato was cut through the center and planted in two hills, which yielded me 39 potatoes of medium size. At the same time and in the same kind of soil, I planted a potato cut in four pieces, one piece in each hill, which produced 64 potatoes, about half of which were very large, some weighing one pound each; the rest were of medium size, some smaller. I am thus explicit, as I fancy it to be an extraordinary yield. The seed was taken from a basket of Carolina potatoes, sent from New York.

R. M. L.

N. Y., Hannaway Falls, St. Lawrence Co., Aug. 29.—My Blount's corn is doing finely now; the stalks are from 8 to 13 feet high, with three to seven ears to a stalk. The drought injured it very much, but a good rain on the 16th and 17th gave it a new start. The Golden Rural Tomato is ahead of any sort I ever had. I picked the first ripe ones on Aug. 9, and I have had plenty since. The Beauty of Hebron potatoes are yet growing and bid fair to give a good yield. The Defiance wheat rusted somewhat, but has given a fair yield. The rest of the RURAL seeds have been nearly failures. H. D. R.

N. Y., Guilford, Chenango Co., Aug. 29.—The weather for the month of Aug. has been dry and cool, which begins to tell on fall feed. The hay crop which was excellent, was well secured. Wheat was very good, especially the spring varieties. I have one called White Russian that seems to do better than any other introduced here. I have not thrashed yet, but its yield with me last year was 27 bushels per acre, and the year previous, 32 bushels.

M. E. M.

OHIO, Fruit Hill, Hamilton Co., Aug. 26.—I purchased a few plants of Pride-of-the-Hudson Raspberry from an Albany, N. Y., firm in the spring of '78. They grew nicely during the following summer, but were killed to the ground last winter. Herstine also was "killed," but not so badly. Turner was injured very little. The thermometer dipped to 24 degrees below zero several times during the winter. Our Miami Black Cap Raspberry, of which thousands of acres are raised here for the Cincinnati market, were somewhat injured. The season here was very dry during May, the latter part of July and the first of August. Now, and for two weeks back, it has been very wet. The Beauty of Hebron potato the RURAL sent me produced about half a peck of large tubers; I think I never saw such a yield from a single potato. J. N. D.

OHIO, Foster's Crossing, Warren Co., Aug. 27.—My Blount corn will average four ears to the stalk. The Golden Rural was our first tomato to ripen; the Acme, too, is very fine. All the seeds sent me grew. D. R.

MICHIGAN, Lainsburg, Shiawassee Co., Aug. 29.—We are having a long-continued drought and vegetation is suffering greatly. Wheat has done fairly, but grass, potatoes, oats, buckwheat, corn and root crops are light. Frost has done more harm this season than for twenty years past. Still, there are provisions enough, and none need suffer on account of scarcity. Clawson wheat will be sown more than all other varieties, though some are inquiring for new sorts. At present we know of no better kind, for it is hardy, adapts itself to different soils, of which we have a great variety, and yields well.

G. M. K.

KY., Owensboro, Daviess Co., Aug. 24.—Pearl Millet I planted too early and lost about four-fifths of it by a heavy rain last May. I am afraid 16 square feet will hardly be room enough for each stand of what is left of it. It is four feet high. The first stalks stand at an angle of about 45 degrees, and young stalks keep coming up between them. Of Blount's corn, about which so many have "great expectations," of course I must say something. I predict that some one who has raised the corn previously, and understands its habits, will "get away" with that gold premium. I have stalks 14 feet high, but the average is only 12 feet. Some stalks have from two to four ears that lie close to the stalk, while others have from four to seven on a shank about two feet long. Is the corn sweet? It seems so, for jaybirds and wood-peckers seem to be resolved to eat mine up, although there are large fields of other sorts within 100 yards of the Blount's. Accordingly, with the wind prostrating some of mine and breaking off some, while birds are eating some more, I am afraid I have but a slim chance for a premium. Corn is worth 40c. to 45c. per bushel; wheat, 80c. to 87½c.; Irish potatoes, 50c.; sweet potatoes, 80c.; tomatoes, 40c.; butter, 15c. to 20c. per pound; honey, 8c.; eggs, 8c. to 10c. per doz.; watermelons at purchaser's own price. About a fortnight ago we had a regular flood. Tobacco and cabbage on low grounds are greatly damaged. J. W. S.

ILLINOIS, Baileyville, Ogle Co., Aug. 26.—The farmers are busy thrashing. Crops are yielding better than was anticipated. Winter wheat averages about 25 bush. per acre; spring wheat, 11; oats, 40, and barley 25 per acre; but there is much variation, and we cannot estimate the exact general average. Quality good. Corn is doing well, and will be a large crop in this part of the West. W. B. D.

ILLS., Evanston, Cook Co., Aug. 25.—I thought my Blount's corn was doing wonders—it has shot up to a hight of 14 feet and has from three to four ears to a stalk—but when I see accounts that give it from four to seven ears to a stalk, I have to "give up." My Pearl Millet is doing first-rate—it is six feet high and still a-growing. C. W.

WIS., Darien, Walworth Co., Aug. 22.—Harvesting is over and thrashing has begun. All small grains are good, and corn promises well. We had a slight frost on the 17th inst., but it did no damage. I've dug my Beauty of Hebron potatoes; the largest is 13½x7¾ inches, outside measure. They were planted on April 20, along with the Early Ohio, and came up seven days ahead of the latter, and kept that lead until dug. They are of better quality than the Early Ohio, which were scabby. The Salix pentandra has a most beautiful leaf and attracts a good deal of attention. Z. H.

IOWA, Troy, Davis Co. Aug. 24.—We have had continual dry weather for the last two months. Corn will be a short crop; early potatoes an average crop; late potatoes a failure. Fall wheat averaged from 20 to 25 bushels per acre. Oats and hay are fair crops. It has been very dry, but my Blount's corn has from two to seven ears per stalk. The Beauty of Hebron potato has done very well. It ripened about the same time as Early Rose, but yielded better, and is a good potato. The Acme tomato is very good. The Defiance Wheat rusted and blasted with me. Pearl Millet is from three to four feet high and running to seed. The flower seeds did not do well.

J. L.

IOWA, Letts, Louisa Co., Aug. 27.—Fall wheat hereabouts was a good crop, yielding from 20 to 30 bushels per acre; spring wheat, however, was a light yield, owing chiefly to chinch bugs. Oats are an average crop, but the acreage under them was less than usual. Hay was an average crop, put up in good condition. Early potatoes were a good yield; late ones are not looking as well as they do some seasons, so that we expect a light crop. Corn looks first-rate, and is now ripening. My Blount's Prolific is doing finely; if nothing happens to it, you will hear from me with regard to it in connection with one of those premiums. The weather is dry and pleasant.

W. M. N.

MO., New Cambria, Macon Co., Aug. 25—I received the Beauty of Hebron potato and planted it on the 10th of May. I have dug one hill and I think they are very good potatoes; but our Early Rose were up when we got the Beauty, so I cannot tell which is the earlier, but will give them a fair trial next year. I shall save all I get for seed. I was very sorry we did not get the rest of the seeds. I hear a great deal said about Blount's Prolific corn. I would like, if I had it, to try it by the side of my Yellow Dent. I have some from 10 to 12 feet high, with from two to seven ears of good solid corn on the stalks. I had the best yield around here last year, but could not tell how much to the acre, as I did not measure it. I can say I have three of the best varieties of sorghum cane in Missouri—one is the Early Amber, which is called the best; then come the White Point and the Arabian Sugar-cane. The Early Amber was ripe three weeks ago, and the Arabian is nearly as early, but the other is late. The Early Amber is from 8 to 12 feet high; the Arabian from five to six, and the White from 12 to 15 feet. J. A. H.

KANSAS, El Dorado, Butler Co., Aug. 27.—It is quite amusing to read to what large dimentions the Blount corn attains. And yet it is not a match for our common field corn here, as grown on the walnut bottoms. I would advise some of our more Northern friends to have ready for time of need some heavy covers for early frosts. Our corn is all ripe and out of the way of frosts and hoppers, and will be a fair crop—forty to fifty bushels per acre on bottom land. There is a large number of acres ready for wheat, which is being sown now. Potatoes are a poor crop and are worth $1 per bushel; eggs, butter and cheese are selling for

10c. all round; wheat, 75c. to 80c. per bushel; hogs, live, $2.50 to $2.75 per 100 pounds; stock cattle are worth, two-years-old, $25 to $28; three-years-old, $30 to $33; heavy spring calves, $8 to $10, and very few to be had.

W. J. B.

KANS., West Asher P. O., Mitchell Co., Aug. 20.—The weather here for the past month has been quite seasonable. Wheat was a poor crop, both as regards quality and quantity. Corn is doing well and must be a large crop in this vicinity. Irish potatoes are not a very good crop, but sweet potatoes are a fair one. Fruit is scarce. Grass is plentiful and hay abundant. J. N. H.

CAL., Loquel, Santa Cruz, Co., Aug. 23.—Santa Cruz is one of the smallest counties of this State, and more celebrated for its manufactures than for its agricultural products, although it embraces some of the richest land in the State. It is also the second county in importance, San Francisco being the first. It is the second county south from San Francisco, San Mateo lying between it and that city, which is 75 miles distant by steam. It comprises an area of 326,000 acres and a present population of about 16,000 souls. It is a narrow strip of land, about 40 miles in extreme length by some 15 in extreme width. Forty thousand acres are the richest kind of bottom lands. These lie along the various streams, and are occupied principally as dairy farms. Fifty thousand acres of agricultural land are terraced plateaus, as the land rises from the bay of Monterey in benches or steps, as it were, back to the summit of the mountains. The county is heavily timbered along the gulches, and uplands. Pastures on the low lands remain green and fresh throughout the entire year. On the uplands, although the grasses wither in the summer season, they lose none of their nutritive properties, and cattle thrive on them as well as on fresh grass. Some 20,500 acres are in cultivation. On this soil the average yield of wheat is 27 bushels to the acre; barley, 38; corn, 48; potatoes, 3½ tons, and sugar beets, nine tons. Our 275,000 acres of mountainous land produce fabulous growths of Red-wood, Oak and Fir, as well as the finest quality of all varieties of grapes. Through this mountainous region runs a thermal belt within which frost is seldom seen even in the coldest season. As a consequence of the mild climate within this limit, strawberries bloom and ripen in large quantities the year round, orange trees wear a perpetual livery of golden fruit and blossoms, and the delicate Almond dons its fragrant dress of blossoms in February, while trees in other sections are hibernating, waiting for the spring.

Within the county limits there are five shipping points; 11 sawmills with a capacity of 36,000,000 feet of lumber annually; five lime-kilns, employing, when running, over 200 men and producing the finest quality of lime in the country, supplying seven-tenths of the demand therefor throughout the State, and capable of unlimited extension. There are also four large tanneries that turn out immense quantities of leather, while the California powder works located one and a half miles above Santa Cruz on the San Lorenzo River, manufacture thousands of kegs of powder per month. Then we have a glue and a chair factory as well as a fusee factory; also four large flour mills all of which are constantly employed, together with a beet sugar factory which is the source of great expectations.

Sixteen years ago there was not a single vineyard in existence in this county. Vine Hill is located from 1,000 to 1,200 feet above the level of the sea, is subject to no frost sufficient to injure vegetation in the least, and will also produce the finest varieties of all kinds of choice fruits. There are some ten vineyards in the vicinity of Vine Hill, which cultivate the vine for the market. At any of the cellars all kinds of wine will be found, as well as brandy. The total manufacture of wine at the vineyards mentioned, is 81,000 gallons annually; but probably the whole amount in the county will sum up 100,000 gallons. C. H. H.

MD., Quantico, Wicomico Co., Aug. 26.—Rain, rain, rain, and still it comes. Up to the 25th of July the weather was very dry, but since that time we have had moisture enough to make half a dozen crops. Corn will be short. My Blount Prolific is doing extra well. It has from four to nine silks on each stalk, but I think the ears will be small. If they fill to a fair size, they alone will be worth the subscription price of the RURAL. G. A. B.

VA., Newmarket, Shenandoah Co., Aug. 20.—We have had the severest drought here that has been experienced for many a year. Corn and other crops suffered severely on this account, but a fine rain, that began yesterday, is still coming down to aid our farmers. But little plowing for wheat has been done here yet on account of the dry condition of the ground. Wheat turned out a pretty good crop; nearly all of it is thrashed. It is selling for from 90c. to 95c. per bushel; corn, 50c.; rye, 50c. to 55c.; oats, 30c.; butter, 12c. to 15c. per pound; eggs, 8c. per doz. P. S. W.

W. VA., West, Wetzel Co., Aug. 26.—The free seeds received from the RURAL were planted carefully, but the greater part of them failed to germinate; or, perhaps, through my ignorance of botany, I pulled them too soon out of the bed to make room for the Jamestown "weed." My Pearl Millet is now about five feet high. I had 115 kernels of Blount's corn. I planted them in my garden, in hills 2½ feet apart, a grain in each. The stalks are now about 12 feet high, and bearing from three to seven ears each, averaging probably 3½ ears. I am satisfied that I have received the value of my subscription to the RURAL by the introduction of this Prolific corn into this section, to say nothing of the mass of varied information on farming and other topics imparted weekly through the columns of the paper. J. H.

FLORIDA, Starke, Bradford Co., Aug. 28.—Some green food for horses here in the winter, would be a godsend. People here talk about cattle being able to live on the wild grass all the year round, 'tis true; but horses will not eat it at all unless driven to it by hunger, except during a short time early in the spring, and then only where it comes up green after the ground has been burnt over. Cattle will do very well on it for four or five months, and for the rest of the year they just manage to exist, though many of them starve to death every winter. There is no hay to be cut, and we have to depend upon dry corn leaves, corn and oats. Corn leaves are $20 per ton; corn, 90c. per bushel and oats 70c. Pea vines grow here all winter—even the heavy freeze and ice we had last December only killed the blossoms of our vines which put out new ones and bore a crop of peas later. I. S.

The Querist.

ANSWERS TO CORRESPONDENTS.

The use of Lime

W. S. L., Attica, Ohio, asks whether lime is as good as barnyard manure as an application to summer fallow for fertilizing purposes: and how much should be used.

ANS.—No. Lime cannot be compared with barnyard manure. It fills the same place in regard to manure as a condiment does to food; it supplies to some extent a needed element in the soil, although it is very rarely that soils are deficient in lime, but its greatest effect is to help the soil to digest the manure, so to speak. It is, in short, a stimulant which requires solid food to be taken with it to prevent injurious reaction. The two cannot, therefore, be compared in the way suggested in the inquiry. Lime is a very useful and effective application to the soil when judiciously used, and its effects are more apparent upon manured than upon worn soils; because it must have something to work upon to produce its effect. It is used in a good system of farming, once in five years, at the rate of 40 or 50 bushels per acre, at the same time with the manure; and generally for wheat or rye seeded to grass and clover. When used on a summer fallow and without manure, it can only act injuriously by decomposing and making immediately available whatever vegetable matter exists in the soil, and by liberating part of whatever potash may remain in it undeveloped. In this case it acts as a stimulant altogether and really helps to impoverish the soil more quickly than would otherwise be done. If the land is foul with weeds and needs some vigorous treatment to improve it, then it might be advisable to summer-fallow it and apply from 25 to 40 bushels of lime per acre, in proportion to its present condition of poverty or goodness. But unless barnyard manure is applied very soon after, the benefit will be only temporary.

Diminished Wheat Yield in the Old-Settled States.

W. C. J., Lebanon, Del., asks whether the wheat crops of the old-settled States are as heavy now as formerly; if not, how much difference is there, and the cause of it.

ANS.—About the beginning of this century the average yield of wheat in New York was from 20 to 30 bushels per acre: now it is hardly 12 bushels. Fifty years ago the yield per acre in Ohio used to be 26 bushels; now it is not more than 13 bushels, and in the New England States the disparity between the yields of the past and present is still more striking. The cause of this diminution in the yield lies in the practice followed by our farmers for years, of carrying off every harvest the fertilizing ingredients taken up by the various crops, without returning to the soil any equivalent. In the course of time the available amount of plant-food in the soil has been so lessened by this practice that, in many places, there is not enough of it to yield crops sufficiently heavy to pay the expenses of cultivating them. By a proper system of tillage and manuring, however, this land can be soon restored to a profitable condition of fertility. In England, during the reign of Elizabeth, the average yield of wheat is said to have been only five bushels per acre, whereas now the yield is from 28 to 30 bushels, and this vast stride in advance has been made chiefly within the present century. With the lessons taught by European experience before them, our farmers in the old-settled States will doubtless speedily restore the fertility of the soil whenever a liberal course of tillage and manuring will pay better than purchasing in the West lands which for years will need no such expensive treatment.

A Preventive of Smut in Wheat.

H. L. C., Rich Prairie, Minn., asks for some preventive of smut in wheat.

ANS.—Smut is the product of a minute spore which serves the purpose of seed, and to prevent the appearance of the pest, this must be removed or destroyed. This can be most readily done by steeping the seed grain in a strong brine or in a solution of, say, four ounces of sulphate of copper to a gallon of water. The seed may be steeped in the solution a couple of hours, and then dried with a small quantity of dry lime, or, better still, of plaster.

Miscellaneous.

A. C. H., Roanoke, Ind., says 1, that the silk on his Blount's corn is mostly white, but about one-fourth of it is a bright pink, and he asks the reason why—it is 20 rods or more from any other corn; 2. He inquires at what time should salt be sown with winter wheat to do it most good; 3. Fears are felt thereabouts that the swarming crickets will injure the young wheat, and he wants to know whether they can be driven off by sowing salt where they are at work; 4. What would be the price of, say 90 pounds of pure Clawson wheat for seed, delivered by United States Express at his town.

ANS.—1. The color of the silk of all varieties of corn varies, and Blount's is no exception. The color of the silk has no connection with the impurity or otherwise of the seed. 2. Salt may be sown at any time: its action is to dissolve potash chiefly and help to decompose organic matter. Its most useful effects occur when it is sown in the spring, when it tends to stiffen the straw and brighten the grain; five bushels per acre may be sown, but, 3, that will hardly interfere with the crickets. 4. Clawson wheat is worth $1.50 a bushel. The express charges to Roanoke, Ind., depend a good deal upon where the wheat is shipped from. The nearest place to procure the seed would be at Detroit, Mich., (Ferry & Co., seedsmen). An excellent quality of Clawson is grown in Michigan.

B. B., Cadet, Mo., asks whether we know anything about W. V. Horton's "Stump Eradicator." Horton, it seems advertises in country papers that for $1 he will supply a stump destroyer with which, without boring, blasting or burning, a boy can destroy 250 new stumps a day. As our inquirer is just opening a new farm in the woods, he naturally thinks such a stump-exterminator would be very handy, if it could effect even half what is promised.

ANS.—A visit to the number on Nassau street, this city, where Horton professes to do business, failed to discover any one who was willing to acknowledge himself connected with this fraud. We learnt, however, from a person in the building that all letters addressed to the fellow are either forwarded to him by a confederate, or that he himself, under another name, is the assumed confederate and pockets directly the money which people send him for his marvelous "Eradicator," Electricity is the means by which he pretends to work such wonders, and this electricity is supposed to be generated from an innocent little white powder. Are farmers really more stupid than other folks, that every swindler seeking a greenhorn whom he may cheat, appeals to them?

R. T., Garrattsville, N. Y., asks, 1, what is the cause of coated wool on sheep? 2. He also sends for name a specimen of a plant which he describes as growing from six to eight inches in hight, with blossoms yellow and bead-shaped, and evidently of the clover family.

ANS.—Our friend doubtless refers to the external coating produced in Merino sheep by the natural secretion of yolk. This is a sticky, pasty, half-hardened substance within the wool or the hard substance at its outer ends, which is commonly called oil, grease or gum. The external yolk is occasionally somewhat yellowish, like dirty beeswax, but generally of some dark shade of brown or nearly, if not quite black. This hue is often intensified by the dust, pollen and other refuse matters that adhere to the yolk-impregnated fleece. Chemical analysis of the yolk has shown that it contains 1, a soapy matter with a potash base; 2, a small quantity of carbonate of potash; 3, a perceptible quantity of acetate of potash; 4, lime combined in an indistinguishable state; 5, an atom of muriate of potash; 6, an animal oil to which is attributable the peculiar odor of yolk. 2. Trifolium agrarium—Yellow hop-clover.

W. A. D. Clinton, Conn., has planted some pot-grown Strawberries and wishes to know which way he will get the most fruit next season—by cutting off the runners or by allowing them to form new plants.

ANS.—Remove the runners. Cut them off with a sharp knife. To tear them off violently, as is done by some persons who do not know any better, will do the plants more harm than good.

W. B., Sennett, N. Y., asks whether the "fancy" beets sent out by the RURAL are fit to be eaten.

ANS.—No; our Domestic Department has contained several recipes for the best method of preparing the leaf-stems for the table. Other inquiries are answered in other parts of this department.

J. C. E., Canterbury, Conn., asks where and when Jeff. Davis, president of the the defunct Confederacy, was born.

ANS.—Jeff. Davis was born on June 3, 1808, in that part of Christian county, Kentucky, which now forms Todd county. Soon after his birth his father moved to Mississippi and settled near Woodville, Wilkinson county.

W. M. E., Middlebury, Vt., asks whether plum trees, grown from stones, will produce plums true to name.

ANS.—Plum trees grown from stones are seedlings, and there is never any certainty that seedlings will reproduce the parent varieties of fruit. The wild sorts will more nearly do this than the cultivated kinds.

R. C. H., Madison, Ohio, asks how to guard his thrashed wheat against weevils.

ANS.—One of the best safeguards against weevils in grain is to thoroughly fumigate the bins with burning sulphur, before the grain is stored therein. The operation should be repeated a month or so after the storage of the grain.

Mrs. M. E. G., Forest Grove, Oregon, asks where she can get Gray's School and Field Book of Botany, or Wood's Botanist and Florist, and the price of them.

ANS.—They can be obtained through this office, but to save freight, it will be better to purchase them through some book store near you. The price of Gray's book is $1.80; of Wood's, $1.75.

Mrs. C. H. H., Loquel, Cal.—The flower of the Pelargonium you sent is very pretty. It is impossible to name such varieties. Pelargonium seedlings are now raised by the tens of thousands, no two of which may be exactly alike, while many bear too close a resemblance to hold a distinctive name.

L. C. Wright, Level, Montgomery Co., Ky. asks whether Osgood & Co., who advertise patent scales in the RURAL, are trustworthy in their representations of the articles.

ANS.—Messrs Osgood & Co., are perfectly trustworthy.

M. F. F., Morenci, Mich., asks when to sow salt on wheat, and how much per acre.

ANS.—Spring is the best time; five bushels per acre is the usual quantity. See several answers to inquiries concerning this matter in back numbers of the RURAL.

C. W., Evanston, Ills., asks how raspberry canes can be made miniature trees, so as to avoid the necessity of tying them to stakes.

ANS.—Simply by pinching off the canes when they are three or more feet high.

W. P. McR., Truro, Nova Scotia, asks what kind of Strawberries would be best adapted to that severe climate.

ANS.—We do not know; experiment is in this case the only reliable teacher.

M. W., no address, asks when she shall cut her Helichrysums.

ANS.—Cut them as soon as the flowers are well expanded.

J. W., Jr., Williamston, Mich., asks where he can get an apple parer and corer.

ANS.—Any hardware store will supply one.

R. S. P., Bolster's Mills, Me., sends a leaf and flower of plant for name.

ANS.—Cleome spinosa.

COMMUNICATIONS RECEIVED FOR THE WEEK ENDING SATURDAY, SEPT. 13.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, SEPT. 13, 1879.

OUR RIVALS IN WHEAT PRODUCTS.

In view of the great importance of our exports of wheat products at present and in the future, it is a matter of interest to know what countries are our chief competitors in the wheat markets of the world. Of these, by far the most extensive and to us the most important is England, and a glance at the nations from which she draws her supplies will convey no small amount of information on the subject. According to the recently published returns of the Board of Trade, the following imports were made from the countries mentioned during the seven months ending July 31, 1879, compared with the corresponding periods in the years 1877 and 1878.

WHEAT, BUSHELS OF 56 LBS.

	1877.	1878.	1879.
United States	22.637.292	36.375.554	34.047.484
Russia	10.747.348	9.565.108	9.022.854
Germany	5.778.044	6.527.478	4.588.116
British North America	479.089	1.484.820	2.321.016
Australia	417.706	1.502.416	2.208.274
Egypt	2.698.226	177,886	1.403.824
Chili	790.848		691.594
British India	5.633.232	2.778,340	521.408
Roumania and Turkey	1.798.670	213.434	74.844
France	2.815.592	22.026	23.616
Other Countries	1.135.734	276.858	316.168
	55.121.770	58,922.920	55.309.208

WHEAT FLOUR, CWTS.

	1877.	1878.	1879.
United States	892.100	2.238.807	3.711.182
Germany	596.778	708.724	431.457
British North America	11.177	98.022	179.658
France	1.487.712	566.576	207.389
Other Countries	1.211.076	1.208.042	1.242.429
	4.198.843	4.910.180	5.772.115

A study of this table is both instructive and interesting in its suggestiveness. The bulk of the wheat importations into that country, it will be seen, are made during the remaining five months of the twelve, including the period soon after our harvest. Down to the present year the imports from Turkey and Roumania were clubbed together, but the latter having lately gained her independence, the last returns give to Turkey only 4,504 bushels, while Roumania is credited with 70,340 bushels; so that nearly all the grain credited to both States in the previous years, must have come from Roumania. Our neighbors across the border are evidently exporting a good deal of grain from the newly settled regions on the Red River, and thus increasing their exports much faster, proportionately, than even this country. The mining fever having abated in Australia, it is evident that the multitude of immigrants thither are devoting their attention to agriculture as well as to sheep farming. The rapid increase of wheat exports thence must be also due in a great measure to the *eclat* won by Australian wheat in bearing away the first prize at the Paris Exposition of 1876. In Chili, anticipation of war with her covetous neighbors, Peru and Bolivia, evidently paralyzed her agriculture last year more than the actual outbreak of hostilities which has since occurred.

The terrible famine which for the last couple of years has been depopulating parts of British India, and which has been only partially relieved by the liberal outlay of the Government, must have diverted to home needs much of the wheat which would otherwise have found its way to the English market. It is within the probabilities that this vast and teeming country will in the near future be our most formidable competitor in the wheat markets of the world. Lately, 1,152 samples of wheat collected from nearly all parts of the country, were exhibited in England and demonstrated the fact that grain of the highest quality is grown in widely-separated districts of that peninsula. Carlessness in handling and the heavy cost of transportation have hitherto checked the sale in Europe of wheat from that quarter; but vigorous efforts are now being made to produce a cleaner and finer article, while the railroads being built and projected through various wheat-growing regions, will greatly lessen the freightage to the seaboard.

In view of the rapid extension of our exportation of flour, the complaints of English millers that most of them must soon abandon the practice of their avocation at home, are quite intelligible, and it is highly probable that within the next few years their forebodings will be realized. Their regret, however, may be assuaged by the knowledge that many of the best of them will find profitable employment in some of the multitude of mills that are now being projected or built in various parts of this country.

HOW WILL THE WHEAT CROP OF 1880 SELL?

FOR the past three or four years our farmers have been fortunate in finding profitable markets for their wheat crops, despite the vast additions annually made to the area under this cereal. The last report of the Department of Agriculture puts the condition of this crop throughout the whole country at seven per cent. better this year than at the same date last year, and a moderate estimate of the aggregate increase in yield places it at 20,000,000 bushels. Yet in the face of this unparalleled crop, prices now leave a fair margin of profit to the farmer, and there is little or no doubt but that they will rise considerably so soon as a moderate export trade shall succeed the rush which is now overstocking our foreign markets, and consequently keeping down prices there. Stimulated by their past and present successes with this crop, there is a strong probability that our farmers will devote to it the coming year even a larger area than they have hitherto done, in the expectation that next year they will find for it an equally profitable market. What is the prospect that this expectation will be realized?

Two circumstances have contributed chiefly to the good fortune we have met with in our wheat production during the last few years:—the crops here have been excellent, while those abroad have been more or less deficient, and the shortage there, fortunately for us, has been in inverse proportion to the increase here. The latest trustworthy statistics of the wheat harvest throughout Europe says that, taking 100 as representing the average harvest, that of the present year in Austro-Hungary may be represented by 78; in Germany by 85; in France by 78; in Switzerland by 80; in Italy by 73; in England by 71; in Russia by 79; and in Roumania by 90. Of course, as the harvest, as a rule, has not been thrashed there yet, considerable modifications may have to be made in these figures; but it is hardly probable that these modifications will be for the better. Even with full average crops, Europe would require a large measure of foreign assistance to feed her teeming population, and, of course, with these deficiencies everywhere in her supply, the amount of foreign cereals needed to keep her people from starvation, must be proportionately greater than in years of average harvests. Moreover, the wheat crop is not the only failure across the Atlantic this year; most of the other crops also have been more or less short, and the deficit in these must be made up from outside sources, chiefly in wheat products, because these can be transported more easily and cheaply than any other equivalent form of food.

Is it probable, however, that the present ill-luck will attend European agriculture next year? Will the weather then be equally disastrous to the farmers' efforts and hopes? for the present poor harvests are on all hands attributed chiefly or wholly to the execrable weather which during the last year has afflicted nearly the whole of Europe. These are questions upon which our readers are as well able to speculate as ourselves. They can also see with equal clearness that an abundant wheat crop across the Atlantic next year, is certain to lessen the demand for our cereal products, and as the supply here is likely to be unusually great, the prices, in that case, would necessarily be unusually low, unless a poor crop here by diminishing our surplus should increase the price for it.

MILLERS AND WHEATS.

THERE seems to be a growing disposition among millers to discriminate in prices against two of the varieties of wheat most popular among farmers, namely, the Clawson and Fultz. It is no longer true that all kinds of wheat are equally valuable, weight for weight; for experience in flour-making has shown that some sorts are worth from five to ten per cent. more for this purpose than others. Hence has arisen a double standard for wheat:—its productiveness and flour-making quality, the farmer being mainly interested in the former and the miller in the latter. From this point of view the popularity of these two varieties among the agricultural community is natural, as both yield largely, while the berries have a fine appearance. On the other hand, the millers insist that first-class flour cannot be made from either; that they are both too soft, and that their own best interests and those of the consumers should induce them to discourage by all legitimate means the cultivation of these wheats. The millers of Pennsylvania, Indiana, Illinois, Michigan, and of several other States, at their conventions during the year, have been unanimous in their objections to these varieties, to which the Indiana millers added the Shoaf and Diehl. Millers who employ the "New Process" of flouring are especially emphatic in their objections to them, claiming that they are not fit for "high grinding," by which the soft part of the wheat, containing the starch, is ground fine enough to pass through the bolting cloths, while the hard part, containing the gluten and oil, is separated and reground to make the patent flour. As millers can obtain from $1 to $2.50 more per barrel for this patent flour than for the family sort, besides securing a larger percentage of flour from the wheat, their objection to varieties which are unsuitable for its production, seems not unreasonable. In many places, too, ordinary flour from Clawson and Fultz wheats brings 50c. a barrel less than that from harder varieties, such as the Michigan Amber and Old Mediterranean.

Shall farmers, then, discontinue growing these sorts? There certainly seems no inclination among them to do so; on the contrary, more of these two kinds, particularly of Clawson—the millers' especial abomination—will probably be sown this season than ever before. This is due to the adaptability of the varieties to a large extent of country, their uniformly good yield and the fine appearance of the grain. Moreover, farmers can grow them in most cases from five to ten cents a bushel cheaper than sorts that please the miller more, while reports from different parts of the country go to show that, as they become acclimated in various sections, they are growing harder, and it is not improbable that necessity will force the millers to devise some means of handling them in a more satisfactory manner. Already it has been discovered that dampening or heating improves their milling qualities. Yet some millers maintain that within two years Clawson wheat will sell for 20 cents a bushel less than more desirable sorts.

"HYBRID" WHEATS.

OF late years we hear a great deal about *hybrid wheats*. It is a pity that those who produce seeds by crossing different varieties of the same species will persist in calling the plants from such seeds "hybrids." The only excuse for it is that *hybrid*, as a catch-word in advertisements, is a more "taking" word than *cross* or cross-bred, which, as the RURAL has always held, should be used to express the above relationship. If Triticum repens (couch-grass) were pollenated with T. vulgare (wheat), and the ovaries produced seed, such seed would be hybrids between those two species. They would be neither wheat nor couch-grass, however much they might resemble either. But if Diehl and Fultz wheats be treated in the same manner, and produce seeds, these seeds would be wheat, whichever parent they resembled; they would be crosses or cross-breeds. According to the above definition, we have no hybrid wheats. In fact, most hybrids are not fruitful—some are sterile, a fact which, if it were generally borne in mind, would put an end to the popularity of this word as applied to all seeds which are valuable according to their yield.

It is generally supposed that wheats will not "mix," even though growing closely together, for the reason that the pollen is ripe and pollenates the stigmas before the stamens are seen, when the grain is said to be "in flower." Crossing wheats is therefore an operation which requires much patience and a deal of very tender manipulation, for the reason that the anthers must be removed from the unexpanded flower before the pollen ripens. The glumes (outer husk) and the palese (inner envelopes) must be spread apart in order to enable the operator to do this. Then the pollen from which it is desired to make the male parent, must be scattered or rubbed upon the pistil. This necessitates a second spreading apart of the glumes and palese, at a time, too, when the stigmas are mature and fitted to receive it. We have very little doubt that by selecting the best specimens of different varieties, kinds of wheat will be produced better than any now known. But it will not be done by *hybridizing*.

VALUE OF SHRIVELED WHEAT SEED.

LAST year, as our readers are aware we tried half a dozen different sorts o spring wheat. Of these, Defiance looked the best, but owing to excessively hot weather and to daily showers, the grain so shriveled that the yield amounted to a mere nothing. The kernels were mere shreds. We were aware that what is generally understood by shriveled wheat is considered by many as good for seed as that which is large and plump. In order to ascertain to what extent seed wheat may be shriveled and yet germinate, we sowed the shriveled Defiance this spring upon a quarter-acre plot. The yield was at the rate of ten bushels per acre—the grain as plump and large as the average specimens of Defiance we have seen in seed stores and elsewhere. The straw, however, was not so heavy as last year, and the heads were much shorter. This, however, may have been due to the soil, which was not so rich as that upon which it was raised last year.

MANY A LITTLE, Etc

To plant one grain of wheat in the hope of, in a few years, producing enough to seed a field, may seem to many as a hopeless task. But we do not realize the vast increase which is made in the produce of a single grain in the course of a few years. Plant one grain this year and gather 50 from it and repeat, and the third year the harvest will be a peck; but the sixth year the product will be 15,000 bushels and the twelfth harvest would be sufficient to supply the whole population of the world for their natural lives. This fact may tend to show what may be gained by a course of persevering industry and economy in the pursuit of agriculture and the rewards which are offered for honest work in the labor for which our race was first created—the cultivation of the soil.

BREVITIES.

THE Double Tiger Lily is a scare-crow among flowers.

THE wheat crop of Michigan will be about the same as last year.

CHINESE history says that wheat was introduced into China 2,700 B.C.

VINE growers of the Rhine are in despair over their vintage prospects.

FARMERS who are in debt should try their best this year to get out of it.

As a rule, superphosphate for wheat has proven the best *special* fertilizer.

WILL poor land, well pulverized, make more wheat than rich cloddy land?

THE Kansas Farmer advises its readers not to waste any more time or money over spring wheat.

BEARDED DIEHL (Lovett's White Wheat)—now offered for the first time—was found in a field of Diehl.

THE Silver Chaff wheat was originated, according to Mr. Rennie, by Mr. Hartwell in this State, and was first offered for sale in 1875.

AS "Wheat is the staff of life," and this is our WHEAT number, doesn't it follow that this number of the RURAL is the Rural staff of life!

THE Weekly World calls Clawson "Lenecca" wheat. Where in the *world* did it get that name from? It can't mean *Seneca*, can it!

WE beg the indulgence of those who have asked us questions. Special numbers have occasioned an unusual accumulation of articles of all sorts.

ACCORDING to Mr. Rennie, of Canada, the White Midge-proof and the Victor wheats are precisely the same. Why charge $3.00 for the former and $2.25 for the latter?

FOR illustrations of the Hessian fly, a full account of its transformations and the injury it works upon the wheat plant, see RURAL NEW-YORKER of July 13, 1878, p. 442.

KLIPPART says that there is not in the entire catalogue of plants another one which has been instrumental in the development of mechanical ingenuity, and the intellectual faculties, as has been, and is, the wheat plant.

PROF. BLOUNT (we have been spelling it Blunt) writes us that at the Colorado State Agricultural College they have just harvested 35 varieties of spring wheats, and the yield is wonderful. Only 24 pounds on 1¼ acre were sown, and it is supposed 60 bushels will be harvested. It was drilled, in 18 inches apart in rows and cultivated twice.

THE RURAL claims to have had a good deal to do with the present appreciation of Clawson wheat all over the country where wheat may be grown profitably. We have raised it for home use for six years in succession, and have distributed not less than 10,000 half-pint packages at fairs. Much is said as to the inferiority of flour from Clawson wheat. It does not make such white bread, but there is no flour that makes sweeter bread. We believe that Clawson will yield a greater amount of grain to the acre and over a wider range of country than any other variety which has been well tested.

D. B. WEIR, Lacon, Ills., sent us his catalogue of Seedling Cherries two weeks ago or more. Crowded columns have prevented any reference to it before. It describes selections from six thousand varieties which he has grown from seed. Particular notice is called to the fact that their names, descriptions and numbers are copy-righted, and are, therefore, his individual and exclusive property. Anyone infringing on his rights will be prosecuted! With all due respect, Mr. Weir, you will find that this is a great nonsense, before you have proceeded far.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

BABY HANDS.

BY ALICE DALSHEIMER.

Oh! soft little baby hands, dimpled and fair,
Now lovingly, tenderly clasped in my own,
Your light touch has lulled to rest many a care,
And awakened much joy, but to mother-love known.

But joy not unmixed with vague fancies and fears,
For I find myself wondering, dear little hands,
If you'll gather the most of life's wheat or its tares,
Now sown by your Fate in the future's broad lands.

I press you with pride to my lips and my heart,
And murmur sweet words with each loving caress—
Oh! say, when my youth and my strength shall depart,
Will yours be the touch that will comfort and bless?

When life's sweet hopes vanish, when sorrows betide,
When God's care and mercy are shrouded by pain,
Will your strength uphold me and tenderly guide,
Or will this dear hope have been hoped, too, in vain?

Oh! soft little hands now curled up in my own,
Like two little birds with no wish to be free;
What deeds will you work when your wings will be grown,
And away from this cage of true love you will flee?

Will you linger unwearied in pleasure's gay bowers,
And seek but to cull all those joys that will fade?
And weaving bright garlands of earth's fleeting flowers,
Forget how the crowns of the angels are made?

Or will you be eager some good to achieve,
And follow the biddings of Charity's voice,
Dispensing those gifts that the wretched relieve,
And winning by kindness the sad to rejoice?

Will you ever be ready true merit to greet,
Unmindful of forms that your grasp would control?
Will you spurn all those shackles that aim to defeat
The freedom inherent in every true soul?

Will you deem all work noble that's honest and right?
Nor shrink from a duty that Fashion might scorn?
Will you strive to grow lovely in Heaven's just sight,
By deeds that the world might not think will adorn?

Will your purity last when by love you are sought,
Though worldliness tempt you against love's demands?
The wreck of a life and a soul may be wrought,
Through treachery dealt by a woman's fair hands.

Oh! dear baby hands, there's no prophet could tell
The magical strength that one day you might wield!
May God ever help you this gift to use well,
And may it a harvest of rich blessings yield!

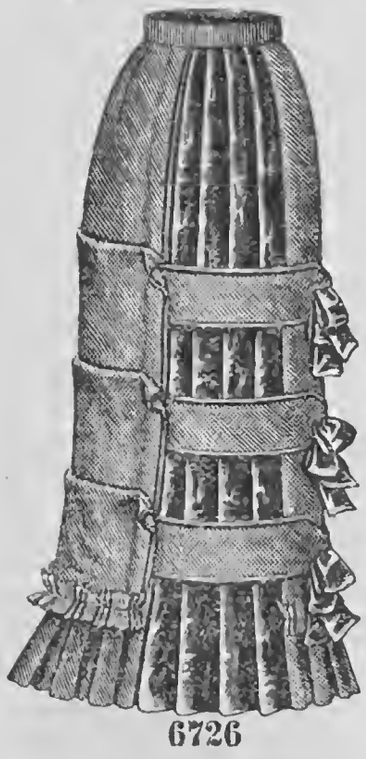
[*N. O. Times.*

FASHIONS FOR SEPTEMBER.

INDICATIONS from abroad seem to point to an exaggeration of the styles that have been most popular this summer. The "tailor-cut" garments will still more closely follow styles affected by gentlemen, until, in extreme cases, we may expect to see ladies wearing gowns and coats that will almost be fac-similies of cut-away coats, etc. This week we present a few of the latest novelties, particulars of which are given in the

Description of Cuts.

Figure 1 is a Ladies' Walking Costume in which comparatively little dress fabric is required, for with deep plaitings at the foot and the attached



6726

FIG. 2.

draperies, the skirt may be cut from Silesia or cambric. The skirt illustrated is charming in construction, and its side-draperies are cut in sections so that small amounts of materials may be appropriated for the purpose. The *revers* are turned up and faced, but may be made of the striped or any contrasting fabric, lined with crinoline and then sewed on where they would be turned up if cut on. The basque worn with the skirt has a short, round front and a coat-tail back, and is fitted in the usual manner. The coat is a stylish affair of basket-cloth and finished like a gentleman's coat. The fronts are loose, but the back is shaped by a seam at the center and side-forms extending to the arm-holes. Pocket laps are on the side-skirts, and extra widths left at the side-back seams are lapped over the skirt and invisibly tacked. Cloth or heavy camel's-hair is much used with such coats to wear with dark suits, or those composed throughout of the same material. Patterns Nos. 6714, (35-cents); 6680, (25-cents); and 6735, (30-cents), will be required for models.

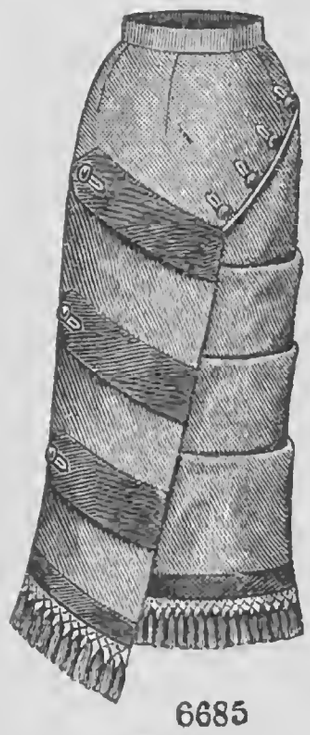
Figures 2 and 3 are front and back views of a walking-skirt, a good feature of which is the ornamental possibilities of its construction. It may be said, indeed, it is the chief feature, as but little trimming is applied, all depending on the arrangement of the material. Three broad straps, commencing at the right edge, cross the front, and

6726

FIG. 3.

their opposite ends are pointed and extended upon the gore at the left side. The right side-gore, which is cut somowhat longer than the remainder of the skirt, is now joined to the opposite edge of the front. Its superfluous length is arranged in three upturning plaits, at nearly equal distances from each other, these plaits cross-draping it very stylishly and being tacked about an inch from the edge in front. The gore is then joined to the front in a flat seam, with the margin outside the joining forming an overlap. The back-breadth is also cut long enough to allow for draping and is twice shirred crosswise, one shirring being inserted about 12 or 14 inches from the top, and the next the same distance from the first. Shirrings are formed by making a tuck on under side, and through casing thus formed is passed a tape, which may be let out every time the dress is taken off. A downward-turning plait is laid over the termination of each shirring to take up extra length, and then the breadth is sowed to the remainder of the skirt, the upper part of the seam at the left side being finished for a pocket. The fullness at top of the breadth is laid in a triple box-plait, and then the skirt is sewed to a belt. The pattern, 6,726, for this skirt is in nine sizes; price 35 cents.

Figures 4 and 5 are an overskirt of novel and stylish construction particularly worthy of notice. There are only three sections comprised in the formation, two of these uniting to make the sides and front, while the remainder constitutes the back-drapery. The gores are fitted over the hips by two darts in each, and while the right side-gore is entirely undraped, the left one is prettily cross-folded in three up-turning plaits. The front edge of the right gore is a little deeper than the adjoining edge of the left one, and has three broad straps cut upon it at equal distances apart. These straps are folded back upon it and faced with the contrasting goods, and the two gores sewed together as far as the top of the upper strap. Here the right gore extends upward diagonally, becoming narrower until it reaches the second dart of the left gore. The first dart in this side is taken up and through the overlapping portion, and a row of large, flat pearl buttons and simulated button-holes is placed along the outer edge. The straps are fastened down under similar buttons and button-holes, and afford a charming contrast to the elegant plainness of the other gore. The back is draped by two plaits turning downward in each side, and the fullness at the top is laid in side-plaits. This pattern, 6,685, is in nine sizes; price 30 cents.



6685

FIG. 4.

Figures 6 and 7 are stylish *jabots*, the first nicely taking the place of a vest, by which addition a high-necked costume is made very dressy. To sustain the effect, frills of lace should be added to the wrists. A strip of foundation or stiff net is first required, and to this the lace is basted. The appearance of the jabots is a guide to their construction.

Figure 8 is one of the stylish turban hats. A turban frame, a silk handkerchief and a fancy pin are used in forming the article.

6685

FIG. 5

Figures 9 and 10 are a jewel-stand. The finished stand is shown in No. 9. The diamond pattern surrounding it, of perforated cardboard, is shown in No. 10. Three small cane rods are needed, which have very small brass knobs put into them at the top, and are bound together with ribbon. A small cushion for pins is placed about half way between the top and bottom of the stand; this has a cardboard foundation; it is filled with bran and covered at the sides with velvet, upon which the diamonds of perforated card are placed to correspond with those around the tray at the bottom of the stand. Three larger brass knobs than those used to finish the top are fastened into the canes at the bottom. The outer covering of the tray is of dark blue velvet, the inside is a quilting of rose-colored silk, with a quilling of rose-colored ribbon, and a little braid or edging is put around to give a finish to the work. The canes are wound round, and the pin-cushion is crossed by a narrow strip of perforated card, laid on to a narrow, dark-blue ribbon, and the edge of the perforated card is bound with it. The bows of blue ribbon are then tied on, and the stand is finished.

Figure 11 is a cigar-ash bowl of cone work. Materials: a piece of dark-colored wood five inches in length and five inches in width; cones, acorns, etc., virgin-cork, small cocoanut-shell cut in half, tin-foil, glue, copal varnish. The foundation must be a piece of oak or mahogany, thin and light. To this a sort of framework of four sticks of wood, with the bark on, is placed at the edge all round (see design). The half cocoanut is neatly lined with tin-foil, and a stick of wood split in half, also covered with foil, is glued across the top. Then the cork, cones, acorns and beech-nuts must be tastefully glued on to form a pretty combination. The virgin-cork will furnish a rocky-looking background for the cone-work. When all is arranged, and the glue has thoroughly hardened, the whole ornament is brushed over with varnish.

FIG. 1.

THE WOMAN'S CLUB.

THE SERVANT QUESTION.

"The best laid schemes o' mice and men.
Gang aft agley."

WHEN I talked so coolly of our work and rest in the afternoon, I did not imagine that the fates would so soon make me "eat my own words." Don't the experience of the last few weeks cause me to give my heartfelt sympathy and pity to those poor women who are compelled, like the galley-slave, to work unceasingly from early in the morning until late at night!

FIG. 6.

The young lady who condescended to assist in the kitchen department of our farm-house very suddenly informed me that ma wanted her at home the rest of the summer! The days were growing warmer, work was hurrying, more men were needed, strawberries were ripening and must

be picked and taken to market; the remainder of the tobacco ground must be fitted and plants set. Neither men nor horses could be spared to go girl-hunting. No help for it, one must do the work of two, and all day long the tired feet must keep up their ceaseless round from pantry to kitchen and back again.

Baby, who is not yet two, must be left to amuse herself, and when she began to grow cross and feverish, and her older sister to show the same symptoms, the work must go undone. Where now was the tidy kitchen or orderly house, and how could it be helped? "It never rains but it pours." The children the next morning were found to be covered with an eruption which was pronounced at once to be chicken-pox, not a formidable disease, but just now very annoying, to say the least. Then, help of some kind must be had. And now I come to the one great annoyance of farm life, hired help.

We live three miles from town, and a girl can never be obtained from that quarter for love or money; it is too lonely in the country, and they cannot have the evening out. We are therefore obliged to put up with what we can get, and as there are no poor people ever known in this happy region, one neighbor who has a surplus of girls offers us one of them. She informs you that she is not obliged to "work out;" that she considers herself just as good as any one, if not a *little better;* that she has heard you are proud and stuck-up and never do anything yourself, and that Mrs Such-a-one says your work is very hard; and is horror-struck at the idea of being called a servant.

FIG. 7.

You find in this case you really are the servant. she will only do such things as she pleases, you must take all the drudgery upon yourself. The cleaning of porches, outhouses, carrying out slops, straining milk, baking and cooking are left or you to do. A friend who was visiting me once when under such an infliction said: "Why, really your 'help' has more leisure than you have." She surprises you every day by some new freak. Perhaps when you are entertaining callers from town, she walks into the parlor, seats herself and remains until they leave. And I actually knew a girl of this kind leave in high dudgeon because the lady did not call her into the parlor and introduce her to company!

Sundays she gets up earlier than any other morning, dresses herself in her best (after hurrying through with her work), leaves for home and is seen no more until night. You can teach her nothing, she knows everything, and her way and Mrs. Somebody's way and Ma's way are so much better than yours. You worry through with it all until at last patience gives out, and you tell her, at the risk of being misrepresented to all your neighbors, that you don't need her any longer.

Am I alone in this experience? Are there not many rural women who wear themselves out with over-work rather than be annoyed by such help? And are there not those who, like myself, would be willing to pay with gratitude, as well as money, a good, faithful servant—one who would appreciate a good home and kind treatment—one who would look to the interests of her employer, and share, not add to, the burdens of the mistress of the household? CLARE.

CANDLE AND SOAP MAKING.

SOME refined natures will shiver with disgust at the very title, the bare idea of this vulgar work, while the more practical will think these hints untimely for they should all be done with before the winds of March or the showers of April. Yet I was behind this year, and having just finished, while the lesson from experience is fresh upon me, is the time to impart to others. Meat-hanging and candle-making should precede soap-making that the wastes may all go to the last. We have a large salt kettle holding eighty gallons or more, sunk into the earth over a rock furnace or flue, upon the brim of which rests one end of a huge trough, formerly used for salting pork in; the other end elevated upon a section of log. Into this trough the ashes are put as they are taken from the fire-places; the rain supplies the moisture necessary, to decay them. In the latter part of February, or the first of March, as the weather suits, the meat is taken up from the salt. lye run (this being close to the creek, puddle holes are made at intervals in the ashes and kept filled with water, the boiling down going on at the same time of dripping), red pepper boiled in the lye, the hams and shoulders dipped, sprinkled with black pepper—from a perforated oyster can and hung highest in the smoke-house. This soapy lye, waste scraps and greasy salt, help out in the soap-making, the soap made of the pepper-lye, being good for cleaning places troubled with insects. In this I usually make up my dirty-grease, for scouring purposes. In this age of lamps and electric lights, it seems ridiculous to speak of dipping candles. And more so for a young housekeeper to attempt to instruct others upon so ancient a custom. But with all the "light upon the subject," and with all of man's modern inventions we have not discovered a means of molding anew old people's fancies. They are afraid of lamps, and I find moulding candles almost as difficult as moulding a man's second nature. So I dip them, and as ancient arts sometimes become new ones, and have to be learned by the rising generation, I presumo and become instructor. Have a board a foot long, wrap around this, the wick, three times, clip open at one end, twist it slightly,

FIG. 11.

pass it around a rod a yard long, twist it together, and keep on till you have prepared wicks for two dozen candles to each pound and a half of tallow which you intend to make into candles, placing enough on each rod to hang one wick or more apart and to dip into the kettle without dragging the sides.

Have the wash-kettle so elevated that a fire may be kept under it, fill it with water to half-inch of the brim, finish it with melted tallow (in which has previously been boiled a half teacup of lye to raise the dregs for skimming off); holding the rods one at a time, parallel with the brim, dip quickly, and hand to your assistant to place upon two poles between which the candles hang, always having one rod dipping while the other is being placed, and another handed you. If a cool day, you may keep going over them until *nearly* large enough for a candle-stick; when the *stalactites* or drips may be cut off to the wicks and the dipping finished. Remove from the rods and place in a box with close fitting lid. Thirty-five pounds will make twenty-two dozen, and last us a year.

For soap-making I boil down eighty gallons of lye to ten, dip it out, and put in three gallons of grease, let it heat through, and feed in the lye, a cup full at a time, stirring constantly. The grease will be eaten by the time the lye is all in; cook down till it falls from the paddle in a roping stream; if a little dropped into clear water proves the grease not to be all eaten, more lye is added; when thick, a half gallon of salt is stirred into it, and if not hard enough for cooled drops of it to be easily slipped from a tin surface, more is added—it is dipped out into a tub to cool, and the trough started and running again. When cold, it is cut in squares, placed upon shelves, and the soft dipped out into the soap trough. If a great quantity of lye be boiled down strong enough to strip a feather when dipped slowly into it, several kettles full may be made in a day.

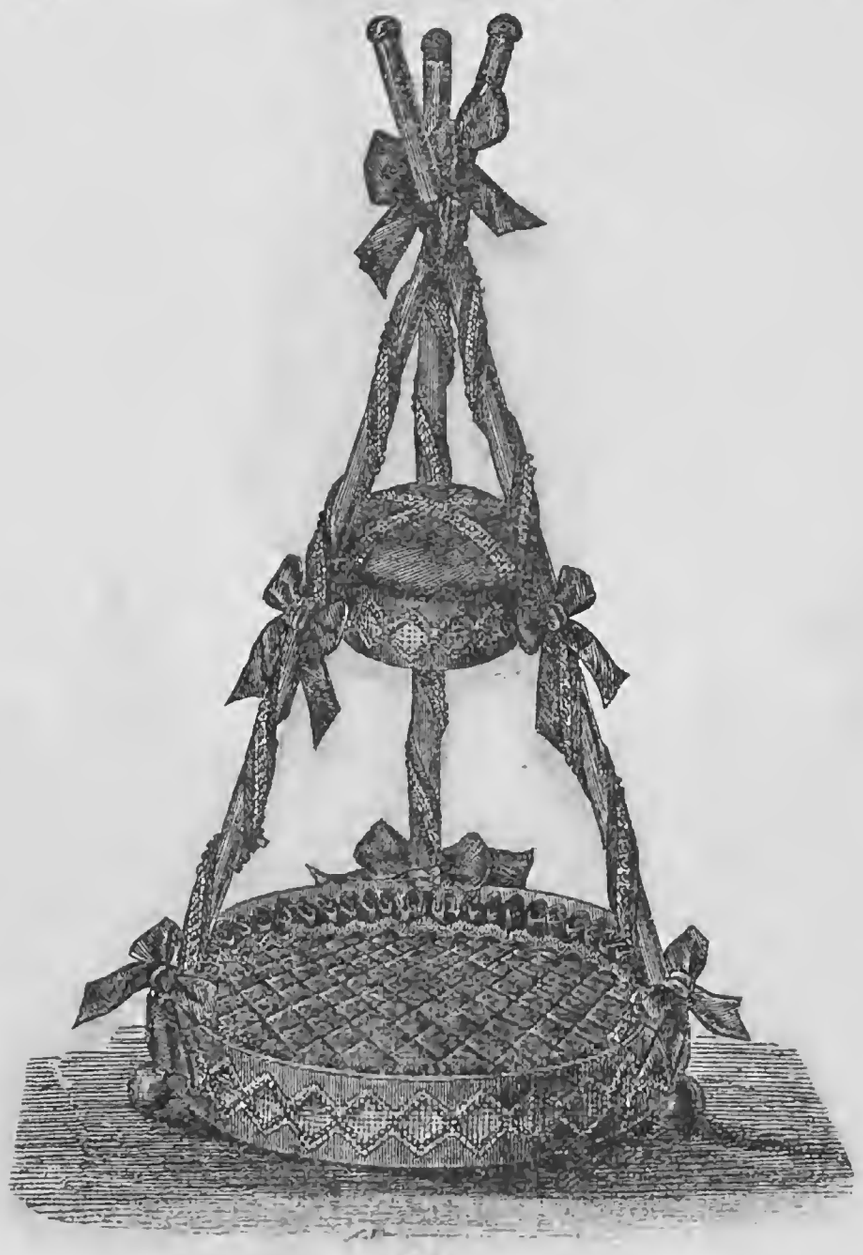


FIG. 9.

For utilizing scraps of toilet soap most satisfactorily, drop them into a corner of the wash-stand drawer till enough accumulates to work with. You will have them of all colors, pink, yellow, brown and white. If you are impatient, and cannot wait for the slow accumulation, add your scraps of home-made soap; shave them up in a bowl, and pour over a little water or vinegar or grape-juice or camphor, sweetened with honey or glycerine, or soda or borax. Let stand till the outsides are soft—make into balls convenient for handling, and you have a soap containing the vinegar, camphor, honey, glycerine and soda, fine for softening the skin; and that containing the grape-juice and borax, fine for the hair and eyes. The juice is obtained from the grape-vine by clipping off the end of a down-hanging branch, tying a bottle to it, with the stem inserted in it. It will run a half-pint, in spring, directly. The soap will be beautifully mottled or marbled through, and will not crumble or break till used u

MRS. M. L. S.

HOW MANY DO IT?

DEAR SISTERS OF THE CLUB:—I have pondered long the feasibility of joining your club. Have thought much of doing so ever since reading "The Successful Housewife," in issue of May 31. That piece did me much good. Love caused me to leave the city and take up my abode in the country. For this life and its duties I was totally unprepared by education and health. In both I have gained much since wifehood and motherhood have come to me; though half a decade has not yet passed since I left "the busy haunts of men" and came to the unbroken prairie to help make a home. As the weeks go by I realize more and more my responsibility as mistress of a large farm, and may some time give a wee bit of my experience with help, in-doors and out. But now I would ask, how many of you give plenty of oat meal porridge to your little ones, and partake of it yourselves? From my experience, I fear this wholesome article is much neglected, especially in the country. Farmers' wives should be able to prepare more tempting dishes than dwellers in the city, for have they not most of the ingredients fresh and at hand? But I will return to the oat meal, and give my favorite method of preparing a dish of it for supper. Place in a small stew-pan or spider one quart of *cold* water. Into this stir one pint of the oat meal, continue to stir briskly till it boils, then place on the back of the stove and allow it to cook slowly for 15 or 20 minutes, stirring occasionally. If it becomes too thick, add some boiling water. The amount can, of course, be varied to suit the size of the family. We usually use cream and sugar with our porridge, but butter is good, and the better way for many dyspeptics, whose sensitive stomachs refuse cream. I do not think this dish can be surpassed as a regulator of the bowels in children and adults. If mothers gave their children more of such diet, with the addition of *ripe* fruits, we would soon become a healthier and happier race. And now I would ask our dear patroness if very plain letters on motherhood would be acceptable, or does she believe in the more conservative plan of allowing physicians and their books to give all necessary advice? I doubt not that many of our elder sisters could give us much needed instruction on this and kindred subjects if they were permitted to do so. Farewell, for my youngest darling will soon arise and call, "Oh! ma," or, "VIDA."

OUR GIRLS.

As this is the Club that is free from any admittance fee, I present myself. I suppose you to be farmers' wives.

We generally have a subject. This shall be about the girls. What shall we do wi them? Why need we be alarmed about them? They will take care of themselves! No indeed, they will not unless mothers teach them how; and the necessity of an effort on their part. We cannot begin too soon to teach them to be useful. The first thing is to obey, for as the twig is bent so is it inclined. Teach them to take care of play things, then their clothes. Give them needles and thread to make dollie's clothes, then as they grow in body and strength, teach them to wash dishes, cook, wash and iron! It is an honor to know how to keep a house I order, and every daughter should be taught, so it she may know when her servants have all th i s in order. If so taught there would be more happy homes, and we would not hear so much about hard times.

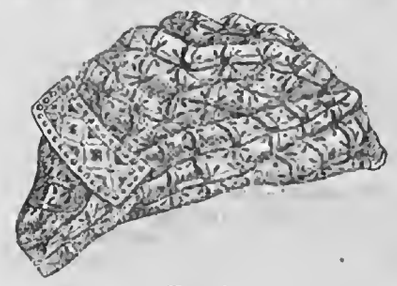

FIG 8.

Girls need not be slaves to house-work and it will not keep them from learning music, painting and kindred accomplishments. And when in turn they have homes of their own, they will rise up and call you blessed for teaching them. It is the mothers of our land that have to do the work of teaching. A good Connecticut mother was asked why she taught her six daughters all kinds of housework. They were wealthy. Her answer was: "If they became poor they would know how if rich, would know when well done." Three were poor. Riches may take wings and fly; what we learn will not. E. M. P.

Literary Miscellany.

TRIP LIGHTLY.

TRIP lightly over trouble,
Trip lightly over wrong;
We only make grief double
By dwelling on it long,
Why clasp Woe's hand so tightly?
Why sigh o'er blossoms dead?
Why cling to forms unsightly?
Why not seek joy instead?

Trip lightly over sorrow,
Though all the days be dark,
The sun may shine to-morrow
And gayly sing the lark.
Fair Hope has not departed,
Though roses may have fled;
Then never be down-hearted,
But look for joy instead.

Trip lightly over sadness,
Stand not to rail at doom;
We've pearls to string of gladness
On this side of the tomb.
Whilst stars are nightly shining,
And heaven is overhead,
Encourage not repining,
But look for joy instead.

IN FOLLY'S NET.

CHAPTER II.

MY HIGHLAND LADDIE.

The new-comer, who was, as Miss McLeod had surmised, no other than Archibald Earl of Ivor, was a tall, stalwart, and well-built man of thirty or thereabouts, carrying himself well, and with a certain stately grace which rarely failed to win notice and admiration. His eyes were half proud, half sleepy, and of a deep gray; his hair, close shorn to his head, was fair and curly, and his mouth, which had a mingled expression of pride and sweetness, was shaded by a heavy, silken moustache.

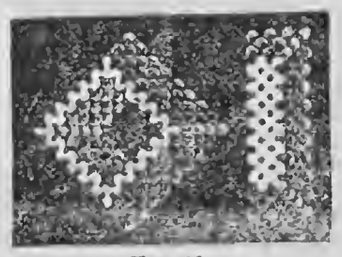

FIG. 10.

Young ladies were apt to turn admiringly when Lord Ivor passed, and exclaim at his good looks, and as he came up to Miss McLeod, looking very handsome in his evening dress, few finer specimens of manly beauty could be found.

"You are very late, Archibald," said Miss McLeod, and Mr. Blair heard the change in her voice, the softness and sweetness which had come into it, corresponding with the sweet love-light in her brown eyes. "I thought you were not coming at all."

"And I did not think I should be able to manage it," he answered, in pleasant, musical tones. "But at least I was determined to be here in time to put you into the carriage, if possible."

As he spoke he glanced rather inquiringly at Mr.

Blair, and Jean hastened to perform the necessary introduction.

The two gentlemen bowed in silence, and Miss McLeod went on, gaily:

"Mr. Blair was at Eton with Lord Sholto, Archibald."

"Then I must have known you there also," said the Earl, turning to him with a smile. "Is your name Andrew? Yes, of course, I recognise you perfectly. Blair of Blair Gates, I am sure."

"You are quite right," said Mr. Blair. "I recognised you at once."

Lord Ivor put out his hand, and they shook hands cordially enough, while Jean laughed as she watched them.

"Quite a coincidence," she said gaily. "I believe I shall find out that I was at school with you myself soon, Mr. Blair."

"Then you must be a believer in the doctrine of metempsychosis," he answered, laughing. "For when I was at school, you must have been an infant, Miss McLeod, or probably not born at all, and your soul existed in the body of some young Etonian who was cut off in his early boyhood."

"Is that a doctrine in which you have faith?" she said, saucily, making room for the Earl to sit down by her side. "Do they believe in the migration of souls in the bush?"

Mr. Blair laughed also.

"I dare say some do," he said, lightly. "I do not hold their creed, however."

"Have you been abroad, Mr. Blair?" said the Earl, who had taken Jean's fan and was slowly fanning her with it.

"Yes; the last ten years of my life have been passed in Australia," he replied. "I never had much fancy for a home life, and until four years ago, you know, I was only a younger son. I knew Blair Gates was in good hands, and that old Jarvis would look after my interests there."

"When did you return to England?" said Lord Ivor, carelessly opening and shutting Jean's pretty fan.

"Three months since—in the beginning of spring."

"I wonder we have not met," said the Earl. "You ought to have looked up some of your old acquaintances."

"I did one or two," he answered, carelessly. "I trusted to chance to meet the others, and," he added, more cordially, "chance has favored me this once at least."

"You would not imagine that Mr. Blair had lived in the bush, would you?" said Jean, laughing. "He makes such pretty speeches."

"As you are strong, be merciful," said Andrew Blair, laughing. "Miss McLeod, you are so severe that I think it will be wiser to beat a retreat.

He rose as he spoke, and Jean held out her hand to him, graciously.

"I think I may presume on Lady Sholto's friendship sufficiently to give you permission to call," she said, smiling. "I am on a visit to her now at No. 17 Ormerod Square."

"I shall not fail to avail myself of your permission," he answered, a pleased flash lighting up his dark eyes. "Good-night, Miss McLeod," he added, as he bent over the small gloved hand. "Good-night, Lord Ivor."

He turned away, and Jean watched his tall figure as he made his way out of the conservatory.

"He walks well," she said, critically. "And he is very good-looking. Don't you think so, Archie?"

"Yes, dear," answered Lord Ivor, absently.

"What are you thinking of?" said Jean, in a moment, as she nestled closer to him.

"I was wondering what was the cause of a great row Blair and I had in our Eton days," he answered, smiling. "I remember a tremendous uproar of some kind; but I don't remember why or wherefore."

"Some boyish squabble," Jean said, indifferently. "He seems pleasant enough, and talks well."

"If you praise him any more, my darling, I shall be jealous," said the Earl, smiling, as he looked down into the charming, laughing face so near his shoulder.

"Jealous, if you dare!" laughed Jean. "I could not make you jealous if I tried ever so hard, Archie."

"I don't know about that, Jeannie," he rejoined. "But I confess my trust in you is so great that it would be difficult."

"I am glad of that," she said, softly, resting her head against him with a proud gesture of perfect contentment; "I like to think that you trust me fully, dear."

Lord Ivor stooped and put his lips fondly to the white brow.

"Of course I trust you, my dearest; because, though you are just a wee bit of a flirt, I know that no truer, sweeter woman breathes than my darling."

"Flattery," she said, lightly, but with happy eyes meeting his, with the soft love light in their depths.

"Truth," he answered, gaily. "Now tell me, dear child, have you enjoyed your ball?"

"Yes, very much," was the reply. "I have had two most perfect *trois temps* with Captain Murray, and a Lancers with Lord Sholto, who dances to perfection. The rest of the dances I have sat out."

"Alone, of course," said his lordship, comically. "Poor child! could not get any partners, I suppose?"

"No; is it not sad?" she replied, demurely. "Becoming quite a wallflower, you see."

He laughed merrily.

"A wallflower is one of the sweetest of flowers in my opinion," he said; "but I am afraid I shall never see you a wallflower, Jeannie."

"Afraid? Why, Archie, if you wish it, I will give up dancing altogether."

"I should not have the heart to demand such a sacrifice, my darling," he said, laughing. "I like to see that my pretty love is admired and sought after, although I fear sometimes that she will find it dull when we settle down at Glen Ivor."

"Dull with you, Archie?" and Jeannie's eyes looked at him reproachfully for a moment.

"I retract, darling," he replied, gaily, fondly closing the red lips with his own.

"Anything interesting at the House to-night?" asked Jean, in a moment, putting on a pretty air of serious interest in the political welfare of her country.

"No, not very; still that vexed subject of the Ragged Schools Bill," he answered, rather wearily.

"Will it pass, Archie?"

"I don't know, love; I fear not."

"You are tired, dear," she said, noting the weariness of his voice.

"A little, Jean. It's tiresome work listening to the same arguments time after time."

"It must be," agreed Jean. "Poor, dear, injured boy."

"Don't laugh at me, you little witch," he answered, smiling at the comically-pathetic face which Jean had assumed, "or I shall wish you were in the House instead of myself."

"Ah! perhaps that halcyon time will come," said Jean, with her serio-comic face full of suppressed mirth. "I am looking forward to it, Archibald. When we, the really superior, but presumably inferior creatures, shall have a voice in the affairs of State; when we shall speak, and our voices shall be heard far and wide, against the maltreatment we receive."

"Then," she added, "Do you know, Archie, I think Captain Murray is falling head over ears in love with Ida?"

"Is he? Does she seem inclined to break his fall?" laughed the Earl.

"I think she does," nodded Jean. "Do you think Lord Sholto would approve?"

"I dare say, love. Why not? Murray is an excellent fellow, and well off."

"He might think Ida ought to make a better match," said Jean, thoughtfully. "I mean, of course, in a worldly point of view."

"Oh! Sholto is not very worldly, dear," he answered, lightly. "I heard him say once that if Florence had been a dairymaid he would have married her all the same."

"But Florence was not a dairymaid, but an Earl's daughter, so his truth was not tried," said Jean, laughing.

"He is a most devoted husband, Jean," said the Earl, rather gravely; for Lady Sholto was his only sister, and her happiness was very near his heart.

"Of course, dear Archie; no one doubts that," she said, smiling. "Still, I am sure he would not like his sister to marry a dairyman."

"Of course not, Jean; but you don't compare Captain Murray to a dairyman? He would not feel flattered, love."

"No," she said, laughing. "I hope Lord Sholto will favor his suit, and I am going to ask Florence to invite him to Sholto Hall for the shooting season."

"Wicked little matchmaker," he said, laughing. "Speak of an angel, and you will see its wings. Here come Ida and Captain Murray."

A tall, slender, graceful girl came quickly into the conservatory, leaning on the arm of a handsome, military-looking young man. The Earl greeted the latter with a smile and nod, and held out his hand to Miss Crawford:

"Have you come to give us the signal for departure, Ida," he said, smiling.

"Yes; Florence is going," she said, regretfully. "She sent us for you."

"Have you enjoyed yourself, Ida?" asked the Earl, as he rose and gave his arm to his *fiancee*.

"Yes, it has been a charming ball," said the young girl, gaily, with a glance at her companion. "Oh! Jean, your last partner, Mr. Blair, has been introduced. Do you know that he knew Arthur when they were boys?"

"And Archibald also," said Jean. "Have you danced with him, Ida?"

"No, he does not dance, seemingly; I think him awfully handsome."

"Oh! pray don't start that theme, Ida," said Lord Ivor, good-naturedly, seeing a shade cross the pleasant face of the young officer. "I am quite tired of Mr. Blair, for Jean has been sounding his praises for the last half-hour."

"Florence has asked him to call," said Ida, smiling. "I hope he will."

"He is not your style at all, Ida," laughed Jean. "Besides, he is a captive to my bow and spear, and you have nothing to do with him, mademoiselle."

They had entered the ball-room; and, as they slowly made their way to the door, hindered by numerous friends and acquaintances who paused to address them, Miss McLeod could see Mr. Blair's tall head over the crowd as he stood leaning against one of the pillars of the ball-room talking to Lady Sholto, who was a pretty, delicate-looking blonde, sufficiently like Lord Ivor to be recognized as his sister.

Just as they reached them, Lord Ivor's attention was forcibly claimed by an elderly gentleman, and while he stood talking to him, Mr. Blair offered his arm to Jean to take her to the carriage.

"You see I have been renewing old acquaintanceship," he said, as they slowly made their way down-stairs in Lady Sholto's wake. "And Lady Sholto has kindly repeated your permission to call."

"Yes," Jean nodded, brightly. "You will come, I hope."

"Can you doubt it?" said Mr. Blair, with his eyes fixed on the little white hand and slender wrist lying on his arm, and that gentle lowered voice which he could assume at will; and Jean was silent, coloring a little, however, for his tone was very significative.

Half way down stairs they were overtaken by Lord Ivor, and Mr. Blair had the pleasure of seeing Jean turn to him with a bright little smile of pleasure, and he walked down beside them; but it was Mr. Blair who put her into the carriage, receiving in return a merry, mocking glance from the bright wine-brown eyes, as bright still as if the evening had but just commenced, and a little touch from the gloved hand, and then he had the further satisfaction of seeing Lord Ivor stand at the carriage-window for fully three minutes, while Lord Sholto, like patience, in a summer overcoat, stood on the pavement lighting a cigar.

"I suppose your cab is here, Ivor," he said, as his brother-in-law relinquished the fingers he had held in his own during those few minutes; they had seemed very long minutes to Mr. Blair. "Take me home, like a good fellow, I'm dying for a cigar."

"All right," Lord Ivor said, carelessly, as his cab drove up, a stylish looking vehicle drawn by a fine black horse. "Good night, Florence; good night, Ida."

"Good-night, Captain Murray," said Jean, putting her head out of the window as they drove away. "Remember, you are to go with us to the Botanical Gardens to-morrow at three. *C'est convenu.*"

The lamp-light fell full on the bright, saucy face as she emphasized her words with a glance at the young officer, which saw how his face brightened, and another at Mr. Blair's handsome dark face, and the carriage drove away leaving the four men standing on the broad white steps of Lady Kergenven's house.

"I suppose you are going in to have another turn, Murray?" said Lord Sholto, laughing. "You young fellows are indefatigable. Good-night," he added, as he entered the cab. "Good-night, Blair; we shall meet soon, I hope."

"I hope so," said Mr. Blair, as he turned into the house again—not to dance, for the interest in the ball-room had left it with Jean McLeod's bright face—but to fetch his coat and hat; and as, assisted by an obsequious footman he put on his overcoat, he congratulated himself on the lucky chance which had induced him to become a Fellow of the Botanical since his return from abroad.

(To be continued.)

Editor's Table—About Melancholy again; The Poetry of the Familiar; The Honors to the Prince Imperial; Books of the Day.

A VENETIAN NIGHT.—We paused in the moonlight silence. There was no sound but an occasional quick tread along the outer walk, which died away under the arches. It is at times like this that Venice is peopled with phantoms.

"Look there, where the moonlight falls on the flowers in that window! Do you not see a scaffolding rising against the arch?" I cried to my companions. "And, standing with his hand following the outline of that robust nymph, do you not mark a tall, bearded figure in velvet cap and gown? Something bright, like steel, gleams under his long robe. As he works, he glances around, and now and again his hand leaves the brush and wanders to his side. Down below, on the cloister-walk, do you mark those slight figures in doublet and long hose, lurking behind the columns and gazing up at the painter as though they would blight him with one glance from their fierce black eyes? Do you know who he is, that phantom painter who plies his brush so busily in the moonlight of the summer nights? It is one Pordenone, who lived in the golden age of Venice. He was all his life fired with a passion to rival Titian, the pride of the republic. He painted so closely after his great model, and so well wrought was his work, that the disciples of the great colorist feared for their master's fame and swore to annihilate this upstart. And so, when the monks of San Stefano ordered Pordenone to cover their cloister-wall with shapes of beauty, the poor painter was forced to work at his task with his sword by his side, for he knew not at what moment some fiery Venetian youth, whose color-god was Titian, might not snatch his brush from his hand and strangle him there on the holy cloister-ground."

I can picture old Pordenone sitting up there on the scaffolding in the summer mornings, when the friars were pacing the length of the cloisters, conning their mass-books or telling their beads, stopping to give the painter a word of greeting, or to glance stealthily at the wondrous mythic shapes, pagan gods or goddesses in the disguise of Christian virtues, with which he is covering their hitherto undefiled walls. I wonder if then, as now, the pigeons circled about the walls, drinking at the hollows in the marble; if the bright dresses of the water-carriers flashed among the columns; if the country girls trudged with their baskets of roses and lavender through the barren stone passage; if the white-kerchiefed market-women bore their shrieking fowls head downward along the walk; if the tired peasants dragged their baskets of purple figs, with sweet red mouths, into the cloister-shade and begged leave of the friars to stand there and sell them? How fair and gracious the summer must have seemed to the painter who sat up there in the world of his creation!

Voices began to echo through the streets from the groups gathered about the doorways or high up in the windows under the tiles—the harsh voices of men drinking in the lighted wine-shops, the tender lullabies of watching mothers, the shrill young melody of girls' voices, bidden like nightingales in high leafy prisons, the passionate utterance of young men's hearts. There is a deep reverence for nature and the unseen in the night-songs of the Venetian people. Light and gay they are, for they are born of the moonlight and the lagoon-foam, but, like the light and the foam, they are the blossoming of the heart-depths of the universe.—*Appletons' Journal for September.*

THE SPEECH CENTER.—Allusion has been made to the determination of a speech center by observations of the phenomena of aphasia, and the repeated examination of the brain of aphasic persons after death. That this center is situated in the third frontal convolution near the Island of Reil in the left hemisphere of the brain all the physiologists agree. Some, however, Dalton, Lander, Brunton and Ferrier, being among them, are inclined to believe that a corresponding center lies in the right hemisphere. Prof. Ferrier explicitly says: "The speech center is, as has been stated, in the great majority of cases, situated in the left hemisphere. But there is no reason beyond education, and heredity, why this should necessarily be so. It is quite conceivable that the articulating centers of the right hemisphere shall be educated in a similar manner.

A person who has lost the use of his right hand may, by education and practice, acquire with his left all the cunning of his right. In such a case the manual motor centers of the right hemisphere become the centers of motor acquisitions similar to those of the left. As regards the articulating centers the rule seems to be that they are educated, and become the organic seat of volitional acquisitions on the same side as the manual centers. Hence, as most people are right-handed, the education of the centers of volitional movements takes place in the left hemisphere. This is borne out in a striking manner by the occurrence of cases of aphasia with left hemiplegia in left-handed people."

This reasoning accords with the phrenological doctrine of the *double organization* of the brain, each hemisphere being a complete set of centers, motory, sensory, and mental. Observers of the form of heads know that the left side of the cranium is generally larger than the right, a natural consequence of the superior activity and use of the left hemisphere in the mental life of men. The differences in minute structure which are noticeable in the right and left hemispheres of the adult brain, are explicable by the same law of growth and development which governs in the case of our arms and hands.—*Phrenological Journal.*

THE AMERICAN NATURALIST FOR SEPTEMBER. Contents: Adjectives of Color in Indian Languages, Albert S. Gatschet; The Habits of a Tarantula, Mrs. Mary Treat; The formation of Cape Cod, Warren Upham; The Geological Museum of the School of Mines, Columbia College, Israel C. Russell. Double-headed Snakes; *Anata calva*; Habits of Ants; A Poisonous Centipede; Anthropology; Mastodon, Mammoth and Man; Archæology at St. Louis and Philadelphia; Chungkee Stones and Quoits; Iron Axes; Anthropological News; Geology and Paleontology; A Decade of Dogs; Geological and Palæontological News; Geography and Travels; The Slave Trade in Central Africa; Microscopy; Purity of Lake Water; Micrometric Ruling; Scientific News; Proceedings of Scientific Societies; Selected Articles in Scientific Serials.

HABITS OF THE RED-HEADED WOODPECKER.—During the past three or four years much has been written in regard to the changes which are taking place in the habits of the red-headed woodpecker—"a versatile bird," to quote the apt characterization of Dr. Elliott Coues. This bird is quite common here, though I am of the opinion that it is not seen in as large numbers as it was when the country was first settled some twenty-two years ago. I have often seen them about my barn-yard industriously picking up corn which had been shelled for the swine. Generally the bird alights and secures a single grain, and then flies off to the nearest tree-top to peck it into pieces and devour it at his leisure, returning for others at frequent intervals. I have often watched them while they were making a score of these little journeys. In 1877 this region was overrun with grasshoppers, upon which the red-headed woodpeckers feasted royally while they lasted. I saw the birds out on the prairie, a mile or two from the timber, so intent upon catching the 'hoppers that they scarcely noticed one in passing. Sometimes they would catch a 'hopper on the wing, dodging around in a very lively manner to secure the insect, and again they would hunt for their prey on the ground. The insect secured, the bird would alight on a fence-post and devour it. I have occasionally seen them, attended by their progeny, in the open fields, where the old birds were engaged in catching insects for the clamorous younglings, which had not yet learned to provide for themselves. It would seem that, at the time the young birds require so much food, the old ones would need some readier means of supply than would be afforded by pecking for grubs in decayed timber, or searching for insects on the outside of trees—whether the "creepers" had intruded upon their domain or not. So far as I have been able to observe, the red-headed woodpecker is really a very "versatile bird," evincing a readiness of resource and an easy adaptation to his environment that are truly wonderful

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

MORNING AND EVENING HOUSEKEEPING.

ANNIE L. JACK.

THE days grow perceptibly shorter, the evenings are lengthening, and the hour of five seems early for beginning a day's work, even in the country. But while the heat lasts—and that is till the middle of September in this latitude—there is really nothing so important in regard to saving strength as to do all we can of the necessary work of house and garden during the cool hours of the morning and evening. For my own part, I much prefer the morning hours. After the freshness of the night air, and one's own good night's sleep, the body is better able to cope with the duties before one. How fresh and sweet the air, as we go into the garden for weeding at an early hour! At no other time do the birds sing so blithely and happily. The Morning-glories, too, are at their best about sunrise—dew-spangled and real "glories," while the evening Primroses are just shutting their eyes as the sun advances, for I have often found the expanded flowers blooming through the night. It is a good time, too, while breakfast is preparing, to think of the dessert for dinner, and, during these days of heat, to study what light, cool and wholesome pudding we can make that will be ready in case of emergency, and cost no extra fire, to cause us discomfort. The children of a household can be sent to gather the vegetables, and taught to prepare them for the table after the lesson of clean hands is properly learned. Anything that requires extra stove or sun heat through the day can be as well done while the cool hours are with us. Apart from fruit—which I set first—there is nothing among dishes for dessert to equal those made with eggs, milk and gelatine. A very simple but palatable pudding to be made in the early morning is by the following recipe: One pint of cream, whipped light; half a package of gelatine, soaked in milk; a small cup of white sugar, and whites of two eggs. Dissolve the gelatine and sugar by heating, then when it has cooled beat up into the whites, making it all a firm froth. Beat in the cream and fill your mold, previously rinsed in cold water. It takes six hours to cool, and is suitable either for dinner or tea.

MRS. ENDICOT'S JOURNAL.

Ole to make scrap-books; tomato catsup; farmers' rice; preparing plants for winter.

SEPTEMBER 4.—Barton's brother, who lives at H., five miles from here, is the editor of the county paper, and knowing how well we appreciate his kindness, he never comes over without bringing a roll of papers and pamphlets. After they have been read by us all, in my leisure I go over them, scissors in hand, cutting out all scraps I think of value to us. These I put in a large brown envelope, such as they put writing paper in at the stores. Then, when I have time, I sort them out and paste in three books, old Patent Office Reports, labeled on the backs, "Kitchen," "Garden," and "Scraps." In the first I put all kinds of recipes; in the second, any thing about flowers and the vegetable garden; in the other, anything else I find worthy of keeping. In the one labeled "kitchen," I have cut out a number of printed pages and pasted in white paper ones, where I can copy recipes when told me. The last one that went in was this:

Tomato Catsup.

Select perfectly ripe sound tomatoes, cut in slices and boil until the pulp is cooked soft. Rub it through a sieve to take out the skins and seeds, and return to the kettle for cooking. To each gallon of the pulp add three tablespoonsful each of salt, ground pepper and mustard, and one each of ground cloves and allspice. Cook it until it is thick enough to run slowly from a bottle. Let it get cold, then bottle and seal.

I made what we call "farmers' rice," for dessert for dinner to-day. We all enjoyed it so much that there was not enough left for baby Katy's supper, as I intended there should be. It is so easily and quickly made, I wonder it is not oftener found on country tables. I put about three pints of milk on the stove in a pan. While it was coming to a boil I mixed two eggs with flour until it was dry enough to roll through my fingers in grains. Then stirred it into the milk quickly, so as to keep it cooking all the time. Five minutes are long enough to finish it. Turn into a dish and eat while warm with plenty of cream and sugar.

SEPTEMBER 6.—To-day I finally accomplished what I have been wanting to do for some time, and that was to pot my plants for winter. Since the coming of the new hard-coal stove into the sitting-room, I have taken so much pleasure with our plants. My work was so arranged that the washing up of the dinner dishes was the last thing to be done. When Della and I had finished them, Harry had Katy sleeping soundly, and we were ready for the work we all love. Early in July I had planted slips of Geraniums in a shallow box and set it under a low tree where the cuttings received the morning sun for a little while every day. They were kept damp by a plentiful sprinkling every evening, and were now fine plants. While I selected what I wanted, Della got the pots from a corner of the wood-shed where they had been put last spring, and Harry brought a barrow of compost from the garden heap with which he mixed several shovelsful of sand thoroughly through it, and filled the pots, each with a bit of crock in the bottom for drainage, with the soil thus prepared. After pressing the earth firmly around the roots I watered them, picked off all the buds and set them in the shed out of the light, where they can have perfect rest for several days. Then the Rose Geranium was transferred from the little three-inch pot in which it had been rooted to a six-inch one. Several Begonias were treated in the same way. As the earth around them had not been disturbed, a smart rap on the bottom of the pot loosened it, so the whole could be lifted out. They were set on the north-east porch. Harry came around with the Smilax, which was just showing a green shoot after its six weeks' rest, in one hand and the hanging basket of Pink and White Oxalis in the other, also just ready to wake up. When Della added the Heliotrope, it did require considerable courage to take off the buds, just showing the purple, while a faint fragrance was perceptible. Soon I shall plant my Sweet Alyssum and Mignionette seed and then I shall have, not all I want, but all I can take care of. We have only three windows in our sitting room, and I have firmly made up my mind that only one shall be filled with flowers. A hanging basket may go in the east window, but nothing more. I find that I have a great deal better success with my plants if they are potted early and get a good start before cold weather. As soon as there seems to be any danger from frost, I will carry them up stairs and leave them there until danger of freezing. Managed in this way, I think they feel the change less than by any other treatment.

GRAPE JUICE.

DEAR MRS. MAPLE:—When a young housekeeper at the South, I was often puzzled to know what to do with my surplus grapes. We did not use wine in the family; so, after our home market was supplied, and I had made jelly, marmalade, etc., there were many left for which I had no use whatever. Thinking I would try canning the juice for flavoring purposes, I found that I had discovered by accident not only a delightful beverage, but a tonic for the sick, which they could take when too weak for other nourishment. It sold readily, and I found it very profitable; beside the pleasure it afforded to send a bottle to a sick friend or a person too poor to buy. Physicians recommended it highly.

Recipe.

Express juice, using cider-press for large quantities; strain through a flannel bag; bring to the boiling point in a porcelain kettle; skim, bottle, make air-tight by pressing well the cork into the neck of bottle and filling with wax. Pack in boxes, standing the bottles upside down, and keep in a cool, dark place. It is best after it has been kept nine or ten months. Quality varies with the variety of grape used; that made from Hartford Prolific and Diana is excellent.

LIVY ELLSWORTH.

DOMESTIC RECIPES.

Preserving Citron.

Pare the citron and cut it into small pieces, not exceeding a quarter of an inch in thickness. Remove all the seeds, weigh and put them in alum water for two or three hours. Then turn the alum off and boil in clear water until you can pierce them with a straw. Make a sirup, allowing one-half pound of sugar to a pound of fruit, adding half a pint of water to a pound of sugar. Place your citron in the sirup and cook the same as other preserves. Just before taking from the stove, slice in two or three lemons, according to quantity of preserves; then let them boil a minute longer.

MRS. D. M. JOHNSON.

Indian Baked Pudding

The following are excellent recipes for the above but whether better than the one you have just published I cannot tell: No. 1. Scald a quart of milk and stir in seven spoonsful of Indian meal, a teaspoonful of salt, a teacupful of molasses and a great spoonful of ginger or cinnamon. Bake three or four hours, the longer the better. If you want whey, pour in a little cold milk after it is all mixed. No. 2. Let one quart of milk come to a boil, then add two eggs well beaten, three tablespoonsful of Indian meal and one of flour. Bake three-quarters of an hour. Serve with cream and sugar. M. M.

Mount Morris.

QUESTIONS ANSWERED.

G. M. G. asks if corn and beans can be preserved in glass cans, and if so, wishes directions for preparing them.

ANS.—*Tin* cans are used chiefly for the preserving of vegetables of all kinds for winter use, and we doubt if you would meet with any success in canning either corn or beans in glass. We can give no other directions than to cook the vegetables until tender, then put into hot cans and make *air-tight*. In the RURAL of May 3, page 288, we gave directions for canning corn in tin (and beans can be treated likewise), which we republish below. Both of the above vegetables can be preserved in brine, directions for which have been given lately in these columns, and for home preserving of either we should prefer that method to attempting to can them in glass or tin.

To Can Corn.

Cut the corn from the cob when not too old; fill tin cans and seal up by soldering on the lid; punch a small hole in the lid and place in a large pan of boiling water, which should come almost to the top of the can. Boil in this bath one-half hour, or until the steam escapes freely from the aperture. Take out and seal up with a drop of solder. Return to the hot water and boil from three to four hours. When cool, if the canning has been perfect, the ends of the can will be slightly concave.

Coloring Everlastings.

M. W., Poquonock Bridge, Conn., asks us how to color wild Everlastings, etc., for winter bouquets. She wants several of the brightest colors, including a good green. She says she has tried aniline dyes, and that she was told by a druggist to mix the yellow and blue together to produce a green, and by so doing just spoiled the whole.

ANS.—We know of nothing better than Leamon's aniline dyes. Try the green.

News of the Week.

MISCELLANEOUS.

MONDAY, September 8, 1879.

THE rice crop of South Carolina for the year is estimated at 44,000 tierces, and that of Georgia at 26,000. The increase of flouring mills in the four States of Illinois, Wisconsin, Iowa and Minnesota from 1860 to 1878 was from 1,158 to 3,000. The production of butter and cheese is said to be four times greater in value than the total yield of our gold and silver mines. In Baltimore there are forty peach-packing establishments. Few, if any, of these houses employ a less number of hands than two hundred, while several of them reach eight hundred or one thousand, and these are exclusive of those engaged in the manufacture of tin cans and the packing cases. This year, up to the close of July, our imports were a million less and our exports seven millions less than for the corresponding period in 1878. The exports of gold and silver were five millions more. This does not show an unusual balance of trade in our favor. The city council of Lawrence, Kansas, Monday week, refused to levy the bond tax ordered by the United States District Court, and passed a resolution declaring that the city cannot pay more than fifty cents on the dollar of its indebtedness. A family named Susy, at Linden, N. J., consisting of a father, mother and four children, were poisoned Monday night by eating toad-stools for mushrooms. Two of the children are dead, and the other two are dying. The parents are sick, but are recovering.

The negro exodus from the South is expected to be very heavy this fall, so soon as the crops have been gathered in. Various organizations have already been here and there formed to promote it, nominally often upon philanthropic principles, but nearly always in reality from political motives. In 1880 the next census is taken and upon the returns then made of the population of the different States, the apportionment of members of Congress will be fixed. The greater the emigration from the South, therefore, before the census, the smaller the number of Congressmen that will be assigned to that section. Moreover, the settlement of the emigrants in the Northern States will add to their population in proportion as it diminishes that of the South, and consequently increase the number of Congressmen from the North, and as the large majority of the Northern Congressmen are Republicans, the exodus, it is expected, will add to the representatives of that party, while lessening the number of their opponents. A careful review of the amount of State and municipal debts repudiated by the South since the close of the war puts the total at $300,000,000. In addition to this, the bulk of Southern debtors availed themselves of the benefit of the lax bankrupt laws that were in force after the "unpleasantness," and thus got rid of at least as much more indebtedness. As almost the entire amount of the debt in this way shirked, was due to Northern capitalists and merchants, the South has been to that amount enriched by the "spoils of the Egyptians," and this has materially aided the efforts of the people to regain an era of prosperity.

Mrs. Dixon, the wife of the man murdered at Yazoo because he was a candidate for sheriff, tells her story and her husband's in one of the Vicksburg papers in a way to stir the sympathies of southern chivalry, if there is any such quality left. When the Democratic convention passed a resolution, based on the names of "two reliable men," that Dixon had threatened to kill Barksdale, Dixon told his friends that this was a trick to prepare the public mind for his own assassination. It seems that Dixon lived long enough to make an ante-mortem sworn statement as to the circumstances, and also to be baptized in the Catholic church. This was in answer perhaps to the taunt of his enemies that he was an infidel, which is still a terrible denunciation at the South. The day before he was shot he sent word to Barksdale by a friend as to the falsity of the charges that he had ever threatened him with assassination, and Mrs. Dixon quotes a letter from J. C. Prewitt, a brother-in-law of Barksdale, dated March, 1878, in which he bears witness to Dixon's good character and to the extent to which he was being persecuted. A tempest extending through part of Louisiana and Mississippi on Monday did miscellaneous damage of many hundred thousands of dollars. Eighty farmers who are dissatisfied with the agricultural prospects in England sailed on Wednesday from Liverpool for New York on their way to Texas. They are from northern Yorkshire and Durham, and are of various classes, ranging from small-tenant farmers upward. Several of them can command capital of $2500 to $3,000, while some others have entered into partnership, one group having raised a capital of $6,000.

A sad story is that of the family of Gen Hood of New Orleans. Last Monday week, Mrs Hood died of yellow fever; the general himself was laid by her side on the following Saturday at the age of 49, and he leaves behind two daughters very ill. Gen. Hood had a brilliant career as a fighter in the Confederate army, rising from a low rank to the command of the forces against Sherman in his march to the sea. The question of Sunday laws is entering into the pending Virginia campaign. The rural districts want the laws strictly enforced, but the cities want them relaxed, and a citizens' association has been formed at Richmond to send men to the next Legislature who will allow the cities to regulate their own Sunday observances without regard to the State law. The same issue will enter into the Texas campaign. A Marshal (Tex.) jury has just fined a newsboy $25 for selling a newspaper on Sunday. Mrs. Kate Chase Sprague fled from Canonchet, R. I., this week carrying her younger children. Gov. Sprague made an exciting pursuit in order to recover the latter but failed. The whereabouts of Mrs. Sprague is not known, but it is thought that she will eventually go to France or Germany to live. It is now denied by her own counsel and others that she was kept a prisoner at Canonchet by her husband or abused by him. Her counsel and friends disapproved of her departure. She will not be pursued or prosecuted, except that Gov. Sprague will press his claim for the children. Mr. Sprague will probably obtain employment under Mr. Chafee, the trustee of the Sprague estate.

The National Greenback-Labor Party of the State of New York assembled at Utica last week. The successful organization of the Convention was not secured till Saturday, Friday up to midnight having been spent in discussing delicate points of parliamentary law, in arranging to pay for the hall, and in admitting the proper delegates from this city. It did not appear that these last, of which there were three sets, were any of them "regular" or irregular, but the question at issue concerned the political affiliations of each set with organizations of real importance. A happy result was at length attained, and the men who composed the meeting are to be congratulated upon the fact that they refused all the overtures which were made to them by Tilden and Company on the one hand, and Tammany Hall on the other. The venerable Mr. Richard Schell was mentioned as a candidate for Governor, but the honest and horny-handed sons of labor literally hissed the Tammany schemers out of the hall. Finally, the Convention nominated Harris Lewis, of Herkimer County, and President of the Farmer's Alliance, for Governor, and a full State ticket. The platform is, in the main, the usual greenback deliverance, but distinguished by the addition of some extraordinary resolutions intended to cheer up Kearney "in his heaven-inspired work," charging "our opponents" with being "really the red-handed Communists," and commending Kearney's recent restraint of the California mob from attacking the same. Apparently Kearney's "peace-policy" has produced a temporary transformation of "the Commune," which is altogether the best thing he has done. The Republican Convention of this State met at Saratoga on Wednesday and at it Conkling won a decided personal victory by securing the nomination for Governor of his intimate personal friend, Mr. Cornell, and the whole of the rest of the ticket. It was thought by the Hayes party that that "muss" in which he was embroiled up at Canonchet, would have injured his influence, but he came out triumphant on all points. Hayes & Co. make the best of a bad job, and express an earnest desire for the election of the ticket. Yellow fever is still raging at Memphis, where the resources of the Howard Association are exhausted so that they have had to issue a request for outside aid. In New Orleans also there has been a considerable number of deaths, but it is confidently expected that there the disease will be localized in a small strip of the upper part of the Fourth District where all the deaths have hitherto occurred.

The lands in Dakotah, opposite the Sioux reservation, reserved for settlement in 1875, to prevent the whites from pressing too closely upon the Indian frontier, have been for the most part thrown open to settlement again, the main object of the reservation not having been achieved.

The following table, prepared from information received at the Bureau of Statistics, shows the aggregate production of the three great agricultural staples of the Southern States for each year since 1870:—

Year.	Cotton, bales.	Sugar, hhds.	Tobac., lbs.
1870	4,352,317	144,881	285,000,000
1871	2,974,311	128,451	426,000,000
1872	3,930,508	108,520	480,000,000
1873	4,170,388	80,408	506,000,000
1874	3,832,901	116,867	315,000,000
1875	4,669,288	141,146	522,000,000
1876	4,885,423	169,331	535,000,000
1877	4,811,423	127,753	560,000,000
1878	About 5,200,000	About 212,000	572,000,000

Out in California, Kalloch instead of dying by De Young's assassinating bullet has been elected mayor of San Francisco by the workingmen's party. The Honorable Bilks and Democrats were nowhere either in the city or State elections. From present appearances the Republicans have elected some of the city officers, while Perkins their candidate for governor of the State has been elected by a respectable majority. They have also elected a majority of the State Legislature and certainly three members of Congress and probably all four. The workingmen have gained a majority of the railroad commissioners and also a majority of the Supreme Court including the Chief Justice. This election may have an important effect on the choice for next President, as before intimated here. Of the 38 State delegations, 19 including California, are Republican, 18 are now Democratic, while the Indiana delegation is equally divided between the two parties, with the deciding vote in the hands of De La Matyr, the Greenbacker. Should the election go into the House, therefore the Republicans now have the best show.

FOREIGN.

Commodore Shufeldt writes from the west coast of Africa that the "opening of Africa," as it is termed, is a mere deceit and delusion, and says the natives of the lower Congo, who have been in contact with the whites for nearly 400 years, have only had engrafted upon their innate barbarism the lowest vices of civilization. The appointment of consuls along the coast by our government is recommended as calculated to give our flag a recognized status and create a rallying point for any future commerce from the United States, besides affording protection to our people in their intercourse with the natives.

In Mexico, Diaz has several times declared his intention not to be a candidate for re-election to the presidency of the Republic, under any circumstances. Indeed, there is in that country a constitutional amendment prohibiting the re-election of a president. Now, however, there is much agita-

tion there with regard to the repeal of this amendment. Eighteen of the 27 States that constitute the Republic are said to be disposed to the repeal of this prohibitory amendment, and as the assent of only a majority of the States is required to a constitutional amendment, instead of two-thirds as with us, the question may be regarded as settled that Diaz will be made president again at the election which takes place eleven months hence. The Lerdist party look upon his re-election in the light of a dictatorship for life. Well, any form of government there would be a godsend, which would put an end to the chronic state of revolution that for the past couple of generations has drenched the country with blood, and rendered impossible the development of its vast mineral and agricultural resources.

Mr. Longman, the last of the original partners in a firm of eminent London publishers, is dead. The earthenware and china manufacturers of Staffordshire, England, have resolved on the reduction of wages of over 50,000 workmen. The reduction is partly attributed to American protective duties. The employers desire to return to the wages paid in 1871. It is expected that the men will submit. The colliery proprietors at the Burnley coal fields gave notice Saturday of a reduction in the price of coal and a reduction of five per cent. in wages. Another party of farmers, numbering about twenty, left Liverpool for America, Saturday. Prince Dondoukoff Korsakoff has started for Odessa, Russia, to assume the Governor Generalship there, relieving General Todleben, who will probably be appointed Governor of Warsaw.

Liberia seems to have about collapsed. The negro republic is bankrupt and in the power of British capitalists; the Liberians themselves are dissatisfied with the condition of affairs; and the most powerful tribes of natives throughout the country are talking secession and calling on the British for protection. Without money, credit, or an organized army, there is lit tle chance that the republic can uphold its authority, and the African State which the United States has indirectly backed for so long is in a fair way to fall into the hands of Beaconsfield. The Russian grain belts south and southeast of Moscow are beginning to feel the effects of the steady exportation of grain to England for two generations; the land is wearing out, and the farmers are moving to the thinly settled provinces on the eastern steppes at a rate which gives the Russian goverment much uneasiness. The government tax on the grain districts remains the same in spite of the diminishing yield, and the departure of the peasants follows inevitably, due in no small measure to the fact that under the pressure of a constant demand for grain from western Europe the old system of fallow lands has been abandoned and the fields plowed year in and year out. The same result has happened in California. With the seaboard close at hand it did not "pay" to feed grain to cattle. It was all exported and fields which began by yielding 20 and 30 bushels to the acre now return half that and are never likely to give more while the same course is continued in cultivating the new grain fields farther inland.

Mr. Clare Sewell, member of the British Parliament for South Norfolk, and Mr. Albert Pell, member for South Leicestershire, arrived in this city yesterday. The steamer City of Montreal, in which they came, reached Quarantine on Saturday evening, too late to be inspected by the Health Officer, and lay at anchor there all night. Messrs. Read and Pell are a sub-committee of the Parliamentary Commission to inquire into the causes of the present distress in the agricultural districts of Great Britain, and are particularly sent to ascertain what hand America has in the matter, so far as the American product and export trade may throw light on the subject. They will give especial attention to the exportation of meat and live stock to England, and make an effort to fix approximately its extent during the next five or six years. Mr. Read is a tenant farmer on a large scale in Norfolk, where for 300 years his ancestors before him have followed the same pursuit. He is a practical and theoretical farmer, President of the Norfolk Chamber of Agriculture, member of the Council of the Central Chamber of Agriculture and of the Farmers' Club. He has written several essays on farming. In politics he is a Progressive Conservative. In person he is tall and well formed, with closely-cut gray hair, a long full gray beard and moustache, and pleasant brown eyes. He looks more like an American than an Englishman. His colleague is also a farmer, and a Conservative. He was educated at Rugby and Cambridge. In Leicestershire he is a farmer, and was the first Chairman of the Central Chamber of Agriculture. He looks the typical Englishman, being rosy-faced, blue-eyed, with white hair and white side whiskers.

The great importance which ostrich farming has acquired in Southern Africa may be seen from an ostrich auction recently held at Middleburg, Cape Colony. The lowest price paid for one pair of these birds was £180, and several pairs fetched £235. A few years ago ostriches were obtained by hunting only, and at that time a good bird could be bought for a menagerie or a zoological garden at a moderate price. But since their domestication and the development of ostrich farming as an industry, their price has risen enormously. At present the Zoological Garden in London owns not one living ostrich. From the Cape of Good Hope 2,297 pounds of ostrich feathers were exported in 1860, at a value of £19,261; but in 1873 the exportation had risen to 31,681 pounds, at a value of £159,679, and recently a bunch of picked bloods were sold at Port Elizabeth for £67 15s. a pound, that is about $8 a feather.

After the conclusion of peace with Yakoob Khan a few months ago, most of the English forces were withdrawn from Afghanistan and Major Cavagnari, with a suite of about 40 souls, was sent to Caboot, the capital of the country, as British Agent to look after the interests of the Indian Empire and the United Kingdom. News has just reached here that last week he and his attendants had been massacred by mutinous Afghan soldiers aided by the populace of Caboot. Three regiments began the attack on the agent's residence, where they met a vigorous resistance; nine other regiments then joined the insurgents. The buildings having been fired, the handful of English, 79 in number, reduced to extremity, sallied out from their cover and fell fighting, all except nine, who are reported to have escaped. Yakoob Khan appeals to the British for assistance, and says that he is himself besieged. His son is said to be among the slain. The English forces from all the neighboring quarters are being rapidly pushed towards the capital, which must soon be once more in their hands.

The uses to which Murray and Lanman's Florida Water is put may, without exaggeration, be said to be universal.

In refined and cultivated society it is recognized as the most refreshing and agreeable of perfumes for the handkerchief, the toilet, and the bath.

The season for contracting that disagreeable and really serious disease, Catarrh, is at hand. Dr. Sykes, of Chicago, in our issue of September 6th, offered our readers a remedy in which he has the greatest confidence. He has the most positive assurances of those who have tried it that it will do without fail all that is claimed for it.

Hearing Restored. Great invention by one who was deaf for 20 years. Send stamp for particulars. Weakley & Boroff, Lock Box 452, Cincinnati, Ohio.

We know that there is nothing on earth equal to Hop Bitters as a family medicine.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Sept. 6, 1879.

BEANS AND PEAS.—The bean market shows unusual strength for the white standards. Unless supplies are short when September comes, buyers are apt to be indifferent; but now, with a pretty free supply and prospective good yields of new crop, prices for mediums and marrows are quite steady at full prices. White kidney and pea beans only nominal. Red kidney are neglected, and likely to be, until the new curings start the market with revised rates. Black beans will be soon wanted. Green peas have declined to $1.25@$1.30 with a large stock. Canadian peas nominal at 70c.: medium beans, prime, $1.32½@1.35; fair to good, $1.27½@1.30; marrows, prime, $1 27½@1.30; fair to good, $1.20@1.25; pea, $1.20@1.35; red kidneys, $2.

Receipts of beans for week, 4,010; exports, 990 packages.

BROOM CORN.—There is a fair inquiry and a steady market.

Brush and short broom, choice, ₹ lb, 5½@6½c.; do., common to good, 4½@5½c.; hurl, good to choice, 4@5c.; do., common to fair, 3½@4c.; red and crooked, 2½@3½c.

BUTTER.—Receipts for the week, 24,426 pkgs.; do., last week, 29,970 do. Exports, 15,246 pkgs. The movement for the past fortnight has been good, while receipts have been moderate enough to prevent accumulation. In fact, storings have been drawn upon to some extent to suit certain lines of enlarged trade. Prices have not advanced, but with the liberal stock of the season and sales not fairly assisted by foreign export dealers have come to regard a maintenance of previous figures as a sort of an improvement. The fine grades of State tubs and all creamery are named something stronger, anticipating possible light September yield. Some points refer to drying pastures and reduced milk; but it is too early to base much calculation upon such contingencies; besides farmers are always more or less nervous on this subject in the fall.

State, pails and tubs, single dairy marks, fresh, extra, 17½@18c.; State, pails and tubs, best invoices, 16@16½c.; good to prime, 14½@15½c.; fair to good, 12½@14½c.; firkins, choice yellow, 15½@16c.; good to prime, 14@15c.; fair to good, 13@14c.; Welsh tubs, choice, 15@15½c.; good to prime, 13½@14½c.; fair to good, 12½@13½c.; tubs, poor, 9@11c.; creamery, best invoices, 19½@20c.; good to prime, 18@19c.; sweet cream, best, 17@18c.; fair to good, 16@17c.; Western, best invoices, 19½c.; Western, good to prime, 18@19c.; Western, fair to good, 16@17½c; Creamery, poor, 14@15c.; imitation creamery, 10@14c.; dairy, best invoices, 12½@13½c; good to prime, 11½@12½c.; fair to good, 10@11c.; poor to fair, 9@10c.; factory, best invoices, June, 11c.; fair to good, June, 9½@10½c.; best invoices, Summer, 8½c.; fair to good, Summer, 8c.; poor to fair, 6½@7½c.

CHEESE.—There has been a great deal of excitement this week and higher prices. The cable came a little better, and as the receipts here were small, a good deal of competition set in to secure the fancy factories. Prices have been carried up to 6@6½c., and even 6¼c. for special lots. Quotations are for State factory: Fancy at 6@6¼c.; good to prime, 5¼@5½c; fair to good, 4½@5¼c.; half-skimmed, 3@4c.; skimmed, 2½@3½c. State farm dairy: Fine, 5¼@5½c.; good to prime, 4½@5¼c.; fair to good, 4½@4¾c.; skimmed, 2@3c. Wisconsin factory: Fine, 5¼@5¾c.; good to prime, 5¼@5½c. Ohio factory: Cheddar, fine, 5½@5¾c.; do., fair to good, 4¾@5c.; flat, fine, 5½@5¾c.; flat, good to prime, 5@5½c; flat, fair to good, 4¾@4¾c.; half-skimmed, 3@4c.; skimmed, 2¼@3¼c.

Plums are firm without much recent advance. German Prune, per bbl., $3.50@4.50; Quackenboss, $6.00@7.50; Egg, $5@6; Reine Claude, $6; Green Gage, $4.50@5; Blue Gage, $4@4.50; Lombard, $3.50@4; Damson, prime, $3@3.50; do., inferior, $3@4. Whortleberries, Jersey, fair to good, per 14-qt. box, 75c. Watermelons, Jersey, Black Spanish, per 100, $5@10; Md., selects, $10@15; do., as they run, $3@8; Nutmeg melons, Cantaloupes, Buckensack, per bbl., 75c.@$1.25; do., Monmouth Co., 25@50c. There is a fair movement in peanuts and with light stocks, both here and in the South, the tone of prices is tending in sellers' favor. The last sale of prime shelled nuts was at 6c. Va. hand-picked, $1.50@1.60; fancy, $1.45; extra prime, $1.40; good to prime, $1.30@1.35; shelled, per lb., 6¾@6c.

GRAIN.—Wheat has shown a liberal export movement, and the market closed firm at for No. 1 amber at $1.11; No. 2 amber at $1.10½@1.11 do., September option, at $1.10¾; ungraded amber at $1.06@1.11; white State at $1.11¾; No. 1 white at $1.11@1.11½; do., September option, at $1.11@1.11½; do., 10th October at $1.11@1.11¾; do., November, at $1.11¾@1.11¾; ungraded white at $1.07@1.11; No. 1 red at $1.11@1.11¾; No. 2 red at $1.10@1.10¾; do., September option, at $1.10@1.10¾; do. October option, at $1.10¾; do., November, at $1.10¾; do., steamer grade, at $1.09; No. 2 red at $1.08¾; ungraded red at $1.03@1.10; mixed winter 81.08¾@1.09; No. 2 Milwaukee, old crop, at $1.02; New York No. 2 spring at $1.03; do., September, at $1.02¾; do., October, at $1.02¾. No. 3 spring at 90¾@90¾c.; ungraded spring at 91c.@$1.03. Rye at 63@65c. for Western. Corn is active and firm, with sales at for New York No. 2 afloat at 46¾@46¾c.; do., September, at 46¾@46¾c.; do., October, at 47¾@47¾c.; do., November, at 47¾c.; New York steamer mixed at 47¾c.; no. for Sept. at 46c.; Oct. at 46¾@47c.; November at 47¾c. asked; No. 3 nominal; ungraded Western mixed at 45¾@46¾c.; car lots of No. 2 white at 57c¾. Oats have been lower, but closed firm and fairly active; sales of New York No. 1 white at 37c.; New York No. 2 white at 35c; New York No. 3 white at 34¾@35c.; No. 1 at 34¾@35c.; No. 2 at 34¾@35¾c.; No. 3 at 30c.; rejected at 28½@29c.; ungraded mixed Western at 29@35c.; white do. at 33@35c.; white State at 35@35c.; mixed State at 34@35c; old No. 2 Chicago at 32c.; new do. quoted at 31¾@32c.

HAY AND STRAW.—Prime hay is rather scarce and rules at strong prices. Shipping qualities are plenty and easy. Quoted at 50c. for shipping; 70@80c. for prime, and 85@90c. for medium. Straw at 55@60c. for long rye, 40@45c. for short rye, and oat at 35@40c.

HOPS.—Emmet Wells in his circular says: "About 200 bales of the new growth of the early seedlings variety have been received here, and have been for shipment at prices ranging from 35@40c. The later sorts are being sold at 20@30c. Picking is now progressing all over the country, and if nothing unforeseen happens between now and the time of finishing we will have a crop of fine quality, but considerably below that of last year in number of bales. We will not attempt to make any estimate of the crop until later, when something more definite can be learned of how the crop comes down. The first arrivals of new hops in market usually causes a decline in the price of yearlings and olds, but this season has proved an exception to the rule, and instead of a decline they are held firm at present quotations. The shipments to London this week are heavy, amounting to 5,495 bales."

	Bales.
Receipts for the week	1,805
Total receipts since September 1, 1879	1,805
Total receipts for same period in 1878	264
Export clearances for the week	3,406
Total exports since September 1, 1879	2,493
Total exports for same period in 1878	none

Quotations are for New Yorks, new crop, 28@30c.; Eastern, new crop, 23@24c.; Wisconsin, new crop, none; Yearlings, growth 1878, 7@8c.; Olds, all growths, 4@10c.; Pacific coast, growth 1878, 9@14c.

OIL-CAKE.—Western is quoted at $27@27.50 per ton.

POULTRY AND GAME.—With prices down to present rates there is a fair demand for live fowls and chickens.

Chickens, near-by, per lb., 11@12c.; Southern and Western, 9@10c., fowls, 9@11c.; roosters, 4@5c.; turkeys, near-by, 10@12c.; Southern and Western, 9@11c.; ducks, ₹ pair, 55@60c.; geese, choice, $1.50@1.75; others, $1@1.37. Dressed steady with moderate supplies.

Turkeys, Phila., dry-picked, 14@15c., State and Western, prime, 13@14c. Chickens, spring, Philadelphia, large, per lb, 15@17c.; Phila., small, 14@15c.; State, 12@13c.; Western, 11@12c. Fowls, Phila., dry-picked, ₹ lb., 13@14c.; N. J., choice, 12@13c.; State and Western, dry-picked, 11@12c.; State and Western, scalded, 10@12c. Ducks, spring, Phila., dry-picked, ₹ lb, 14@16c.; spring, State, 12@13c.; old, Phila., dry-picked, 11@12c.; old State, 10@11c. Squabs, white, per doz., $1.75@2; dark, $1@1.25

The new list is well patronized; wild ducks are in season but hardly quotable. Partridges, State, 1$1@1.25 ₹ pair; do., Western, 90c.@$1; grouse, 90c.@$1; Western pigeons, tight, per doz., $1.25@1.50; woodcock, State, 85@90c.; Western, 75@85c, ₹ pair; Eng. snipe, $1 50 per doz.

PROVISIONS—Have been excited and much higher on speculative manipulation. Mess pork quoted at $8.8.@8.90 for September; October, $8.90; November at $8.80 bid and $9 asked for seller's option, old or new, and the December option at $8.85 bid and $9.05 asked. Bacon at 5c. for long clear and 5¾c. for short clear. Lard—Western steam at $6.15 for spot lots, $6.15 for September; $6.20@6.22½ for October, $5.55@5.97½ for November and $5.82½@5.85 for December. Stearine at 6¾@6¾c. Tallow at 5 13-16@5¾c. Beef hams at $17@17.25. Beef—Plain mess at $10.25@11; extra mess at $11.50@12; packet at $11.50@12; tierced beef, city extra India mess, at $19@22, and Philadelphia do. at $19.

SEED.—Timothy is selling at $1.80. Flaxseed is in fair demand at $1.40. Clover is dull at 6¾@7c. for prime Western and 7¾c. for choice.

TOBACCO.—The export movement is slack and the jobbing trade moderately active, with prices firm. Quotations are for

Tub-washed Wool.—Choice, 40@44c.; fair, 38@40c.; inferior and burry, 30@33c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Sept. 6.

BEEVES.—Receipts for the week, 11,914 head; do. last week, 12,300 do. Cattle as a rule dragged; quoted lower, but the loudest complaints were from holders of Texans and their natives, some of which could not be sold at any price. Texans ranged from 6c. per lb., to dress 51 lbs., up to 6¾c., to dress 55 lbs., but were mainly sold at 6¼@6½c. Poor native heifers and oxen went down to 6¼@6¾c., to dress 54 lbs., and common to prime native steers sold at 7¼@9¾c., to dress 51@56 lbs., selected tops reaching 9¾@10¼c. No demand for the export trade. It is asserted that the offerings of Western cattle here today made an average loss of at least $50 per car-load.

COWS AND CALVES.—Arrivals continue to be subjected to close veterinary surveillance, and although most of the offering is of low-priced quality, it generally passes inspection. Sales range at $20@40 per head, most sales at $25@30.

VEAL CALVES.—The market closes with some firmness. Buttermilk and grassers, 2¾@3¼c.; fed and to prime, 4@6¾c.

SHEEP AND LAMBS.—Receipts for the week, 10,868 head; do. last week, 34,758 do. Demand limited for both sheep and lambs, and the market closes heavy. Lambs, 4@5¾c.; sheep, 3¾@5c., fair to good market stock; extra fat wethers for export, $5.25@5.40 ₹ 100.

SWINE.—Receipts for the week, 21,401 head; do., last week, 25,050 do. Market ruled at a range of $3.50@4 ₹ cwt.; city dressed, 5¾@6¾c.; pigs, 5¾@6¾c.

NEW WINTER WHEATS.
HEADS FIVE TO SIX INCHES LONG.
Champlain and Defiance.
128 *Bushels to the Acre.*

These two varieties which have succeeded so wonderfully as *Spring Wheats*, have been shown by experiments to be equally valuable as *Winter* varieties. We are confident that they will soon supercede all the varieties now sown. Send for Wheat circular giving full description and prices. Mailed free to all applicants. Also *Mahl's celebrated White and Red English Winter Wheats.*
For description see circular.

Reading for the Young.

"SOMEBODY'S MOTHER."

THE woman was old and ragged and gray,
And bent with the chill of the winter's day;
The streets were white with a recent snow,
And the woman's feet with age were slow.

Down the street, with laughter and shout,
Glad in the freedom of "school let out,"
Came happy boys like a flock of sheep,
Hailing the snow, piled white and deep.
Past the woman, so old and gray,
Hastened the children on their way.

None offered a helping hand to her,
So weak, so timid, afraid to stir,
Lest the carriage wheels or the horses' feet
Should trample her down in the slippery street.

At last came out of the merry troop,
The gayest boy of all the group;
He paused beside her, and whispered low,
"I'll help you across if you wish to go!"

Her aged hand on his strong, young arm
She placed, and so, without hurt or harm,
He guided her trembling feet along,
Proud that his own were firm and strong;
Then back again to his friends he went,
His young heart happy and well content.

"She's 'Somebody's Mother,' boys, you know,
For all she is aged, and poor, and slow,
And some one, some time may lend a hand
To help my mother—you understand—
If ever she's poor, and old, and gray,
And her own dear boy is far away!"

"Somebody's Mother" bowed low her head
In her home that night, and the prayer she said
Was "God be kind to that noble boy,
Who is Somebody's Son, and pride, and joy."

THE FRUIT GROWER'S FAMILY.

William's Amateur Nursery.

REV. HENRY S. CLUBB.

WHEN William was only fourteen, he prevailed upon his father to mark off from the fruit farm some 20 square rods of ground for a little nursery on which he could raise fruit and ornamental trees. The ground was nearly level and rather too light for the purpose. The first thing was to get it well plowed and the sod well covered. This was done in the fall. It was two rods wide and ten rods long. When the spring came, William dug the ground, loosening the subsoil with a digging fork. He then procured from a neighboring swamp a large number of young American Arbor-Vitæ. He was very careful to keep the roots moist and to prevent their exposure to the sun and wind. He selected those about a foot high and planted them a foot apart all round his nursery, leaving a gate at each end.

The other Arbor-Vitæ plants he also assorted according to size. Those about six inches high, he planted in rows to root and strengthen. The rows were 18 inches apart and the plants a foot apart in the rows. Of these he formed a bed two rods long by one rod in width. The larger plants, those from two to four feet high, he planted in a bed by themselves, giving them more room. They all grew, with very few exceptions.

He also procured young Hemlocks from the forest and assorted them in a similar manner, taking care to shade them from the sun, as the season advanced. He did this by forming a rough shed with pine crotches and cross pieces, laying pine bows on top. Three rods were thus occupied.

He had saved up peach pits the season previously and sowed them in rows occupying four rods more with them. The apple seeds he had saved during the previous season, he also sowed, occupying a similar space. He obtained from a distant nursery in Wisconsin, 250 Norway Spruces, six inches high, and 250 Balsam Firs. With these he planted the balance of his ground, six rods.

In the latter end of August of the same year, the Peach trees having acquired a fair growth, William tried his hand at budding. He had seen that operation performed at the nurseries and studied the subject well. He procured buds from the Hale's Early, Early Crawford, Old Mixon and Late Crawford, of his father's orchard, and after repeated experiments succeeded in placing the buds in the stock near the root, to his satisfaction. He only budded those stocks that showed evidence of superior thrift and vigor.

In the fall he dug up the young Apple seedlings and packed them away nicely in sand in the cellar. During the winter, when his school lessons were learned, he would devote an hour or so to grafting choice varieties on the Apple-roots, dividing each root and making as many stocks as its growth would permit. He packed away his young grafted trees carefully labelled according to name, and in the spring he planted them in rows setting a stake to each row, to show the number, and making a record in a book, of the variety indicated by each number. As he had not room in his nursery for all this young stock, his father permitted him to plant out several long rows near by between his nursery and the orchard.

During the ensuing summer, William was very attentive to his young trees, kept them clear of weeds and hoed them so as to prevent their suffering from drought. The result was his trees made a good growth. Some of the buds on the Peach trees failed, but those that lived grew finely, and he trimmed off all the seedling wood above the bud, and by a little attention to the small shoots, secured a nice growth of straight stems. The Apple grafts, although slowly, made steady progress, and by the end of the second year William found himself the owner of several thousand Peach and Apple trees one year from the bud.

To encourage his industry, William's father purchased two thousand Peach trees of him, and paid him $100. They were planted out, forming a new Peach orchard, on a piece of table-land commanding a view of Lake Michigan, at an elevation of about 100 feet above the level of the lake.

William continued raising Peach trees from seed every second year after this, and became quite expert in budding.

The Apple trees remained in the nursery rows three summers, and when we visited the place, presented a very handsome appearance. Some of the Wagner Apple trees were bearing fruit in the nursery rows.

The Norway Spruce and Balsam Fir trees had made very handsome growth in the rows. They needed but little attention, except keeping them clear of weeds and cultivating in dry weather. A little heading in had produced a very thick growth, and persons ornamenting their grounds came to look over the rows of William's evergreens and mark such as they desired for transplanting the next season.

The Hemlocks had made a slow growth, and since the first year had been subjected to light pruning at the tip end of the limbs, so as to get them into shape, but they had not yet made sufficient growth to make them desirable for transplanting.

The Arbor-Vitæ did better. The largest ones had been carefully sheared and kept free from dead foliage, and were greatly admired for their fresh, green color and vigorous growth, as well as for their compact, solid appearance. Some of the larger ones had been trimmed into fantastic shapes, and had become "double" and some "treble-deckers," as they were called by visitors.

Those Arbor-Vitæ that were quite large when brought from the swamp were treated to such judicious shearing as their peculiar shapes rendered necessary. One of the trees was about the hight of a lady, and by careful trimming it had assumed the form of the prevailing fashion—a tall, elegant figure, with high hat and feathers, a reasonably good bust, with the "pull-back" behind and a graceful flowing train. The outline of a fashionable lady was remarkable and striking, and on festive occasions, when his sisters were having a birthday party, and were showing their pets and flowers, William would adroitly fix a mask on his tree-lady, perfecting the resemblance so as to cause much merriment among the young guests.

The Arbor-Vitæ hedge around William's little nursery had, in four years, grown to quite a respectable screen. Frequent shearings had prevented its becoming over three feet high, but its solid, compact and beautiful appearance was remarked by all, and really, with the fine shrubs and trees within the enclosure, made a very attractive feature of the homestead.

Now, all the cash expenditure for this nursery did not exceed five or six dollars; the rest was all accomplished by William's own labor and the use of the farm implements, and occasionally a horse belonging to the farm. The labor was performed at leisure intervals from other duties at school and on the farm, and in time that would ordinarily have been wasted in idleness. The stock resulting might, without close figuring, be estimated as follows:—

2,000 Peach trees, sold	$100 00
3,000 Apple trees, for sale	300 00
200 Norway Spruce	40 00
200 Balsam Fir	40 00
200 Arbor Vitæ, large	40 00
400 " " and Hemlock, small	20 00
	$540 00

Besides this, there was a second stock of young Peach trees ready for sale in the fall or spring, which, when sold, would realize $100 more.

Here was William, at the age of 18, the owner of this amount of personal property. The appearance of the nursery had so improved the farm that, had it been offered for sale, it would have realized several hundred dollars more than it would before William commenced his nursery.

But the pecuniary advantage to William and his father was a small consideration compared with the moral advantage gained. During these four years William's attention had been so taken up with his nursery that he had no time to spend in the village with "the boys." At the very time when wild habits are too usually formed, he had been occupied in studying the nature of his pet trees and plants and in perfecting himself in the arts of budding, grafting, pruning, shearing and the like, so as to produce the best results. He had, in fact, acquired knowledge and experience worth much more to him than all his nursery stock, and had become an important and intelligent help to his father on the farm.

Now, with Amy's Botanical Garden on the island on one side, and William's Evergreen and Fruit tree nursery on the other, the fine orchard in the rear and the young Peach orchard on the hill, the Fruit Grower's home was greatly improved and attracted attention from every passer by. The whole family learned to love the home because it was a very beautiful and delightful one, and it had a great influence in promoting, by example, the improvement of all the fruit farms in the neighborhood.

THE HORTICULTURAL CLUB.

IT may interest the cousins at this time to read a short review of the history of the above-named club, and what it has accomplished in the way of making horticulturists. The proposal that the cousins should unite to form a horticultural society, or club, was first made in the latter part of March of this year. With the wide-awake alacrity that distinguishes the Rural Cousins, quite a number responded immediately, and, providing themselves with gardens, seeds and plants, they straightway began gardening in good earnest. Since then, I have daily received applications for membership, till at present, when the organization is not yet half-a-year old, there are upwards of 500 names on my list of members. These young gardeners are not confined to one State or section of the country, but are scattered all over the United States and Canada, wherever the RURAL is read.

The object in forming this club was to create in its members a love for a useful industry, to furnish them recreation, pleasure and profit. How well the object has been accomplished, can best be judged of by reading the letters and reports of the members from week to week. Nearly all of them have gardens, in which they cultivate all kinds of vegetables and flowers, and some pay more attention to the cultivation of house plants.

There are two inducements for the young to join the club, namely, profit and pleasure. As a source of profit, gardening has proved a paying business, especially to the boys who live near towns, many of whom raise onions, peas, beans, radishes, celery and other vegetables that meet with a ready sale. In this way they not only turn many a dollar, but acquire habits of industry that will be of infinitely more worth to them than the money.

As a source of pleasure, none can realize what gardening is, but those who have the horticultural fever, to all others it appears at best but an eccentricity. It cultivates a taste for the beautiful; it elevates the mind and promotes purity of thought by diverting the attention from baser topics. It is an indefinable satisfaction that one experiences when he beholds the plants he has been so faithfully tending and finds they respond to his efforts by a thrifty, luxuriant growth, as if they were grateful for his care. It is this profit, this pleasure, this recreation and this formation of industrial habits that the Horticultural Club is designed to promote among the many young readers of the RURAL. To still further encourage the enterprise, I have several times sent the members seeds of such plants as they can easily cultivate, either as prizes or gifts, and I intend to continue to do so from time to time. The Club is prosperous, and let all those cousins who would like to reap the benefits it may confer make it still more so by joining. UNCLE MARK.

CULTURE OF THE TUBEROSE.

DEAR UNCLE MARK:—I am not a child, but a reader of your very excellent paper the RURAL NEW-YORKER, and as such I have learned a great many very valuable things through the Horticultural Club concerning plants, flowers etc. We have success with all kinds of house plants, and flowers excepting tuberoses. I have had them four years and they have never bloomed since I got the first bulb. I would like to have some light as how to keep them over winter, and how to plant in the spring in order to have them bloom. I am almost discouraged in trying to care for them. By giving the desired information you will greatly oblige A READER.

Columbiana Co., O.

I print the above letter in this department because the answer may prove especially interesting to my young relatives.

The Tuberose belongs to the Amaryllis family, and its botanical name is *Polianthes tuberosa*. It has been cultivated in Europe nearly 300 years, having been brought into France in 1594. Botanists are not agreed as to which country is its native home, some maintaining that it first came from Mexico, and others that it originated in East India. However this may be, it is a tropical plant and requires a long warm season in order to flower out-of-doors. The bulb is pear-shaped and not very large; a good sized bulb measures about two and a quarter inches from base to apex, and one and a half inch in diameter. It throws up a flowerstalk two to four feet high bearing on the top some twenty or more pure white and very fragrant flowers. A variety bears double flowers. In the Northern States the bulbs should be planted in boxes or pots and started in a greenhouse or warm window in the beginning of April. Near the end of June when all danger of cold weather is past the plants may be thumped out of the pots and planted, with a ball of earth adhering, in rich soil out-of-doors. During the summer nothing further is required than to keep the bed clean and tie the flowerstalks to stakes when they become so high that there is danger of their breaking. They will begin to bloom in September and continue until killed by frost. To prolong the flowering they can be carefully lifted, planted in pots and removed to the house. For winter flowering bulbs may be planted in August in boxes or on a bed in the greenhouse. Such bulbs must have been kept over from the previous summer. It will not do to attempt to make young bulbs flower in the winter after they have been growing all summer. The greatest trouble amateurs meet with is perhaps in wintering the bulbs. They must be kept dry and in a place where the temperature never falls below 50 degrees. Below this the embryo flowerstalk in the bulb will be destroyed and the grower disappointed in the expectation of getting flowers; if they can be kept at a uniform temperature of between 60 and 70 degrees all winter, then all the better.

Another source of disappointment to those who are not acquainted with the plant is that it flowers but once. All bulbs that have once shown flowers are valueless and may be thrown away. The stock is kept up by the young bulbs that appear by the side of the old ones. These are removed in the fall or better in the spring after having been wintered as above stated, and planted in rows in the garden for one or two seasons, according to size, till they become large enough to flower. It thus requires a little skill and careful treatment to grow the tuberose successfully, but the flower is so handsome, pure, modest and deliciously fragrant that it richly repays the trouble. UNCLE MARK.

DEAR UNCLE MARK:—As I have been so long writing, I thought I would write now. And if it is not too late, I wish Uncle Mark would put my name on the club list. I am very fond of flowers, and I have plenty of room for gardening, as I live in the country. We have lived in the country almost two years; I do not like to live in the country so very much. Please publish this, uncle.

Respectfully yours,

Crawfordsville, Ind. MAPLE LEAVES.

THE GOLDEN SIDE.

THERE is many a rose in the road of life,
If we would only stop to take it;
And many a tone from the better land,
If the querulous heart would make it;
To the sunny soul that is full of hope,
And whose beautiful trust ne'er faileth,
The grass is green and the flowers are bright,
Though the winter storm prevaileth.

Better to hope, though the clouds hang low,
And to keep the eyes still lifted;
For the sweet blue sky will still peep through,
When ominous clouds are lifted;
There was never a night without a day,
Or an evening without a morning;
And the darkest hour, as the proverb goes,
Is the hour before the dawning.

There is many a gem in the path of life,
Which we pass in our idle pleasure,
That is richer far than the jeweled crown,
Or the miser's hoarded treasure;
It may be the love of a little child,
Or a mother's prayer to Heaven,
Or only a beggar's grateful thanks
For a cup of water given.

Better to weave in the web of life
A bright and golden filling,
And to do God's will with a ready heart,
And hands that are ready and willing,
Than to snap the delicate, minute threads
Of our curious lives asunder,
And then blame Heaven for the tangled ends,
And sit and grieve and wonder.

SECULAR DANGERS OF THE CLERGY.

THE dangers begin before the clergy are clergymen. They begin at the moment when the young man is questioning himself whether he shall be a clergyman or not. They start up among the motives which replenish the ranks of the ministry.

Some writers have brought it as a serious objection to public efforts for this replenishment, that many men in orders are but partly paid, or that, not being settled in parishes, they are left to poverty; in other words, they object that to increase the ministry increases competition for whatever money the people are ready to pay for church services, to the pecuniary inconvenience of those who are already ordained. There is matter for much speechless meditation both in this view of the subject itself, and in the tepid mist of mild assent which seems to rise and diffuse itself when it is propounded. As a suggestion in political economy, or as a precaution of personal thrift, the point appears to be well taken and quite beyond dispute. In the whole animal world the instinct of self-preservation is sure not only to survive, but to assert itself, and the tragic struggle for existence goes on, if without much magnanimity, at least with common consent. The material kingdom can hardly be expected to conquer its own laws, or to ascend by natural levitation into supernatural air.

When men repeat such maxims as these, "Ministers, after all, are men, with flesh and blood, like the rest;" "We must all live;" "Faith and hope will not buy bread and butter;" "It is all very well to talk about doing good, but here is a family that must be fed and clothed;" "One salary will not go round among three clergymen"—what is to be said? One does not care to buckle on spurs and run a tilt against a physical necessity. In the range of bodily wants, a plea of starvation is the end of controversy. But we are all agreed that there is another sphere—a region where the spirit of man lives, breathes, grows, and puts forth its power; where a universe of unseen realities stands in order and grandeur; where disinterested sympathies, unselfish motives, holy heroism, divine compassions, magnanimity, sacrifice, and the passion for saving other souls play and rule. The room is large, but there is no place there for the competitions or calculations of demand and supply. Rules of political economy and personal thrift do not apply there. There is never any embarrassment from surplusage, never a glut in the market. In that domain belongs the ministry of Christ, who is its King. This ministry is its special product.—*The Churchman.*

CONTENTION among Christians is a fire-ship sent in by Satan to break their unity and order.—*Gurnall.*

PERSONAL ITEMS.

Ibrahim Pasha, aged 19, the Khedive's favorite boy, is exceedingly liked at Woolwich.

George W. Jones, formerly U. S. Senator from Iowa, has been forced by poverty to seek a nomination for Sheriff of Dubuque county. He is eighty years old.

The cottage in which lived John Mackey, the "Bonanza King," when he used to dig gold in Red Star Gulch, is still standing. It is a tiny shanty about 12x16 feet in size, with a little porch.

In view of King Alphonso's approaching marriage with an Austrian princess, Don Carlos has reasserted his claim to have already on hand several heirs to the throne of Spain, whose right to the succession he will never consent to sell.

Tennyson's brother changed his name to Turner, in order to inherit an income of $10,000 a year. He left no children, and Tennyson can now get the estate on the same terms; but he will not accept the condition.

The Prince of Wales's two sons, now beginning their career on board the British ship Bacchante, will be treated like other officers of their age and naval rank, with one exception. They will have a private cabin under the poop.

Ex-Gov. Brown, who is one of the richest men in the State, doesn't believe there is a single millionaire in Georgia, though there are quite a number of wealthy men whose friends like to regard them as Crœsuses.

Lady Lonsdale is said to be the handsomest woman of the London season, so that Mrs. Langstrey's day is on the wane. By the way, it is said that her husband is about to sue for a divorce for valid reasons.

Sara Bernhardt's American engagement (says the Era) is signed and sealed. The exact terms have been published by authority of Mr. Henry Jarrett. Mlle. Bernhardt is to come, not next season, but in September, 1880. She is to receive $600 a performance and $20 a day for her personal expenses.

The Archduchess of Austria, the coming Queen of Spain, aged 20, although an Abbess of the noble Order of Prague, with twelve canonesses under her, wearing on state occasions a mitre-shaped cap, is devoted to dancing, and will propably infuse some welcome gayety into Aranjuez. The woman who will give gayety to the Escurial has probably yet to be born.

The condition of Pope Leo's health is now admitted to be even more than critical. Change of scene and a better atmosphere have been prescribed him, but he sets the opinion of his physicians at defiance, and considers that in matters of hygiene, no one is half so wise as himself. His Holiness occasionally suffers from severe attacks of rheumatic gout.

Marshal St. Arnaud, Commander-in-Chief of the French in the Crimea at the time, spoke highly of Prince Napoleon's bravery at the battle of the Alma, and Mr. Kinglake, in his caustic history of the Crimean war, pays him the compliment of saying that he was not inferior to his uncle in personal courage; yet French soldiers are firmly convinced that he is a coward.

A man with a $500 diamond on his shirt bosom leaned over a hen coop in a Cincinnati market, and a hungry hen picked off the jewel and swallowed it. The thief was soon lost among the hundreds, and there was no way of identifying her. So the man bargained to have them killed, one after another, until the right crop was found. To recover the diamond cost him $28.

There is an incident in the life of Miss Mulock almost as romantic as any in her novels. In 1864-5 George L. Craik, a member of a London publishing firm, was injured by a railroad accident near her residence. She helped to nurse him, and as a result they fell in love, though he was many years younger. In spite of the opposition of friends they were married and live very happily together.

Mrs. Thankful Taylor is a remarkable Vermont lady seventy years old. In her younger days she thirsted for a thorough knowledge of English, Greek and Latin, and, being poor, she worked for her books and then studied them as she stood at her spinning-wheel. In this way she not only educated herself in the languages, but she learned ecclesiastical and profane history, medicine, science and general literature.

Thieves so exasperated Prof. Dellam, at Castle Shannon, Pa., by stealing fruit from his garden at night, that he resolved to shoot the next offender. While watching in a grape arbor, gun in hand, he heard a rustling among some bushes and fired in that direction. Then he went to ascertain whether he had hit anybody, and while he was searching in the bushes his hired man shot him dead, mistaking him for the thief.

The well-known Paris paper *La Presse* has been bought by M. Phillipart, of wondrous financial fame. In 1877 he was declared bankrupt, with liabilities of $9,000,000; he has now, it is asserted, paid all and is entirely cleared by the courts. He is 52, and a Belgian by birth—a man of the same stamp as Strousberg who made millions by railroad building in Russia, and lost them all, and is now making another gigantic fortune.

Signor Marcucci of Spoleto, Italy, a man of property and position, called in Dr. Domenicis to attend his only son, who was seriously ill. If, said Marcucci, the young man recovered, Dr. Domenicis should receive 2,000 francs; if, on the other hand, the patient died, Dr. Domenicis should be killed. Marcucci proved to be a man of his word, for the lad died, and the father thereupon killed Domenicis. He was condemned to five years' imprisonment and the payment of a fine of $5,000, to be given as damages to the Doctor's widow.

There is just one Belgian political refugee in existence. This is General Count Van der Meere, who is now 80 years of age and living in Paris. He was a general under Leopold I., but in 1842 organized a conspiracy for placing the House of Orange on the Belgian throne. For this he was condemned to death, but was saved by his wife, who, gaining permission to visit him in prison, dressed him in her clothes and remained in his cell while he walked out and made his escape as the Countess Van der Meere. He has since several times asked to be amnestied, but without result.

Upon the dissolution of Jefferson Davis' Confederate government, fourteen years ago, Mr. Judah P. Benjamin is said to have tramped on foot from Central Georgia to Florida and escaped in an open boat to Nassau with a single ten dollar gold piece in his pocket, which he gave to the negro who rowed the little boat. He has recently bought a beautiful Parisian residence for 300,000 francs, cash, and it is believed that this large sum does not exceed one-half of his yearly income from his practice in the English courts. He designs revisiting his friends in Louisiana.

No wonder Sir Bartle Frere, whose meddling and muddling brought on the Zulu war, desires to remain in South Africa whether the south Africans like him or not. His sources of income are: Pension from Indian Government, £1,000; annuity as retired member of the Indian Council, £1,000! as Governor of Cape Colony, £5,000; as High Commissioner of South Africa, £1,000; rent for country house, £500; special allowance for South Africa, £2,000; total, £10,000 a year. Of this sum £1,500 comes from the revenues of India, £6,500 from Cape Colony and £2,000 from the revenues of Great Britain. There are sundry small expenses, such as traveling allowances, not included in the above, but which are paid proportionately by Cape Colony, Natal, the Transvaal and Griqualand West.

Hop Bitters purifies the blood, and removes all pimples and eruptions.

New Publications.

The Voice of Worship,
For Choirs, Conventions and Singing Schools.
BY L. O. EMERSON.

This splendid book is now nearly through the press, and will be in great demand. Full collection of the best Hymn Tunes and Anthems for Choirs, numerous Glees for Social and Class singing, and a good Singing School course. Its attractive contents, with the low price ($1.00 or $9.00 per dozen), should make it the most popular of Church Music Books.

THE TEMPLE. *For Singing Schools, Conventions and Choirs.* By W. O. PERKINS, will be ready in a few days. First class book for Singing Schools, with large collection of Glees, and plenty of Hymn Tunes and Anthems. Price $1.00 or $9.00 per dozen. Although Singing Classes are especially provided for, both the Secular and Sacred Music render it one of the best Convention and Choir Books.

FATINITZA. The new and very favorite opera, is now ready, with words in three languages, all the Music and Libretto complete. Price $2.00 paper, $2.25 boards.

PINAFORE. Price reduced to 50 cts. The same elegant edition heretofore sold for a dollar. Complete Words, Libretto and Music. All ready for the stage.
Any book mailed for retail price.

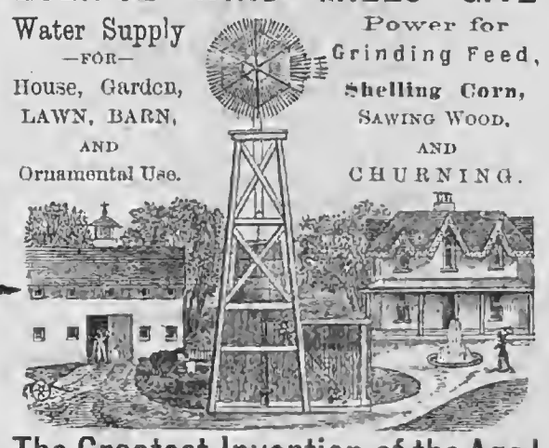
HIGGANUM MFG. CORPORATION,
Higganum, Ct.
Manufacturers of Agricultural Implements of all descriptions.

Attention, Owners of Horses!

THE ZINC COLLAR PAD is the only permanent and reliable pad for sore-necked horses or mules, that has ever been produced, and has been greatly improved since Jan. 1st, by being specially fitted to first-class tight and loose-ppe.l collars. The new pad of proper sizes will fit either. Being of smooth metal, they do not wear the mane, and always dispense, when needed, their medicinal virtues. There are over a million and a half of them in use. Pads made of other material can only temporarily have any curative properties whatever, and soon become worthless by abrasion in cleaning them. The Zinc Pads are sold by leading Saddlery Houses throughout the country, and harness makers generally. Ask your Harness Maker for them. Manufactured by ZINC COLLAR PAD CO.,
BUCHANAN, MICH.

Implements and Machinery.

ECLIPSE WIND MILLS GIVE
Water Supply —FOR— House, Garden, LAWN, BARN, AND Ornamental Use.
Power for Grinding Feed, Shelling Corn, SAWING WOOD, AND CHURNING.


The Greatest Invention of the Age!
An attachment easily fitted on any Wind Mill, and gives a rotary motion out of the stroke of Pump pole, so that the Power can be applied by belt to any machine. Send for illustrated circular.
ECLIPSE WIND ENGINE CO.,
Beloit, Wis.

Horse-Powers,

Wit and Humor.

THE baby rolls upon the floor,
Kicks up his tiny feet,
And pokes his toes into his mouth,
Thus making both ends meet.
The dog attached to a tin pail,
Goes howling down the street,
And, as he madly bites his tail,
He maketh both ends meet.
The butcher slays the pensive pig,
Cuts off his ears and feet,
And grinds them in a sausage big—
Thus making both ends meat.
The farmer coops his skinny hens,
And feeds them with choice wheat;
The means must justify the ends,
And so he makes them eat.

[Sidney Lanier.

BANKS'S BABIES.

A Parent's Difficulties in Getting His Children Baptized.

I WAS detained over Sunday in Barnsbury, and on Sunday morning I resolved to go to church. The first church I came to, a small frame structure with a wooden steeple, had the doors and windows tightly shut, but there was a man sitting on the front steps whittling a stick, and I said to him:

"Are you connected with this church?"

"Yes," he said, "I'm the sexton."

"What is it closed for?"

"Well, mostly on account of Banks's babies."

"Babies?"

"Sit down, and I'll tell you about it. You know Banks, he came to this town to live a few weeks ago a perfect stranger, and he rented a pew in this church. It seems that Banks had three little babies, triplets, not more'n two months old, and then, besides these, he had twins about a year old. So nobody knew about the babies, but Banks wanted to have the little darlings baptized, and he allowed to Mrs. Banks that to rush the whole five babies into church on one Sunday might excite remark, you understand. So he settled it that he'd have 'em christened gradually, so to speak. Accordingly the next Sunday he fetched little Jimmy, one of the triplets, and all went off well enough. On the followin' Sunday he come a promenadin' up the aisle with George Washington, another triplet, and Dr. Binns, our preacher, he fixed him up all right. People thought it was queer, but when on the next Sunday mornin' Banks and his wife came into church with another baby, William Henry, crying like a Pawnee warwhoop, some of the folks couldn't help snickerin'. Howsomdever, nobody complained, and all might have been well if Banks hadn't come along the Sunday after with Elijah Hunsiker Banks, one of the twins. Everybody laughed and Mr. and Mrs. Banks were furious—mad as anything, you know; and when Elijah Hunsiker Banks hauled off accidentally with his hand and hit Dr. Binns, who was holding him during the ceremony, a whack in the face, and the Doctor dropped him in the water, the congregation just fairly roared with laughter. Mrs. Banks turned red as fire and looked as if she would like to murder somebody.

"Well, you know, we all thought this was the last, and public feeling kinder simmered down on toward the end of the week, when who should come booming up the aisle on Sunday morning but Mr. and Mrs. Banks, with Tecumseh Aristotle Banks, the remainin twin! Well, you ought just to 've heard that congregation laugh! I never seen nothin' like it in all my experience. Even Dr. Binns had to smile. And the Bankses, they were perfectly wild with rage. Anyhow, they baptized Tecumseh; and after meetin' some of the elders got joking about it. One, they'd have to apply to the town supervisors for an extension of the water works; another allowed that arrangements ought to be made to divert Huckleberry creek and run it down the middle aisle of the church; another made some kind of a joke about business being good because so many banks were in town; another said that Banks would need about twelve pews when his family grew up. Somebody must have told Banks about it, for what does he do to revenge himself? He sends down to Clarian county to his two sisters to come and bring their children. So they had a couple of babies apiece, and as soon as they arrived Banks he begins to bring them to church gradually, like the others. You never seen such meetings as them! The church was jammed full and people just roarin'. And when Banks came in on Sunday with the fourth and last of his sisters' babies, the trustees thought it was time to interfere. Gettin' to be a farce, you know. So Deacon Smith he stepped up and said somethin' or other to Banks, and Banks, quicker 'n a wink, laid down the baby and banged the deacon with his fist. And so, I dunno how it was, but in a minute there was Banks and Deacon Smith and Deacon Hubbard, and Banks's sister's baby and me, all a rollin' and a bumpin' over the floor, hittin' and kickin' and whoopin' in a manner that was ridiculous to behold.

"And when we all come to and got straightened out, Banks picked up the battered baby of his sister and quit, and the trustees held an informal meetin' and agreed to close the church for a month so's to kinder freeze Banks out, and now we've shut up; but I reckon it is no use, for I hear Banks has got his back up and gone over and joined the Baptists."

So I said good day to the sexton, and went in search of another sanctuary.

"SALUTING THE BRIDE."

THERE was a marriage at the upper end of the Detroit, Lansing and Northern road the other day. A great big chap, almost able to throw a car-load of lumber off the track, fell in love with a widow who cooked for the hands in a saw-mill, and after a week's acquaintance, they were married. The boys around the mill lent William three calico shirts, a dress coat and a pair of white pants, and

OUR WHEAT FESTIVAL.

chipped in a purse of about $20, and the couple started for Detroit on a bridal tour within an hour after being married.

"This 'ere lady," explained William, as the conductor came along for tickets, "are my bride. Just spliced fifty-six minits ago. Cost $2, but durn the cost! She's a lilly of the valley, Mary is, and I'm the right bower in a new pack or keerds. Conductor, sa-lute the bride!"

The conductor hesitated. The widow had freckles and wrinkles and a turn up nose, and kissing the bride was no gratification.

"Conductor sa-lute the bride or look out for tornadoes!" continued William, as he rose up and shed his coat.

The conductor sa-luted. It was the best thing he could do just then.

"I never did try to put on style before," muttered William, "but I'm bound to see this thing through if I have to fight all of Michigan. These 'ere passengers has got to come to the chalk, they has."

The car was full. William walked down the aisle, waved his hand to command attention, and said—

"I've just been married: over there sots the bride. Anybody who wants to sa-lute the bride kin do so now. Anybody who don't want to will hev cause to believe that a tree fell upon him!"

One by one the men walked up and kissed the widow, until only one was left. He was asleep. William reached over and lifted him into a sitting position at one movement and commanded:

"Ar you going to dust over thar' and kiss the bride?"

"Blarst your bride, and you too," growled the passenger.

William drew him over the back of the seat, laid him down in the aisle, tied his legs in a knot, and was making a bundle of him just a size to go through the window, when the man caved and went over and sa-luted.

"Now, then," said William, as he put on his coat, "this bridal tower will be resumed as usual, and if Mary and me squeeze hands or git to laying heads on each other's shoulders I shall demand to know who laffed about it, and I'll make him e-magine that I'm a hull boom full of the biggest kind of saw logs, an' more comin' down on the next rise. Now, Mary, hitch along an' let me git my arm around ye."

USEFUL HINTS.

BRIGHT'S DISEASE AND ICE-WATER.—A Baltimore druggist of experience and ample opportunity for observation has advanced the idea that Bright's disease is attributable to the immoderate use of ice-water and cold drinks. He cites the fact that the people of this country use 90 per cent. more ice in their drinks than the people of any other country, Greenlanders not excepted. We have 75 per cent. more of Bright's disease. He cites the fact that the wine-drinking countries of Europe are comparatively free from the malady. Travelers have observed and commented upon the prejudice which seems to exist against ice-water and iced drinks in all countries outside the United States. The Englishman and the German fairly shun ice, though placed in easy reach of boundless quantities of it, and the Frenchman who sips the light wines would as soon think of taking an emetic as of chilling his stomach with an iced draught. Our drug friend points to the fact that Bright's disease has kept pace in this country with the increased consumption of ice, and claims that before ice became a common household necessity the malady was scarcely known among physicians. There may be something in this theory.—*Ballo. Gazette.*

BENEFITS OF FARINACEOUS DIET.—Liebig's theory that liquor-drinking is not compatible with farinaceous diet seems to have been corroborated by an English scientific man, who has been trying the experiment on 27 liquor-drinking persons. A striking instance of reform was shown in the case of a man of 60, who had been intemperate for 35 years, and was in the habit of taking a spree about once a week. His constitution was so shattered that he had great difficulty in obtaining insurance on his life. After an attack of delirium tremens, which nearly proved fatal, he was induced to live upon farinaceous food, which in seven months entirely removed his desire for liquor, and he became perfectly sober. He lost flesh at the beginning of the experiment, but regained it after two or three months. Among the articles of food mentioned as especially antagonistic to alcohol are lentils, dried beans, haricot beans and macaroni, all of which should be well boiled and seasoned with plenty of butter or olive oil. Ordinary garden vegetables are said to be provocative of temperance, but much less than farinaceous diet. The carbonaceous starch contained in macaroni, beans and oil seems to render unnecessary, and therefore repulsive, the carbon resident in alcohol. This remedy is so very simple that it ought to be tested by men who have so often tried to break themselves of intemperate habits. Drinking to excess is unquestionably a curse in every American city, and farinaceous food has never hurt anybody. Whatever harm it does to alcohol is clear gain.

Who Has Not Been Bilious?

Probably no one. Doubtless we have all suffered to some extent the disagreeable sensations which a disordered or languid liver can inflict. Sallowness of the skin, constipation, nausea, vertigo, soreness in the vicinity of the organ affected, a sensation as of congestion in the head, positive headache, a loss of appetite, extreme thirst, a high color of the urine, are among the symptoms which announce a perversion or vitiation of the bile. The remedy of remedies for the above is Hostetter's Stomach Bitters, administered by medical men; pronounced pure and wholesome by them, and popular as a comprehensive family medicine, and as a specific preventive and remedy for chills and fever and bilious remittents throughout America, and to a wide extent in foreign countries. Disorders in the stomach and bowels, as well as liver, are speedily remediable with this popular and time-honored medicine.

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XXXVIII. No. 38.
WHOLE No. 1547.

NEW YORK, SEPT. 20, 1879.

PRICE FIVE CENTS.
$2.00 PER YEAR.

[Entered according to Act of Congress, in the year 1879, by the Rural Publishing Company, in the office of the Librarian of Congress at Washington. — Entered at the Post-Office at New York City, N. Y., as second-class matter.]

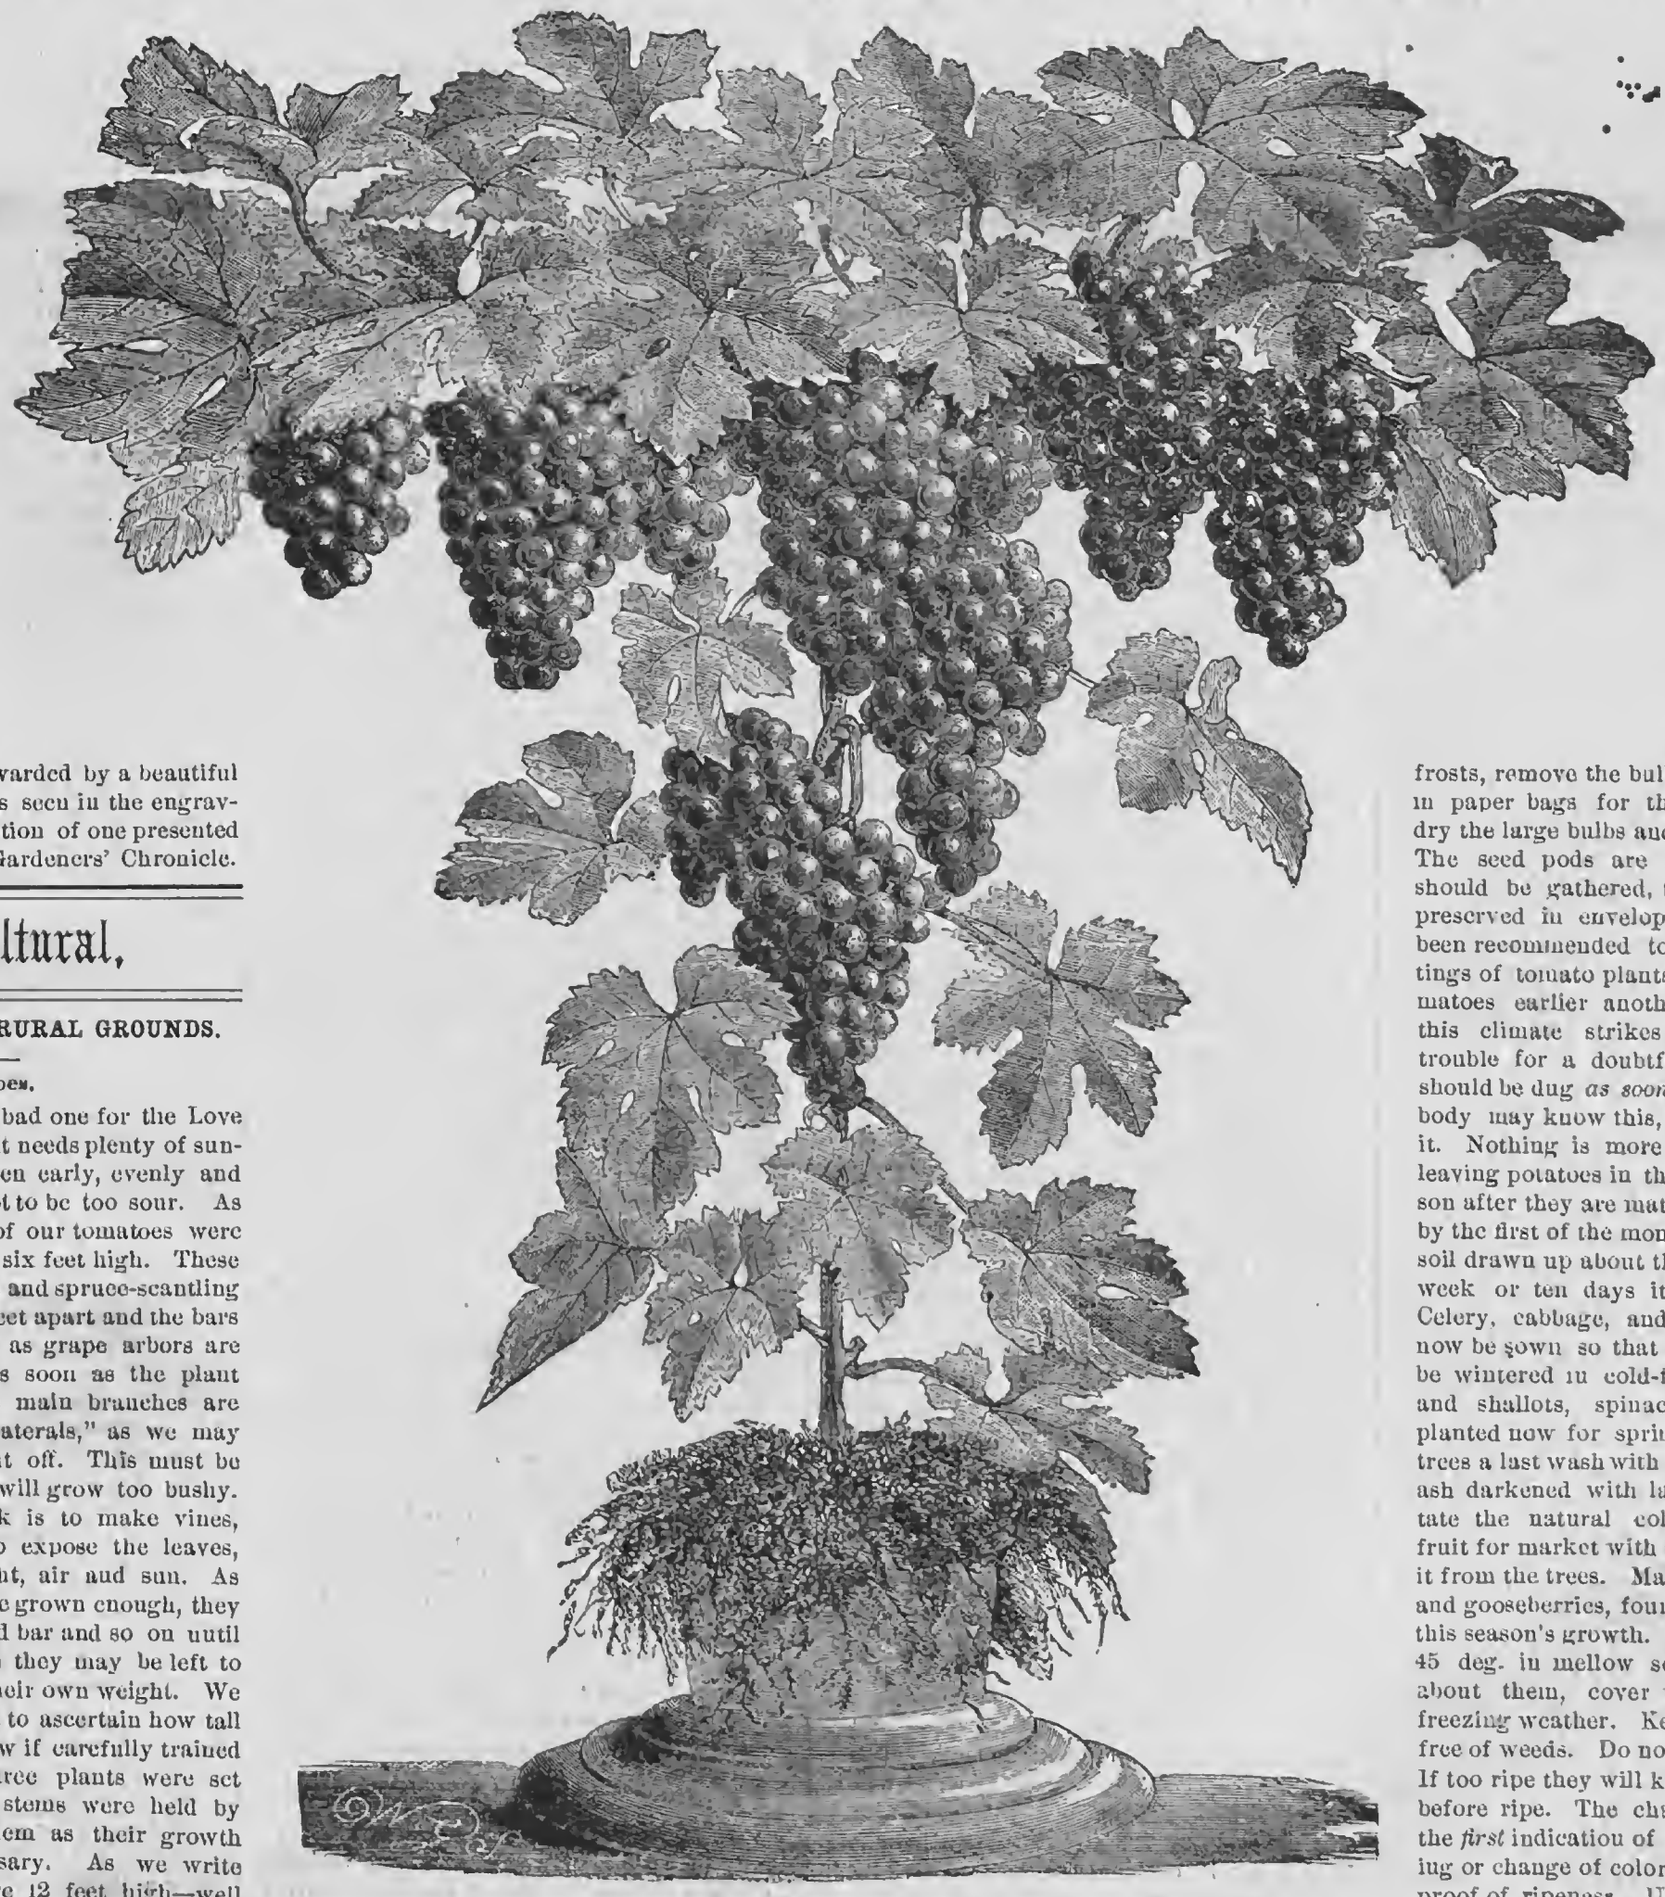
The Vineyard.

POT CULTURE OF THE GRAPE VINE.

THE accompanying cut represents a Grape-vine growing in a pot, as practiced in England and other European countries. In this country grape culture in pots is still in its infancy; but as a healthy, well-trained plant is a combination of both the ornamental and the useful, anybody who has the requisite facilities will be well repaid for the extra trouble this culture may occasion.

The plants can be most easily grown from cuttings or single buds, which should be set in small pots in March, and if placed in a greenhouse or hot-bed and given proper attention, nearly all will take root. Larger pots should be given as the growth of the plants may require. Well-grown specimens may bear fruit the second year.

The vines can also be raised from seeds, and thus, perhaps, give rise to new and valuable varieties. The present is a good time to plant seeds of grapes for cultivation in pots. If planted as soon as taken from the grapes, many will germinate in three or four weeks. Sow the seeds in boxes, and of the young plants select only the strongest, which should be transferred to small pots, and trained to a stake. By pinching back, careful training, and repotting into larger pots and richer soil, when necessary, we may in three years be rewarded by a beautiful plant loaded with fruit as seen in the engraving, which is a reproduction of one presented in a late number of the Gardeners' Chronicle.



POT-GROWN GRAPE-VINE.

Horticultural.

NOTES FROM THE RURAL GROUNDS.

Tomatoes.

THE season has been a bad one for the Love Apple—too much rain. It needs plenty of sunshine and a dry air to ripen early, evenly and to be sweet—or rather not to be too sour. As will be remembered, all of our tomatoes were trained to trellises about six feet high. These consist of red cedar posts and spruce-scantling cross-bars, the first ten feet apart and the bars two feet apart, the same as grape arbors are usually constructed. As soon as the plant reaches the first bar, the main branches are tied to that and the "laterals," as we may call them, pinched or cut off. This must be attended to, or the vines will grow too bushy. The object of trellis-work is to make vines, not bushes—and thus to expose the leaves, stems and fruit to the light, air and sun. As soon as the branches have grown enough, they must be tied to the second bar and so on until they reach the top, when they may be left to hang over and support their own weight. We have tried an experiment to ascertain how tall a tomato plant *would* grow if carefully trained and pinched back. Three plants were set against the barn and the stems were held by leathers tacked over them as their growth rendered support necessary. As we write (Sept. 5.) these vines are 12 feet high—well loaded with golden, crimson and green fruit The idea is a good one and we can tell our friends that if they have old trees, fences, outbuildings or out-of-the-way corners that they propose to cover with vines, let them be tomato vines.

New Varieties.

As usual we have tried all the much-talked of or advertised new sorts. Among them were Criterion, New Triumph and Paragon. Criterion seems to be a selection from Acme of a somewhat quadrangular shape. It is of medium size, prolific, firm, of a pinkish-red color and free from seams. It does not begin to ripen with us until about September 1st, which condemns it for this climate and situation. New Triumph is an irregular, much-lobed sort, without any unusually fine qualities that we can discover. Paragon seems a selection of the Trophy—large and lobed like it, and earlier.

Again (for the third year) ACME is our best red Tomato. It is, indeed, the best kind known so far as our tests enable us to judge. This tomato is one of those decided steps in the improvement of fruits, that rarely occur, and it seems to us worthy of being considered the standard of excellence from which we are to estimate all future improvements. We should now breed for better keeping qualities.

Curculio-proof Plums.

Bassett's American "Curculio-proof" Plum was discovered, it seems, some eleven years ago in a wood, bending with an immense crop of fruit. It was brought to the notice of Mr. Wm. F. Bassett, an experienced fruit-grower, who was so well pleased with it that he bought the tree "at a large price" and provided for its propagation. Three years ago, a tree was sent to us for trial, and this year it blossomed profusely and the branches were wreathed with the little plums which followed, not more than one dozen of which are left to ripen. Those who are introducing this tree have freely conceded that the fruit is inferior. Its wonderful productiveness in spite of the Curculio was its great point of excellence. As it is not curculio-proof, there does not seem to be any reason why it should not be consigned to the long list of Tried and Worthless Novelties.

Among the novelties offered this season and extensively advertised, was

The American Banner Rose.

We paid *five* dollars for a little plant of this about six inches high. In due time a bud appeared and in due time that bud unfolded. The *outside* petals were flesh-white with an occasional streak of light red. The inside was merely of a whitish color suffused with a rosy tint. The flowers were small, semi-double and perishable. The American Banner Rose, considering its price is quite a curiosity.

Musk Melons.

There are thousands of these left in the fields to rot. It does not pay to send them to market.

Hints.

Take up Lily bulbs as soon as the leaves begin to turn yellow, and reset either in the same bed or another well prepared for their reception. The soil should be mellow at least a foot in depth. All greenhouse plants which have been bedded out had better be repotted before they are injured by even the lightest frosts. Take up Gladiolus bulbs before severe frosts, remove the bulblets, dry them and place in paper bags for the winter. Cleanse and dry the large bulbs and treat in the same way, The seed pods are now ripening. These should be gathered, the seeds removed and preserved in envelopes until spring. It has been recommended to make and strike cuttings of tomato plants now, so as to have tomatoes earlier another year. The plan for this climate strikes us as involving much trouble for a doubtful advantage. Potatoes should be dug *as soon* as the tops die. Everybody may know this, but many neglect to do it. Nothing is more conducive to rot than leaving potatoes in the damp soil at this season after they are matured. Celery, if wanted by the first of the month, must now have the soil drawn up about the stems and then in a week or ten days it should be "banked." Celery, cabbage, and cauliflower seeds may now be sown so that the young plants may be wintered in cold-frames or pits. Onions and shallots, spinach etc., may also be planted now for spring use. Give the fruit trees a last wash with lime, sulphur and potash darkened with lamp-black so as to imitate the natural color of the bark. Pack fruit for market with all care—do not shake it from the trees. Make cuttings of currants and gooseberries, four inches long, of wood of this season's growth. Set them at an angle of 45 deg. in mellow soil and press it firmly about them, cover with a little litter after freezing weather. Keep the strawberry beds free of weeds. Do not pick grapes too early. If too ripe they will keep better than if picked before ripe. The change of color is merely the *first* indication of ripening. The shriveling or change of color in the *stem* is a positive proof of ripeness. Use shears or a knife to cut off the bunches—never pull them off.

HORTICULTURAL ITEMS.

PEAR blight has, in several instances, been arrested in affected trees by syringing them with a weak solution of potash, and it has proved a preventive when applied to the healthy trees. Let all orchardists try this remedy and report their success to the RURAL. * * * * * Lilium auratum, the beautiful Golden Lily of Japan, will, in its native wilds, sometimes attain a hight of twelve feet, and bear as many as a hundred and seventy-five flowers on a single stem. * * * * All tender plants that have been used for bedding or otherwise have been out-of-doors during the summer, should now be housed before they are nipped by frost. * * * * * At Adelaide, South Asturalia, is a botanical garden containing 8,500 rare plants, besides the ordinary plants in common cultivation. * * * * Label carefully all bulbs and roots that are now taken up to be wintered in the greenhouse or in the cellar. * * * * The Salisburia adiantifolia, or Ginkgo tree, which here generally grows as a shrub, attains a hight of some forty or fifty feet in China and Japan, and sometimes even a hundred feet. * * * * Do not remove any leaves from cuttings that easily wither, but let all remain and bury the two or three lower ones under the sand in the cutting bed. This will assist in keeping the cutting fresh till it has struck roots. * * * * Last winter sun-dried peaches sold at from seven to eight cents per pound, while evaporated peaches sold at from 30 to 40 cents. Let fruit growers note this and seek to make the most of their crops. * * * * Many hardy annuals may be sown in the fall when they will bloom earlier than if sown in the spring. Among these are Pansies, Sweet Alysum Mignonette, Portulaca, Nemophila and China Pinks. * * * * Strong-growing Grape-vines should be allowed ample space on which to spread. The Concord, for instance, has proved, in several cases, to give more fruit on a given area when the vines were twenty to twenty-four feet apart than at a distance of twelve feet. * * * * * To prevent the red spider from gaining foothold on the house plants during the winter, syringe them freely with clean water. A dry, hot atmosphere is especially conducive to the spread of the pest. If the use of the syringe is not convenient, dip the top of the plants a couple of times a week in a tub of water holding a little lime in solution. * * * * Now is the time to give the celery a final blanching by heaping up the soil around the plants. * * * * If not already done, it is high time to paint the greenhouse or conservatory, to repair the sashes, and to see that the heating apparatus is in order, so that all may be ready for the winter. * * * * Tuberoses that are still blooming at the approach of frost, can readily be lifted, planted in pots and transferred to the house where they may continue in bloom for several weeks

Floricultural.

FLORICULTURAL JOTTINGS.

WILLIAM FALCONER.

A LADIES' GARDEN CLUB.—The ladies of Garden Street—which bounds our garden on the west side—have got up a club, which they call the Garden Club. Their object is to assist one another in horticultural knowledge, by relating their experience regarding the cultivation of out-door and window plants, experimenting with "new" things, and clubbing together for the purchase of seeds and gardening periodicals. They meet once a week at some member's house when horticultural topics are discussed within, and the garden examined without.

WHAT'S IN A NAME?—The cut-leaved variety of our Western prairie Dock is called Silphium terebinthaceum var. pinnatifidum; the Russian Daisy of our borders, Chrysanthemum Tchehatchewii; an annual composite we grow, Achropappus Schkuhrioides; the Climbing Hydrangea, Schizophragma hydrangeoides; our wild, white-fringed Orchis, Habenaria blephariglottis; and a common window-basket plant, Chlorophytum Sternbergianum.

THE SORREL TREE.—This handsome shrub or tree (Oxydendrum arborcum) is found wild in rich woods in Pennsylvania to Ohio and southwards along the Alleghanies, where it grows from 12 to 40 feet high. It is not generally considered very hardy so far north as Boston, but in the garden here are several bushes of it, some in open places and others in shrubbery clumps, and they grow unscathed. About the middle of July every branchlet is terminated by a loose panicle of one-sided racemes of white flowers, that last in fair condition into August. The leaves, too, assume a gold-and-crimson coloring in the autumn. Notwithstanding the highly ornamental character of this plant, it is hardly ever found in private gardens; indeed, only a few nurserymen have specimens for sale. Prof. Sargent tells me that at the Arnold Arboretum they have found it rather difficult to propagate—the seedlings die off unaccountably.

JAPANESE IVY ON TOMB-STONES.—Ampelopsis tricuspidata is being extensively planted hereabout, and although it is one of the best and most appropriate vines for covering buildings, fences, old stumps or anything it can cling to, there is certainly a limit to its use. It is not without a feeling of deep regret I see it extensively used in our cemeteries to cover head-stones and monuments. The "Ivy" is planted at the back of the head-stones and encouraged to cover them all but the lettering in front, and even costly and elaborately-carved monuments are being ruthlessly buried in the same fashion. And the lot-owners only are to blame for this sacrilege—I will not call it by a milder name.

COMMON VIRGIN'S BOWER.—This lovely Clematis now in all its glory, draping trees, and spreading over bushes, banks and rocks, is a common wild plant, to be sure, but there are few more comely garden ones. It grows readily from transplanted roots, layers, and seeds, and for festooning old stumps, fences, and trellises it is admirably adapted. The nakedness of some of our country homes is hardly in conformity with this progressive age, and this is the more to be regretted when we know our woods and waysides teem with plants as fitly suited to adorn a palace garden as to enrich a farmer's yard. The Climbing Hempweed, Ground-Nut, Trumpet-Creeper, Climbing Fumitory, and Wild Balsam-Apple, are good examples of common, wild but ornamental vines.

SOME VARIEGATED BEDDING PLANTS.—Mr. Farquhar, head gardener at Forest Hills Cemetery, considers the variegated Stevia the best of variegated bedding plants. It flourishes in open, sunny places, and bears any amount of pinching with impunity. The variegated Sweet Alyssum is almost as good in its way. The variegated German "Ivy" and the variegated Chrysanthemum he commends for slightly shaded places, but says that with him they have proved useless for sunny exposures. He has given up growing Centaurea candidissima, because it sometimes damps off very badly. But when he lived at Providence, he found this silvery plant both good and reliable.

A BUTTERFLY FLOWER-BED.—Near the rockery in Forest Hills Cemetery is a carpet flower-bed, the ground work being mostly composed of Mexican Cotyledons, and on which, in embroidery fashion, is defined a large and beautiful butterfly, the horns, eyes, long body, and expanded spotted wings, all being handsomely and truthfully delineated with such plants as Alternantheras, Cotyledons, House-leeks, Cactuses, and the like.

NIGHT-BLOOMING PLANTS.—We all know about the Night-blooming Cereuses, the fragrant Evening "Jessamines," and the showy Evening Primroses; but it is not generally known that the long-flowered tobacco-plant—Nicotiana noctiflora—and others of its class are among the brightest and most profuse of evening flowers. Their color is white.

HARDY PLANTS FROM SEED.—If the seeds of such hardy herbaceous plants as Larkspur, Columbines, Bellflowers, and Pentstemons be sown as soon as they are ripe, we get nice little plants before winter sets in, and many of them, too, will blossom the next summer. In fact, the fresher seed is, the more readily will it germinate.

BIENNIALS.—Canterbury Bells, Wallflowers, Sweet Williams, Antirrhinums, Centranthus ruber, Hollyhocks, and other biennials, if not already up and growing, should be sown at once. If not sown before this time, the Wallflowers and Sweet Williams will not be likely to blossom till the year after next; of the Hollyhocks and Canterbury Bells a few, but not all, will blossom; but no matter whether the Centranthus and Antirrhinums be sown now or in the spring time, they will bloom anyway.

THE CHINESE YAM.—Dioscorea Batatas, the Chinese Yam or "Cinnamon Vine," as it is often called, is one of the best vines I have tried for high and dry exposures. The yams bury themselves so deeply in the earth as in a measure to escape the evil of drought. At any rate, we are growing it this year in one of the driest spots of the garden, at the base of a wall, and where all other vines, except Hops, Mignonette Vine, and Rumex sagittæfolius have almost refused to grow, and in point of thriftiness the yam vines surpass all others but the Hop which, though taller, is spoiled by insect pests,—the Yams are not.

NOTES FROM MOUNT AUBURN.—Mr. Collins, the head gardener at Mount Auburn Cemetery, considers Bijou the best of the white-leaved Pelargoniums for bedding purposes, the white is so deep and pure, and the plant stands the sun so well. Next to it he prefers P. picturatum, but its white is much duller. Madam Voucher is his favorite white-flowering kind; he has it mixed with Asa Gray, a good, pinkish one, with fine effect. General Grant is the infallible scarlet, but P. orbiculatum, for free flowering and stocky growth, is preferable; besides it does not "draw" so much as the General when grown in a shady place. Master Christine is a profuse and useful pink sort with large trusses, but Miss Gertrude is the main-stay in this class. Happy Thought, not much appreciated at one time, is redeeming itself in a somewhat shady place. Madame Thibout eclipses everything in the way of a double pink; the habit is stocky, the trusses many and ample, and the flowers large. I could refer to many other new kinds—most commendable ones too—but I do not know how to spell their French names.

Besides Pelargoniums, among

"White-leaved" Plants

Mr. Collins speaks highly of Santolina incana; it grows freely, and he can cut it as much as he chooses, but it is rather hard to get a hasty stock of it. He also highly praises the variegated Stevia and Sweet Alyssum; Leucophyton Browni; a little wiry plant, that hates to be watered overhead; the variegated Solanum capsicastrum—if the potato beetles would only let it alone, last year they ate it nearly all up, but this year, so far, they have not interfered with it—both kinds of variegated Sage and the sun-loving variegated Mesembryanthemum cordifolium. Ophiopogon spicatus, with creamy variegated leaves and spikes of violet blossoms, was very pretty in a shady place, and it can be safely wintered in a cold-frame.

COLEUSES multicolor and pictus are hardly to my liking among bedding plants; they are neither branchy nor bright enough. Alternanthera paronychioides major is the brightest of plants: it is bright all the time, whereas the other kinds do not assume their fiery hue till August. Mr. C. finds it harder to winter it than the others.

NIEREMBERGIA filicaulis and gracilis are profuse and dense little lilac cushions. Old plants lifted and potted this month, may be had in flower in the house all winter long. Gaura Lindheimeri in borders, beds and vases, is an appropriate subject; the old roots may be safely wintered in a cold-frame, or the plant may be treated as an annual.

Mr. C. grows the Pampas Grass in tubs, wintering the plants in a "cool" greenhouse, and transporting them out-of-doors in summer, when they are liberally treated to manure waterings. Specimens in two-feet tubs are now showing 14 spikes apiece.

THE Eulalia Japonica, variagated and zebra-leaved, are among the most ornamental of hardy grasses, and their flowers, which appear in September, if cut and dried for winter bouquets, become very pretty and flossy.

A BED OF FIERY POKERS (Tritoma Uvaria) is very gay, and survived, unscathed, the last winter, where they are now. Instead of covering over their crowns with boxes or half-barrels, as he used to, Mr. C., last fall, twisted their leaves into a solid, thatch-like knot, which rested over the crown, and thus led off the water; this, added to a general heavy mulching of tree leaves, was protection enough, the plants awaking from their bed in spring as freshly and soundly as if they had been wintered in a pit or frame.

ROSEBUGS AND WHALE OIL SOAP.—"I never knew rosebugs to be more numerous and destructive than they were here this summer." This from Mr. Collins: "You see that bed of Hydrangeas there:—well, in the early part of the season I thought the rosebugs would have eaten them all up, so one afternoon I dissolved about two pounds of whale-oil soap in a tub of water, and gave the bushes a thorough syringing and—would you believe it?—it was like butter to their bread, the bugs grew fatter and multiplied!"

CAKE FOR THE FAIR.—Some years ago I lived in a frontier State. We were about to have an agricultural fair, and were straining every effort to contribute to the exhibition and its visitors' provision. A neighboring lady was busy making cake for the fair, and as I happened to drop in at the time, I noticed how she did it. Many of the ladies out there chew snuff, which is not to their credit, and so did Mrs. T. It was a fancy cake, with a heavy frosting all over it, and to make the snowy coating more ornamental, the lady, with a small cane tube, blew a series of flower-like scrolls over its surface. And, oh horror of horrors! the snuff went scattering in the snow, like pepper in broth. I ate no cake at that fair.

MAURANDIA SCANDENS, or Lophospermum, as many botanists still call it, my neighbor, Mrs. Needam, has a large specimen of that she plants out in a border in the summer-time, and now it has grown to be a vigorous vine, thickly covered with purple fox-glove-like flowers. In fall she cuts away most of the vines, lifts and pots the root, and then stores it in the cellar till spring. This she has successfully practiced for several years. It is easily propagated by means of cuttings or seeds. It keeps in blossom all summer long.

NEW SEEDLING COLEUSES.

MR. H. W. HALES, of Ridgewood, N. J., sends us specimen leaves of seven varieties of new Coleuses. Some of them are worthy of the attention of fanciers of this plant; but others are totally eclipsed by older and well-known varieties. One of the best of these new candidates for favor, as near as we can judge from a few leaves, is Sensation. The leaf is small, coarsely serrate, and the edges fringed with a not very sharply defined zone of bright yellow, which gradually shades into scarlet purple, and finally green near the base of the blade. Ridgewood Gem is the name of another good variety. The leaves of this are medium to large, not deeply serrated, and the ground color is green dappled with yellow and a few velvet brown spots. Zebra is very similar to the last, the leaves are a little smaller, have less yellow, and the blotches of deep velvet are larger. Fantasic, Queen of May and Starlight are others of some promise. On the whole, of the innumerable sports and seedlings of this plant, we know of none that surpasses Fascination, a variety of recent introduction.

Field Crops.

A GOOD WORD FOR ALFALFA.

I HAVE grown Alfalfa successfully as a forage plant here, three miles east of the Rocky Mountains, both on the plains and on dry upland. I have 42 acres seeded with it. I mow it three times, and think if I did not pasture it late in the spring with sheep, I could cut it four times in a season. I came here in 1874, from the Genessee Valley, western New York, in search of relief from asthma, and found here what I sought, as I am now never troubled with the ailment. The seasons here are of about the same length as at my old home. Our winters here, however, are much more mild, still we have some severe cold spells; so that I cannot see why Alfalfa should not thrive as well in the neighborhood of Rochester, N. Y., as it certainly does here. It will produce more forage than any plant I ever knew, growing the second crop over 2½ feet high in 30 days. It is, I think, stronger and more nutritious than clover for hay, and invaluable for soiling. It should be sown where it may remain permanently, as it is not killed, like red clover, simply by plowing it under; for, after plowing, it will come right up again and grow vigorously. A part of mine has been already cut twice this season, and I am now growing the third crop. Thirty acres I have mowed only once, and the second crop of this I am now allowing to go to seed. I think it will produce about six tons of hay a season per acre. About 20 pounds of seed per acre are the proper quantity, and it should be sown on wheat in spring, the same as red clover, like which it should be always treated to a great extent. Its roots penetrate very deep and it will last, without reseeding, fifty years or perhaps more, according to experience in California. If sown in wheat, it will grow just like red clover, and will be clipped in the butt ends of wheat when harvested, and produce good fall feed thereafter, and may be cut three times the following season. If sown on ground well prepared for it and slightly harrowed or bushed in from about the first to the thirtieth of April, according to the locality and season, it can be mowed twice the first year. Stock of every kind like it much either as pasture, for soiling or for hay. If sowed on grass ground, it will do well. I have some that was accidentally scattered on blue-grass and buffalo-grass sod that never was plowed, and of this the second crop this season is over two feet high to-day, and going to seed. I consider Alfalfa one of the most profitable forage plants now known, after an experience with it of four seasons, including the present one. J. S.

Farm Economy.

SUBSOIL PLOWING.

F. A. GULLEY.

THE subsoil plow is used to loosen up the subsoil without throwing it up on the surface. It is drawn by another team after the ordinary plow, running in the bottom of the open furrow, and merely lifts the soil, letting it fall back in the bottom of the furrow. The next furrow is turned over on top of this loosened soil by the first plow as it comes around again.

Trench plowing is merely deep plowing, turning over the soil as deep as the plow will run, or sometimes using one plow after another, turning the soil from the bottom of the furrow up on top.

Deep plowing, trench plowing and subsoiling are by many supposed to mean the same thing, hence this explanation.

Whether it will pay to use the subsoil plow or not, can only be told sometimes by an actual trial. It will seldom or never pay to subsoil plow a light sand, a loose gravelly soil, or where the subsoil is wet and heavy. Experience

has shown that subsoiling a wet, heavy, undrained soil is worse than time and labor thrown away.

I believe on heavy well drained land the maximum crop cannot be grown without deep and thorough cultivation. Yet I am not an advocate of deep plowing except under certain circumstances.

There are many soils that are made the richer by turning up a little more of the subsoil every year. A large portion of the western prairies and river bottom lands, where the soil is made up of sediment deposited by overflowing waters in the centuries past, is of this class, but if from two to four inches of the subsoil on most of our upland farms should be turned up on top, the result would be a lighter crop for one and perhaps two or three years. Many a farmer has believed in deep plowing until a trial has shown no benefit was derived from it. yet there is no doubt as to the desirability of a deep, fine soil on any land except light sand, provided it can be secured without covering a good surface with a poor subsoil.

The advantages of subsoil plowing, are:—first, that we may get a deep fine soil without any of the drawbacks of deep plowing, although I would at the same time turn the soil over as deep as would prove by experience to be beneficial to the crops grown, running the subsoil plow also deeper each time. In a deep, friable soil the roots of plants make a stronger growth; penetrate farther after plant food, and are better able to stand dry weather owing to their running down deeper in the ground. Again, the soil itself will retain more moisture in dry weather, and allow an excess of water to pass off sooner when saturated, (we are supposing the land to be underdrained) and there will be less evaporation from the surface, thereby making the soil much warmer, as the process of evaporation reduces the temperature, as any one knows who has sprinkled a floor on a warm day. Breaking up the subsoil allows the air to penetrate, which helps to decompose the mineral and organic compounds, rendering them soluble, so that they may be taken up as plant food.

It will probably pay well to use the subsoil plow in preparing ground for both the large and small fruits, also for all garden and root crops. The best time for subsoiling is during the latter part of summer or in fall. When the ground is dry, it will do much better work than in the spring, and the effect will be more lasting. Some of our garden land, where the subsoil plow was used last fall, was so fine and mellow in the bottom of the furrows after the ordinary plowing this spring, that I could push my foot down out of sight; whereas where the ground had not been subsoiled, it required some force to push a spade down.

There are several reasons why these plows have not come into more general use. They are seldom kept for sale at our implement stores, and people know little or nothing about them. I have never seen one offered for sale in any store in Michigan. Some men have given them a trial on wet soil, and, seeing no benefit from their use, concluded they were worthless. To get one, an order must be sent to some far-off manufacturer, when the exorbitant price usually asked, with the added freight, makes it very expensive, and if anything breaks or wears out, it costs too much time and money to have it repaired. For these reasons, a few years since, after using a subsoil attachment on a common plow, I concluded to have one made. After several trials and changes, with the aid of an ingenious blacksmith, we produced the plow shown in Figure 1, which, for cheapness, ease of draft, thorough work and durability, is not excelled by any I have seen. The iron-work can be fitted to almost any old wooden plow beam and handle at a small outlay, or it can all be made new for less than the price of a good common plow.

The beam is made of tough, hard wood, 3x4½ inches at the center, and tapering to 2¾ inches square at either end, and five feet four inches long. The rod attachment to hitch to, with adjustable nut and thumbscrew to regulate the draft, gives the plow a more steady motion, and takes the strain from the beam. It is, therefore, well worth having, although I have used an ordinary plow clevis very satisfactorily. f, fig. 1. The side draft, provided for by the clevis with long slot, can not be avoided, as the plow must follow directly the horse walking in the furrow. The wheel, which I would always use, must either run under the plow beam or on the right side of it, as the land side runs close to the side of the furrow.

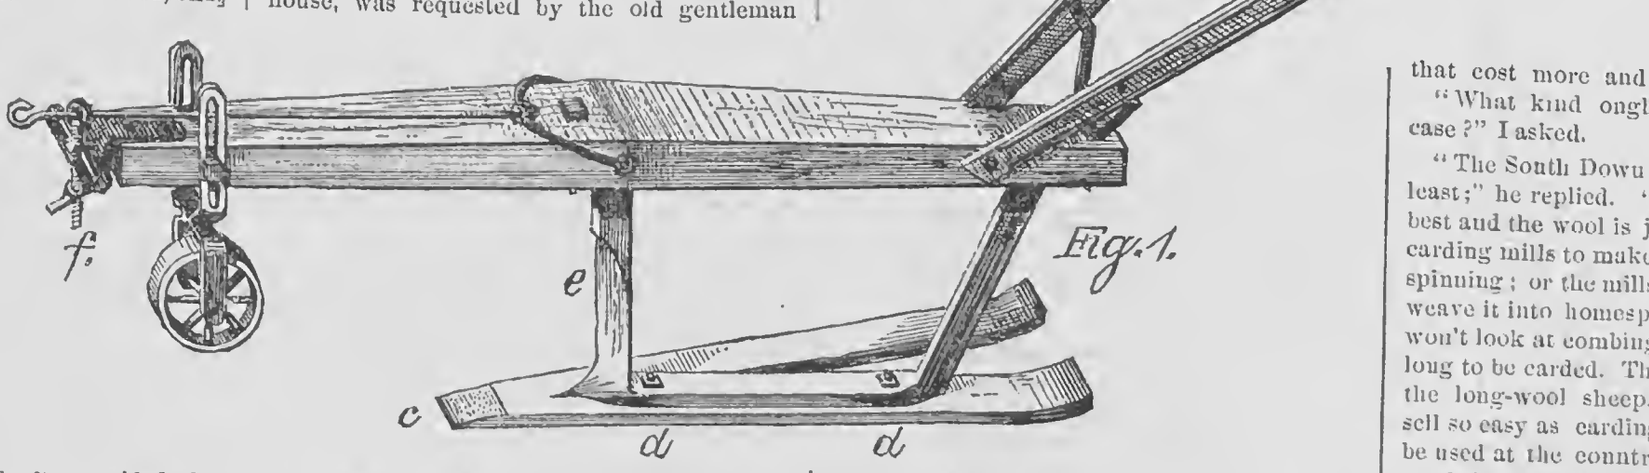

Fig. 1.

The bottom or sole of the plow, Fig. 2, is 34 inches long, and the main part, a, except the point, is wrought-iron, one inch thick and 2½ inches wide. The flange, or side piece, b, Fig. 2, is cast-steel *one-half inch thick* and 3½ inches wide, firmly welded to the main part of the sole.

The point, c, fig. 2 is also steel from the dotted line; the outer side of the flange is drawn to an edge and tempered hard to prevent wear and to enter the soil easily. The point is chisel-shaped, bevel side up, e, fig 1, and bent down about one half of an inch lower than the level of the bottom of the sole, to hold the plow down to its work. The sole is fastened to the

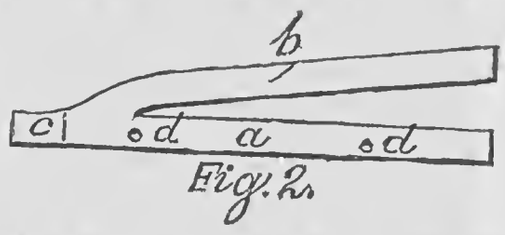

Fig. 2.

frame or standards, fig 3, by two half-inch bolts, d, d, fig. 1. with the heads down and countersunk level with the bottom of the sole. The sole is eight inches wide at the heel, from outside to outside, and the ends of both flange and main part are bent up one inch, as shown in fig 1. to lift the soil and break it up. The frame, fig 3, is wrought-iron, the front standard 16 inches in length and the other enough shorter to make the heel one inch nearer the beam than the point. The standards are each two inches wide and a half inch thick, the one before being drawn to an edge, e. fig. 1, in front to cut the soil. The bottom of the frame, g, fig 3, is two inches wide and three-quarters of an inch thick, with holes for the bolts, d, d, fig 1.

The greatest wear is at the point, and when much is worn off, it will not hold itself down in hard ground; for this reason the sole and frame are made in separate parts, as it is then easier to lay on more steel as it becomes worn away.

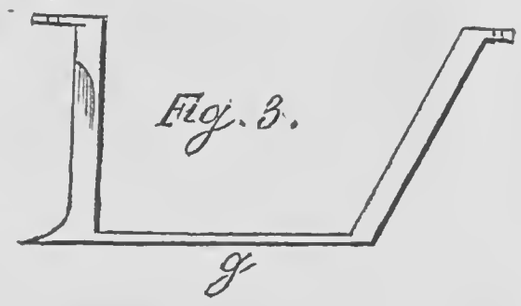

Fig. 3.

Twenty hours' use in our soil here at Lansing, will wear two inches off from the point; the bottom or sole is then taken to the blacksmith who, in fifteen minutes, sharpens it, tips it down a little, and it is as good as ever. When the steel is worn nearly back to the iron, a new piece is laid on and the plow is as good as new. The main part of the sole is of wrought iron to facilitate the welding on of the steel. We first made the bottom all steel and found it more expensive, no more durable, and much harder to repair—it being a difficult matter to weld steel to steel, that is hard enough for this purpose. The greatest difficulty with subsoil plows generally is, that they soon become worn and will not do good work. If made of common or chilled cast-iron, they cannot be repaired or sharpened. This plow any blacksmith can repair or rebuild if necessary. For very hard and stony soils, and for use when employing three or four horses, the parts of this plow would need to be heavier; but the measurement given will make it strong enough for any ordinary team. The sole and frame weigh about 60 pounds, and a blacksmith in town told me he would furnish material and make it for five dollars.

Agr'l. College, Lansing, Mich.

Sheep Husbandry.

HISTORY OF A POOR FARM.—No. 16.

Something About Sheep.

A FEW days ago Fred, passing his father's house, was requested by the old gentleman to take into the wagon two fine dressed lambs, one of which was to be left for me and one taken to Mr. Martin. Fred had gone on to the Martin's before I knew of this, and after a long delay, in which I suppose he was learning some new ideas on dairy matters from Miss Martin, he returned and informed me that his father requested my acceptance of a sample of his cross-bred lambs. The sample was a splendid specimen of a market lamb four months old, weighing, when dressed, 44 pounds, or 11 pounds to the quarter. I had neglected in the abundance of my occupation to take much notice of my old neighbor's flock, although he had frequently given some very direct hints that he would be gratified by an occasional look at what was evidently a pet possession of his; but this unexpected kindness determined me to go and investigate the matter. Mr. Martin and I therefore went over and were soon very much interested in examining a noteworthy flock. The rear part of the farm was divided into three fields and in each of these was a flock; one of thoroughbred South Downs, another of ewes of grade long-wool varieties generally known as "Canada sheep" with a number of unweaned half-bred black-faced lambs, and the other of pure-bred and grade weaned lambs. The fields were eaten rather bare, but the sod was thick and, if not eaten so closely, would have given a fair crop of hay.

"These fields have never had any manure on them since I moved here," said the old gentleman, "excepting what the sheep have dropped on them. I have never been without a flock of some kind since I began farming, 62 years ago next spring. I have seen sheep sold for a thousand dollars apiece, and I have seen them knocked on the head for their pelts, which brought 25 cents each; but I have kept on and never knew a fat sheep or a lamb to be worth less than 10 cents a pound to me for meat, nor the wool less than 25 cents a pound for the girls to spin on winter evenings. That is the way I always got the value for my sheep, never mind what the market was, and my sheep never lost me a dollar, but have made hundreds for me. Some of my neighbors have thrown away their sheep, and before five years have bought lambs from me to begin again; and in the meantime have bought wool to spin, or yarn to knit, at the store prices. That's what I used to call foolishness."

"I think you might call it so still," remarked Mr. Martin. "Why do you keep South Downs?" asked he.

"Well, my commission agent, who sells my lambs, says he can sell a black-faced, when he cannot sell a white-faced lamb; and the price is always better. I have sold lambs for 25 cents a pound this year when others about here have got but 12 cents. A half South Down lamb does not look so big as a Cotswold, but it is plump and fat and weighs well. I have kept South Downs for a good many years, and every year get a fresh ram from a different breeder. I don't believe in crossing too close, in sheep."

"That was a fine lamb you sent me, but I see many here as good or better; how do you raise these half-breeds?"

"William picks up, every fall, a few ewes from the droves that pass here to the Eastern markets, choosing grade long-wool sheep that come from Canada; these are large, heavy-bodied, and give a large lamb, and one that grows fast and soon gets fat. We cross a pure-bred South Down on these ewes early in the fall, so as to have lambs begin to come in January. But William can tell you all about that; he looks after the lambs, but as long as I live we shall have a flock of sheep on this farm, that is certain."

"Let us hear all about it, William," said I. "I think I can get an idea or two that may be useful to me."

"Yes, you have some hill-sides grown up to briers and weeds, that would keep a few sheep and lambs nicely without costing you anything," replied he. "But this lamb business is mine; grandfather looks after the South-Downs. The ewes in this field have each had one lamb, and some two; we have sold most of them, and the rest are with the pure-bred ones in the next field; you can tell the half-breeds at this distance; they are larger and the fleece is longer and rougher. A South Down lamb looks round and as smooth and even as if it had been planed down and sand-papered, but the half-breeds are looser-wooled and more bony. Yet they are good lambs. I weighed some yesterday. The heaviest is a January lamb, a wether now, and weighed 120 pounds; the mother, that gray-faced ewe, half Cotswold, weighs 165 pounds; both are nearly fat and will go to the butcher soon."

"Do you sell off the ewes, then?" I asked.

"Every one, excepting an odd extra-good young one. The ewes are our profit. These ewes were bought last August, and cost about five dollars each. I have had the fleece and a lamb from each, and the ewes will bring me, when fat, about six cents a pound for shipping sheep; that will average $8 each, if not more. We have nothing on the farm that pays better. You ought to have a flock of sheep on your farm."

"That will come in time," I replied; "I want to hear how you keep them in winter, and why you have them here now."

"In the winter we keep them in the yard at the red barn, and give them the run of the barn floor at night and on stormy days. The yard is filled, and the barn floor is covered, with straw. We feed clover hay and all the turnips to the sheep and buy bran besides. They get a few oats or corn ears for a change, and we get a yard full of manure by the spring. That goes on to the corn. In the summer we bring them out here to one of these fields and feed them bran, oats and corn, and get them fat; and after two years' pasturing, we can plow up the field and get a round of as good crops as from any of the other fields. I don't see but these are as good as any, even now. As soon as these ewes are sold others will be picked up and turned in here to pick their living until cold weather comes, with the help of a little corn and fodder, perhaps."

"How about dogs?"

"Well, we lose a sheep now and then, but we keep a close watch and we shoot a dog now and then, and that brings us square. The sheep are kept in a high rail pen at night and the dogs cannot get at them. Sometimes we trap a few dogs, by making a rail pen with the sides sloping inwards and pretty high, and putting a sheep that has been killed, when we have one, in it? The dogs can get in but cannot get out and then we have a little caucus with the neighbors, who have to own up and pay for the sheep among them. But we have never had much trouble."

"I have always thought that the greater part of the fuss made about dogs was merely an excuse to cover up carelessness," remarked Mr. Martin. "Folks keep sheep and neglect them, and expose them to danger and the dogs kill them. If every farmer kept sheep—as every one ought to—the outcry about dogs would cease. There is a great opportunity, if we would only adopt our old friend's plan; that is, raise mutton and wool, for our own consumption at least, and buy a spinning wheel and a few dozen knitting needles and let the girls spin their yarns, while the boys spin theirs. It would be a great help on many an interesting occasion, if the girls had their spinning wheels to provide them with occupation when conversation lagged, and their visitors were dull."

"That is true enough," rejoined our old neighbor, "spinning our own wool is a good old domestic habit, and to be able to eat our own mutton is very convenient and saves money. A dozen sheep might be kept without costing anything that could ever be found out, if it was not very closely looked for, and there are many wastes that are permitted that cost more and are never thought of."

"What kind ought to be kept in such a case?" I asked.

"The South Down gives the most for the least;" he replied. "The mutton is the very best and the wool is just right for the country carding mills to make up into rolls for home spinning; or the mills will take that wool, and weave it into homespun on shares, but they won't look at combing wool, because it is too long to be carded. That is the great fault with the long-wool sheep. Combing wool don't sell so easy as carding wool, because it can't be used at the country mills; besides, coarse-wool sheep are too fat mutton for home use. You can put two inches of fat on their ribs, but that is only good to sell."

"There are no other sheep so hardy as the South Down," said William. "Our thoroughbred flock gives us more lambs than the grade long-wool ewes, and are never sick; but the grade ewes are often ailing and if we did not sell them off, some might die: the wool is too open to suit me, and the sheep take cold in stormy weather, which the South Downs don' mind at all.

"You may be right," remarked Mr. Martin, "but the Cotswold is a noble sheep. Look at the ewe that weighs 160 pounds, and not half fat yet. And, moreover, it is now an acclimated citizen and as hardy as a native, as, indeed, most of our flocks of this breed now are. It is true, combing wool is hard to sell in country places, but there is a permanent and growing home market for it, and in the cities it is always salable at some few cents per pound higher than any other wool."

"All that is true," replied my old neighbor; "if I did not keep South-Downs, I would choose Cotswolds."

"And we would raise lambs by crossing them on Merino ewes," remarked William.

"I see," I rejoined, "it is a case of 'not that I love Cotswolds less, but South-Downs more;' and I think you are right, but I would include along with the South-Downs all the black-faced breeds which have their blood, such as the Hampshire Downs, and the Oxford Downs."

"There is no question," rejoined Mr. Martin, "of the advantages from sheep to our agriculture. They are close feeders; easily managed; if well provided for, they will manage themselves, in fact; they pay two profits. Like a National bank, there is a dividend half-yearly—one is the fleece, and one is the lamb; there is a reserve fund accumulated, which is the manure heap, and the capital, which is the carcass, is guaranteed by the butcher. It costs little to start a flock; the poorest farmer can go into the business as well as the richest; but a small flock is apt to pay better than a large one. It is one of the most surprising things in existence to me, that so few flocks are kept now. I suppose it is the result of a change in our habits, and our contempt for small things in our grand attempts to grasp something big; for in our fathers' days, when all kept a few sheep, folks were satisfied if their backs were warm and their stomachs filled, and never expected to carry around a pocketful of dollars, to go shopping with."

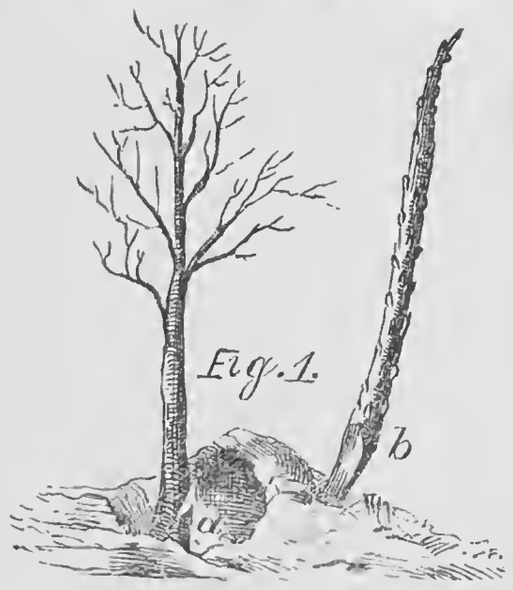
"That is your old story," I replied. "You are always harping on the good old times, and our old friend here confessed, the other day, that we were all as happy and well off now as then. The change is one of those which occur periodically; one of the ups and downs of farm life. There is more inquiry about sheep now than for many years, and when the boys are buying a thousand 'Shepherds' Manuals' in six months, you may be sure there will soon be plenty of young shepherds. Twenty-five sheep may bring in $100 clear every year, and every farmer's boy—or girl, too, if she would—could soon get up a flock of that size and manage it successfully, and in five years increase their profits until a thousand dollars would be earned. They don't see it and don't think of it, that is all; and it is somebody's business to let them know of it. Let them never mind what kind they begin with, only let them begin; they will soon learn how to manage their little flocks profitably."

Arboricultural.

A NEW AND SUCCESSFUL MODE OF GRAFTING.

PROFESSOR ELBRIDGE GALE.

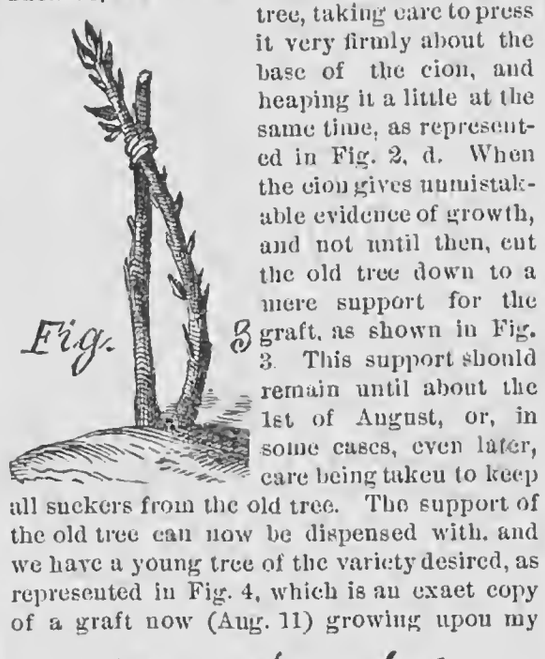
THE art of fruit culture is so far perfected, and the demand for choice fruit so imperative, that a seedling tree can scarcely be tolerated. And yet seedling trees of some kind are found every year, springing up about all places where fruit is grown. These are, in a great majority



of cases, valueless; but if their tops could be changed, they would not only be an attraction, but a source of profit in coming years. How can this change be made? The writer knows of no mode so simple, safe and successful as the one here described. We will suppose that the trees are anywhere from one-half inch to three inches in diameter at the crown. The grafting is to be done at the crown, so as to replace the entire top.

The tools needed are a sharp knife, a sharp chisel at least an inch wide, a light mallet, a handful of twine and a shovel to remove the soil from the base of the tree. We will now suppose we have a cherry tree, Fig. 1, an inch or more in diameter, which we wish to graft. The soil is first to be removed from one side of the tree, and a deep, smooth incision made into the side of the trunk, as represented at a. A cion, b, Fig. 1, is to be selected as long as can be conveniently secured, say from one to three feet in length. The lower end at b should be

wedge-shape, as in common cleft-grafting, taking advantage, in making the wedge, of any curvature of the cion, as represented in the figure, for convenience in fastening to the tree. The cion should then be inserted at a, Fig. 2, and pressed firmly to its place. Fasten them securely, as at c, to the body of the tree, or to one of the branches, if more convenient. Then replace the soil about the body of the tree, taking care to press it very firmly about the base of the cion, and heaping it a little at the same time, as represented in Fig. 2, d. When the cion gives unmistakable evidence of growth, and not until then, cut the old tree down to a mere support for the graft, as shown in Fig. 3. This support should remain until about the 1st of August, or, in some cases, even later, care being taken to keep all suckers from the old tree. The support of the old tree can now be dispensed with, and we have a young tree of the variety desired, as represented in Fig. 4, which is an exact copy of a graft now (Aug. 11) growing upon my



grounds, and made as above described, last spring. The following figures will indicate the value of this mode of grafting:—The cion in this case was two feet nine inches long; the graft is now two inches in circumference at the ground, and the united length of the eight new shoots is 16¼ feet.

Industrial Societies.

OHIO STATE FAIR A SUCCESS.

OUR State Board of Agriculture has been under a cloud, financially, the past year, but the fair held at Columbus the present week has made the skies bright again. The weather was simply perfect, excepting on Monday, and so were all the arrangements for the exhibition. Everything was well advertised, and all the railroads pledged to carry people to and from the fair with facility and at very low rates, so that the rural population, with that of the small towns for fifty miles or so around, seemed to turn out *en masse* for a day or two at the fair. On one day, (Thursday) it was shown by the tickets sold, that over 40,000 people entered the grounds, and about half that number on Wednesday and Friday.

The exhibition itself was very full and complete, as all our State fairs have been of late. The display of implements and machinery was particularly fine, showing continual progress in improvement. A marked feature in this department is the increase of the number and styles of portable steam-engines for farm purposes, and of self-binding reapers. There are also noticeable improvements in plows, cultivators, seed drills, corn planters, etc., of which I have not time or space to write in detail.

Of cattle, we always have splendid shows of Short-horns. Some Ohio herds are known to be as good as any in the world, and as none but the best can gain premiums at our State fairs, but few others are seen there. A larger number than usual of Jerseys were at this fair, and they attracted considerable attention. The cows are sought for by towns'-people, and some others, so that a few sales were made.

Horses were quite numerous and good—the fast-trotting part being seemingly most in favor; and the trials of speed in the ring were a more prominent feature than most of our people desire. They were only excused as a necessity for increasing the attractions of the fair and the funds of the Board. This motive will not exist the coming year, and it is hoped that there will be less catering to mere amusement at the fairs hereafter, and more effort to instruct the people.

Hogs and sheep were specially abundant, and the breeds or varieties were so numerous that every one's fancy could be suited. The same was true of poultry.

The departments of farm products and domestic manufactures, have never been very well filled at Columbus—the central and southern parts of our State not being occupied by farmers who devote much attention to the class of articles usually exhibited in this line. Some of the county fairs of the Reserve, or northern section of the State, make better displays in these departments. The mechanics and manufacturers of Columbus made very good displays of their work, and the citizens generally seemed to do all in their power to add to the attractiveness and success of the fair.

The fruit and floral halls were well filled and highly attractive, although it is not the bearing year with our orchards—there being a very scant crop of apples and no peaches at all, excepting along the lake shore. There was a fair display of apples, a very good one of pears and also of grapes, although the time was too early for these fruits to be generally ripe. We expect to see better displays of these, and a grand exhibition generally at the Northern Ohio fair, at Cleveland this coming week; and if the weather be favorable there will be another grand turn-out of the people; for it is quite evident that the better times are beginning to be felt by the millions.

M. B. BATEHAM.

COUNTY FAIRS.

THE interest taken by the rural population of our land in their local county fairs, has its fluctuations in common with many other such matters that from time to time gain attention. Many of the most promising efforts in this direction, that have been looked to with hope, as indicating progress in all that concerns the best interests of agriculture, have finally met with disaster and death. In view of the really beneficial influences that ought to flow out of these exhibitions of the ability of our farmers to produce the best of anything they undertake, that shows the result, in the long run, of faithful, pains-taking labor, it may become us seriously to inquire, once more, why so many county fairs fail of reaching complete and permanent success. Many reasons have been alleged, many arguments elaborated, yet the bare fact remains that the majority of these enterprises do not attain long life and prosperity.

I invite the attention of my readers to this subject, and, at the same time, simply propose to lay before them some slight account of one of these exhibitions that is at present in the full tide of success, and promises well for the future; and it may be this little history will answer some of the queries that may be raised on County Fairs.

Bergen County, New Jersey, is possessed of a fine soil and capable farmers: it has also many small factories of various wares, and its location, so near to the great metropolis of our country, would seem to call forth enterprise in its citizens. Yet until three years ago this county knew not the pleasures and advantages of a properly conducted county fair. In the year 1876 the first exhibition was held—although the great attractions of our Centennial Exhibition made it seem like a hazardous experiment—and was in character, more than in attendance, a surprising success. The following year the officers had the encouragement that their success gave to make a more extended effort, and at the close of the fair for 1877, they were the recipients of unlimited praise and congratulations. So much indeed was said about this exhibition that delegations were appointed from older, and possibly wiser, organizations in other counties, and even in one other State, to visit the Bergen County Fair of 1878, and ascertain their methods and the result. These official visitors were as hearty in commendation as the Bergenese themselves. We learn that the statistics of these fairs are about as follows:

Year.	No. Exhibitors.	No. Entries.	No. Visitors.	Receipts.
1876.	56	119	About 200	About $ 32
1877.	127	215	" 900	" 250
1878.	219	434	" 1,800	" 525

These figures indicate rather a remarkable progress for a young organization, and the present stage of proceedings gives promise of unflagging interest and continued success. The methods practiced in the administration of this county fair are only these: A simple organization; few officers; plain rules; economy in expenses; no money prizes, but in place thereof practical works, agricultural papers, implements and diplomas. Added to these are efforts to incite a healthy rivalry in rural matters. So far the association has managed to steer clear of "hoss trots;" believing that experience teaches that county fairs fail whenever they get into this rut. A slight examination of the premium lists of these associations generally, is sufficient to show the rock on which they split. "Too much of one thing good for nothing" is a homely proverb, that county fair managers might well bear in mind, and a farmers' fair, to receive a farmer's sympathy and support, must include, and treat fairly, all the interests of a farmer's calling. To those of our friends who wish to see for themselves how this can be done, I recommend a visit to Bergen county about October first, and to those who cannot make the visit, I presume the officers will be glad to communicate their ideas when requested. V.

THE sixteenth New England Fair of the New England Agricultural Society, was held in the City of Worcester, Mass., on September 2, 3, 4 and 5. The Ploughman characterises it as an unprecedented and magnificent display in all departments. Of cattle there was a fine display of Short-horns, Devons, Ayrshires and Jerseys; a single exhibit of Herefords, two of Guernseys; three of Holsteins; four of Swiss, and a goodly show of grades and "natives," besides a long list of working oxen. The horses included stallions for general use; mares, geldings, matched horses and fillies. Of sheep there were a few exhibits each of Cotswolds, South-Downs, Middle-wools and Merinos; of the latter two exhibits of American and one of Spanish. Of swine and poultry there was also a nice but not numerous display. Corn, wheat, oats, grass-seed, fruits, vegetables, butter, home-made and factory-made cheese, household manufactures, etc., etc., also made a fair show. So did Ex-Gov. Long, Gov. Head, Attorney-General Devens, Ex-Gov. Boutwell and some smaller celebrities, most of whom also delivered speeches appropriate to the occasion. The attendance was good, and the fair, it is to be hoped profitable, financially as well as educationally.

NEW YORK STATE FAIR.

(Special Correspondence.)

Utica, N. Y., Sept. 12, 1879.

THE weather was the great drawback to a brilliant fair. As it is, the Society will barely have receipts sufficient to meet expenditures. The exhibits in all departments are good—better than usual, notably the stock. Although the entries were larger than last year, there was not more than a third or a half represented in any class.

The same faults are manifest in this as in previous years. Exhibits are spread over too much ground; they should be grouped more closely and with more uniformity. If the Society should require the judges to make a report incorporating such suggestions regarding improvements as seemed to them needful in their several departments, I think the Society would profit by the information. Especially among the implement men was the "magnificent distance" between things spoken of, with an accompaniment of growls and complaints. In other respects the fair is as skillfully managed as usual, and with all its imperfections, it is about the best *agricultural* fair that we have. Machinery and stock notes are deferred until next issue.

Manufacturers' Hall,

is half filled with the usual collection of bed quilts and pianos so dear to the hearts of the ladies. One hundred and fifty feet and four tables are set aside for farm and dairy products, and a beggarly show they make. The Queens Co. fair makes a much finer exhibit in this line. Mr. Oscar J. Lewis takes first premium on the best collection of potatoes, which comprises 250 varieties. The plates are filled with well-grown samples. He tells me that Beauty of Hebron is in high favor in his neighborhood (Schaodack Centre, N. Y.,) owing mainly to its having been popularized by the RURAL through its Free Seed Distribution last season. Mr. L. grows seeds for Price & Knickerbocker, who also make a fine display. Bliss and Sons and Lewis Brewer have good collections of pota-

toes, (the latter taking second,) and in fact, potatoes are the main feature in this department.

The butter and cheese display is good, what there is of it, but it is ridiculously small in view of the fact that the fair is held in the center of the finest dairy district in the East. The name of Blessing heads most of the entries in this department, but it is a blessing in disguise, as he has entered under the name of his wife and son. This is the fellow who was expelled from the fair last year for cheating.

There is something fundamentally wrong about this department or there would not invariably be such meager exhibits. I would suggest that hereafter the Society make sweepstakes premiums for counties, in addition to the separate premiums, with the object of inciting local rivalries. The displays would be largely augmented, because there would be country organization and local pride to urge on endeavor. Such a plan is capable of extension beyond farm products merely, and if successful, would make this department the most interesting and instructive of any, and enable strangers to get a really clear idea of the resources and capabilities of particular locations of the State. This plan was carried to perfection during the Centennial by Kansas, and I have no doubt it was instrumental in creating the present prosperity of that State. The idea is well received among those to whom it has been broached, and I hope next year will show an improvement in what ought to be a leading department of the fair.

Floral Hall

contains nothing new in fruits or flowers. The cut flowers, as usual, focussed all the "ahs!" and "ohs!" of the multitude. Especially did an American flag in flowers draw the warmest praises. Ellwanger & Barry, though not entered, made the largest exhibit, comprising 96 varieties of apples, 46 of plums and a fine show of pears, including the new *Souvenir du Congrès*, large, good flavor, prolific, and somewhat like a Bartlett in shape. Among the 34 varieties of grapes are two new seedlings, "Rochester" and "Monroe." The Monroe was scarcely ripe and its flavor could not be judged, but the Rochester has a fine, full-flavor, close bunch, and it is said to be hardy. This firm also show cut flowers. Among the Roses is *Countesse de Serenyé*, a new variegated kind. Mr. Marvin, of Watertown, is conspicuous by his absence. J. Van Dorn has a very good collection of fall and winter apples, on which he takes three first prizes. Owing to a dry season, the fruit does not show up quite as well as it did at Elmira, but here, as there, Mr. Van Dorn's plates are by odds the best.

The Poultry.

is not equal to that of previous years in number or quality. Owing to the regulation of the Society it will always be difficult to gather together fine birds at this season. The premiums are given for aged birds, which now are looking their worst. Few care to send dilapidated specimens, especially as they contrast so unfavorably with the cockerels and pullets in the yard, which are now in their prime. A reform in this particular would bring together a splendid display at the next fair. The best classes are Light Brahmas, Buff Cochins, Plymouth Rocks and Hamburgs both as regards quality and quantity. The best single collection is that of J. M. Seymour, but the prize has gone to a collection that is larger, but not equal in quality. The Plymouth Rocks of L. J. Bundy are a magnificent lot of young birds. Their coloring is fine. Mr. Newton Adams's Hamburgs, as usual, are of the highest merit. G. H. Warner is strong in Dorkings, and H. B. Thomas shows the best Light Brahmas. Col. F. D. Curtis has the cream of the show in ducks and white turkeys, while J. Julian has expended his energies to advantage on Bronze turkeys. Mr. Halsted's incubator has up to the present hatched sixty chicks out of one hundred eggs, and the cry is still they come. This incubator was transported 107 miles, part of the way in a wagon without heat or unusual protection, the eggs meanwhile being in process of incubation, yet they were not perceptibly injured. This is a severe and successful test.

Implements.

THE representation of farming machinery at the fair is very complete, and an inspection of it gives a vivid impression of the sweep of improvement in this department. Most of the leading manufacturers have examples of their best work, but, with one exception, we cannot point to anything very novel that has not already been called to the attention of agriculturists. Our exception refers to the William Anson Wood Mower and Reaper Company, of Albany, N. Y., whose complete exhibit includes a very decided improvement in a light reaper that is a novelty, and demands special description. In speaking of this display it becomes necessary, as well as pertinent, to add a few lines regarding the Company, which has undergone a thorough reorganization, and, as the successor of the old Eagle Mowing and Reaping Machine Co., is now one of the most vigorous and pushing corporations in this line of business. In both mechanical and business departments the right men have been put in the right places, and with the abundant capital now at their command and the excellent implements they are making, they have succeeded in scoring a great success this season. Every machine put out has given gratifying satisfaction, and of the great number put in the field not a complaint has been received. This is a fact well worth pointing to.

The display on the grounds is made up of seven machines, which include four mowers, two reapers and a combined machine. The leading feature, as before stated, is the new light reaper, which not only combines simplicity with strength, durability and light weight, but has, in addition, a completely new device. This is a brake-shaped crank, a little to the right and in front of the driver's seat, where it can be easily operated, that works an eccentric which raises or lowers at the same time both sides of the cutter-bar and table and tilts the rakes forward so that they pick up the grain perfectly. A lever, just back of the crank, throws the table to any desired angle. With this improvement the driver can cut grain at the surface, or at any intermediate distance from the level of the ground up to a hight of sixteen inches. While the weight of this reaper is only 750 pounds, it is yet so nicely balanced and thoroughly made that it works with great smoothness and precision, and with the least amount of friction. The drive-wheel has a wide tread and is without lags. As this machine is covered by 15 patents, it may be said that it starts its career under ample protection. The new inclosed-gear mower is marked by simplicity and thoroughness of construction, running very smoothly and not jumping when heavy work comes in its way. This good feature is mainly due to the manner in which the weight of the pitman protector and its connections is distributed. The other regular styles of machine are also shown, but their good points are now well known from constant demonstration in the field. A minor point, but one not without its influence, is the handsome and tasteful manner in which the new styles are painted. The colors are durable ones and of neutral tints, that cause the machines to present a neat appearance, even after long use. Circulars descriptive of the new reaper may be had of the Company, and every farmer interested in improvements that tend to facilitate his labors, will be pleased with the new reaper.

THE HIGGANUM MANUFACTURING CORPORATION of Higganum, Conn., are at the fair principally to show new things and do not, therefore, make as large a display as is possible if they should show a sample of all the implements made at their shops. The first machine to attract attention is Hughes's Castor-tooth Smoothing Harrow, which is really a new departure in this class of farming tools. The principal novelty consists in the swiveled, or Castor-vibrating teeth which work loosely in the frame and are self-adjusting. The teeth slant backwards and are alternately bent to right and left which makes a zig-zag cut and in passing over the land, thoroughly pulverizes the surface to a depth of three or four inches. Its advantages are that being made in sections three feet wide, from two to four sections can be used. The teeth are slanting, work upon a swivel, are self-adjusting and self-cleaning. Farmers may use only the number of teeth required to do the work in the best manner. The teeth are taken out and replaced without trouble. It turns corners on growing corn or cotton without tearing it up. Is sold as cheap as any harrow with same number of teeth.

THE HOLLINGSWORTH NEW IMPROVED QUAKER RAKE is conspicuous for the simplicity of its mechanism, its durability and the uniform excellence of its construction. It rakes clean, lifts easily and falls back lightly. The least experienced can put it together and operate it. It is a combined hand and self-dump, and should the appliance for dumping by the power of the horse get out of order (which is hardly possible), there is no inconvenience, as the rake can be operated by hand without fatigue, to speak of.

A POWER CIDER MILL is also shown that may be truly called a *multum-in-parvo* piece of machinery, as with its attachments it is at will, either a cider-mill, corn-sheller, cob crusher, or grain-mill. The power is supplied by a horse that sets in motion gearing that does the work. It is all very simple and can be changed quickly, and with little trouble to serve any of the purposes above named.

J. M. CHILDS & Co., Utica, N. Y. have the largest exhibit of Agricultural Implements on the grounds, for which they received the Bronze Medal of the society. This exhibit includes a handsome display of small agricultural tools of all descriptions. Cultivators etc., of their own make and a large number of larger implements such as mowers, reapers, fan mills, thrashers etc., for which they are general agents. The Centennial Farmers' Favorite Grain Drill made by Brickford & Hoffman, Macedon, N. Y. is also a leading feature of their exhibit. The first noticeable improvement is the Bonanza Grass Feeder—a device that it is said will positively distribute all varieties of grass seed, large small and mixed. It can be attached to front or rear of machine. The new spring tube possesses the simplicity, efficiency, and durability found in the peg tube, but uses no rubber, and if broken by any accident it can be replaced at the nearest shop, saving cost and delay, and during the interval the drill can be used as a peg tube, not stopping apparatus at all. The new Bessemer steel axle gives lightness, strength and stiffness, and lessens the draft. In small devices, such as an accurate land measure, the drill is fully equipped and altogether the machine is very complete and effective.

Another leading feature was the show of Watertown Wagons distributed between their large tent on the grounds and the Wagon Hall. Of these wagons made by the Watertown Wagon Co. of Watertown, N. Y., there were 12 different styles on exhibition, for which they received the three first premiums awarded to Platform Spring Wagons. Among this company's improvements for 1879 is a Platform wagon with a new patent reach drawing direct from the axle. The Watertown Wagon Co., report a very good business this year and made a number of good sales during the fair.

J. M. Childs & Co., are also agents for the celebrated Oliver Chilled Plows, made by the Oliver Chilled Plow Co., of South Bend, Ind. They made a fine exhibit of these plows showing all the different styles. These implements are very popular in this section of the country as attested by constantly increasing sales. The Oliver Chilled Plow Company make over 75,000 Plows a year, and still find it hard to fill orders—further comment is unnecessary.

They also exhibited for Messrs. A. W. Gray's Sons, of Middletown Springs, Vt., a very handsome display of horse-powers, small thrashers, etc. These machines have long been known over a wide territory, and their merits are becoming better appreciated each year. Lightness, strength and durability combined with ease of handling, are among their leading characteristics. Mr. A. S. Flulay, the general agent, reports that business has increased 20 per cent this year, and that they are driven to fill orders. Improvements have been made in both lag-irons and cylinder for 1879.

THE EMPIRE DRILL Co., of Shortsville N. Y. exhibit a drill fitted with their new positive force-feed fertilizer distributor. As this device is something entirely new it is entitled to extended notice. It is a revolving cup, which when filled becomes a revolving cylinder of fertilizer. In operation the fertilizer is fed in a continuous stream from the bottom end of the cylinder, and only that is stirred which is immediately fed, and there is no chance of sticking or gumming. There is no connection between the fertilizer and seed until both are emptied into the drill tubes. The reservoirs hold a sufficient quantity to enable a farmer to sow the long way of a lot, which is a saving of time, and the whole device is so extremely simple that any inexperienced man can handle it and, if necessary, take it apart without disturbing a nut, key or spring. The Elmira Farmers' Club tested it and say, "we reached the conclusion that it approached perfection for precision and certainty of distribution." This is solid praise.

ONE of the most attractive exhibits was Kemp's Manure Cart. This is something entirely new. It is so constructed by the combination of simple machinery, as to unload perfectly, pulverize and evenly spread the manure by simply driving along, just as grass is cut with a mower. All kinds and quantities of manure are picked to pieces, and cast upon the ground with the evenness of sowing grain, and it is perfectly adjustable as to the quantity per acre. During a trial on the Fair grounds we saw a load put out in one minute and twenty seconds. All practical farmers spoke in the highest terms of its utility and its certainty of success. It is made by the Richardson Mfg. Co., Worcester, Mass.

NASH & BRO., of New York City, make an interesting exhibit, the main feature of which is a new harrow named the "Acme." The invention is the outcome of long study by Mr. Nishwitz, the original inventor of the wheel harrow. The "Acme" is an entirely new model. It has a strong wooden frame, the front half of which can be raised or depressed by a hand lever. This frame is fitted with steel spurs. Back of these spurs are the pulverizing teeth, which are a kind of plow-shaped cultivator tooth, lying horizontally. The under or inside edge is bevelled, and as the action of the soil is on the opposite surface, a tooth is kept sharpened as the implement is at work. In operation the frame-beam first strikes the clods, crushing them and passing them under the spurs, after which the soil is cut, lifted and turned by the teeth. The work is thorough, and it is said that the most stubborn soils yield to its work. It is sold at a very low figure.

THE GALE MFG. Co., of Albion, Mich., display through W. J. Walker, their general State agent, a very large assortment of plows of various styles. It is now six years since they began the introduction of chilled metal, and their success has not yet reached its climax, as the sales show an increase yearly. Once seen the plow will always be remembered, as it is constructed on different principles from those in common use. The novelty this year is a very handsome pattern called the rod beam. The beam is three wrought iron rods, that give the necessary strength and minimum weight. The beam is adjustable both in regard to pitch and width of furrow, according to requirements. The wheel is attached to the clevis, and not being attached to the beam it can run in a perfect line with the furrow and team. This plow received the most distinguished honors at the field trials in France, and is making a splendid record in this country.

M. WILLIAMS & Co., of St. Johnsville, N. Y., make their usual fine exhibit of Horse and Steam Power Thrashers and Horse-powers. They had them in full operation during the fair. Their new 34x6-inch cylinder, which has been on the market for the past year, has proved a great success; a large number have been sold, and in every case have worked to perfection, thus keeping up the reputation of the "Williams" in large as well as small thrashers. The large thrasher runs almost noiselessly, is simple in its construction, and capable of thrashing and cleaning, without waste (to the admiration of every one), all that one set of men can handle. Their Horse-powers are noted for the power developed at a low elevation with a slow walk of horses.

H. W. MARCELLUS, of Rochester, N. Y., the general agent for New York of the well-known Taylor Rake, made by B. C. Taylor, Dayton, Ohio, shows the latest improved combined self-dump and hand rake. It is conspicuous for simplicity of construction, the slightest pressure from the foot of the driver throwing it into gear as a self-dump, while the hand lever is conveniently placed if it is desired to work it as a hand-dump. In operation the rake, after discharging, falls back into position very lightly, making very little jar or strain. The Taylor works are noted for the wide range of their rake products, making a number of sizes and styles that are adapted for all sections of this country, as well as for foreign markets.

THE WATERTOWN STEAM ENGINE Co. included two engines in their exhibit, both being fired and in operation. We were especially pleased with the recent improvements in the engine designed for thrashing and farm purposes—an engine with which the readers of the RURAL are familiar through illustration. Several improvements have been added to the steamer that greatly enhance its value. The fire-box has been deepened and a series of three dampers so arranged that the fire is under perfect control, and the facilities for burning long sticks of wood are superior to anything we have seen. The self-oiling governor and stop-motion, in addition to the inspirator, are improvements that are best appreciated by thrashermen who have had to do without them. In mounting the engine, the rear axle has been carried under the boiler, instead of projecting from lugs supported by the fire-box, and the front axle is equipped with a ball-and-socket joint through which a pin projects, making a perfect support and easy turning combination. The wheels are of a new design that is peculiar to this company, and combine lightness with great strength. Altogether, the eight-horse power engine made by this company combines great and solid advantages.

THE SYRACUSE CHILLED PLOW Co. of Syracuse, N. Y., make a very handsome exhibit of their plows, one hundred in number, and of various styles. They are shown without any great flourish of fine painting, depending on their points of excellence for recommendation to the good opinion of agriculturists. Of this large display, sixty have been sold on the grounds and will be put right into the soil to demonstrate the claims made for them. The most novel thing shown, however, is a swivel plow that is characteristically simple and strong in construction. The handles of this plow are made adjustable to the line of draft by simply moving a pin and shifting into graduated slots, but the great point is an adjustable jointer that is quickly shifted in the direction of the mold-board by a lever, within reach of the plowman. This is something never before attempted on a swivel plow. It is unnecessary to speak of the manufacture of the "Syracuse," it is made of the best material and by skilled workmen. The sales this year are largely in excess of previous seasons and really remarkable in numbers.

THE EUREKA MOWER Co., of Towanda, Pa., believes in a specialty and this specialty—the Eureka Mower—was in full force on the fair grounds. The machine has undergone some slight improvements during the past season, such as strengthening the wheel, for one thing, but in essential features it is the same—and there is no mower made like it in the world. The Centre-Cut idea is being vigorously pushed by active agents, and it is meeting with great favor. Business, Mr. Gardner says, has nearly doubled in volume this year, and as the new company in its organization, was able to secure abundant cash capital, it is in a position to keep the ball rolling. The Eureka is also doing a large business in the West. It is made for this trade by the St. Paul Harvester Works, St. Paul, Minn.

OLIN & Co., of Perry, N. Y., are introducing a spring-tooth harrow that combines, it is said, the merits of harrow, cultivator pulverizer and drill. The teeth are sprung curving over the frame and incline forward like those of a horse-rake. They have a vibrating motion that clears them of weeds and other clogging substances, while the sharp points cut and score the soil, no matter how hard it may have become. But little friction is generated in operation and the ground is thoroughly prepared. It has proved very serviceable as a quack digger, and in fact, as a tool that can be devoted to a number of uses farmers will find it always convenient.

A VERY interesting and large show of farming tools is made by the WHEELER & MELICK Co., of Albany, N. Y., including their large and small thrashers, (mounted or down), horse-powers, the La Dow disc harrow, Tolley's Screw-tooth cultivator, etc. The disc harrow has quickly advanced in popular favor, and with its improvements is now one of the most serviceable implements on the farm. We noted two and three horse harrows, large and small gangs of wheels, with and without weight boxes, so that every requirement of the farmer is met and satisfied with the best class of tools and workmanship.

JOHNSON, GERE & TRUMAN of Owego, N. Y., have a very handsome "Champion" drill on the grounds. It is the new model with fertilizer and corn-planting attachment and spring hoes. The attachment successfully distributes all kinds of fertilizers wet or dry, and is simple and durable, requiring very little power to run it. The grass seeder has metal distributors, that are perfectly durable, and deliver the seed continuously, without intermittent pulsations. This and the other attachments are easy to regulate. The Champion has received premiums in this country and abroad at all important exhibitions.

THE Westinghouse Agricultural Engine, made by G. Westinghouse & Co., Schenectady, N. Y., was under steam every day, and worked to the satisfaction of all who saw it. It is a 10-horse power, and weighs only 3,800 pounds. It is an upright, but has horizontal tubes. It is easily and quickly fired, makes steam rapidly, and has every appliance necessary to safety, convenience and economy, including an anti-condensation and spark-arresting jacket. It was to be expected that Westinghouse & Co. would turn out highly-finished work, but this engine is a special credit to the concern.

P. K. DEDERICK & Co., of Albany, N. Y., exhibit a new perpetual Hay-Press that has admirable points both in design and construction. The power is supplied by a single horse that makes a complete circuit, thus putting in motion an apparatus that enables the operator to press and wire bales without cessation. The press shown bales about ten tons per day.

The Querist.

ANSWERS TO CORRESPONDENTS.

Pekin Ducks;—Mange in Animals, etc.

A. L., Atlanta, Ohio, asks a description of the Pekin duck; 2, a cure for mange in domestic animals; 3, how to procure the last report of the Signal Service Officer.

Ans. 1.—The Pekin ducks were first exhibited in this country at Hartford in 1873, having been first imported a year or two earlier from China, as their name suggests. They are larger in appearance than Aylesbury or Rouen, but seldom weigh more, as their fluffy feathering exaggerates the real size of their bodies. Their eggs are slightly larger than the Aylesbury's and they average more white-shelled eggs. The body of the Pekin duck is well down behind, the legs being carried back further than those of other domesticated varieties, while their tails rise almost vertically. The position of the hinder-part of the body naturally makes the bird carry its head high, making its neck apparently unusually long. The head is not quite as flat as the Aylesbury's, while they resemble each other in color, being almost pure white, although the Pekin shows a creamy, yellowish shade on its under feathering. The bill is of a bright orange color; the legs a shade deeper, almost a bright red. The weight of an ordinary adult bird should be six or seven pounds, but those exhibited at poultry shows are often much larger.

2. Mange or itch in the lower animals is always due to the presence of parasitic insects, which live in or upon the skin, finding their food in the watery or yellowish discharge which their bites cause to flow. They are of several kinds, and hardly ever visible to the naked eye. The disease they produce is in all cases exceedingly contagious, being spread by healthy animals touching affected ones; by the mites finding lodgment in the surroundings of diseased animals and being thence transferred to sound ones, and sometimes by the insects being carried through the air from mangy to clean animals. In all its forms the disease is characterized by itching of the skin, and loss of hair on the affected parts, which become covered with scabs. The treatment varies somewhat with the kind of animal affected. For the horse an efficacious remedy, in mild cases, is sulphur, 6 oz.; sperm or train oil, 1 pint; spirits of turpentine, 8 oz.; mix and rub well into the skin with a flannel every third day for three or four weeks; in severe cases, take of compound sulphur ointment, 8 oz.; train or sperm oil, 1 pint; spirits of turpentine, 3 oz.; mix and use as above. In all cases the affected parts should be thoroughly washed in warm water and the scabs broken and removed before the application of the remedy The diseased horse should also be separated from the others. The blankets should be destroyed, and every piece of harness, curry-comb, brush and other utensil that has touched the affected animal, as well as the manger, and all the surroundings should be thoroughly washed with carbolic soap, and, when dry, saturated with spirits of turpentine. Occasionally the disease appears in ill-cared-for cattle on the face, head and neck. In such cases rub well into the affected parts an ointment made by mixing elecampane root, 2 oz.; sulphur vivum, powdered, 2 oz. For mange in pigs use promptly carbolic acid diluted one drop to ten of water; petroleum or a strong decoction of tobacco. Mange in sheep takes the name of "scab," and is the worst disease that can affect them. The affected animals may be treated by giving each of them half an ounce of sulphur and one drachm of cream-of-tartar daily for two weeks. The scabs should be soaked in warm water, broken up and removed. Then the affected parts should be dressed with a mixture of one quart of pine tar, one quart of raw linseed oil, and one ounce of creosote, well rubbed in. A flock really attacked by scab should be got rid of, as to cure the disease would cost more than the sheep are worth. For mange in dogs use: oil of tar, one ounce; sulphur, one ounce; common oil, one pint; allow the mixture to stand in the sun or near the fire for some time and frequently shake it. There is a multitude of other recipes for the malady in each class of animals, but many of them are poisonous and therefore dangerous. The above may be employed with safety, and are as efficacious as any others. 3. Apply to the member of Congress for your district for all government publications, except for those issued from the Department of Agriculture. Gen. Le Duc has lately adopted the excellent rule of distributing directly from Washington all the publications from his Department.

Hoop Pole Farming.

C. P. B., Edwardsville, Ill., wants to plant about four acres of hickory nuts for hoop poles, and he asks if we think it would pay in connection with a general fruit farm. When should the nuts be planted, and what kinds will make the quickest growth and the best poles?

Ans.—Plant the nuts soon after they are ripe this fall; if this cannot be done, keep them in moist sand during the winter and plant them early next spring. The rows should be far enough apart to admit of using a horse cultivator, and the nuts should be about two inches apart in the rows and covered two inches deep with soil. Next fall dig the young plants up and shorten the tap-root to about half its original length, then heel-in the plants in a dry place in the open ground and let them remain till spring. As early as the ground can be worked, set the plants in rows six feet apart and about eighteen inches apart in the row. At this distance about nineteen or twenty thousand plants will be needed for the four acres. From this time forward but little attention is required, except culture and occasional pruning to make the plants grow straight and with but few side branches. As to varieties, the Shellbark—Carya alba—is the most common, and nuts from it can perhaps be more easily obtained than from the other species. The Pig-nut—C. porcina—has a very tough wood, and is preferred by many artisans to other kinds. The Mocker-nut—C. tomentosa—is also good. The latter prefers a light rich soil, the two former thrive on rather stiff and heavy lands. The Hickory is a slow grower for the first few years from the seed, but when it becomes well established, the growth is usually quite rapid. Whether the raising of hoop poles will pay better than to cultivate the land with some crops, we are not prepared to say. It will depend upon the character of the land, the cost of cultivation and the demands of the market. It should, however, be borne in mind that the first crop of hoop poles is the most expensive, because less in number and longer in coming to maturity. If the first cutting is properly done and at the right time of year, the stumps will throw up thrifty sprouts that will grow as large as the original stock in half the number of years. The second crop may be double that of the first, for each stock may be allowed to carry two or three stems.

German-American Citizens and German Military Service.

G. W., San Antonio, Texas, says that he left Germany in 1872, at the age of 17, having obtained permission from the Government to travel in this country until April, 1875, when he would have been old enough to appear before the board of examiners who decide upon the fitness of young men to be enrolled in the army. Not wishing to return home at the expiration of the term mentioned in his permit to travel, he settled in this country and two years ago obtained a certificate of citizenship. Now the landrath of his native place informs him that he must pay $50 to secure exemption from military service in case he returns to Germany, and he asks whether he is now, being an American citizen, under any obligation to the German Government.

Ans.—In 1868 it was settled by a treaty between the United States and the North German Union that if a citizen or subject was, after a residence of five years, naturalized in either country, he was to be deemed a citizen of that country; that if he returned to the land of his birth, he could not be prosecuted for any criminal offence unless it was committed before his expatriation, and that by a residence of two years in the country to which he originally belonged, with no intention of returning to the one of his adoption, he would be presumed to have renounced his naturalization there. The Prussian law, however, requires that, to lose the quality of a citizen of that country, it is necessary that the person who desires expatriation should, at his own request, receive a discharge from the obligations of citizenship—and this is not granted to males between the ages of 17 and 25 years without a military certificate that the application is not made to avoid the performance of military duty. This proviso of the Prussian Government seems now to be extended to the whole of the German Empire, or at any rate, to the smaller States more directly under Prussian influence. The matter is now causing some little difficulty between this country and Germany, but it is probable that the diplomatic correspondence which is at present being carried on with regard to the matter, will soon lead to a satisfactory settlement of the question.

Remedy for Garget.

M. M. W.,—no address—asks what will cure garget in a cow's bag.

Ans.—If the evil is in its early stages, the simplest remedy is to put the calf with the cow, and let it suck and knock about the udder as it pleases. In most cases this will relieve her from an excess of milk and disperse the lumps. If this fails, then if the disease occurs, as in this case, in hot weather, the udder should be well fomented with warm water three or four times a day, after which it should be thoroughly dried and hand-rubbed. In order that the application of moisture may have the best effect, it should be continuous for a considerable time. An excellent way to secure this end is to take an oil-cloth or India-rubber bag to fit the cow's udder, or nearly so, coming up to the body, flaring at the top, and held up by a strap passed over the animal's back; then fill this with soft water, say, of the temperature of 65 degrees. The water will gradually absorb the heat from the udder, and must be changed as often as it gets warm. Or, a cloth may be applied over the udder and secured by bandages round the body, holes having been left for the teats. The udder can then be covered with wool or tow, which should be kept moist by renewed applications of water every hour. A moderate purge should also be administered, say, half a pound of Epsom salts, which may be beneficially followed up with two ounces of saltpeter in the water, morning and evening. Instead of this purge, however, an injection of about three pints of soft, blood-warm water, without any medication in it, is often preferable, as it moves the bowels without any irritation, dissolving the hard fæces and cooling off the intestines. If the first injection does not operate in an hour or two, a second should be given, and generally a repetition is beneficial in any event. The milk should be carefully drawn every four hours, and when the milking is attended with great pain, a siphon should be used. This treatment will usually prove successful in cases in which the disease can be cured without the aid of a skillful veterinary practitioner. If the disease has become so severe that his services are necessary, it is his business to prescribe the various medicines suitable for the different stages of the malady.

Hair Ball in a Heifer's Stomach.

S. E. H., Milton, Ky., sends us a hair ball two inches in diameter, and weighing an ounce, taken after death from the stomach of a heifer, and asks for some information as to the formation of the curiosity.

Ans.—Such balls as this are peculiar to cattle and are found almost always either in the rumen or first stomach or paunch, or, more rarely, in the abomasum or fourth stomach, which is the true digesting stomach. In the latter case the balls are composed exclusively of hair irregularly matted and held together by the mucus of the stomach. Those found in the rumen have generally a mixture of food or earthy matter in their texture, and in the center a bit of nail, stone or wood; although sometimes there is no distinct central body. They are generally round, but occasionally of various other forms and varying in weight from an ounce or two to six or seven pounds. Their presence where found is due to the habit which cattle and even very young calves have of licking each other. A considerable quantity of hair is loosened by the rough tongue, the greater part of which is swallowed, and the stomach seems gifted with the power of separating this indigestible matter from the other substances it may contain. These hairs, which the stomach cannot grind down, gradually accumulate and form into hard masses often at a very early age of the animal. Generally various compounds of lime and siliceous matter can be detected in the balls by chemical analysis, and sometimes when the concretions are sawn asunder, the parts are so hard as to be capable of a considerable amount of polish. The effect these substances have upon the health of the animals is not yet clearly understood; but they are found oftener and in greater numbers in ailing than in healthy beasts. Whether they are a cause or a consequence of impaired digestive powers, is somewhat doubtful, but their presence in the stomach, often in considerable numbers, must produce a sense of oppression and an impairment of appetite.

Treatment of Asparagus, Etc.

N. S., Walnut, Crawford Co., Kan., has set out a bed of asparagus and he would like to know, 1, how to treat the plants from now on; 2, what is the best way to keep onions during winter where there is no cellar in which to store them; 3, his Millet headed out two weeks ago; when must it be cut for fodder; 4, how can early potatoes best be kept from now until winter; 5, he has just gathered a fine crop of Concords, and he asks if any other variety of grapes would do well there. Hartford Prolific and Isabella have been a failure with him.

Ans.—1. Asparagus should not be gathered after the end of June. All shoots that may appear after that time should be allowed to grow, to strengthen the plants for next year. In the fall, when the tops have all turned yellow, they should be cut off and removed, and a little later, the bed should be given a dressing of long-staple manure to remain on during the winter. Near the end of March or in the beginning of April rake off the longest straw and turn the rest under with a digging fork, without injuring the roots. These should have four or five inches of soil over them. If a thin dressing of guano is raked in just before the shoots appear, the crop will be much increased. A sprinkling of salt once a fortnight, as long as the plants are cut, will prove beneficial. 2. Keep them frost-free by covering them up with hay or straw on a barn floor, on a loft over a stable, or in a room. A few degrees of frost will do them no harm; they should not have too warm a place. A temperature between 30 and 40 degrees will be about right. 3. Rightaway. 4. In a cool place in a barn. They can also be kept in a dry pit in the ground. 5. To experiment is the only safe way of finding out what varieties of Grapes will succeed in a new locality. Whatever sorts prove successful in the neighborhood under similar conditions, would be likely to do well with our friend also.

Growing Vetches in Florida.

I. S., Starke, Bradford Co., Fla., referring to a notice of the English vetch in a late issue of the Rural, asks whether it would be likely to thrive in that locality in winter, as a green forage crop there at that season would be a godsend; 2. where the seeds can be obtained?

Ans.—Having some doubts as to whether these vetches would do well so far south, we consulted the Department of Agriculture at Washington on the subject, and Mr. E. A. Carman, the acting Commissioner, has just written us that there is no doubt that the English vetch, both the spring and winter varieties, will thrive in winter in the latitude of Jacksonville, Fla., and no doubt somewhat farther to the south, too. Vetches are not at all fastidious in regard to soil and can be successfully cultivated in a great variety of soils. There is no botanical difference between the winter and spring sorts, and the seeds being identical in appearance, caution is required in purchasing so as to get the right sort. The land on which the seed is sown should be dry and well sheltered, clean, and in good heart, and should be further enriched by plowing into it from 10 to 12 loads of farm-yard manure per acre. Not less than 3½ bushels of seed per acre should be sown, to which, in England, some think it beneficial to add a bushel of wheat; but winter beans are preferred to wheat by the best farmers. The land having been plowed rather deeply and well harrowed, the seed is deposited in rows, either by a drilling-machine or by ribbing. The latter is considered the best practice, and the ribs should be at least a foot apart, and rather deep that the roots may be developed before top-growth takes place.

Winter vetches are sown in England in August, or as soon as the land can be cleared of the preceding crop, and as soon in spring as the state of the weather and land will permit, the crop is hoed between the drills and top-dressed with, say, 40 bushels of soot or two hundredweights of guano per acre. The crop is ready for use in May and June. Spring vetches sown there about the first of March are ready for use about the first of July, when winter vetches are just cleared off. Of this variety not less than four bushels of seed per acre should be used, if sown broadcast, or three bushels if drilled in. As vetches are in the best state for use when the seeds begin to form in the pods, repeated sowings are made at intervals of about three weeks from the end of February until May. In the above locality experience must determine the best time for sowing vetches, as the difference in climate between that place and Great Britain will necessitate, no doubt, a considerable difference in this matter. 2. Seed can be procured from any prominent seedsman, that of the English Grove Vetch being probably the best.

The June-bug Among Strawberries.

A. S. H., Elm Grove, W. Va., has a strawberry patch in which he has found that a grub is destroying the plants. He contemplates setting out a large number of plants, but hesitates on account of the grub, and he therefore asks if there is any means by which to exterminate the pest without injuring the plants.

Ans.—The grub our friend mentions above is, in all probability, the larva of the June-bug or Dor-bug—Lachnosterna fusca—as it sometimes is very destructive to strawberry plants. The presence of the grub is indicated by the withering of the plants, when, on gently pulling them, they come out quite readily, the roots having been eaten off, and the mischief-maker may be found near the surface of the soil directly under the plant. A strawberry patch once thoroughly infested with this pest cannot be saved. Nothing can be applied that will kill the grubs without injuring the plants, and to attempt to dig the pests out is too expensive and ineffective to be practicable. Neither is it advisable to set strawberry plants on land where the grub is found, for in ninety-nine cases in a hundred they will prove a failure. The best way is to raise hoed crops on such land for a couple of years preparatory to setting the strawberry plants, both to destroy those larvæ that are already present and to prevent the beetles from laying their eggs, as they prefer grass land to cultivated land for that purpose. Or, the land may be fallowed for a season, and by frequent plowings the larvæ exposed to the birds and to starvation.

Treatment of Strawberries, Etc.

J. N. J., Mt. Vernon, N. Y., has a strawberry bed on the place he hires, which is several years old and did not bear very well this year. The berries are very nice, but the runners cover the ground. He asks, 1, what he shall do with it to get a crop next year, if he remains there; 2, his Blackberries are very thick, how shall he transplant them; 3, a

brood of chickens, raised from Light Brahma eggs, have nearly all five or six toes on each foot; he asks if this is common.

ANS.—1. The bed is worn out. We would advise our friend to plant a new bed now from the strongest runners, if the variety is desirable. Then clean the rows of the old bed, cover it with a coat of manure during the winter, and let it give what it can for another year. Meantime the new bed will come into bearing. 2. Fall planting of Blackberries is, perhaps, most successful. Dig out young plants and set them in prepared ground in rows six or eight feet apart. 3. It is not common. We surmise that there is some Dorking blood in the fowls; otherwise the fifth toe would hardly appear in so many of them. The sixth toe is a monstrosity.

The Chinese Sand or Le Conte Pear.

A. M. A., no address, asks information about the Chinese Sand Pear introduced about 26 years ago into Liberty County, Ga., from New York city by Major Jack Le Conte, and where cuttings and layers of it can be obtained.

ANS.—In answer to this inquiry Mr. Charles Downing writes us, "The Chinese Sand Pear or Le Conte, as it is now called, is not the true Chinese Sand Pear, but probably a cross between it and some cultivated variety, and partakes more or less of the nature of both. It is much better in quality than the genuine Chinese Sand Pear—which is not eatable—but is not equal to the best garden varieties. The tree is said to be hardy, and, so far, it has not been affected by the pear blight. It is an early and very abundant bearer. Young trees and cuttings can be obtained from H. H. Sanford, of Thomasville, Ga., and probably of other nurserymen in that locality." In the weekly Tribune of Aug. 20th, we see the Georgia Hort. Society reports that Leander Vernadol, of Thomasville, marketed 150 bushels of Le Conte pears this year from 12 trees.

Chronic Rheumatism in a Horse.

B. F. E., Webster City, Ia., has a six-year-old gelding that from its colt-hood has been troubled with stiffness in one of his hind legs. The stiffness is shown in the morning after a working on the farm the previous day. When started he cannot bend either the hock or stifle joint, but drags his foot on the ground and jerks it up a few times, after which he goes along all right for the day, and sometimes for weeks. The ailment is worse during the latter part of summer than in winter or in any other part of the year, and he asks for some cure for the animal.

ANS.—This is doubtless a case of chronic rheumatism, and from the fact that the horse has been troubled with it from colt-hood, it is probably constitutional and incurable. Relief may possibly be found by rubbing the joints with a mixture of four ounces of olive oil and two ounces of *aqua ammonia* several times a day, and giving half ounce doses of bi-sulphate of soda daily for several weeks in the feed. This may not cure the complaint, but it may prevent deposition of bony matter at the joints or the spread of the inflammatory action to the substance of the bone.

The Five-Spotted Sphinx.

H. L. R., no address, sends a moth and requests us to give its name, habits and all about it.

ANS.—The moth is of the sphingidæ family and is known under the not very enphonious name of Macrosila quinquemaculata (Haworth), or, in common language, the Five-spotted Sphinx. Its larva is the well-known tomato worm. The moth is among the largest known. It has five distinct orange-yellow spots on each side of the abdomen, and the tongue, which is usually coiled up, can be extended to the length of five or six inches. The female lays her eggs on tomato and potato plants in July. The eggs soon hatch, and by the end of August or beginning of September the large green larvæ are full-grown, when they measure some three inches in length and are as thick as the little finger on a man's hand. They then bury themselves in the ground, where they pupate and remain till the next summer, when they again appear as moths. Whenever the larvæ become troublesome to the potato vines, they are easily killed with Paris-green; on the tomato vines, hand-picking is the best remedy.

Miscellaneous.

S. A. A., Champlain, N. Y., asks our opinion as to the comparative merits of Maryland, Virginia and Florida, for raising strawberries and other small fruits, as well as early vegetables for the Northern market. He prefers Florida for several reasons, despite its distance from New York, as transportation rates are low.

ANS.—Not knowing the reasons which influence our correspondent in favor of Florida, we cannot form any opinion as to their weight; but we are disposed to think a more northern location preferable for the purpose here intimated, chiefly because it is very probable that many of the most profitable fruits and vegetables would thrive better farther from the tropics, and because means of transportation thence to market would be more numerous, cheaper and speedier, and with perishable goods, such as many of those in which our friend intends to deal, the last consideration is important. A good location, handy to railroad or steamer and with the right kind of soil, exposure and labor facilities, either in Maryland or Va., would doubtless prove profitable in the hands of the right sort of man; for, after all, more depends on the owner's character and abilities than upon anything else, in such an enterprise undertaken by a man of fair intelligence. Our "Everywhere" has furnished many hints during the year as to a suitable location.

A. F., Howard, Minn., 1. makes inquiries about plants a clip of which is said to have been inclosed in the note; 2, a dwarf English Clematis which she expected to bloom twice each season, has never bloomed, though this is its second season, and she wishes to learn the cause; 3, must Maréchal Niel Rose be a year and a half old before blooming—she has one that must be two years old, yet it has only a single flower yet; 4, should it be cut back when brought into the house this fall.

ANS.—1. There were no slips inclosed. 2. Clematis, as a general thing, makes very little growth the first season. It ought to grow vigorously the second. The finer sorts of Clematis upon their own roots are less vigorous than if grafted upon strong-growing stocks. We would advise that the plant be cut off within three inches of the ground this fall, and after the first severe frost, or upon the approach of settled cold weather, covered with long stable litter, two inches deep. 3. Maréchal Niel Rose should bloom the second year. 4. Yes.

H. A. W., Kearney, Neb., asks at what time the following tree seeds get ripe, and when should they be planted and how: 1, Cotton-Wood, Box Elder, Ash, Elm, red and white, Sycamore and Sugar Maple; 2, how should seed of the Osage Orange be treated before planting; and, 3, where can he get basket Willows.

ANS.—1. Seeds of all the above trees ripen variously; we cannot tell the exact time in the above locality. The seed can be sown immediately after they are gathered or early in the spring. Sow in rows nine inches apart, and from one-half to an inch and a half deep, according to the size of the different kinds of seed. 2. Soak Osage Orange seed in water a couple of days before sowing. 3. Basket Willows can be obtained, or information furnished as to where they can be had in the above section, from any nursery in the neighborhood.

H. E., Ont., Canada, says that her tomatoes sent by the RURAL rotted on the blossom side before ripening, and she asks whether the mishap was due to the nature of the soil. 2. She has some Weigelas only an inch high, and she inquires whether they can withstand the winter in the open air or should they be removed into the cellar.

ANS.—1. We have had a few similar complaints from different sections of the country, which seem to indicate that the charge of causing the tomatoes to rot, cannot justly be laid to the soil. It may be that it is caused by some peculiarity in the season, but it seems more reasonable to suppose that it is a tendency in the variety. One correspondent states that the Acme was grown side by side with other tomatoes, and these were not affected, though the Acme was. 2. Weigelas are hardy, and will stand the winter perfectly out-of-doors.

A. W., Southold, N. Y., asks, 1, whether R. G. Chase & Co. and D. H. Putty & Co., of Geneva, N. Y., are reliable; 2, whether there is a better wringer than the Universal; 3, do we know anything about the Foster Peach; 4, what are Russian Apples.

ANS.—Chase & Co. are trustworthy nurserymen; Patty & Co. we do not know. 2. The Universal is a good wringer; so is the Peerless, price $8, which the RURAL offers for a club of 15 subscribers. 3. No. 4. The Russian Apples were introduced some years ago into this country chiefly by the Department of Agriculture, and distributed for trial among pomologists living mainly in the cold parts of the country, in order to test their hardiness and adaptability to the "cold belt." During the last couple of years the RURAL has had several articles giving the results of these experiments, and to these we must refer our correspondent; see our Pomological Number, Nov. 16, '78, and issue of July 26, '79.

W. T. A., Greenville, Pa., asks if the process of weaving designs in ribbon is brought to such perfection that a name can be put in at comparatively little expense. He deals in supplies for agricultural fairs, and would like a lot of officers' badges made by weaving in the words "Secretary," "President," etc.

ANS.—Badges such as these are made, but they will cost much more than if the names were printed. A badge of fine quality, six inches long, with name or motto weaved in, will cost about 40 cents. For further information, address the American Silk Label Manufacturing Co., 389 Broome Street, N. Y.

J. W. S., Owensboro, Ky., has a horse one of whose velus was cut on the inside of the leg about two inches above the hoof; the wound has healed, but its site is marked by a knot, and he asks how the enlargement can be reduced.

ANS.—The swelling is probably caused by infused blood from the vein, or may be a thickening of the tissue caused by inflammation. The only method of treatment that would be effective and safe is to rub briskly with the hand, and apply iodine ointment at the same time, rubbing it well in. This may produce absorption. If no effect is seen in two or three weeks, it would be best to leave it alone. The friction will be the most effective and should be gentle and long-continued.

G. G.—no address—has a hen that for some time has been troubled with a short, quick croak or cough, breathing sometimes like a person troubled with asthma; otherwise she is in good condition and eats well, and he asks her ailment and a remedy therefor.

ANS.—The hen has a cough or cold. Take of sweet spirits of niter, one ounce; paregoric, one ounce; syrup squills, one half ounce; mix thoroughly and give one half teaspoonful twice a day. In slight attacks, no medicine is necessary; the fowls usually get well in a week or two; but in severer cases give the above as directed or oftener, as required.

A. D. G., Holland, P. O., Ohio, says that millers thereabouts affect to dislike Clawson wheat, while growers admire it greatly, and he asks what fault it has and whether the millers' dislike is real or affected.

ANS.—Millers object to Clawson because it has a large per cent of starch and a low per cent of gluten, and being a very soft wheat, it is impossible to make first-class flour from it. This query and several others with regard to wheat and its culture were fully answered in various articles in last issue.

C. A. M., Lysander, N. Y., sends plants for name. No. 1 is found in swamp places, and blooms from the last of June until the middle of August; No. 2 is found in old pastures and by the road-side.

ANS.—No. 1 seems to be a Desmodium—Tick-Trefoil. No. 2, Pink Root—Spigelia Marylandica. Would our friend kindly furnish us with other specimens? The above were so crushed that we could not determine them positively.

J. H. L., Coxsackie, N. Y., asks what variety of wheat besides the Clawson we would advise him to sow this fall, and where it can be had.

ANS.—For desirable sorts of wheat, see our Wheat Number, dated Sept. 13. The various sorts can be generally procured from the large seedsmen, such as Thorburn & Co., 15 John street, and Peter Henderson, 35 Cortlandt street, R. H. Allen, 189 Water St., this city.

J. A. W., Castile, N. Y., asks for some better way to clean the paint off paint brushes than by the use of hot soap-suds or spirits of turpentine.

ANS.—The ingredients of the different paints vary considerably, so that certain solvents act more effectively on some than on others; but we do not know of any so generally efficacious as spirits of turpentine:—who does?

R. S. H., Hazlettville, Del., asks whether multiplying pounds sterling by five will give correctly their value in American dollars.

ANS.—No. A year or so ago, Congress enacted that the English sovereign, or pound sterling, is worth only $4.84 in American money. Multiply the number of pounds sterling, therefore, by 4 84, instead of by 5, to obtain the equivalent sum in American specie.

P. S. W., Newmarket, Va., asks where and to whom he can sell Confederate money and stamps.

ANS.—We really do not know. Neither of these has now any intrinsic value beyond that of old paper; and whoever might purchase either would do so out of mere curiosity or from a wish to possess specimens among his antiquarian treasures.

J. W. W., Factoryville, Pa., wishes to exhibit a sample of Blount's Prolific corn at the local fair, and asks whether his doing so would interfere with his competing for one of the premiums.

ANS.—Certainly not; returns, however, must be made of the yield of the exhibited corn as well as of the rest of it.

J. A. B., Montreal, Can., sends specimens of a shrub for name.

ANS.—The shrub is Viburnum acerifolium, the Maple-leaved Arrow-wood, common in rocky woods and hedges. The showy fruit, which is now bright crimson, will soon turn purple.

L. A. E., Roselle, N. J., sends a plant which is very common in that locality, and asks for its name.

ANS.—Gerardia tenuifolia.

NOTE.—The letter and flower received from a correspondent of Republican City, Neb., were mislaid. Would ask him to repeat his inquiries.

A Subscriber, Ceres, N. Y., asks where can he obtain land plaster.

ANS.—Through almost any country store.

W. A. B., Yorkshire, N. Y., asks where can he buy Todd's Young Farmer's Manual, 3 vols.

ANS.—Through this office:—price $4.50.

THE FARMERS AND THE RAILROADS.

J. M. PETERS.

The influence which the railroads of the country have hitherto had upon its agricultural development, suggests a train of possibilities for the future, which are worth the consideration of those who own or till the soil. Their first effect was a division of labor, by making the cheap and fertile lands of the West the great grain-growing and sheep-grazing sections, while the more costly Eastern farms were restricted chiefly to those branches of farming, which required nearness to the most populous markets, and which could stand the enhanced cost of cultivation resulting from the greater value of the farm lands and the more expensive labor at the East. Within a decade the constant complaint of the Western farmer was, that he was able to use the Eastern markets only at great cost to himself in freight charges for a thousand miles or so of railroad transportation, and grain was the only considerable product upon which he could afford to pay this tax. Latterly the policy of the competing lines of railroads connecting the Great West with the seaboard, has been such that the Western farmer has been able to send his products a thousand or fifteen hundred miles at less cost than the farmer within the boundaries of New York State could place his goods upon the New York market. The result has been the rapid development of the West and the gradual decline of farming operations, because of increasing unprofitableness, at the East.

Much of the agricultural products of the West is, according to the statements of actual cost of transportation made by the railroad companies themselves, carried at a loss—the result of over-competition. If this be the case, there is reason to believe that the rate will ultimately be advanced, and if this advance be material, it will reduce the profitableness of farming at the West, and increase the chances of Eastern competition. On the other hand, should the local rates at the East be brought to a basis of equality with the through rates, the farmers east of the Ohio will again be in the ascendant in all branches of their industry excepting those which are specially adapted to the broad fields of unexhausted soil in the sections of the West, which are constantly becoming more remote. The stability and permanent profitableness of American agriculture depend upon a system of internal transportation, which shall be stable, and shall overcome geographical differences without unjust discriminations. Otherwise the abnormal development of one section of the country at the expense of another, must bring periodical disasters which will affect our individual and our national prosperity. The remedy requires something more liberal than grangerism, and something honester than party politics. I commend the subject to the attention of the free-thinking and non-partisan readers of the RURAL.

A CHANGE IN PROFESSORSHIPS

PROF. GEO. T. FAIRCHILD, who for many years has occupied the chair of English Literature in Michigan State Agricultural College, has recently been elected president of Kansas Agricultural College. Professor Fairchild is an able teacher and manager, and we congratulate the Kansas College on choosing so efficient a president, as well as the Professor on the recognition of his abilities. But what is gain to the Kansas institution is loss to the college in Michigan. Michigan Agricultural College has, ever since its establishment, merited and held the reputation of being the best institution of its kind in the Union, but at present it seems as though she was destined to be deserted by her able professors. Only a short time ago Professor Ingersoll, who was Professor of Agriculture, left for Purdue University, Indiana; now Professor Fairchild is likely to leave, and there have been indications that others of the professors might do the same, while Professor Shelton, of Kansas, has declined the chair of Agriculture, which was offered him in Michigan. We hope that the Michigan Legislature will take warning from these facts and in the future make better provision for the college. This honorable body exhibited their skill as financiers by pinching the appropriations for the college to a pittance. The consequences were, that the State Board of Agriculture were obliged to reduce the salaries of the professors. This justly gave rise to some dissatisfaction, and other institutions taking advantage of the opportunity, have lost no time in offering their professorships to the Michigan men. To economize in this manner is of doubtful advantage to the State.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, SEPT. 20, 1879.

OUR RIVALS IN THE MEAT SUPPLY.

HITHERTO the United Kingdom has been almost the only European market for our live stock and fresh meat exports, although many Continental countries have been good customers of ours for bacon, hams, salted meats, lard and other animal products, and in the absence of hostile legislation, it is by no means improbable that we may ere long find more than one profitable market for our fresh meat supply on the Continent also. If we could secure a monopoly of the British market, however, we might rest content for a few years. According to the returns of the Board of Trade the following imports in this line were made into England during the seven months ending July 31, 1879, as compared with the years 1877 and 1878.

		1877.	1878.	1879.
Oxen and Bulls		74,684	104,602	98,018
Cows		16,913	19,227	15,480
Calves		21,560	17,350	26,144
Sheep and Lambs		516,772	490,194	533,773
Swine		9,293	27,186	32,670
Ham	cwts.	264,436	499,587	626,943
Bacon	"	1,474,811	2,205,401	2,511,593
Pork, salted	"	222,907	261,817	266,805
" fresh	"	7,299	8,137	26,509
Beef, salted	"	139,439	151,510	131,659
" fresh or slightly salted	cwts.	337,380	320,399	351,802
Other meat, fresh	"	65,371	75,709	77,334
" " preserved	"	257,341	215,813	310,437
Lard	"	415,231	630,361	494,403
Tallow	"	801,160	598,122	610,328

To the ordinary man statistics are rather dry reading, but even to the most ordinary man the figures at the foot of his bank account are seldom without some interest, and to every owner of a head of stock in this country, the figures in the above table should possess a somewhat analogous interest, inasmuch as the demand they set forth, affects to a greater or less extent the money value of his possession, and therefore the sum of his wealth. They represent for the first seven months of this year, an outlay of £13,590,507 or $65,768,053, by far the greater part of which was paid for our stock products, not only affording us a profitable foreign market for our surplus wares, but also enhancing the price of similar goods sold here, by preventing a glut in the home markets by the outlet thus opened for our superabundant products.

Time was, and not very long ago, too, when a nation having obtained or made a good market for its wares, kept exclusive control of it by the strong hand, regardless alike of the welfare of its customers and of the claims of its rivals. It was this principle that induced England to impose on the commerce of her American colonies the restrictions that led to the independence of this country, and it was also this principle that spurred her on to the career of unscrupulous aggrandisement in Asia, which has made her mistress of the vast empire of India. Now-a-days, however, nearly every market in the world is open to the traders of the world, with a few provisos, in the shape of import duties, in each country in favor of the native producers. Accordingly we shall have to exert our best efforts to maintain or increase our trade, not in Great Britain alone, but in every country that may need the goods a surplus of which we may have for sale. This is equally true with regard to our manufactures, our cereals and our stock products.

In these last our chief competitors in the British markets are a few of the neighboring Continental countries whose herds have hitherto remained free from pleuropneumonia and other contagious diseases, and which, therefore, have not been "scheduled" as we and most European countries have been. The following is an approximate statement of the population and stock of those that contribute to any considerable extent to the meat supply of England:

	Population.	Cattle.	Sheep.	Swine.
Spain	16,921,506	2,017,348	1,976,269	——
Norway & Sweeden	6,011,276	3,195,000	3,450,000	150,000
Denmark	2,032,200	1,235,000	1,921,000	387,000

In these countries, especially in Spain, meat is very rarely eaten by the lower classes and, therefore, although their supply is but small in comparison with that of other lands, yet they can spare a considerable annual proportion for shipment abroad, while their proximity to market gives them great advantages over remoter regions. There is little doubt, however, but that the enormous resources of some of these will soon be utilized in the European markets. The figures in the following table have been carefully checked with the latest statistics furnished by the shelves of the Astor Library of this city and with other accessible information, and are as nearly correct as it is possible to make them with our present imperfect knowledge of the resources of some of the countries mentioned:

	Population.	Neat Cattle.	Sheep.
United States	48,000,000	29,327,000	35,789,000
Argentine Confederation	2,000,000	14,500,000	75,000,000
Australia & New Zealand	2,124,000	6,100,000	63,487,000
Uruguay	450,000	5,000,000	10,000,000
Canada	4,250,000	2,750,000	3,250,000

There are several other countries also possessed of vast herds of semi-wild cattle, such as Brazil and Cape Colony, but even an approximate estimate cannot be formed of their number, as nothing like a census has ever been taken of the roaming herds. Here there has been room only for a glance at the chief market for our meat supply and at the rivals we must discomfit there.

HONESTY THE BEST POLICY.

HARD times may tempt one to stretch the boundary of honesty, and the dairyman who is forced to accept 1½ cent per quart for his milk may think it no blame to take off some of the cream, if he does not drop a lump of ice into the can to ensure the sweetness of the contents on its arrival at market. But it is poor policy to meet low prices by low quality. We have a marked example of the evil of such a method in the present position of the English nation. Heretofore, ruling the world in commerce, the English people have become adepts in adulteration, so that even the "Heathen Chinee" has become disgusted with the English calicos, of which four-fifths of the weight and bulk are made up of sour flour-starch and potato gum. Recently an export trade of baled manure to Holland has sprung up from England, and the Dutch farmers have found that the bales have been made up of rotten straw and decayed leaves from the woods. The demoralization which comes upon the adulterator is complete. We have seen something of it in this country, where the skimming of milk has injured the cheese dairy business greatly, but on the whole, so far, as a people, we are free from any great iniquity in this respect. Let us keep our hands clean; with honesty in business, we shall soon have the world's trade in our hands. No other country enjoys such an outlook as the United States, and having made a reputation for honesty in business, let us strive to keep it.

THE GREAT PANICLED HYDRANGEA.

WE have just measured one of the largest panicles of this now popular plant, and find it to be 32 inches in circumference at the base, and 11 inches from base to apex. It is worthy of note, that young plants blooming the first season, will produce larger panicles than older ones. The old plants should, therefore, be treated the same as currant bushes, cutting out a large share of the oldest canes or stems each fall or spring. These shrubs may in three years be trained into standards or little trees that are remarkably odd and showy. We have found it during six winters perfectly hardy, the main stem increasing yearly in size until it reaches a diameter of six inches. To form standards, therefore, it is only necessary to cut off the lower branches. An objection to this Hydrangea as a shrub is, that the flowering branches are not strong enough to support the weight of the panicles, so that many of them bend over and rest upon the ground. As standards, this objection would in a measure be removed. The branches would bend over all the same, but they could not reach the ground, and a pendulous habit would be given to the little trees.

GOOD RESULTS.

ONE of our contributors writes us: "'GOOD RESULTS,' I heard that expression many times at a late farmers' meeting. "Good results" had followed various modes of farming and the use of various fertilizers. But when I sought for *accurate experiments*, no one had made them. No one knew how much wheat a dollar's worth of superphosphate produced, or how much milk and manure a dollar's worth of shorts would give. Hence, the great value of the experiments now making and already made on THE RURAL FARM and GROUNDS, and on my farm and elsewhere where accuracy is secured and experiments are not mixed so as to confuse or mislead."

Taking our hint from the above letter, we shall have more to say about "Good Results" in due time.

BREVITIES.

STORE potatoes in a dark, cool place, and in shallow bins.

A BETTER understanding is needed between farmers and millers.

THE Prairie Farmer says that Western farmers have become crazy over wheat.

LEAVE all winter pears on the tree as long as there is no danger of severe frosts.

PROFESSOR RILEY doesn't seem in any haste to "own up" about weevil-eaten peas.

MANY farmers who use plaster have found its good effects more apparent when salt is added.

EXTRACT from Catalogue of the New York State Fair: "Class V. Farm Produce: *Balmoral Petticoats!*"

TAKE the topmost ear of corn for seed, and select it from those stalks which bear the greatest number of ears.

T. T. LYON says that he knows no better way to treat the Peach Yellows than to exterminate the tree, root and branch.

CORN stalks and leaves are more nutritious if cut green. Much is lost if the shocks are permitted to remain until late in the year.

JOSIAH HOOPES says, that if he were restricted to one small tree, he should certainly feel tempted to select Soulange's purple Magnolia.

FROM many different parts of the country, correspondents tell us that the Acme tomato has rotted more than other sorts—sorry to hear it.

IN the Northwest there is some fear as to the safety of the corn crop. Jack Frost has made his unwelcome appearance in a large number of places at least two weeks earlier than last year.

MR. MEEHAN grew Ægilops ovata for two successive years without noting the slightest tendency to become wheat. Hence he concludes that wheat would as soon turn to chess as this grass to wheat.

THE editor of the Rural Home thinks the Souvenir du Congres Pear the largest, most beautiful and most delicious of the summer varieties—strong praise. We thought the quality only moderate.

OUR Market Reports this week should be interesting reading to our farmers, inasmuch as they show a decided upward movement in the prices of most of their chief products, and an upward tendency in nearly all.

APPLICANTS for seeds are requested not to stick their stamps to the letters. This practice causes us much trouble and the stamps are often destroyed in the attempt to sever them from the paper. *Leave them loose in the letters.*

IF strawberry beds are to be protected this winter, it is of importance that the material used should not cover the soil with seeds. Probably straw or even the leaves and small stalks of corn are as good as anything that can be used.

WE are now shipping nearly as much wheat to Continental Europe as to Great Britain. During the week before last we sent 2,848,000 bushels to the former against 2,856,000 bushels to the latter, to say nothing of unusually heavy shipments of wheat flour.

THE hens at RURAL GROUNDS are all confined in picket inclosures—ten to an area of about 30 feet square. We give a teaspoonful of ground bone or bone flour every two or three days mixed in their food. We have never yet found a thin-shelled egg.

ALL of our writers or friends who have any valuable information respecting potatoes, will oblige us by communicating such information now. We are preparing our POTATO NUMBER and desire to make it as interesting and instructive as possible.

MR. VICK says that every farmer should have a supply of Willows for binding, such as are now used for binding bundles of trees. For binding cornstalks, straw and for many other purposes, they will be found of great value when their utility is once known.

SAVE the potato seed. We do not mean the *tubers*, but the seeds within the balls or fruit. It is from these that *new* varieties are produced. They may be planted in the greenhouse or a sunny window now. Little tubers will have formed ere another planting season rolls round.

HERE agriculture is pulling the nation out of the Slough of Despond and all its financial difficulties; in England a revival in manufactures is promising to help farmers a little and the country a good deal. We are a nation of farmers; England, a nation of mechanics and shop-keepers.

THE present prospects are that we shall have a surplus of from 160 to 175 million bushels of wheat for exportation; and that the wheat-importing countries in Europe will require from 280 to 300 million bushels, so that there is a fair margin for the surplus products of other nations also.

CALIFORNIA, so long exempt from the Codling moth, has now an opportunity of testing the effectiveness of the bands now used in the East for subduing this pest. If effective here, California should be able by their use to keep it in subjection there—and "a stitch in time will save nine."

ANTI-RENT and anti-landlord agitation is spreading in Ireland, while danger of another famine threatens that distracted country. On Thursday last Mr. Mitchel Henry, Member of Parliament, declared that if the government left the people without relief for the winter, it would be held responsible for a repetition of the Irish famine of 1848.

THE last English advices estimate that from 128 to 144 million bushels of foreign wheat will be needed to eke out the scanty domestic supply. On the first of September, 15,630,568 bushels of wheat were on passage to that country against 8,816,080 bushels at the same time last year. Wheat is slowly rising in price there and Indian corn sinking nearly in proportion.

PICK grapes when fully ripe and during pleasant weather. Leave them under cover for a week or so until dry. Pack in shallow boxes, six inches or less in depth, a foot long. Cut out all imperfect, decayed, dry or green berries. Pack as closely as possible without injuring them and then nail on the covers. Then they should be placed in a cool, dry room.

SOME people—many, indeed—have no faith in lightning-rods. During a very severe night-storm which occurred last week, a house near us was struck by lightning. It struck the tin leader, shattering a shingle or so, and passed down the leader, which ended in a hogshead of water. It may be that the tin leader saved the house by answering the purpose of a lightning rod.

THERE are few plants more brilliant—more beautiful, at this season of the year, or at any season, than the Cardinal Flower—Lobelia cardinalis. This is found in low grounds, but thrives just as well in any garden soil if a little shaded during the hottest part of the day. It is said to vary to rose-color and even to white. We have failed in endeavors to procure any but the brilliant scarlet.

THE immigration into this country for the first six months of the present year amounted to 52,284 against 37,919 for the same time last year—a pretty sure sign that "hard times" elsewhere are worse than here. Germany sent more of the newcomers than any other country; then came Ireland, England, Italy, Switzerland, Russia, Scotland and France. Of them 80 per cent landed at this port.

OWING to the great loss of hay by wet weather in England this season, much attention has been aroused to the advantage of drying the product artificially. It is asserted on all hands, or nearly so, that artificially-dried hay is worth half as much again as the sun-dried article, and tenant farmers are now agitating to compel landlords to purchase the necessary apparatus to be hired to the tenants, as its purchase would cost too much for the latter.

FOR hedges we know of no more ornamental and effectual plant than the Japan Quince. Choose the white, rose and deep-red for colors. This will bear pruning to any desired extent while its leaves are of the greenest and firmest of textures. In early spring, no other hedge would equal it in beauty. It is very hardy and, though not an evergreen of course, its bare branches in winter can scarcely look more dreary than the lifeless-brown color of Arbor-vitæ.

UNLESS the mangels are to be stored in the cellar or outhouses, we must provide a receptacle for them outside. Shallow pits may be dug in any dry place and a canvas covering or boards placed over them until the weather becomes cold. Then corn-stalks, sea-weed, or salt-hay may be thrown over the boards. A covering of earth would answer—light at first and thicker as winter advances. Thus all danger from heating, by this progressive protection, will be avoided.

SPRING bulbs, such as Hyacinths, Tulips, Crocus, etc., are now offered for sale by most of our seedsmen. Judging by those we have seen, the crop is of unusual excellence, and seems rather to have been benefited by the wet weather which has prevailed in Holland as well as in other parts of Continental Europe and England. No other plants so much beautify the spring garden. Plant from four to six inches deep in mellow, rich soil. They may be set out now or later, so long as the ground is not hard frozen. Any of our seedsmen will furnish catalogues of spring bulbs upon application.

"OUR country is full of poor ministers and poorer lawyers, and shockingly poor doctors, who ought to have been good shoemakers and farmers, who reached their present and unprofitable station by aiming too high." Thus speaks the New Hampshire Mirror and Farmer. "Isn't that a mistake?" asks Dr. Hoskins in the Vermont Watchman. "Didn't they aim too low? But if they aimed too high in trying to be professional men, would it not have been a fault in them to have aimed still higher by trying to be farmers? For it takes a great deal more brains and energy to be a successful farmer than to succeed in professional life, according to our observation and experience."

IT is gratifying to note that some people are as enthusiastic over farming as others are over special hobbies. In this connection one of our good friends writes us as follows:—"I never was so enthusiastic about my own farming as now. I am determined to make mine in time the model farm of this region, if the Lord continues to give me excellent health. I would not for anything have men point at my farm and say "he underdrains and writes for the papers, and tells other folks how to farm, but he *doesn't farm himself.*" * * * * This fall I intend to make a number of *accurate* experiments (the only kind of any value) on manures and fertilizers of various kinds and on different varieties of seed and modes of culture. Such experiments will cost time, trouble and money, but will be of value."

ENGLAND, as well as the South, is not a little disquited at the prospect of a pretty heavy "Exodus." Her's is an agricultural one, too; but instead of the ignorant, impecunious field hands who are leaving the Southern cotton fields in search of a Promised Land beyond the Mississippi, it is her sturdy farmers with some capital in their pockets and brains under their hats that are turning their broad backs upon the Mother Country. The first considerable batch of them arrived here, mainly from Yorkshire and Durham, early last week, and started by steamer for Texas on Wednesday. A little energetic forethought on the part of some of the Southern States might direct southward a good deal of this valuable stream of immigration. Several of the Western States have already sent agents here to explain to the newcomers the superior advantages of their own localities; but we have yet to hear of a Southern State that has moved in the matter.

Literary Miscellany.

IN FOLLY'S NET.

CHAPTER III.

THE DRIVE.

Andrew Blair, although too acute a personage to become that most pitiable object—a regular lady-killer and fop—had a sufficiently good opinion of himself to imagine that he had made a favorable impression on that wicked little coquette, Jean McLeod, and that the laughing glance flashed on him from the carriage window might fairly be interpreted into a command to meet her party at the Botanical Gardens on the day after Lady Kergenven's ball he did not doubt for a moment.

Accordingly, three o'clock on the following afternoon found him driving in the direction of the Regent's Park, and controlling his handsome horses with skilled hands and a rather well-satisfied expression of countenance, while several people turned to look admiringly after the well-appointed mail-phaeton and its very good-looking owner, and one or two men who were taking an "afternoon crawl" remarked to each other:

"Blair, of Blair Gates, you know; made no end of money in Australia; several times a millionaire."

"What in the world made him go to Australia when he had a good property in Scotland already?"

"He was only a younger son; but his brother died some years since, and he came in for the property."

"Lucky beggar!"

"By Jove! so he is. He might have the pick of the matrimonial market this season if he chose; but I think he is too sensible a man to commit matrimony. Perhaps he does not care for women."

The speaker would probably have altered his opinion could he have known Mr. Blair's thoughts as he drove on, for they were of a woman most certainly, and no other than Lord Ivor's *fiancee*, Jean McLeod.

"What a bewitching creature she is," he said to himself, a smile curling his lip under his dark moustache as he thought of Jean's coquetries and pretty, saucy ways. "She is not half so handsome as Emily, of course, but then she is the most fascinating woman I ever met, whereas Emily has only her beauty. I wonder if she likes that fellow Ivor. Strange that he should be engaged to the first woman I have admired since I came to England. Is he to cross me always?"

And Mr. Blair went into a brown study, which was apparently not a very pleasant one, for his countenance darkened, and the slight smile disappeared.

"I am rather in the habit of getting my own way," he added to himself, in a moment. "Women are strange cattle, and I don't think she is much in love with him. He is a poor man beside me and riches can do most things in this mercenary age, except that they may not weigh with her as she is well off herself. It would be wiping out a very old score if I could take her from him; and yet, somehow, much as I admire her, I am not at all sure if I am going to fall in love with her. I should like to feel my hand on the reins though," with a little soft laugh. "I expect she would be rather rebellious in harness; she would not like to feel the bit in her mouth. Pretty creature, though!"

At this moment Mr. Blair's chestnuts, which he had allowed to go at a walk during his reverie, were passed from behind by a handsome landau, with powdered servants in gorgeous livery, which contained three ladies, whom he recognised at once. Lady Sholto and Miss McLeod, in the front seat, passed without having time for any salutation, but Miss Crawford in the back seat, inclined her pretty head in a gracious recognition, while Mr. Blair bowed low.

"*Milord* is not there," he said to himself, as they passed. "So much the better; but I won't follow directly—there is something gained in being wished for."

So instead of driving straight to the Botanical Gardens, as he intended, Mr. Blair turned his chestnuts' heads in another direction, and lengthened his drive considerably before he returned to the Regent's Park *en route* for his first destination.

The band was playing when he pulled up at the entrance to the Botanical Gardens, and throwing the reins to his groom, alighted, giving orders to the man to return at five o'clock.

"Rather before five than after," he added. "Drive back by the club and see if there are any letters, Jenkins."

"Yes, sir," said Jenkins, touching his hat, as his master disappeared through the gates, and found himself in the gardens, which were looking their loveliest on this fair day in June, with the roses in bloom, and all the trees clothed in their richest verdure.

It was a gala day, too, for some celebrated foreign band was to be heard there that afternoon; all the fashionable world in London was present, and the green sward was covered with well-dressed women with or without their attendant cavaliers, as the case might be.

It was a pretty sight; the rich, green verdure, the blue sky overhead with fleecy white clouds floating hither and thither, the butterfly brightness, and varied colors of the women's dresses dotted over the grass like moving human flowers, the glass of the conservatories reflecting back the sunshine, the brilliant uniform of the band in the kiosk among the trees, and the sweet sounds of the music, all contributed to a *tout ensemble* of brightness and gaiety which could hardly fail to give pleasure to the beholder.

Stepping jauntily along, fitting on a most irreproachable pair of primrose kids with which he has replaced his driving gloves, Mr. Blair looked among the gay groups for Lady Sholto's party, and having espied them seated under a wide-spreading elm tree, he made his way towards them with just the right amount of diffidence and *empressement*, noting with some satisfaction that Lord Ivor was not one of the party, although several gentlemen were grouped round the three ladies, who looked fresh and charming as the day itself in their gay, summer costumes.

"Here is Mr. Blair, Ida," Lady Sholto said, smiling, as he approached, and Jean turned laughingly to the gentleman who was bending over her chair, talking in unison with the music and flowers, and said:

"Place, messieurs—place for the Australian millionaire, worth ever so many times his weight in gold."

Mr. Blair advanced with his usual self-possession, and paid his respects to Lady Sholto and Miss Crawford first, turning to Jean last, but reserving for her the wonderfully winning smile and glance he could assume so readily.

CHAPTER IV.

JEAN, who was looking very lovely in a cool cream-colored dress of shining material, with a profusion of azure-blue knots, and a coquettish, broad-brimmed straw hat with blue ribbons and creamy lace, looked up, smiling at him between her long lashes, and quietly withdrawing the creamy drapery of her dress from a chair which she had adroitly hidden, pointed to it significantly with the ivory handle of her parasol, and, nothing loath, Andrew Blair seated himself, while her cavalier, who was used to Jean's *facons d' agir*, and who was moreover an old and intimate friend, bowed himself away.

"Who could have expected to see you here, Mr. Blair?" said Jean, in a low voice, with languid surprise.

"You did for one, Miss McLeod," he answered, promptly; and Jean laughed a little consciously.

"You gave me your orders to appear," he went on, audaciously, looking at her with his dark eyes full of meaning.

"I?" she said, lifting her eyebrows, but coloring a little notwithstanding her affected surprise, "How, when, and where, Mr. Blair?"

"The time was last night," he said, softly; "the place was at the window of a closed carriage; the manner," he hesitated a moment, "was in the prettiest and most expressive language I have had the good fortune ever to receive instructions in."

For a moment Jean was silent, uncertain whether to be vexed or laugh; the latter inclination prevailed, and she laughed gaily.

"The wish may have been father to the thought," he said, in a moment, smiling. "But I certainly thought you wished me to come, Miss McLeod. You are not angry with me?" he added, entreatingly.

"Angry for such obedience?" she said, laughing; "of course not." "What makes you so late?" she went on, in a moment. "We passed you on our way here ever so long ago."

"Yes, I tried not to come," he answered, in a low tone.

"Tried not to come!" said Jead, affecting great bewilderment. "You are speaking in enigmas, Mr. Blair, surely."

"Am I?" he answered. "What are we told to do when temptation besets us sorely?"

"I don't know. Give way to it, I should think," said Jean, laughing.

"Give way to it!" he repeated, eagerly. "A thousand thanks, Miss McLeod. I was under the impression that the right thing was to resist and flee from it; but I will remember your words—please do not forget them yourself."

Jean laughed, little thinking, poor child, of the regret with which a few months after she would remember them, little thinking what a tangled net of misery and wretchedness she was beginning even then to weave for herself and others.

The music went on; the foreign band was playing now some soft, dreamy melodies from "Lucia di Lammermoor," and Mr. Blair began talking in a low tone about Scott's best and greatest novel, and compassionating the ill-fated bride and her unhappy lover.

"We were admiring your chestnuts, Mr. Blair," said Lady Sholto, after a time. "I was wishing Lord Sholto was with us; he is fond of horses."

"Your ladyship does them too much honor," said Mr. Blair, bowing. "They are hardly broken in yet."

"Please don't say so before Miss McLeod," said Ida Crawford, laughingly, "or she will surely want to drive them!"

"Nothing I should like better," Jean said, with her pretty grace of manner. Somehow, do what this girl might, she was always charming. What would have degenerated into fastness with other girls was only pretty frankness with her, and there was something so quaint and original in her bewitching sauciness that it was no wonder men admired it among the affectation, languor and indifference which is supposed to be the right of refinement and *bon ton* in the society of the present day.

"Nothing would give me greater pleasure than to see you driving them," said the owner of the chestnuts, a flush of gratification coloring his dark face; "that is, if I were by your side to prevent accidents."

"Then, if you will allow me, I will drive back with you this afternoon," said Jean, coolly disregarding Ida's look of dismay. "We can follow the carriage, Florence."

"My dear Jean, what are you thinking of?" Lady Sholto said, as Mr. Blair bowed his delight at the proposal, "the horses are quite unfit for a lady to drive."

"There will be no danger with Mr. Blair," answered Jean, quietly; she was as Mr. Blair had surmised, impatient of control. "Ah! there is Lady Aghuer; I must go and speak to her. Come, Mr. Blair, and I will introduce you to the most charming woman in London," she said, as she rose and moved away over the soft, green sward.

"I have the honor of knowing her already," he said, quickly, and Jean's bright face darkened slightly; she did not quite like such open compliments, but she turned it off with a slight laugh, and Andrew Blair was too acute to repeat his error.

"I wish Jean would not be so wild," said Lady Sholto to her husband, who came up to her at this moment. "Arthur, she has actually suggested driving home with that Mr. Blair in his mail-phaeton."

"That Mr. Blair!" repeated Lord Sholto, who was a very handsome, good-natured man, intensely devoted to his pretty wife, and far too easy-going to object to any of Jean's whims, had she been Lady Sholto. "I thought you liked him so much, Flo. You were all in raptures about him last night."

"I can't bear him," she said vehemently; she was a most enthusiastic little personage, was Lady Florence Sholto. "I am sure he is falling in love with Jean as fast as he can, and it will make Archie wretched."

"Nonsense, wife," answered his lordship, as they sauntered on arm-in-arm. "If Jean's flirtations make Archie wretched, he must have had a pretty hard time of it since their engagement."

"But, Arthur, it is wrong of her."

"Wrong? I don't know about that, love," he replied, carelessly. "She is as leal and true of heart as a girl can be, and Archibald knows it quite well, and has no objection to her amusing herself a little."

"But he won't like this, I am sure," persisted Lady Sholto. "Just consider it, Arthur, driving through London at this time of year with Mr. Blair, in his phaeton."

Lord Sholto was silent. It did look rather bad, he owned to himself. To drive through the town in Mr. Blair's phaeton rather grated even against Lord Sholto's sense of propriety.

"I am sure Archie will be angry," went on her ladyship.

"I will tell you what I'll do," said his lordship, suddenly. "I'll get Blair to send his groom home, and let me sit behind; then the good folks cannot talk, Flo."

"That will be better; but I was hoping you would come home with us, Arthur," said his wife, rather wistfully.

"We'll follow or precede you, dear," replied his lordship, who was rather curious to see Mr. Blair's celebrated chestnuts.

Notwithstanding her husband's promise, Lady Sholto thought it her duty to make another appeal to Jean's sense of propriety, and seized the first opportunity to do so.

"My dear Jeanie," she said, impressively, drawing her a little aside when the young girl rejoined them, "are you prudent to encourage Mr. Blair's attentions so much? I am sure Archie will be vexed if you drive home with him."

"I am accountable for my own actions, Florence," she was answered, haughtily enough. "If Archie has any complaint, he can make it to me himself. He has perfect trust in me," she added more gently. "I am not afraid of his vexation."

So when they left the Gardens Mr. Blair lifted Miss McLeod into his phaeton, and politely offered Lord Sholto the seat beside her.

"Oh, no, if you please," Jean said, leaning a little forward, and speaking eagerly; "I must have Mr. Blair in front, Lord Sholto. I should not dare drive these horses otherwise."

"Of course," Lord Sholto answered, "you must let me do groom this afternoon, and, Jeanie, set me down at the corner of Park Lane. I want to go round to the stables before I go in."

"Very well," answered Jeanie, as she took the reins; and Mr. Blair found that his attention was pretty well occupied during the drive home between his dainty charioteer and her steeds, for though, as I have said, Jean was "a capital whip," the fiery, half-broken chestnuts were beyond a lady's management, and more than once Mr. Blair's hands had to find their way to the reins, while once they covered Jean's, and held them for a moment in a close clasp.

At the corner of Park Lane they dropped Lord Sholto, who went round to his stables, while they drove homewards, and then Mr. Blair had an opportunity of expressing to Jean the great pleasure he had had, the unutterable happiness, etc., etc., etc.

"Neither my horses nor their master were ever so honored before," he said, in his softest voice, as Jean said the drive had been charming and the horses "loves." "When shall you be in Scotland, Miss McLeod?"

"Early in August, I believe," she answered. "And you yourself, Mr. Blair?"

"I am going almost immediately," he answered. "Blair Gates wants renovating. I hope we shall meet then,"

"I hope so," Jean answered, frankly. "I want to hear some stories about the bush, you know. Why," she added, as a hansom dashed up from an opposite direction, and stopped at the door of Lord Sholto's house, "surely that is the Earl?"

"Lord Ivor?" exclaimed Mr. Blair. "I hope he will not be angry, Miss McLeod? I should never forgive myself if I got you into a row."

Jean drew herself up a little haughtily, and Mr. Blair, motioning to the footman who opened the door to go to the horses' head, jumped out of the phaeton and put up his hand to assist Jean to alight.

At this moment Lord Ivor, who was reading a newspaper, aroused by the sudden pulling up of his cab, looked up and put out his hand to open the door, and saw Mr. Blair and his companion.

Jean's color had faded slightly, for though she was not afraid of the Earl's vexation, she loved him too truly to give him pain, and as she saw the sudden expression of mingled anger and sorrow which flashed into the proud, sleepy, gray eyes, she wished from the bottom of her heart that she had not given way to her freak of wishing to drive Mr. Blair's chestnuts home.

But she was a very proud girl, and Mr. Blair's words, apprehensive of the Earl's anger, and getting her into a row, had roused a lurking imp in that wayward little heart of hers, and made her farewell to Mr. Blair more gracious than it would have been, had not Lord Ivor dismissed his cab and been standing beside her on the pavement.

"Ah, Archibald, is that you? Are not these pretty creatures? I have driven them home from the Botanical Gardens; have I not?" she added, turning to Mr. Blair, with a laugh in her brown eyes, as she put her little delicately gloved hand on the glossy, satin coat of the horse nearest to her.

Mr. Blair bowed, smiled, and looked delighted, hoped his lordship was well, again shook Jean's proffered hand, and finally jumped into his phaeton, and drove off; while Miss McLeod preceded the Earl into the house, and the powdered footman following, imparted to the other powdered footman who kept guard in Lady Sholto's hall that in his opinion there was "something up, for his lordship did not look too well pleased," upon which the other gave it as *his* opinion "that his lordship need not take the trouble to be angry with Miss McLeod, for she would soon throw dust in his eyes."—(*To Be Continued.*)

RECENT LITERATURE.

Breton Mills: A Romance. By CHAS. J. BELLAMY New York. G. P. Putnam's Sons.

The principal element of interest in this story is the absorbing love of the hero, Philip Breton, for the lovely girl, Bertha Ellingsworth, who, in the opening chapter is represented as his affianced wife. The girl is indifferent to Philip's love, in fact, reproves all exhibitions of tenderness on his part, and treats his impassioned speeches with contempt. She belongs to a wealthy family and all her tastes and associations are refined and elegant. Presently she becomes enamored of a labor-reformer, Curran, by name, with whom she elopes, leaving Philip broken-hearted. In the course of a few months Bertha returns to her father's house and Philip, although he knows she eloped with a man to whom she was not married, renews his suit, and after a little he succeeds in inducing her to marry him. He has not been married to her a day before he finds out that she was married to Curran, and that the divorce she obtained without Curran's knowledge is invalid. He buys off the lawyer, who is in the secret, and keeps Bertha in ignorance of the fact that he has discovered her previous marriage and the attempted divorce. The story gets bruited around and Philip has his hands full trying to keep them from dragging his wife to the felon's dock. He finally decides that there is safety only in flight, and he arranges for a European tour. After many trying experiences, he is finally driven to the pier with his wife and followed by Curran on horseback, who has just learned that his deserting wife has been married to Philip. There is an exciting race, which is terminated by Curran being thrown over the horse's head and killed. Philip and Bertha board the steamer. "He loses the look of feverish watchfulness. Fate had seemed invincible. He had pitted his beautiful mills and his home and his hopes of glory against it, all for the love of a woman who had no heart for him. He had conquered, and he did not begrudge the price, this royal lover; for he had won the love of his bride at last."

"Below in her state-room, weary with her unwonted excitement, Bertha was sleeping; sleeping like a child unconscious of the terrible peril and infamy she had escaped only by so much as a hair's breadth."

The moral of the story is all wrong. The lovely sinner who betrays first a lover, then a husband, and deserts her child is loved and protected to the end, while of the men who loved and were true to her, one is killed and the other besides being made miserable by her sins, crushes his best impulses and sacrifices material prosperity to save and serve her. In addition to the peculiar and exciting details given above, the book is enlivened by labor revolts and reform speeches.

The Great Fur Land, or Sketches of Life in Hudson's Bay Territory. By H. M. ROBINSON, with numerous illustrations from designs by Chas. GASCH. New York: G. P. PUTMAN'S SONS.

This is just the sort of weather to make a visit to the regions of ice and snow—either in imagination or in the flesh—agreeable, so that Mr. Robinson's book has the charm of timeliness in addition to its other attractions. His travels led him quite outside the experience of ordinary travelers—the places he visited, the people he met, and the adventures that befell him all being of the order "unique"—and then he has a really captivating way of telling his story. Some writers are forever giving the dimensions of ruins, estimating hights, depths, lengths, going down to the roots of the language, tracing the development of the race, and bewildering and depressing the reader by the display of their profound erudition in the "ologies" and "isms." Not so Mr. Robinson. The reader learns very much that is useful and entertaining about the "Fur Land" but it is all told in a conversational sort of way. As a certain writer puts it, Robinson "unconsciously distils information," and it is this absence of a labored effort to be instructive which is one of the charms of the author's style.

The book tempts one to do quite an amount of scissoring, but we shall have to content ourselves with one extract, a sketch of the driver which gives a fair idea of the taste displayed by the native heathen in the matter of costume.

"My driver was a heathen Cree. He was, moreover, a linguist, speaking several aboriginal dialects and a kind of Mongrel French. Five golden sovereigns constituted the bond of union between us. He was a lank, muscular man, the bones of whose huge frame stood out conspicuously at the joints and angles, and the muscles showed distinctly in his gaunt meagreness. He had yellow paint on his face, and was arrayed in rather bewildering apparel. His headgear was the luxuriant *Chevelure* with which Nature had endowed him. On his feet he wore moccasins: on his limbs he wore leggins, which extended only a certain way above the knee, leaving that Providence which

"tempers the wind to the shorn lamb" a dreary waste of yellow-mottled skin upon which to experiment; on his body he wore a cotton shirt, and stretched straight and taut across the pit of his stomach, he wore a brass watchchain. Over all, like the mantle of Charity, was strapped a green blanket. Thus attired, he resembled a settled melancholy, or a god of bile from a dyspeptic's *inferno*. Nevertheless, he could travel from forty to sixty miles a day, running alongside the sledge."

Vegetarianism, the Radical Cure of Intemperance. By HARRIET P. FOWLER. New York: L. M. Holbrook.

It has long been evident that something beyond moral suasion is necessary to forward the cause of temperance. Appeals in the form of tracts and lectures, warning people of the sin and folly of drunkenness, are well enough in their way, but unless supplemented by something more practical, the convert is apt to backslide. For some little time the question of diet in its relation to intemperance has attracted considerable attention, and in the pamphlet under notice the author proposes both the prevention and cure of intemperance by the exclusion of meat as an article of diet. Even those who are not at all interested in this reform will find much matter for instruction in "Vegetarianism," the tables showing the nutritive properties of different kinds of food—eggs, beans, peas, lentils, etc.—alone being worth more than the price of the book.

A Summer Jaunt Through the Old World by the Tourjee Educational Party of 1878. By LUTHER L. HOLDEN. Boston: Lee & Shepard.

There is no dearth of books of European travel, and possibly this latest contribution to that class of literature may be regarded by some as superfluous. In spite, however, of the fact that this book does not supply an aching void, there is much in its pages to instruct and amuse the reader. It consists of a full narrative of the places visited by the "Educational Party," and an account of their adventures. Statistics are given when necessary, and also full descriptions of places and buildings of historic interest, art galleries and museums. There are some thirty odd illustrations, which serve not only to embellish the book, but also to make the text more clear.

Summer and Its Diseases. By JAMES C. WILSON, M. D. Published by Lindsay & Blakeston, Philadelphia.

In this, the third volume of the American Health Primer series, the author treats of the various ills incident to summer, the best methods of cure, and points out how most of the diseases peculiar to the warm season can be avoided if people will only exercise a little care. Sunstroke, summer diarrhœa and dysentery, cholera-infantum, summer and autumnal fevers, colds, hay asthma and the summer diseases of the skin are among the subjects which receive the author's attention. As the book is designed for the laity, it is written in clear, simple style, and a child could understand and follow the directions given.

THE OLD FRENCH CHATEAU NEAR TOULOUSE. Boston: Loring. Price, 25 cents.

We regret to see Mr. Loring striving to occupy the field of the New York Ledger. This story is "blood and thunder" to the last extreme; it has no literary merits, and, in fact, is not worth talking about.

MAGAZINES.

ST. NICHOLAS FOR SEPTEMBER. Contents: Frontispiece—"Oh, how deep!" Drawn by Addie Ledyard; Three Drews and a Crew, Sarah J. Prichard; Rosebud—Poem. Lucy Larcom; The Chateau D'Oiron, Katharine Cameron; A Soul for Music—Picture, drawn by Miss S. A. Rankin; Puck and the Butterfly—Jingle, Henry Baldwin; Bob's Missionary Work, Louise Stockton; Eyebright—Chapter X., Susan Coolidge; A Run after Sword-fish, Alexander Young; Helmets and Violets—Poem, Ruth Mariner; Try, Constantina E. Brooks; Her Fan and Her Furs, Constance Marion; On Wheels, John E. Lewees; One Summer Day, A. E. B.; Off for Boy-land, Emma Huntington Nason; A Queen—Poem, M. E. Bennett; Gretelein and her Queer Stove, Rosamond Dale Owen; So Wise—Verse, Adelaide F. Waters; Pirates of the Chinese Coast, J. O. D.; A Jolly Fellowship. Chapters XXI and XXII. Frank R. Stockton; Norah's Oil-well, Sophie Swett: The Frolicsome Fly, S. F. Clarke; "Buttered Pease," in Choctaw, Frederick Palmer; The Story of a Prince, Paul Fort; For Very Little Folk—The Broom Giant, S. J. P.; Slate Pictures, drawn by L. Hopkins; Jack-in-the-Pulpit; The Letter-Box; The Riddle-Box.

The October number will open with a short story by Miss Louisa Alcott, called "Jimmy's Cruise in the 'Pinafore.'" Maurice Thompson will contribute a sketch about bows, arrows and boys, and there will be two very fully illustrated articles—one on the Elevated Railroads of New York; the other describing a curiously populated craft called "Noah's Ark Ashore;" both will be crowded with interesting pictures. Among other handsome engravings in the number will be a large picture by Fredericks, illustrating "Duke Leopold's Stone," a poem by Mrs. Mary E. Bradley. The frontispiece will show some of the sports of "Witches' Night," or, "All Hallow-e'en," which will be described in an article by Oliver Thorne. The serials, "A Jolly Fellowship," and "Eyebright" will be brought to a close in this number.

OFF FOR BOY-LAND.

Ho! All aboard! A traveler
  Sets sail from Baby-land!
Before my eyes there comes a blur,
  But still I kiss my hand,
And try to smile as off he goes.
  My bonny, winsome boy!
Yes, *bon voyage!* God only knows
  How much I wish thee joy.

Oh, tell me, have ye heard of him?
  He wore a sailor's hat
All silver-corded round the brim,
  And—stranger o'en than that—
A wondrous suit of navy-blue,
  With pockets deep and wide;
Oh, tell me, sailors, tell me true,
  How fares he on the tide?

We've now no baby in the house;
  'T was but this very morn,
He doffed his dainty 'broidered blouse,
  With skirts of snowy lawn;
And shook a mass of silken curls
  From off his sunny brow;
They fretted him—" so like a girl's!
  Mamma can have them now."

He owned a brand-new pocket-book,
  But that he could not find;
A knife and string was all he took;
  What did he leave behind?
A heap of blocks with letters gay,
  And here and there a toy;
I can not pick them up to-day,
  My heart is with my boy.

Ho! Ship ahoy! At Boyhood's town
  Cast anchor strong and deep!
What! tears upon this little gown
  Left for mamma to keep?
Weep not, but smile; for through the air
  A merry message rings;—
"Just sell it to the rag-man there!
  I've done with baby things!"

St. Nicholas for September.

CONTENTS OF THE SEPTEMBER NUMBER OF THE ECLECTIC.—Steel Engraving, William Penn's Treaty with the Indians; White Wings, a Yachting Romance, by William Black—Cornhill Magazine; Benjamin Franklin, by Thomas Hughes—Contemporary Review; The Comedie Francaise, by M. Francisque Sarcey—The Nineteenth Century; Mechanical Chess-Players, by Richard A. Proctor—Belgravia Magazine; Some New Books—Blackwood's Magazine; The Mandolinata, by W. W. Story—Blackwood's Magazine; Recollections of Thackeray—Chambers' Journal; The Colored Man in Australia—Fortnightly Review; Wordsworth, by Matthew Arnold—Macmillan's Magazine; Food and Feeding, by Sir Henry Thomson (Concluded)—The Nineteenth Century; The Milky Way, from the Swedish of Topelius—Temple Bar; Mademoiselle de Mersac—Chaps. XVI. and XVII.—Cornhill Magazine; The "Sociology" of Ants—The Spectator; The Ballad of the Barmecide, by Austin Dobson—Belgravia Magazine; Literary Notices; Foreign Literary Notes; Science and Art; Varieties,

RECOLLECTIONS OF THACKERAY.—Thackeray was born at Calcutta in 1811. While still very young, he was sent to England; on the homeward voyage he had a peep at the great Napoleon in his exile-home at St. Helena. He received his education at the Charterhouse School and at Cambridge, leaving the latter without a degree. His fortune at this time amounted to twenty thousand pounds; this he afterward lost through unfortunate speculations, but not before he had traveled a good deal on the continent, and acquainted himself with French and German everyday life and literature. His first inclination was to follow the profession of an artist; and curious to relate, he made overtures to Charles Dickens to illustrate his earliest book. Thackeray was well equipped both in body and mind when his career as an author began; but over ten years of hard toil at newspaper and magazine writing were undergone before he became known as the author of Vanity Fair, and one of the first of living novelists. He lectured with fair if not with extraordinary success both in England and America, when the sunshine of public favor had been secured. His career of successful novel-writing terminated suddenly on 24th December, 1863, and like Dickens, he had an unfinished novel on hand.

* * * * * *

In dictating to his amanuensis during the composition of the lectures on the Four Georges, he would light a cigar, pace the room for a few minutes, and then resume his work with increased cheerfulness, changing his position very frequently, so that he was sometimes sitting, standing, walking, or lying about. His enunciation was always clear and distinct, and his words and thoughts were so well weighed that the progress of writing was but seldom checked. He dictated with calm deliberation, and showed no risible feeling even when he had made a humorous point. His whole literary career was one of unremitting industry; he wrote slowly, and, like "George Eliot," gave forth his thoughts in such perfect form, that he rarely required to retouch his work. His handwriting was neat and plain, often very minute; which led to the remark, that if all trades failed, he would earn sixpences by writing the Lord's Prayer and the Creed in the size of one. Unlike many men of less talent, he looked upon caligraphy as one of the fine arts. When at the hight of his fame he was satisfied when he wrote six pages a day, generally working during the day, seldom at night. An idea which would only be slightly developed in some of his shorter stories, he treasured up and expanded in some of his larger works.

* * *

The personal appearance of Thackeray has been frequently described. His nose, through an early accident, was misshapen; it was broad at the bridge, and stubby at the end. He was near-sighted; and his hair at forty was already gray, but massy and abundant; his keen and kindly eyes twinkled sometimes through and sometimes over his spectacles. A friend remarked that what he "should call the predominant expression of the countenace was courage—a readiness to face the world on its own terms." Unlike Dickens, he took no regular walking exercise, and being regardless of the laws of health, suffered in consequence. In reply to one who asked him if he had ever received the best medical advice, his reply was: "What is the use of advice if you don't follow it? They tell me not to drink, and I *do* drink. They tell me not to smoke, and I *do* smoke. They tell me not to eat, and I *do* eat. In short, I do everything that I am desired *not* to do; and therefore, what am I to expect?" And so one morning he was found lying, like Dr. Chalmers, in the sleep of death with his arms beneath his head, after one of his violent attacks of illness; to be mourned by his mother and daughters, who formed his household, and by a wider public beyond, which had learned to love him through his admirable works.—*Eclectic for September.*

CORNS.

CORNS may be developed on any part of the body where pressure and friction exist to an inordinate degree: thus they may be occasioned by too tight or too loose a shoe; in the one case being due to pressure, in the other to friction; and they are most actively produced when both causes are combined. They are met with most frequently on the feet, on account of the unpliant nature of the coverings of those organs; between the toes from pressure only; and on other parts of the body from distortion. Corns are of four kinds, viz.: clavus (bunion), callus, soft and the common corn. The callus may be softened by moisture, as by soaking in warm water; by the application of a starch or soap poultice; and being softened, the thickened cuticle may be thinned by scraping with a blunt knife. When the thickening has been reduced sufficiently, it may be kept down by daily washing with soap. Clavus and the soft corn require removal with the knife; and in effecting this purpose their mode of formation is to be borne in mind. If the soft corn be of moderate size, a single pinch with a pair of pointed scissors will effect its removal, while the hard callus will require a patient digging with the point of a not too sharp knife. After the operation, the corn should be covered with a piece of soap plaster for a day or two, and a perforated plaster of buff leather subsequently worn to keep off pressure from the center of the growth. The removal of a callus or soft corn may be very considerably aided by the use of the compound tincture of iodine painted on the swelling. When the corn is painful, this application subdues its sensibility and renders the cuticle dry and friable, and easy of removal by means of a file. Soap and water, so useful to the skin in many ways, are especially serviceable to feet afflicted with corns and particularly when they are soft corns. Daily washing with soap and the subsequent interposition of a piece of cotton wool between the toes, may be considered as a cure for soft corns; and in these cases the skin may be hardened by sponging with spirits of camphor after the washing. The cotton wool should be removed at night, and this is a good time for the use of the camphorated spirit.

BRIC-A-BRAC.

NEVER DESPAIR.

I FAIN would impress on
  The weary and sad
The truths of a lesson
  In metaphor clad.

Still in life's journey the
  Bravest do best—
Still on life's journey
  We hanker for rest.

Innocent merriment
  Shortens the mile;
Try the experiment
  Once in a while.

Face your foes fearlessly:
  "Never say die"—
Trials, tak'n fearlessly,
  Lightsome'y lie.

Our tear drops are lenses
  That magnify ills;
They cozen our senses
  'Till hillocks seem hills.

And faces grow wrinkled,
  While tresses with gray
Grow speedily sprinkled
  When woe has her way.

Horrors may haunt you, but
  Foul may grow fair;
Dangers may daunt you, but
  "But never despair,"

Verily, verily,
  Judge as you may,
He who toils merrily
  Carries the day. [*Catholic Herald.*

CHAPTER ON FLIES.

You can sometimes catch a base ball on a fly.

The most irritating fly is the Spanish fly.

The Latin name for a certain kind of fly is *tempus fugit.*

The fly is an author. See "Flies on Horses."

You can always, at this season of the year find flies on toast at the restaurants.

Flies are always on hand early in the morning.

You have all seen a kite fly.

Longfellow speaks of a fly as a bird when he says, "Fly, proud bird of freedom."

Some people employ the blind to keep flies from the room.

You can draw a fly with a drop of molasses better than with a crayon.

I have often seen flies hand-cuffed.

The spider is the only creature which invites the fly to his parlor.

The only popular fly—"Shoo-fly."

Flies are like rivers. They are often dammed.

A conjugal quarrel is a promoter of hair flies.

Stage flies are painted.

A fly is conservative in reading; he always sticks to his own paper.

Butchers and grocers exhibit flies in their windows.

You can't drown a fly in the milk of human kindness.

Although flies don't stay long in one place, they always carry a trunk.

There are musical flies. People often speak of that base fly. [*Boston Transcript.*

THE SAME OLD STORY.

SHE read until she could not see—
  Did "Ivanhoe" e'er weary!—
Then dropped the book upon her knee
  And said her life was dreary.
"From day to day I still must tread
  The same dull round of duty—
Of darning socks and baking bread,
  Without one glimpse of beauty.
From week to week my landmarks are
  A sermon dull on Sunday,
On Friday night the Plumville Star,
  The weekly wash on Monday.
And, oh! there's never a line of grace,
  And never a hint of glory."
She sighed and lengthened her pretty face—
  "It's always the same old story:"

She dried her eyes and curled her hair,
  And went to the conference meeting—
From the garden gate to the vestry stair
  The self-same words repeating.
At last the final hymn was sung,
  And all the prayers were ended,
When one from the doorway crowd among
  Her homeward steps attended.
They left at length the village street,
  And sprang the low wall over,
To cross through Captain Peaslee's wheat
  And Deacon Bascombe's clover.
The moon seemed shining overhead
  To flood their path with glory;
They whispered low, but what they said
  Was—only the same old story!

[*Cambridge Tribune.*

THE WAYS TO SPELL TAILOR.—The accommodating nature and capacity of the orthography that the savants of England and America are seeking to reform, are astonishingly illustrated in the number of different ways in which it is possible to spell the name of the artist who makes our clothes, the knight of the goose and shears:

Tailor, taylor, talor, teighlor, thalor, thailor, thaylor, phthalor, phthailor, phthaylor, phthelghlor, taileur, tayleur, taleur, thaleur, thaileur, thayleur, teighleur, phthaleur, phthailleur, phthayleur, phtheighleur, talour, tailour, taylour, thalour, thailour, thaylour, teighlour, phthalour, phthailour, phthaylour, phtheigh'or, talar, tallar, tailer, tallur, taillyr, taylar, tayler, taylir, taylur, taylyr, teighlar, teighler, teighlir, teighlur, teighlyr, thalar, thaler, thailr, thalur, thalyr, phthalar, phthallar, phthaylar, phthaler, phthailr, phthalur, phthalyr, phthailir, phthailur, phthaillyr, phthaylir, phthaylur, phthaylyr, phtheighlar, phtheighler, phtheighlir, phtheighlur, phtheighlyr, thaylar, thayler, thaylir, thaylur, thaylyr, thallar, thaller, thailir, thailur, thaillyr, tailir, theighlar, theighler, theighlir, theighlor, theighlur, theighlyr, theighlour, theighleur.—*Troy Times.*

A MIDSUMMER IDYL.

Thou art so near and yet so far,
O filmy, pale musquito bar!
In silent watches of the night
  When owlets moan and bats disport
  And cats upon the woodshed court,
We stretch our hands to thee so while
To pluck thee 'round us all about,
Lest flies blaspheming find us out
  By dawning morning light.

Thou art so near and yet so far,
Coquettish, vain musquito bar!
Some nail hath caught thee on the floor—
  Perchance some hook upon the wall
  Impedes thy graceful, sheltering fall;
Yet when the dreary night is o'er
We find thee plastered on the bed
Entwined about our feet and head—
  O clinging, gauzy bore!

A TRUE GENTLEMAN.—"A beg your pardon," and with a smile and a touch of his hat, Harry Edmon handed to an old man against whom he accidently stumbled, the cane which he had knocked from his hand. "I hope I did not hurt you. We were playing too roughly." "Not a bit," said the old man, cheerily. "Boys will be boys, and it's best they should be. You didn't harm me." "I'm glad to hear it;" and lifting his hat again Harry turned to join the playmates with whom he had been frolicking at the time of the accident. "What do you raise your hat to that old fellow for?" asked his companion, Charles Gray. "He's only Giles, the huckster." "That makes no difference," said Harry. "The question is not whether he is a gentleman, but whether I am one."

BEE-CAUSE.

A BEE flew out on the sunny air,
  By a boy so blithe and young,
Who laughed and screamed without a care,
  And would not hold his tongue.

The scene then changed; with sob and shriek
  The vault of heaven rung:
And homeward flew the bee so meek,
  While the small boy held his stung.

Marathon Independent.

ONE day Billy and Sammy were playing by a mud-hole, and Billy he said: "Now, Sammy, les play we was a barnyard; you be the pig, and lie down and woller, and I'll be a bull, and bellor like everything." So they got down on their hands and knees, and Sammy he went in the dirt and wallowed, while Billy bellowed like distant thunder. Bimeby Sammy he came up muddy—you never saw such a muddy little fellow—and he said: "Now you'll be the pig, and let me beller." But Billy he said: "I ain't a very good pig except for dinner, and it'll be time 'nuff for you to beller when yer mother sees yer close."

IT occurred to one of two editors in the West, who had quarreled, that a reference to his adversary's life would prove telling, and he launched it off accordingly. "As for our contemporary," he wrote, "what can be expected from a man who five years ago was peddling around with a mule, and an ill-conditioned beast at that?" His rival did not deny it. "Our contemporary," he wrote in his next number, "says that five years ago we were peddling around with a mule, and an ill conditioned beast at that. He is quite right. We were

so occupied. But we are surprised to find that the mule has such a good memory."

ONE of a party of six Boston boys who are spending their vacation at Kennebunk, sent the following expressive letter: "We dug a woodchuck out of his hole; it was a skunk; we slept in the barn that night."

ALL the clothes Adam had for a long time was the close of day, while a mantle of night was his bed-clothes.

For Women.

CONDUCTED BY MISS FAITH RIPLEY.

A YARN ABOUT SPINNING.

THAT the arts of obtaining food and clothing have been practiced from the earliest period is known to all. But while the tailor and gardener have each claimed the greatest antiquity for his respective professions—the former on the ground that Adam did not till the earth until expelled from Eden, but followed the craft of tailor, by sewing together fig-leaves—we must assert that the human race is much more indebted to the spinsters, who, making the first advance in civilization, relieved mankind from the necessity of wearing the leaves of trees, or the skin of beasts. The literature, proverbs and superstitions of most nations have reference to this fact; while the distaff and spindle have been the symbols of woman's industry in all times and countries. Among the many popular fancies of the middle ages, none was more firmly held, or more deeply rooted, than the belief that Eve was the first spinster. The lines,

"When Adam delved and Eve span,
Who was then the gentleman?"

formed the rallying cry in some English insurrections, during feudal times.

The expulsion of our first parents from Eden was a favorite subject with the medieval painters, and the first pair are usually represented in this wise. Adam, who passes out first, receives with an air of abject submission, a spade, from the attendant angel; while Eve, already supplied with spinning materials, walks boldly forth, carrying her distaff and twirling her spindle.

The allusions to spinning in the sacred writings speak of the antiquity of the art, while praising its professors. Abraham refused to take a thread of the spoil; flax was cultivated in the time of Moses; the women who were wise-hearted spun with their hands; and she, the wise woman, par excellence, whose worth was above rubies, laid her hands to the distaff and the spindle.

By the classical writers of Greece and Rome, Minerva, the goddess of wisdom, was made the inventor of spinning. Homer speaks of a distaff as being a present fit for a queen; and every one has heard of the labors of Penelope, though Valerius, in Coriolanus, says spitefully, "all the yarn she spun in Ulysses's absence, only served to fill Ithaca full of moths."

Pliny tells us that the distaff and spindle of Cala, Queen of Tarquinious Priscus, was preserved in the Temple of Fortune. This royal spinster was considered the model of a good wife; hence a distaff, charged with wool, and a spindle were carried before a Roman bride, and when the procession reached the bridegroom's house, the bride was asked her name, to which she replied, "Cala." The three Fates, who, according to ancient mythology, presided over man's mundane existence, were spinners; one held the distaff, another spun, and the third cut the thread of life.

A picture on the wall of a house in Pompeii represents a woman spinning in exactly the same manner as that described by the ancient poets; and the Italian peasants spin now just as they did in the days of Cala. Long ere "Romulus and Remus had been suckled," as we learn from paintings in the tombs of Beni-Hassan, the yarn for the "fine linen of Egypt" was spun in the same manner; and so do the wretched fellahs still spin in the shade of the pyramids. Mummies have become merchandise; Pharaoh has been sold for balsam; even the eagle and fasces, symbols of imperial and consular power, have been swept away; but the distaff and spindle, emblems of domestic peace and household cares, still remain. Their history, could it be written, would be the history of the human race—the same hopes and wishes, tears and aspirations, have been experienced by millions of the various tribes and religions who have used these simple implements.

Among the Saxons, spear-half and spindle-half expressed the male or female lines of descent, and in their tombs a sword was laid by the remains of a man, a spindle by those of a woman.

The French law, by which "no woman shall succeed in Salic land," is popularly expressed by the words, "the kingdom of France never falls under the distaff."

Previous to the introduction of the spinning-wheel worked by the foot, spinning, though a necessary art, was merely the occupation of female leisure—the employment of rich and poor in the intervals of more serious business. But through the more rapid production of yarn by the wheel, spinning became a mode of obtaining a livelihood, and consequently the art sank in the social scale. A somewhat similar change has been produced by the invention of the machine and consequent extinction of the wheel. Now it is persons of much lower social standing who wait in the halls of the giant Steam, to tend the whirling, many-bobbined mule and jenny.

The quantity of yarn spun in a day by a good spinner depended on its fineness. In Scotland a hank, or twelve cuts, was considered a fair day's work. But the spinners of Tyrone, the best in Ireland, thought two dozen no extraordinary task, and at their contests of skill they often produced as many as four dozen in one day. Edward Eggleston, in the "Circuit Rider," speaks of "Patty spinning her two dozen cuts a day."

The distaff and spindle, besides being the universal symbols and companions of the softer sex, could be used as offensive or defensive weapons. In the south of Europe the pointed steel spindle is sometimes used as a stiletto, while in the north the heavy distaff may be used as a club. "We'll thwack him hence with distaves," says Hermione, in "A Winter's Tale." Goneril, in "King Lear," says, alluding to the "cowish terror" of her helpmate, "I must change arms at home, and give the distaff into my husband's hands."

In France, Queen Bertha of the long-foot; in Italy, Bertha of the horn; in Germany, Frau Berta the fairy, and in England, Bertha the saint, are spoken of as the patronesses of spinning. They are all derived from the same source, the Scandinavian mythology, and are the more modern representatives of Herthus, or Freeya, the Norsemen's inventor of spinning.

It was considered a very inauspicious omen by the Romans for a traveler to meet a woman spinning; and nearly two thousand years later the same idea prevailed in France. In the Isle of Man, and also in Northern Germany it was considered sinful to spin on Saturday. In Scottish farm-houses the wheel was put away early on Saturday, not from any feeling of superstition, but in reverence for the approaching day of rest.

Like the black-jack, the wheel of the turnspit dog, and the pack-saddle, the spinning-wheel is now almost unknown, save as a relic of the past. And when we take into consideration that a steam engine will whirl 150,000 spindles at once, rattling off 30,000 miles of yarn every hour, at an expense of less than a cent for every six miles—that the thousands of women tending spinning-machines earn more in a day than they would in a week at hand-spinning—we may, in spite of all the pleasant recollections of the spinning-wheel, be content to leave it on the shelf: its work is done—our yarn is spun.

EMILY LOUISE TAPLIN.

WOMEN AS BLACKSMITHS.

A CORRESPONDENT of the Pall Mall Gazette writing from Rowley Regis—a Lancashire village—thus describes one of the strange sights of that strange district:—

I came here to inquire for myself how much it would cost to deliver one hundred tons of coal a month by the Rowley Colliery Company at two or three given localities within a distance of ten miles; and having satisfied myself on that point, much to my pleasure I continued my walk from the coalpit up through the fields to Rowley old Church. I came to a place called Bell End, which is apparently a new part of the old village. Through a small window I observed a female head bobbing up and down; soon I heard the sound of a hammer; and never having seen any riveting done by human hands, I threaded my way through some brick passages until I came to the little smithy where "Alice" was at work. This was the name by which her father called her, whom I met on my way, and to whom I am indebted for the following remarkable piece of knowledge.

Alice, I may say, was a young wife engaged in blowing bellows, heating pieces of iron in a "gleed" forge, and producing rivets from an anvil at the rate of 3,000 a day. For this manual labor, Alice, her father proceeded to tell me in her presence, gets from the warehouse 1s. 3d., out of which she has to pay for wear and tear of tools 1d, carriage 1d., and a like sum for gleeds, a kind of small coke made expressly for nail and rivet forges. On Monday she does her washing, on Saturday her cleaning up, so that she only works at rivets four days in the week, and her gross earnings therefore amount to 4s. 3d. for forging 12,000 rivets. I have said nothing of rent which Alice would pay, and which might amount to one shilling a week. She was a sedate young woman, well spoken, with very fair hair and a low sweet voice. John Price (Alice's father) then, at my request, took me to see his neighbors, Edward and Phyllis Tromans, who lived and worked at making nails close by. Phyllis is a handsome woman, with beautiful white teeth and abundance of flesh, which Rubens might have painted, it is so plentiful and rosy. This woman was forging large nails, and the manner in which she made a nail with a point, and a head an inch and a half in circumference, fly off a piece of hot iron was marvelous to behold.

She works from eight o'clock in the morning until nine at night, and in four days will forge fifty-four pound weight of clout nails, for which she will receive the wondrous price of 3s. 8d., out of which she has to pay fivepence for gleeds and twopence for tools. Her husband works "as hard as he can drive" from six o'clock in the morning until eleven at night; and his week's wages amount to 12s., from which tenpence for gleeds and fourpence for tools will have to be deducted—to say nothing of rent. Edward Tromans was only forty-three years old, but looked much nearer seventy. Two other young women were hammering away at rivets in company with Phyllis; and never as long as I live shall I forget that little black smithy. I once traveled many miles to see "Vulcan's Forge" by Velasquez: but there was in that famous picture no figure equal to that of Phyllis Tromans, and I shall remember Phyllis to the day of my death. That such a woman should be slaving in soot—blowing bellows, now with her left, and then wielding a hammer with her right hand—forging clout nails for twelve hours a day, in order to earn less than forty pence in a week, is a phenomenon that I would never have believed as being possible in England if I had not seen it.

AIR CASTLES.

DEAR MISS RIPLEY:—I thought it might please some of the RURAL readers to have me tell them how I make some kinds of air castles. I will try to explain first about those made of straw.

You will want some red woolen stuff, and if you have a pinking iron, cut rounds out of the woolen with it. You will want forty-five small rounds and five larger ones. Get your straws—pick those that are straight and of a uniform size, and I would select the yellowest ones for the large castle. You will want six straws eight inches long, and three straws four inches in length. Now with a stiletto bore holes in your five large rounds of woolen cloth, and push four straws through one round and fasten securely with a fine needle and thread—in short, fasten those straws all together so as to form one large diamond. Now for the smaller diamonds. Cut fifty-four straws two and one-half inches long, and with the small rounds fasten together in six diamonds. For the smallest ones, cut twenty-seven straws an inch and a half long, and make three small castles to fasten them together. You will require one yard of red worsted. Now take your large diamond, and on the shortest length from top to bottom fasten three of the second size on the three shortest corners, and use one for the top, to hang it up by. Now fasten two on the longest part, and place the other large one in the center of the large diamond; now put the three small ones on the corners of the top one, and you have your castle done, and if right, it looks very pretty in the corner over your what-not.

To make a castle out of horse-hair or hog's bristles, you will want some wax, colored red. Cut your horsehair into four pieces, each one and one-half inches long, and fasten all together at one end by winding and tying thread around them, dip the end in the wax and lay to cool. Fix four more the same way and fasten all together in the form of a diamond, with red wax on the six corners. This is a small diamond, and you can make as many as you wish and fasten them together in every variety of form.

In all probability you know how to make castles out of cardboard; but if you never have made them, try one of silver cardboard embroidered with blue zephyr, and see how the result pleases you. Oats gathered while green, and dried, will make a pretty castle.

MISS INCOGNITA.

FACTS, NOT IDEAS.

DEAR MISS RIPLEY:—You ask for ideas. In this marvelously hot country one cannot originate ideas as freely as one could wish, especially during this awful weather; but I can give you a few facts, and perhaps ideas may suggest themselves. It is a fact that a few years ago the idea of a woman being manager of a newspaper, either in whole or in part, was simply too ridiculous to be tolerated: but *now* the idea has become a reality, and it is not ridiculous either. Perhaps in your social circles now, the idea of ladies of culture and refinement *potting* around in their houses over mud floors, with mud walls, ceilings and roofs and wooden or cotton windows, if any at all, would seem not only ridiculous but impossible; but I can tell you that is *now* the case with many in Southern Arizona. The advent of the S. P. R. R. may change things some, (I hope it may change the climate, for during June, July, August and most part of September the thermometer ranges from 90 at sunrise to 110 deg. in a few hours until about sunset.) The idea which especially interests me is, how shall a woman of average blood and nerve get through all the daily routine of duties to her family, her house, herself and her neighbors without degradation or death to herself or some of her family?

MRS. L. R. S.

Phoenix, Arizona.

TEMPERANCE WORK PERPETUAL.

IN one respect temperance work is like housework. Women are sometimes heard to wish that they could get this dusting, and darning, and dish-washing done up once for all; as a man builds a barn, clears a wood-lot or digs a well, and is through with it. It is tedious to keep pegging away at the same hum-drum task to-day, to-morrow, and the year round, as long as one lives—always doing it but never getting it done. But that is what temperance people must make up their minds to do. There is no discharge in this war. We may whip in many a skirmish and carry many an entrenchment; we may burn the enemy's supply trains and break up his camps. But so long as human nature is human nature, so long as men love self-indulgence, we shall have to keep up a running fight with this foe. To call this task a "reform" is misleading. It will not be like the crusade against slavery. That evil has been wiped out. When intemperance is wiped out we may expect to hear the trumpets blowing for the millennium.—Editor's Table; Good Company.

WE sometime knuckle readily to difficulties, and take complacence in our serene submissiveness to Providence, when a little more pluck and persistence on our part would overcome the obstacles. We mistake laziness for Christian resignation.

CORRESPONDENTS' CORNER.

WILL some reader of the RURAL please send the words in full of "Home Sweet Home?"

I HAVE a small collection of Postage Stamps collected in 1862-3, some very rare, which I would like to dispose of. Where can I do so to the best advantage?

A. W. B.

Monument, Mass.

ANS.—If A. W. B. is acquainted with any collector who wishes to procure stamps included in his collection, they may be disposed of to the best advantage in this way. If not, I would advise him to correspond with a reliable stamp dealer. I have had dealings with several parties in this business, and would recommend Wm. P. Brown of 115 Nassau St., New York City, as having given me the best satisfaction. If the collection includes *very rare* stamps as stated, there will be no difficulty in disposing of it; but no collector or dealer would make an offer without seeing the stamps, as their value will depend on their condition.

PRAKRAMA.

Sabbath Reading.

"WHILE THEE I SEEK, PROTECTING POWER."

WHILE thee I seek, protecting Power,
Be my vain wishes stilled;
And may this consecrated hour
With better hopes be filled.

Thy love, the power of thought bestowed,
To thee my thoughts would soar:
Thy mercy o'er my life has flowed;
That mercy I adore.

In each event of life, how clear
Thy ruling hand I see;
Each blessing to my soul most dear,
Because conferred by thee.

In every joy that crowns my days,
In every pain I bear,
My heart shall find delight in praise,
Or seek relief in prayer.

When gladness wings my favored hour,
Thy love my thoughts shall fill;
Resigned when storms of sorrow lower,
My soul shall meet thy will.

My lifted eye, without a tear,
The gathering storm shall see:
My steadfast eye shall know no fear;
That heart will rest on thee.

Some expressions of this hymn have direct reference to the stormy scenes in France about the time of the Revolution. It was written in France when the political sky was very dark and threatening, and no one felt secure. Its author was Miss Helen Maria Williams. She was born in the North of England in 1762. She went to London at the age of eighteen, where she won much reputation as a poet. She afterwards went to Paris, where she lived during the breaking up of the monarchy, and where she published works in prose and verse. She was a very devout woman, and relied on the strong arm of God at the time of peril. She held a high place in religious society, both in London and Paris.—*Story of the Hymns, by American Tract Society.*

CHRISTIANS THE GUARDIANS OF THE SABBATH.

BY REV. G. T. RAYMOND.

Much has been said and done to secure a better observance of the Sabbath. Has it occurred to you, Christians, that you are the guardians of this day? If you wish others to respect God's laws you must respect them. If you wish others to obey God's commands you must obey them; and you must be particular about that obedience. If you seek your pleasure by driving out with your family on the Lord's day, your non-Christian neighbor, who has different tastes, will see no harm in seeking his with dogs and gun. If you patronize Sunday trains, even for the purpose of seeking the church of your choice, the non-Christian community will see no harm in using the same Sunday trains to seek places of their choice. And I might continue. A strict observance of the Sabbath by the church is the only vote of the church for a decent observance of the day by the world.

The fourth commandment is the dyke which keeps back an ocean of corruption. Through a break in the dyke any sin can enter. Shall we, Christians, with hands washed clean in the blood of him who plants the dyke, scoop out the sand and roll away the stones, while the merciless ocean laughs, and hisses, and leaps with playful treachery into the breech we have made?

Do I mistake? There is power enough in the church to save the Christian Sabbath in America. But if this power is not exerted, or is used in the wrong direction, whose is the pen that dares venture a description of the consequences? While I was musing on the Ten Commandments, I seemed to see a string of invaluable pearls. Their lustre was glorious as you looked at them in the light of the "Sun of Righteousness." And they were ancient, too. I saw them committed to the church for safe-keeping. And he who committed them said: "In keeping of them there is great reward." And while I was watching I saw the shadowy hand of no uncertain personage stretched out over one of the brightest of them all. And a siren voice whispered in the ear of the church, "Let me have just this one." But the church answered promptly, "No." Meanwhile the shadowy hand remaining, artfully covered the brilliancy of the pearl. And after some time had passed, the siren voice whispered again: "Let me have this one, for it has lost its lustre and the day of its value has gone by." And the church looked at the shaded pearl, but answered not a word. Stealthily the dark fingers clutched the coveted prize and began to draw it away, and, as I beheld, the nine followed the one, for they were united and inseparable.

USE sin as it will use you; spare it not, for it will not spare you; it is your murderer and the murderer of the whole world. Use it, therefore, as a murderer should be used; kill it before it kills you; and though it bring you to the grave, as it did you Head, it shall not be able to keep you there. You love not death; love not the cause of death.—*Baxter.*

THE Bible does not need defence so much as proclamation. It defends itself wherever it is known. Deep in every soul there dwells forever a witness to the truth, whose clear eye and steady voice will see and respond to it wherever it is known.—*W. M. Taylor.*

SICKNESS should teach us what a vain thing the world is,—what a vile thing sin is,—what a poor thing man is,—and what a precious thing an interest in Christ is.—*Mrs. Savage.*

A STRING of opinions no more constitutes faith, than a string of beads constitutes holiness.—*J. Wesley.*

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

TRAVELING.

MRS. M. G. RAND.

WHY people travel for pleasure in summer, is a problem not easy to solve. It is true that the facilities for traveling at any season in America seem little short of perfection. However, the easiest and most spacious car with its convenient arrangements for eating and sleeping, is not to be compared with home and home comforts.

When we take passage in a public conveyance, we must, to some extent, give up our independence. If it is on the cars, and we pay for a "section," or part of one, that is one's *pro tempore*, and *there* we must *stay*, be it for a day or a week. If we leave it for a walk up and down the car, while it stops at a station, we usually find that we are in somebody's way. Gladly we return to the place allotted to us, thankful that *there*, at least, we have rights.

Traveling is good discipline for all of us, for it places one where he must be governed by circumstances, *nolens volens*. If an ill-bred person is assigned a seat with or near us, we must endure the annoyance without complaint. If the air is so warm and suffocating that we open a window, we may expect to get looks that "speak volumes!" Added to the looks are remarks, not made directly to us, perhaps, but intended for us all the same. By all this we are made to understand that we are considered unjust to those who have no appreciation of pure air. Sometimes one's fellow passengers go so far as to demand (all supposed to have equal rights, remember) that a window shall be closed. Not infrequently the demand is accompanied by a threat to call upon the conductor to interfere. Under the circumstances, the offender thinks best for the sake of peace to succumb. He thinks with a sigh of his *home*, and resolves that if he be so fortunate as to get back to it, he will stay there.

Traveling with anything like comfort, is an art that has to be learned by experience. More forethought is necessary in preparing for a journey, than one unaccustomed to traveling would suppose. The question of "What to Wear," the packing of trunk and satchel, etc., etc., are requisites that call for careful planning. Those who look back to their first journey, will very likely see that they were encumbered with some unnecessary baggage. On the other hand, some needed articles were left behind, the want of which was seriously felt. A substantial trunk, even if it be an expensive one, will be found the most economical in the end. The money expended in a cheaply-made trunk that shows rough usage on its first journey, is a bad investment. Satchels, even well-worn ones, can be made presentable by being brushed over with the kind of varnish that is used for kid shoes. Packing the trunk ought not to be put off until the day of setting out on a journey. There are always enough "odds and ends" of work to attend to at the last. It is best to begin to collect articles to be packed several days before starting on a trip, so that nothing will be forgotten.

And now, don't keep the hackman waiting when he calls to take you to the depôt. It is the duty of those who order a hack for a certain time, to be in readiness promptly at that time. Have the trunks packed, locked, strapped, and ready at the door. It must be very trying to hackmen to wait for a lady to put on her gloves, gather up her traveling appurtenances, say her adiens, etc., etc. All of these little things should be attended to beforehand, as there may be other passengers to be called for; and as a rule the cars, like time, "wait for no man" or woman either. It is not pleasing to see the satchel so crowded that it cannot be clasped, and a little management will prevent it. Toilet articles should be closely wrapped in a napkin, pinned, and placed in the bottom of the satchel. If wrapped in paper, as is common, they will get undone easily, and be in sight every time the satchel is opened. Provide yourself with pencils, watch-keys and button-hooks. Otherwise it might become necessary to ask the loan of these things from a stranger.

The dress of a lady traveling in summer, should be of cool fabric, of a grave color, clinging in style and not too long. A "duster" of heavy linen, or thin woolen material, is essential to comfort and neatness. It is anything but wise for a person to go on a journey in a pair of new shoes. A pair of easy slippers ought always to be put in the satchel. This advice is as good for gentlemen as ladies.

A large shawl or "waterproof" made into a compact roll, and secured by a shawl-strap, ought to form a part of the traveling outfit. Neglect of this precaution may be regretted, as the warmest day may suddenly become cool. Carry a few postal-cards with you; there are stops enough on the way for one to write a few words on a card, to anxious friends, when letter-writing would be an impossibility.

Now-a-days, a lady can travel quite well alone; that is, unaccompanied by friends. The porter is almost always accommodating, and polite, especially to those who treat him with civility. It is not an evidence of culture to *command* instead of *request* the services of those who are employed to render them. It often happens in the temporary absence of the waiter from the car that a lady is glad to accept some little courtesy—raising a window, for example—from a gentleman. It is proper for her to make some slight acknowledgment of the favor, but it does not afford sufficient ground for active conversation between strangers. Where friends travel together, they should remember to converse in low tones, as their affairs cannot be interesting to people whom they do not know. Loud talking or laughing between friends on the cars, is disagreeable to those who take no part in such pastimes.

The lunch-box often contains so great a variety of cakes, pies, pickles, jellies, etc., as to be suggestive of abundance, at least. Plain food, with plenty of fruit, makes a suitable luncheon for any traveler. Traveling brings about an entire change of habits, making it necessary to observe care and regularity in eating. Constant munching of even the most harmless food will seriously disturb the digestive organs. People become so tired of the monotony of a journey that they eat when they are not hungry, to "pass away time," as they say—a bad remedy, truly. Nuts, both domestic and imported, are freely indulged in. Sometimes the shells are thrown upon the car-floor, which reminds one of the saying that "We carry home manners abroad."

A gentleman who had traveled extensively for many years told the writer that "three consecutive days of travel with a carful of people was all he would ask to judge by of the disposition of each." The necessity of being confined to limited quarters with persons of different tastes and habits, and the lack of home comforts, etc., are enough to call into requisition all the amiability one can command.

In closing, I wish to say a few words in kindness to the ladies, particularly to those who have children. If you have been thinking that you need the benefit of a change for yourself and family, don't seek it in a journey while the warm weather lasts. At that season there is no place like one's own home, "be it ever so humble."

APPLE ECONOMY.

ANNIE L. JACK.

ALL over the orchard. It is quite a task to pick up fallen apples after a gale when the trees number by thousands; but it must be done and we try hard to gather all the queerly misshapen, unripe fruit, in order to prevent the spead of the worm and its progeny, that generally infest such apples. There are some work and economy necessary in order to make the best use of these windfalls. It is the truest saving to make three sorts. The first, of course, are for market, and if the largest apples are put apart they will bring in more money than if all are sent away unsorted. Those of second quality make very good apple-sauce. I noticed the other day at a neighbor's that the sauce was extra-fine, and found the fruit of which it was made had been boiled with the skins on, and afterward put through a sieve which reduced the apple to a fine pulp, and left the skin and core out. This with a little sugar, is a healthy and palatable supper for children, instead of so much butter. Apples baked and used with cream and sugar are also easily digested, and the best of food. The thirds, or smallest apples are good food for pigs; boiled with a few potatoes or beets they form a pleasant variety to the diet of these animals. So that just now we are busy with this light and pleasant work gathering up the fragments that nothing be lost.

DOMESTIC RECIPES.

A PICKLE CHAPTER.

Pickelette.

Four large crisp cabbages and one quart of onions cut fine; two quarts of vinegar, two pounds of brown sugar, two tablespoonsful each of mustard, black pepper, cinnamon, turmeric and celery seed; one tablespoonful each of allspice, mace and pulverized alum. Pack the chopped cabbage and onions in alternate layers with a little salt between. Let stand until the next day. Scald the vinegar, sugar, spice and alum, and pour over the cabbage and onions. Do this three mornings in succession. On the fourth morning put all over the fire and boil five minutes. When cold put into small jars.

Sweet Cucumber Pickles.

Seven pounds of cucumbers pared and sliced; cover with salt, adding a piece of alum size of a butternut. Next day drain off the liquid and boil in vinegar until tender; put in a jar and cover with a sirup made of one pint of vinegar, four pounds of sugar spiced with cinnamon. MRS. A. G.

Albany.

Chili Sauce.

Twelve large, ripe tomatoes, four ripe pippins, two large onions, two tablespoonsful of salt, two of sugar, one of cinnamon, three cups of cider vinegar. Chop all fine and boil one hour. Bottle for use. MRS. H. L. K,

Indian Pickle. (An English Recipe.)

Two gallons of good vinegar, one-fourth pound ginger, two ounces of allspice, one-half ounce of cloves, one-half ounce of chili peppers, four ounces of black pepper, four ounces of coarse salt, two ounces of garlic, two ounces bruised shallots, one-fourth pound of mustard, two tablespoonsful of powdered alum. Tie all these ingredients in a bag and boil in the vinegar twenty minutes. Take small cucumbers, onions, beans and tomatoes, scald them in boiling, salted water by pouring the water over and letting them stand until cold, instead of putting over the fire to scald. Then scald in clear water. The cucumbers will not need to be scalded again, but the onions, beans and tomatoes will require several scaldings. Wipe them off and throw into weak vinegar for twenty-four hours, then wipe them off and cover with the Indian pickle. After they have been in that for three weeks take them out, drain, and put into pickle jars, strain the Indian pickle over and seal tightly. They will keep for years.

In making mine, I left out the garlic as I thought the onions would make it strong enough.

Chow-Chow.

Two quarts of cucumbers—one quart very small and the other about a finger in length. Cut the large ones into inch pieces. Three heads of cauliflower picked into pieces, four large green peppers sliced fine, two quarts of small onions. One gallon of cider vinegar, one half-pound of ground mustard, three cups of sugar, one cup of flour and one ounce of turmeric. Mix the flour, mustard and turmeric smooth in a little vinegar. Place a porcelain kettle upon the stove with the vinegar and sugar; after it is warm throw in the mixed mustard, etc., and boil, stirring carefully to prevent burning. Have the pickles all prepared by scalding the same as for Indian Pickle. Let them boil in the vinegar for a short time, stirring constantly, then bottle and seal.

Chili Sauce.

Eighteen good-sized ripe tomatoes, six medium-sized onions, three red peppers, two and one-half cups of vinegar. Chop the onions and peppers fine, peel the tomatoes and squeeze out the juice. Take the juice with all the other ingredients except the tomatoes and boil together for a few minutes, then add the tomatoes, chopped fine, and boil twenty minutes longer. Season with sixteen tablespoonsful of brown sugar, eight tablespoonsful of salt, two nutmegs, a large teaspoonful of ginger, one and a half tablespoonsful of cinnamon and one-half teaspoonful of cloves. Cork tightly and seal. MRS. E. H. SARGENT.

Piccalilli.

One peck of green tomatoes, one large head or two small ones of cabbage, three green peppers and two red peppers. Take out the seeds from the peppers and chop with the cabbage and tomatoes quite fine. Put into a stone pot, sprinkle with salt and let stand over night. In the morning drain in a colander. Take one quart of strong vinegar, one pound of sugar, one-half ounce each of ground cloves and allspice, and two ounces of whole white mustard. Put the vegetables, vinegar, etc., over the stove in a kettle and boil fifteen minutes. Put into glass cans and make air-tight.

N. J. MRS. S. G.

Green Tomato Toast.

Twelve good-sized tomatoes sliced and thrown into salt and water for twenty minutes; take them out and boil, adding a little water, until tender; then add one quart of milk, plenty of butter, salt and pepper. Pour this over toast and serve at once.

Escaloped Green Tomatoes.

Fifteen medium-sized green tomatoes, slice thin and throw them into salt and water for a short time. Take an earthen pudding dish and cover the bottom of it with cracker crumbs, then put in a layer of tomatoes. Season with butter, pepper and salt, using butter plentifully. Thus alternate the layers until the dish is full. Put in half a teacupful of water, cover with a plate and bake for an hour or longer. A layer of crumbs should be on top. Green tomatoes require a good deal of seasoning to make them palatable.

I should be pleased to have published choice pickling recipes, also directions for making foreign or imported pickles and different kinds of sauces for meats. MRS. E. H. SARGENT.

For Dropsy or Swelled Limbs.

Make a tea of the green branches or leaves of asparagus, not the seeds, but the green branches, cut up and steeped in hot water and drink either warm or cold. I am always sorry to hear people recommend or use liquors of any kind in medicine. If any kind of roots or herbs is steeped until the strength is out, and white sugar added to the strained liquor and boiled slowly until it is thick like molasses, then put in clean bottles, and kept in a cool place, it will be far better and healthier than if any liquor had been added to it.

HATTIE HOPEFUL.

Everywhere.

RURAL SPECIAL REPORTS.

MASS., Monument, Barnstable Co., Sept. 8.—Pearl Millet is a failure with me. The Blount corn is doing well. I raised some very fine potatoes from the Beauty of Hebron the RURAL sent me; I think it is much superior to the Early Rose. Cranberries are about an average crop in this vicinity; some bogs are looking very well, and others not so fairly.

A. W. B.

NEW YORK, Franklin, Delaware Co., Sept. 6.—I planted the Beauty of Hebron potato on the 12th of May, in good garden soil, one eye to a hill, making 22 hills, and by their side, in the same way, at the same time, the same number of Early Rose, with a handful of ashes to each hill, both kinds being treated alike. I dug them after they got ripe, about a week ago, and got one peck of Beauty of Hebron from the one potato you sent. They were nice, and of a good size. There were more than a peck of Early Rose. Both kinds of potatoes ripened about the same time. The willow cuttings sent the previous fall are growing nicely. A few of the leaves of the Pearl Millet are four or five feet high, and some heads are appearing, but I don't want to plant any more of it. I would rather have even the common kind of corn planted here for a forage crop. When I come to speak of Blount's Prolific corn, my patience is tried, not only from what I have experienced with it, but also from what Mr. Blount himself says of it in the RURAL of Aug. 23. It is useless to send a corn to this section for farmers to raise that takes, according to his account, from March 30 to Aug. 5, or from May 7 till October, to ripen, even in the warm Colorado climate. I planted 44 hills of the seed sent me, as I did my common corn, on the 15th day of May, both side by side, fertilized in the hill and out of the hill, and cultivated both in the same way. I cut it up last week. The most of it had tasseled out and five or six silks had made their appearance, two of them on one stalk. I am six feet tall, and I think some of it was about two feet above my head. The stalks were large, but, cut in small pieces, our cow will eat nearly all of them. This is all I want of Blount's Early Prolific corn. Most of the other seeds sent failed to come up. It was a bad spring here for seeds to come up, it was so dry. A. T. N.

N. Y., Andover, Allegany Co., Sept. 3—I planted my Blount's Corn at the last of May; it is now ten feet high, with from five to seven ears on a stalk. Pearl Millet is two feet high. The Defiance wheat failed. The Acme tomatoes are a splendid crop. The Beauty of Hebron potato you sent me did not weigh one ounce; it had six eyes, I cut it into three pieces, and planted one piece in a hill and have dug nine pounds, one ounce of very nice spring potatoes. They alone are worth the price of the RURAL. They were earlier than the Early Rose. Wheat was not a large crop here. Winter wheat was very good. Oats are good where sown early. Potatoes where they have been dug are a good crop. Apples in places where they were not hurt by the frost are good. Altogether we have had a good season here. We are having very dry weather now. C. F. H.

N. Y., Smithville Flats, Chenango Co., Sept. 4.—My Blount's corn is from eight to twelve feet high; I fear it won't get ripe. Pearl Millet is a failure. My Beauty of Hebron potatoes were dug on Aug. 27; from 19 eyes I had 32 pounds of as handsome potatoes as I ever saw. My Acme tomatoes are splendid. J. A. B.

MICHIGAN, Dansville, Ingham Co., Sept. 2d.—We have been having very dry weather since July, but to-day a good rain is falling. Wheat has been mostly thrashed, and is turning out from 15 to 25 bushels per acre. Oats have turned out a full crop. Corn where tended well, is a fair crop. I have never seen any of Blount's Prolific yet. Potatoes will average a good crop, the varieties being mostly Early Rose, Peerless and Peachblow. It will take a good potato to beat the Early Rose. Wheat in market brings 90 to 95c. per bushel; corn, 18 to 20c.; potatoes, 40c.; butter, 8c. per pound; eggs, 7c. per doz. I have not lived in this State very long, but I think Michigan is a good place for a farmer. C. G.

WIS., Freedom, Outagamie Co., Sept. 5.—Thrashing machines are busy. Wheat is yielding better, and is of better quality than last year. We are also getting a better price for

our wheat than we did then. Farmers are feeling correspondingly happy in consequence. Oats are the best crop that we have harvested for years. Other crops are good, except apples, of which we have very few. We are suffering from a severe drought now; pastures and fields are brown and bare. Wells and streams are drying up. Many are waiting for rain, in order to sow fall wheat. Our markets are improving for most kinds of produce, and there is a ready sale for everything that farmers have to sell. J. K.

NEB., Brownsville, Nemaha Co., Aug. 10—Noting some complaint in RURAL as to size and growth of Pearl Millet, I send you to-day, by express, a few specimen stalks from seed you sent me. I do not know whether this is what it *ought* to do or not; but it is what it *has* done. It was sowed broadcast, and had no cultivation. Advise me if this is a *fair* specimen. ROBT. W. FURMAS.

[REMARK.—The package sent to us by Ex-Gov. Furnas contained half-a-dozen stalks of Pearl Millet, about ten feet in hight. It was received Aug. 15. Of course, it may be cut back earlier in the season. The plants will continue to grow till frost.—EDS.]

News of the Week

MISCELLANEOUS.

MONDAY, September 15, 1879.

In view of the constant and frequently just complaints made of the civil service of the Federal government, it is fair to notice the honesty and skill with which it often acts. The last fiscal year closed with every dollar collected by the agents of the internal revenue, over $100,000,000, turned into the Treasury without the loss of a cent The accounts of the 500 postmasters through whom the four per cent certificates were sold have just been closed, and it is found that of the entire amount received in sums of $10 and upward not a dollar has been lost. Remembering the large amount involved and the large number of untried agents called into this service, it was not unreasonable to expect, not so much that any large sum could be stolen, as that carelessness would lead to loss. The result is gratifying.

The congressional committee, to inquire into the causes of the recent hard times, have disbanded for the present, after a trip of over a month at the West, during which they took some 10 days testimony in Chicago and four in San Francisco and examined a few witnesses at Des Moines, Ia. The depression of labor and business was not very perceptible anywhere on the journey, and the farther west the committee traveled the more difficult it became to discover any traces of such depression. At Chicago there were communist socialists. At San Francisco the principal topic of inquiry was as to the effect of Chinese immigration. Farmers, tradesmen, mechanics, peddlers, miners and workmen, all agreed that they could not hold their own against the skill, business capacity, industry, patience, endurance and frugality of the "Chinese." It was with the good qualities of the Chinese that most fault was found.

Dealers in butter here say that the sales made for exportation this week have been heavier than ever before. No actual figures have yet been given, but it is estimated that not less than 175,000 packages have been disposed of; one firm having sold 10,000 packages in one transaction for $65,000; and the week's sale cannot be less than $500,000. The butter has been sold to agents of dealers in Great Britain and the Continent. The price has accordingly advanced from 2c. to 2½c. per pound. The causes of this increase in the traffic are two-fold—first, sales here, owing to low prices, have hitherto been unusually small and vast quantities have been stored here for better prices, some dealers having as many as 50,000 and 60,000 packages kept in improvised ice-houses constructed in the upper stories of their warehouses; in which the temperature has been kept as low as 40 deg., and, second, Irish, Scotch and domestic butter has been thrust with unusual abundance lately upon the English market; hitherto the makers have been accustomed to keep back their butter until they could get winter prices for it; but finding that American product was pretty sure then to come into competition with their own, they have this year forestalled our dairy product, and the small supply now on the British market gives us a profitable opening for our hoarded goods.

Gen. Grant is expected in San Francisco between next Wednesday and the following Sunday. He will be greeted enthusiastically by the best people of the Pacific Slope and several deputations of personal friends from the East. Dennis Kearney, a few days ago, threatened to burn him in effigy on the sand lots, and this blackguardism of the foul-mouthed quintessence of the foreign scum of the country has greatly impaired his popularity even among the hoodlums of San Francisco, and threats are pretty freely uttered should he attempt to insult the American representative whom Europe and Asia have combined to honor as no American has ever yet been honored, that nothing can save him from a merited lynching.

Every day or two the London Times discovers some new article which America is furnishing to the ruin of English trade. The last is machine-made doors. In 1877 2,800 were shipped to England; last year 45,000. An American trade with Australia has sprung up in the same article, but the New York dealers complain that California has swept in the supply of that country, sending 27,000 doors last year while New York supplied but 5,000. By the way, a Springfield firm recently shipped a case of fine doors to Michigan, the lumber for which came from Indiana. Late advices leave no doubt that Kalloch is chosen Mayor of San Francisco.

A Word of Warning. To protect the public, and prevent them from being imposed upon by the worthless counterfeits and imitations of our MURRAY & LANMAN'S FLORIDA WATER, we have prepared a paper in which the words "LANMAN & KEMP, NEW YORK," appear in pale letters when a leaf of the little pamphlet is held up to the light; and whenever Florida water is offered for sale wrapped in a pamphlet that does not have this water mark or stamp in it, then it is counterfeit, and should be rejected.

THE season for contracting that disagreeable and really serious disease, Catarrh, is at hand. Dr. Sykes, of Chicago, in our issue of September 6th, offered our readers a remedy in which he has the greatest confidence. He has the most positive assurances of those who have tried it that it will do without fail all that is claimed for it.

Take Hop Bitters three times a day, and you will have no Doctor bills to pay.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Sept. 13, 1879.

BEANS AND PEAS.—There is a fair demand for marrow beans at stronger figures. Mediums very steady; new med. and pea, $1.40@1.45. Green peas quiet. New So. B. E. are in, opening at $2.75@3 per 2 bush. bag. Canadian peas nominal at 70c. medium beans, prime, $1.32½@1.35; fair to good, $1.27½@1.30; marrows, prime, $1.32@1.35; fair to good, $1.25@1.30; pea, $1.20@1.25; red kidneys, $1.75.

Receipts of beans for week, 7,584; exports, 632 pkgs.

BUTTER.—Receipts for the week, 33,052 pkgs.; do., last week, 24,425 do. Exports, 27,000 pkgs. This is about the largest shipment for one week that has ever occurred. The buoyant tone and other improved indications of the butter trade, after the long period of comparative cheapness, have given the market an aspect of unusual cheerfulness. One noted feature in the increased strength of feeling in State is the smal difference wholesale dealers concede to jobbers; this shows that holders are not so anxious to be "helped out" as they were at an earlier point in the season. Compared with last week, and with heavier arrivals to handle, quotations are fully up to last week's ranges for State, certain marks doing better. Western has had its share of the export trade, and fine is quoted to sellers' favor.

State, pails and tubs, single dairy marks, fresh, extra, 18@19c.; State, pails and tubs, best invoices, 16½@17c.; good to prime, 14½@15½c.; fair to good, 12½@14½c.; firkins, choice yellow, 15½@16c.; good to prime, 14@15c.; fair to good, 13@14c.; Welsh tubs, choice, 15@15½c.; good to prime, 13½@14½c.; fair to good, 12½@13½c.; tubs, poor, 9@11c.; creamery, best invoices, 19½@20c.; good to prime, 18@19c.; sweet cream, best, 17@18c.; fair to good, 16@17c.; Western, best invoices, 19½c.; Western, good to prime, 18@19c.; Western, fair to good, 15@17½c.; Creamery, poor, 14@15c.; imitation creamery, 11@14c.; dairy, best invoices, 13@14c; good to prime, 12@13c.; fair to good, 10@11c.; poor to fair, 9@10c.; factory, best invoices, June, 11½@12c.; fair to good, June, 10@11c.; best invoices, Summer, 8@9c.

CHEESE.—This week has shown a very peculiar position of trade. The country markets were so much nigher than an advance of fully one cent per lb, was thought warranted by holders here; this served to restrict business for a day or two, and left the situation somewhat nominal. Later on in the week, however, exporters were forced in by orders from the other side, where there was also an advance, and the full outside rates of the week now prevail strong, at 7½c. quite general on fancy factories. The improvement originated with factory men, who in consideration of the improved quality of the cheese, now turned out would not release their supplies, except at more remunerative rates, and the limited shipments forward left this market rather poorly supplied with really choice factories. There is plenty of undergrades or early made lots in stock, and a good portion of these will have to be carried over, as shippers want the late made lots to help out assortments. Quotations are for fancy at 7½c.; good to prime, 6½@7c.; fair to good, 5½@6½c.; half-skimmed, 4½@5c.; skimmed, 3½@4½c. State farm dairy: Fine, 6½@7c.; good to prime, 5½@6½c.; fair to good, 5½@5c.; skimmed, 3½@4½c. Wisconsin factory: Fine, 6½@7c.; good to prime, 6½@6½c. Ohio factory: Cheddar, fine, 6½@6½c.; do., fair to good, 5½@6c.; flat, fine, 6½@7c.; flat, good to prime, 6@6½c.; flat, fair to good, 5½@6c.; half-skimmed, 4½@5½c.; skimmed, 3½@4½c.

COTTON.—There has been a fair outlet for supplies to exporters, and a good degree of activity otherwise, with prices closing firm at for September, 12.18@12.19c.; October, 10.62c.; November, 10.46@10.47c.; December, 10.40@10.41c.; January, 10.48@10.49c.; February, 10.58@10.60c; March, 10.69@10.72c.; April, 10.80@10.82c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Apples are in steady demand and rule at firm prices. Blackberries are higher. Cherries favor sellers. Peeled peaches are held at strong figures, and now are especially wanted, while they continue in small receipt. New North Carolina apples, 5¼@5½c. for common sliced, and bright, 7¼@8¼c., with really fancy white at 9@10c. Patent evaporated apples, choice, in cases, at 11c@12c.; do. fair to good, 8½@10c.; N. Y. State sliced, choice, 5@5¼c.; do, quarters, choice, 4½@5c.; western quarters, bright, new, 5@6c.; common and old, 2@4½c.; new N. C. peeled peaches at 12½@16c.; do. Georgia, 10@13c.; old unpeeled halves, 4½c.; do., quarters, 3½@3¾c. Blackberries at 8c. for old and 8½c. for new. Raspberries 28@29c. Pitted cherries at 20c.

EGGS.—Receipts for week, 5,627 bbls.; do., last week, 6,554 do. The market is higher and can be sustained if receipts do not crowd.

Near points, 18@19c.; State and Penn., @17½c.; Western, and Canadian, choice 16½@17c.; poor marks and remnants, 15@16c.

FLOUR.—Exports are large and trade generally brisk, with prices doing better.

Prices are: $3.75@4.35 for poor to very fancy superfine State; $4.35@4.60 for poor to good extra do., odd lots and lines; $4.60@4.85 for good to choice do.; $3.75@4.35 for inferior to fancy superfine Indiana, Iowa, Michigan, &c.; $4.35@4.60 for inferior to good shipping extra do., and $4.60@4.85 for good to choice extra do.; common to choice white wheat extras, $4.90@5.80; choice to very fancy do. at $5.80@6.50; red and amber winter wheat, inferior to very choice trade and family, at $4.70@6.10; round hoop Ohio at $4.40@4.85, and trade and family brands of do. at $4.90@6.10, the latter rate for choice; St. Louis, $4.20@5.75 for inferior to very good extra; $5.75@6.65 for very good to fancy; Minn. clear, very inferior to very fancy, at $4.35@5.85; do. "straight," very inferior to strictly fancy, at $5.25@6.50, and patent poor to fancy at $5.25@7.50; unsound stock at from $3.00@5.75; city mill extra at $5.35@5.60, fair to choice, for West Indies; do. for England, $4.35@4.80 for very poor to very choice; do. trade and family extras, $5.50@6.50; do. for South America, $5.40@5.75 for standard to choice brands; No. 2 at $3.00@3.75 for very poor to very fancy.

CORN MEAL—Is selling at $2.65@2.75 for Brandywine and $2.15@2.20 for Western.

FRESH FRUITS.—Apples are in large supply, but with higher pears and moderated supplies of peaches, prices may be called steadier.

Blush Pippin, up-river, ₱ bbl., $2.00@2.25; do., western N. Y., $1.75@2; do., Gravenstein, $1.75@2; do., Alexander, $1.75@2; do., Fall Pippin, $1.50@1.75; do., 20 oz. Pippin, $1.75@2; do., Maiden Blush, $1.75@2; do., Calvert, $1.50@1.75; do., Cranberry Pippin, $2; do., Strawberry, $1.50@1.75; do., Detroit Red, $1.75@2; do., Golden Sweet, 75c.@$1; do., mixed lots, $1.50@2. Cranberries have appeared. Cape Cod, bbl., $8@9; crates, full colored, $1.75@2.25; poor, $1@1.25. Pears have generally advanced. Bartlett, State, good to prime, ₱ bbl., $5@6; do., up-river, extra, $5.50@6; no., fair to good, $4@5; do., Boston, per bush. box, $1.75@2.25; Seckel, $2.50@3.50; Swans' Orange, $2@2.50; Flemish Beauty, State, $3@3.50; do., up-river, $2@2.50; cooking, $1.50@2. For general use peaches have nearly worn out their welcome Supplies will struggle along until the middle of October. With the early contributions of the South and late pickings from Hudson river gardens, New York will have a long season. Thus far 1,357,000 baskets have been marketed here and over 200,000 do. for England—not 3,000,000 baskets: as our typo stated last week. Southern Smocks, best, 90c.@$1; plain, 60@75c.; do, white, 90c.@$1; up-river, choice, $1.25@1.50; fair, 60@75c.; N. J., choice, 1.25@1.37; poor to good, 40c.@$1. Grapes easy with a full supply. Delaware, State, 18 3-lb. boxes, $2.50@3; do, in baskets, ₱ lb. 5@7c.. do., up-river, bulk, ₱ lb., 7@8c.; Concord State, 18 3-lb. boxes, $2@2.25; do, in baskets, ₱ lb., 3@4c.; do., up-river, 18 3-lb boxes, $1.25@1.75; do., up-river, bulk, ₱ lb., 3@3½c.; do. S. J'y, case of 24 2-lb. boxes, $1.25@1.62; do., S. J'y & Del., bulk, ₱ lb., 2@3c.; Hartford Prolific, up-river, per lb., 2@3c. Plums show an important advance. German Prune, per bbl., $10@12; Quackenboss, $8@9; Purple Egg, $7@9; Reine Claude, $5.50@6.50; Blue Gage, $5@5.50; Lombard, $4@5; Damson, $5.50@6.50. Peanuts have a strong market, owing to a light offering. Va. hand-picked, $1.65@1.70; extra prime to fancy, $1.47½@1.55; good to prime, $1.35@1.45; shelled, per lb., 6@6¾c.

GRAIN.—The export movement in wheat is brisk, and the speculative activity is unprecedented, with a feverish market, which, however, leaves off strong. Sales at the close are of No. 1 amber at $1.13¾@1.14; No. 2 amber at $1.12¾@1.13¾; do., September option, at $1.13@1.13¾; do., October, at $1.13¾; ungraded amber at $1.10@1.13¾; No. 1 white at $1.13¾@1.14¼; do., September option, at $1.13¾@1.14¼; do. for October at $1.13¾@1.14¾; do., November, at $1.14¼@1.14¾; No 2 white, at $1.12¾; ungraded white at $1.9@1.12¾; No. 1 red at $1.15¾; No. 2 red at $1.13@1.13¾; do., September option, at $1.13@1.13¾; do. October option, at $1.13¾@1.13¾; do., November, at $1.12¾@1.14¼; No. 3 red at $1.10@1.11¾; ungraded red at $1.04@1.13¾; mixed winter at 1.12¾@1.12¾; No. 2 Chicago and Milwaukee spring at $1.05@1.07; New York No. 2 spring at $1.06@1.08¾; do., October option, at $1.07; No. 2 Northwest spring, October option, at $1.07@1.08; No. 3 spring at $1.03@1.04; ungraded spring at 97c.@$1.06. Rye is strong at 65@65½c. for poor Western. Corn is fairly active and strong; latest sales of New York No. 2 at 47@47¾c. do., September, at 47¼c.; do., October, at 47¾@47½c.; do., November, at 48¾@48½c.; New York steamer mixed at 47@47¼c.; do. for September, quoted at 47c. bid; Oct. at 47½c. bid and 48c. asked; November at 47½c. bid; ungraded Western mixed at 47@48c.; No. 2 white, in lots, at 57½@58c; 400 bush. round yellow at 57c.; yellow Western at 48@48½c.; yellow Southern at 50c. Oats have a liberal inquiry and closed at firm prices; sales of New York No. 1 white at 37@37½c.; New York No. 2 white at 34c; New York No. 3 white at 33c.; No. 1 at 34c.; No. 2 at 33¼@33¾c.; No. 3 at 32½@32¾c.; New York rejected at 31c.; ungraded mixed Western at 31@33½c.; white do. at 34@38½c.; white State at 32@38c; mixed State at 34@35; No. 2 Chicago at 34c.

HAY AND STRAW.—Prime hay is in small receipt and wanted. Other grades are plenty and freely offered. Sales at 50c. for shipping; 70@80c. for prime, and 55@60c. for medium. Straw at 55@60c. for long rye, 40@45c. for short rye, and oat at 35@40c.

HOPS.—Emmet Wells in his circular says: "A lively export demand for old hops continues, the shipments this week amounting to a little over 1,700 bales. The total receipts into New York since the 1st of the month reach 5,200 bales, only about 750 of which were of the new growth, the balance being 1877s and 78s, chiefly the former. A few sample lots of new have been sent to London with a view of testing that market, but the quality of those sent is nothing like as good as our middle and later pickings will show. No price is yet established in London for our new hops. Here in New York the price ranges from 28 to 35 cents, according to grade and quality. Our new crop is estimated at from 50 to 70 per cent. that of last year. Sixty per cent. would give us about 100,000 bales, or say a yield equaling two-thirds that of last year. The market closes strong."

	Bales.
Receipts for the week	1,669
Total receipts since September 1, 1879	3,414
Total receipts for same period in 1878	175
Export clearances for the week	1,713
Total exports since September 1, 1879	5,209
Total exports for same period in 1878	658

Quotations are for New Yorks, new crop, 28@36c.; Eastern, new crop, 28@31c.; Wisconsin, new crop, none; Yearlings, growth 1878, 7@18c Olds, all growths, 4@10c.; Pacific coast, growth 1878, 9@14c.

OIL-CAKE.—Western is quoted at $27@27.50 per ton.

POULTRY AND GAME.—Live poultry active and higher, a Jewish festival on the 18th helping sales.

Chickens, Jersey, Pa. and State, ₱ lb., 12@13c.; Western, 11@12c.; Southern, 10@11c.; fowls, Jersey, 13@13½c.; Western, 13c.; Southern, 12@12½c., roosters, old, 6@7c.; turkeys, Jersey, State and Pa., 12@13c.; Western, 11@12½c.; Southern, 11@12c.; ducks, Jersey, N. Y. and Pa., ₱ pr., 60@75c.; Western, 40@50c.; Southern, 40@45c.; geese, Jersey, $1.50@1.75; N. Y. and Pa., $1.37½@1.62½; Western, $1@1.25; Southern $1@1.25; pigeons, 20@25c.

Dressed poultry sells steadier, with more seasonable weather for use.

Turkeys, Phila., dry-picked, 15@16c., State and Western, prime, 13@15c. Chickens, spring, Phila., 15@17c.; State, 13@14c.; Western, 12@13c. Fowls, Phila., dry-picked, ₱ lb., 14@15c.; N. J., choice, 14@00c.; State and Western, dry-picked, 13@14c.; State and Western, scalded, 12@13c. Ducks, spring, Phila., dry-picked, ₱ lb, 14@15c.; spring, State, 12@14c.; old, Phila., dry-picked, 12@13c.; old State, 11@12c. Squabs, white, per doz., $2 25; dark, $1.25@1.50.

Game plenty and lower. Wild ducks, canvas, $1; red heads, 60c.; Mallard, 50c.; Teal, 40c., small birds, ₱ doz., 20@60c.; partridges, State, $1.25@1.37; do. Western, $1@1.12; grouse 15c.; wild pigeons, $1.25@1.50; woodcock, 80@90c.; Eng. snipe, $1.50.

SEED.—Timothy is scarce and higher, quoted at $2.40@2.50. Clover is in demand and quoted at 6¾@7¼c. for Western.

TOBACCO.—Export demand is still small, and trade otherwise moderate.

Reading for the Young

THE BIRDS' PARTY.

LAURA S. HAGNER.

THE birds gave a party one bright summer's day—
'Twas held in a meadow of newly-mown hay,
Close by an old orchard, where apples of June
Kept the throats of the choristers sweetly in tune.

A hedge of wild roses this meadow concealed
From the farmers at work in a neighboring field;
While the hum of the bees, and the murmuring brook,
Made a paradise quite of this sweet little nook.

The first to arrive was the Carrier-dove,
Who brought the regrets of her friends of the grove,
The pouters and nuns, who had serious reason
To give for thus slighting the ball of the season.

Then came the Cock-Robin with sweet Jenny Wren,
The Blackbirds, a family party of ten.
The Thrushes in brown, and the Jaybird in blue—
With wild Bob-o-linkum who makes such ado.

The King-bird and suite, next arrived, I am told,
With the Oriole dressed all in velvet and gold;
While the cardinal thought it no shame to be seen
In humble attendance upon the gay queen.

The sweet Meadow Lark was the hostess that day,
Of manners so gentle and temper so gay;
Tho' 'tis whispered discreetly, half earnest, half fun,
That her graces were learned at the court of the sun.

In strutted the Peacock, a vain, gaudy bird,
And rendered himself by his airs quite absurd,
But the Daws in a corner just whispered together,
And soon the poor creature had scarcely a feather.

In a bower of ivy screened off from the day,
The Owl and the Bat dozed the morning away;
While the Woodpecker's tap, and the Cat-bird's wild scream,
Failed to rouse the dull souls from their indolent dream.

Neath a wide spreading locust the banquet was spread,
Whose clustering blossom a rich odor shed,
Where seated on couches by Nature designed,
On the sweetest of berries they merrily dined.

(But alas for the plans of the children of clay!
The farmer that moment remembered his hay.)

The dessert had been placed, and in bumpers of dew,
Many toasts had been given, when over there flew
A pert little Sparrow whom nobody knew.

"Farmer Seedwell," he cried; "Ladies, fly for your lives!"
Then into a sheltering thicket he dives.
The birds gave a flutter, and off they all flew
Without even bidding their hostess "Adieu!"

"BUD BROWN."

BY HOPE LEDYARD.

A STORY? Well, I'll try. You like a true story best, I know, so I will tell you of a little black boy I became acquainted with when I went to Atlanta to attend the grand Sunday-school Convention.

I had a letter introducing me to some people at Atlanta, and so one afternoon I resolved to hunt them up. I was told to take the "Taylor Hill" car, but as I asked my way I passed a row of carriages. Such looking carriages you never have seen, I am sure. The linings were torn or the windows broken, they were dirty and old and rickety, and the horses were to match. Still, I was tired, and as they told me I would have to walk some distance if I took the cars, I was tempted to take one of these affairs, and the drivers surrounded me, begging me to "take a carriage."

Among the men and boys was one little fellow not more than eight years old, almost lost in a crowd. I laughed at the earnest, comical looks of the negroes.

"Sho!" said one big fellow whose hat was remarkable among the rest as having a complete brim, "the lady don't want a carriage—none o' your ole tings. Hyar's the one, madam!" pointing with a flourish to a double carriage which certainly was a trifle cleaner and more whole than the others.

"Thank you," I answered, "but I want this little chap's carriage. Show me yours, my boy."

The older fellows laughed good-humoredly; many of them, no doubt, had their own piccaninnies, and were not vexed that the boy should be chosen.

To tell the truth, after I had gotten into the one-horse carryall, and my boy was seated in front, my heart failed me a little. The horse, though bony, had considerable spirit, and "Bud Brown," as he told me he was called, drove in regular darkey style, letting the reins hang loose, and flicking the horse's ears with his whip every moment.

"Can you take me to Mrs. Ware's?" I asked.

"Oh ya-as! I know all 'bout dem folks—Colored University, I'm gwine dar mysef."

"But then you ought to go to school to get ready—not drive round."

"Oh! I was late this mornin', so I missed school; but I know my lessons. G'lang! (to the horse.) Do you see that little house? That's where we live. I'll get you some roses if you'll stop a minute."

I was quite ready to wait for the roses, and admired the neat little garden. Then we drove on, chatting together until I almost forgot my fears.

My call was made, and my friend decided to come back with me to the convention. She had no pocket in her dress, and unknown to me she handed little Bud—who was a complete stranger to her, remember—her purse, telling him to keep it for her, and to call again at four o'clock to drive her out.

When I heard what she had done, I was startled; she might never see her purse again. "There was not much in it, and how can that boy prove he is honest unless he is tried?" said my friend.

Now, remember, this was a poor boy, very ignorant, and no doubt with many ungratified wishes as to candy, books and pictures. At four o'clock, though, as we left the church, there was our boy, and with a bright smile he handed back the purse.

"Bud," I said, "who taught you to be so honest?"

"Why, Miss, I go to Sunday-school, and I'm gwine to the University. I'm bound to be honest."
—*Sunday-school Times.*

AN INDIAN LEGEND.

THERE was once a beautiful damsel upon whom one of the good genii wished to bestow a blessing. He led her to the edge of a large field of corn, where he said to her: "Daughter, in the field before us the ears of corn, in the hands of those who pluck them in faith, shall have talismanic virtue, and the virtue shall be in proportion to the size and beauty of the ear gathered. Thou shalt pass through the field once, and pluck one ear it must be taken as thou goest forward, and thou shalt not stop in thy path nor shalt thou retrace a single step in quest of thine object. Select an ear full and fair, and according to its size and beauty shall be its value to thee as a talisman." The maiden thanked the good genius, and then set forward upon her quest. As she advanced she saw many ears of corn, large, ripe and beautiful, such as calm judgment might have told her would possess virtues enough; but in her eagerness to grasp the very best she left these fair ears behind, hoping that she might find one still fairer. At length, as the day was closing, she reached a part of the field where the stalks were shorter and thinner, and the ears very thin and shriveled. She now regretted the grand ears she had left behind, and disdained to pick from the poor show around her, for here she found not an ear which bore perfect grain. She went on, but alas! only to find the stalks more and more feeble and blighted, until in the end, as the day was closing, and the night coming on, she found herself at the end of the field without having plucked an ear of any kind. No need that the genius should rebuke her for her folly. She saw it clearly when too late; and how many in all climes and in all ages, in the evening of life call sadly and regretfully to mind the thousand of golden opportunities forever lost because they were not plucked in their season.

CONDUCT NOT POLITE.

SEVENTEEN things in which many young people render themselves very impolite:

1. Loud laughter.
2. Reading when others are talking.
3. Cutting finger-nails in company.
4. Leaving meeting before it is closed.
5. Whispering in meeting.
6. Gazing at strangers.
7. Leaving a stranger without a seat.
8. A want of reverence for superiors.
9. Reading aloud in company without being asked.
10. Receiving a present without some manifestation of gratitude.
11. Making yourself the topics of conversation.
12. Laughing at the mistakes of others.
13. Joking others in company.
14. Correcting persons older than yourself, especially your parents.
15. To commence talking before others are through.
16. Answering questions when put to others.
17. Commencing to eat as soon as you get to the table.

HOW MANY WERE THERE?—Henry, upon being asked how many boys were in his Sabbath-school class last Sabbath, replied: "If you multiply the number of Jacob's sons by the number of times which the Israelites compassed Jericho, and add to the product the number of measures of barley which Boaz gave Ruth; divide this by the number of Haman's sons; subtract the number of each kind of clean beasts that went into the ark; multiply by the number of men who went to seek Elijah after he was taken to heaven; subtract from this Joseph's age at the time when he stood before Pharaoh; add the number of stones in David's bag when he killed Goliath; subtract the number of furlongs that Bethany was distant from Jerusalem; divide by the number of anchors cast out at the time of Paul's shipwreck; subtract the number of people saved in the ark, and the remainder will be the number of boys in the class." How many were there?

THE PRIZE PUZZLE.

NUMEROUS answers to the prize puzzle published August 23d, have been received, and a large majority of them are correct. I am inclined to think that the puzzle was too easy, (a fault which can readily be avoided in the future) for the correct answers have greatly outnumbered my supply of books. Not having books for all, and being loth to disappoint anybody, I have procured some very pretty steel engravings, each of which cost $3.50 at wholesale, and instead of a book, I have sent one of these to each cousin who gave the answer correctly. UNCLE MARK.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK.—Will you please admit me as a member of the club. One of my brothers subscribed for the RURAL last spring; he gave me all the seeds, but the wheat and millet, which he received from the RURAL. Everything came up and is doing nicely but two sorts of the flower seeds. The Acme tomatoes were well planted in hills in the open ground, and are loaded with large, perfect fruit. I have planted a row of the Beauty of Hebron potato from seed matured this summer from the potato we received. Though I have worked some in the vegetable garden a couple of summers before this, this is the first year that I have paid much time and thought to gardening. I am trying various experiments in my garden, if Uncle Mark and the cousins wish I will tell of some of them in future letters. [Please do.] I have Kentish Invicta peas now ripe, which were planted from seed raised this year. Turnips are doing nicely in place of the late peas. Melons are running riotously over the early pea patch. Tomatoes are looking contented and at home, where in the spring grew the lettuce, cress, &c. Oh dear, here I am on the very verge of that dreadful waste basket. Good-bye, all, from a friend to you all—from BEYOND THE MISSISSIPPI.

Kearney, Neb.

DEAR UNCLE AND COUSINS:—I received those seeds you sent to me all right, and am ever so much obliged to you for them. I planted them according to your directions. Uncle Mark, I wish to know what makes corn mix when the different kinds are planted near each other. My garden is doing very well, but it needs rain. The wheat crop around here was damaged considerably by the frost last winter, and it has suffered also from the Hessian fly. I send my love to Uncle Mark and all the cousins. Yours truly, LAKE SIDE.

Wesleyville, Pa.

[Corn bears flowers as do all of the cultivated grains. Now, if you have studied the lesson on the flower which appeared lately in the RURAL, you know that there are two sets of organs in a flower, the stamens and the pistils, that are necessary in order to produce seed. If a flower has stamens and no pistils, it is called a staminate, or female flower, and if it has pistils and no stamens, it is called a pistillate, or female flower. The staminate flower can never produce seed, but though there are no stamens *in* the pistillate flower, it can produce seed if the staminate flower is so near that some pollen can fall upon the pistils. These are just the conditions we have in the corn. There are two kinds of flowers; the tassel on top of the stalk bears staminate flowers and the silk is the pistillate, or female flower, and the pollen falls from above down upon the silk and fertilizes it. Now if two varieties of corn are planted so near together that the wind can blow pollen from one kind over upon the silk of the other, the two kinds of corn are said to "mix;" that is, the corn in the ears will have some point in common with the two parent plants. You can easily learn this for yourself by planting black and white sweet corn in two rows close together. The two will "mix," and a great deal of the young corn will be neither black nor white but red. UNCLE MARK.

DEAR UNCLE MARK:—I would like to join the Horticultural Club; our garden is much longer than a hoop though not very large. We raise all the vegetables we use in the summer; my brothers and I have to take care of the garden together. Mother has always raised flowers ever since I can remember, and I always have some plants or bush of my own. The seeds mother received from the RURAL are doing first rate, considering how late they were planted, there were but two or three that didn't come up. We have to irrigate twice a week and use the watering pot a great deal to get anything to grow here. I read the cousins letters with much interest, and also the answers to the correspondents. I would like to propose a plan by which to give the names of plants, but I don't know as I ought to, this being the first time I have written to you, but it may be of considerable interest to the members of the club. I see a great many send in plants to be named such as the Dog-tooth Violet and other plants. I may have seen them a good many times, for there are a good many wild flowers here, and I know some of them, and some I don't. Now, if you could give pictures of those that are sent in, it might prevent others from sending in the same plants and then we could all know how the plants looked that were named. I guess this letter is long enough for my first. I am eleven years old. Yours truly,

Grant Co., Oregon. ROBERT LOCKWOOD.

DEAR UNCLE MARK:—Seeing that there are so many joining the Horticultural Club, I thought I would like to join too, and I would be very much pleased to have my name placed upon the list. Some of all the seeds we got from the RURAL came up except the Aquilegias. I planted them in three different kinds of soil and in the house and out-doors but none of them came up. The ornamental beets are growing nicely and I wish to ask if they are edible? (Yes.) There were two Pinus edulis trees that came up one met with a mishap and died the other is growing well. I planted all the seeds in May, out-doors and some of them did not come up until July. There was only one of the sweet-scented shrubs came up, and after they had been planted so long I thought I would see if I could find any of the seeds and while I was stirring the soil I broke one off that was coming up. I have several kinds of flowers and among them I have a silver-tipped Geranium, the center of the leaf is green and the edge is white. The plant sent out two sprouts one of which is clear green, and the other is clear white. It is two feet high. This is the first time I ever wrote to the RURAL. I live in the Province of Ontario and also in the county of Ontario about seven miles north of Lake Ontario. L. H.

Othawa, Ont.

DEAR UNCLE MARK:—I would like to join the Horticultural Club. I do not have a garden of my own, but I have several flower beds. The largest is seven or eight feet across. It is made by placing stones about a foot and a half through in a circle, and then making a smaller circle inside the larger one and then filling it up with dirt. On the upper one I have in the center a Bronze Ricinus, and Thunbergia vines around the edge to run over the stones. On the lower there are Portulaca, Petunia, Phlox, Convolvulus, Sweet Alyssum, etc. Mother has a good many flowers besides, and I help take care of them. We have a few plants of every variety of seed the RURAL sent us, except Vitus heterophylla and Yucca. Mother has planted some more of the Yucca seed. Do the seed of the Vitis require any special treatment? Can you tell me the name of the plant, a piece of which I send. It is an annual. Perhaps if you accept my letter I will write again.

Cuyahoga Co., Ohio. EDITH A. HUNT.

[The plant is perhaps Fumaria officinalis, the flower was too much crushed when received to determine it with certainty. The Vitis seed does not require any *special* treatment.—U. M.]

DEAR UNCLE MARK:—As it has been some time since I wrote you, I will try again. I have a garden, which was manured last spring. It is close to the Blount corn. I dug it up and raked it; it was just after the first good rain, which was in the last part of July, and it worked up very well. I planted potatoes, sweet corn, bush beans, turnips, and I am also raising some cabbage for father. My garden is 36 by 53 feet. I planted my potatoes on the 23d of July, sweet corn on the 24th of July, beans on the 25th of July and my turnips on the 13th of August. My pop-corn looks fine; I have never seen so many ears on a stalk. I have one flower bed, in which I planted Geraniums, Cockscombs, Bachelor's Buttons, Pinks, Snapdragons and Zinnias. I have got 25 Geraniums and six foliage plants. Mother's flowers did not come up very well, but what have come up are doing finely. We are having a nice August rain; the ground is plenty wet here. I like Wm. J. Mason's letter. I have not seen many letters from Illinois, so please print this. ROBERT L. HARNEY.

Morgan Co., Ills.

DEAR UNCLE MARK:—I grew up with the RURAL NEW-YORKER in the house and now that I have a home of my own it finds its way to our house, weekly, and is a most welcome visitor I assure you. As ever, I take a deep interest in the cousins letters, and am highly pleased with your endeavors to create a taste in the youthful ruralists for flowers and rural surroundings. I am very fond of flowers, and have some fine ones. I have an Oleander, now four years old, which is at the present time loaded with buds and blossoms. I have practiced the same treatment which you recommended to a cousin a few weeks since, and consider it the true course to pursue if one wishes to have a beautiful shrub. If acceptable, I should like to join the Horticultural Club, and will from time to time, pen short notes of my success or failure in the horticultural line. EMILY.

Corning, N. Y.

DEAR UNCLE MARK:—For a long time I have had a desire to join the Horticultural Club, but was afraid that I was too old. I am 23 years of age, am a young farmer's wife. I have a nice flower-garden with over thirty varieties of flowers. The Bronze Ricinus sent us is a perfect beauty; it is of a rich, bronze color; is now four feet high and covers as many square feet of ground. Hollyhocks, Vitus and Hibiscus, are all the flower seeds that came up. If you have room in one corner, I would like very much to become a member of the club. I am sorry you do not approve of exchanging seeds. I should like very much to exchange seeds with some of the RURAL cousins. If you accept me as a member, I will endeavor to report my success as a florist. Yours truly, AZILCA.

Linesville Station, Pa.

[Azilca is heartily welcome, and so is Emily, above.—U. M.]

DEAR UNCLE MARK:—I have often thought that I would like to be one of the cousins, and write to the RURAL. My father has taken it since 1859 every year until two years ago he thought he would try something else; but this year he subscribed for the RURAL again, and we were all glad to see it. I read the "Reading for the Young" first, and always find it interesting. My sister and I have a flower-garden; it is twenty feet wide and forty feet long. We have quite a good many kinds of flowers and are quite proud of our garden. The solution of the prize puzzle in the RURAL of August 23d is "Man-slaughter," and I hope I am entitled to a prize. Well, I guess I will close for this time. LIBBIE C. DEY,

Seneca Co., N. Y.

DEAR UNCLE MARK:—As so many of the boys and girls have joined the Horticultural Club, I thought that I would like to join, so please put my name on your long list. I do not have any house plants this summer, but I have some running vines out in boxes and hanging-baskets. I have a good deal of Ivy, which I think is very nice. I think the RURAL is a splendid paper, and I love to read the letters from the cousins. I should like to write more, but I am afraid I will take up too much room, as my letter is quite long now.

Niagara Co., N. Y. MARY H. TRYON.

DEAR UNCLE MARK:—I wish to thank you for the seeds you sent me, the Hollyhock, Bronze Ricinus, Celosia and Eryngium Leavenworthii grew. The Celosia looks nice all covered with blossoms. The Eryngium is full of buds. The potato you sent us had twelve eyes, all of which grew. There was two-thirds of a bushel from the twelve eyes, and they were earlier than the Snowflake and Early Rose that grew right beside them. I remain your friend, NETTIE.

Sturgis, Mich.

DEAR UNCLE MARK:—My garden is doing nicely. The Beauty of Hebron potato was first-rate, and the Rural tomatoes were the first to ripen and are very good. I received the Dolly Dutton corn, for which I thank you very much. Must we cover the plants grown from the seed you distributed, or will they live through the winter without? [The plants need not be covered.—U. M.]

Barnstable Co., Mass. GEORGIE W. BOURNE.

DEAR UNCLE MARK:—I am now 14 years old. We have some flowers, six or seven kinds of Roses, three kinds of Hollyhock, some Gladioli, Pansies and yellow and blue Irises. We have some chickens. I will not tire you with too long a letter this time. FLORENCE N. CHANDLER.

Cameron Co., Pa.

PERSONAL ITEMS.

George Leclereq of Copper City, Pa., stuck a giant powder cartridge into his mouth, lit the fuse, and the explosion literally blew his head off.

Deacon Peter Young, of the Norwich (Conn.) African Baptist Church, has gone triumphantly through a trial on a charge of stealing cabbages, the jury acquitting him.

The stranger who talked eloquently in a Stamford (Conn.) prayer-meeting turned out to be a burglar, who had come to town on business, and incidentally sought amusement.

The Rev. D. T. Benjamin of McArthur, O., undertook to be a peacemaker between a husband and wife, and was killed by a blow of the club which the man had been using upon the woman.

Jonathan Haskall, the "Reformed Clown," is a Western Temperance lecturer. At Monroeville, Ind., he ejected a popular rumseller from a meeting, and was subsequently driven out of town by a mob that pelted him with eggs, mud, and tar.

A rare and enormous orang-outang, a widower, is the most interesting recent arrival at Paris. His wife died soon after they were caught in Borneo, and all his affection is now concentrated on their son. The father is described as the personification of melancholy.

Of the four sons of the ex-Khedive of Egypt, the eldest is Tewfik, who has replaced his father. The second is Hassan, who was educated at Oxford and afterward served in a Prussian cavalry regiment. The third is Hussein, educated at Berlin, and, unlike his brother Hassan, grave and austere. The fourth son is Ibrahim, who studied at Woolwich, and has lately returned from England.

Minnie Lewis's beauty was unrivalled in the neighborhood of Hot Springs, Ark., and Harry Farley is said to have married her for the express purpose of putting her on the stage. He believed that she would be attractive enough as an actress to bring him wealth; but she failed when he took her on a theatrical tour, and he soon left her. Then she committed suicide.

Col. Edwin Lawrence Drake, who sank the first oil well, is living in a modest home in Pennsylvania. He is disabled by muscular neuralgia, and, as he sits in an invalid's chair at his doorway, he can see the long tank trains carrying away the product of his discovery. His illness at an unlucky time prevented him from making a fortune; but he has a pension of $1,500 a year from the State.

Secretary Mullens of the London Missionary Society was the official who organized the movement to Christianize Central Africa. Of the six missionaries who made the first start for Lake Tanganyika, two abandoned the journey and two died by the way. Mr. Mullens decided to go along with the next party, so as to learn for himself the difficulties and dangers of the enterprise. News of his death has just been received.

A robber found Winnie Roberts, aged 16, alone in a farm house at Wakesburg, Mo. He commanded her to give him all the money in the building but she refused. After searching a little, and finding only ten dollars, he threw her on a bed, drew a pistol, and swore that he would kill her if she did not give the information. She thrust her hand under the pillow, leading him to suppose that she was getting some money, but what she drew out was a revolver, with which she shot him twice.

Hop Bitters is a preventive and cure for Ague; it is your own fault if you have it.

Implements and Machinery.

"THE JOHN D. BILLINGS Patent Steel and Iron Horse-Shoe."
Made *complete,* with Level Spring Platform—Continuous Calk. The best for Horse Railroads, Farm, and Carriage Horses in the world. Cures Tender and Contracted Feet, Corns, Interfering, Quarter-crack Lameness, and all evils resulting from the use of the common shoe. Trial Set, with Nails, **$1.** To Measure, place foot on paper, and draw pencil around. Shoes put on cold. No heating of foot. Send for free Illustrated Pamphlet. THE JOHN D. BILLINGS PATENT HORSE-SHOE COMPANY, 161 and 163 Bank Street, New York.

Attention, Owners of Horses!

THE ZINC COLLAR PAD is the only permanent and reliable pad for sore-necked horses or mules, that has ever been produced, and has been greatly improved since Jan. 1st, by being specially fitted to first-class tight and loose-eyed collars. The new pad of proper sizes will fit either. Being of smooth metal, they do not wear the mane, and always dispense, when needed, their medicinal virtues. There are over a million and a half of them in use. Pads made of other material can only temporarily have any curative properties whatever, and soon become worthless by abrasion in cleaning them. The Zinc Pads are sold by leading Saddlery Houses throughout the country, and harness makers generally. Ask your Harness Maker for them. Manufactured by ZINC COLLAR PAD CO.,
BUCHANAN, MICH.

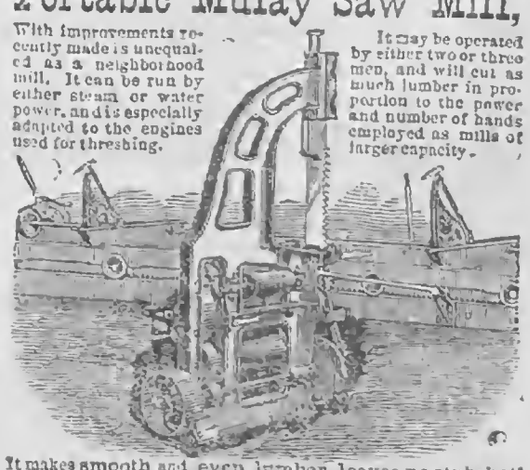
State where you saw this.

WELL-AUGER. Ours is guaranteed to be the cheapest and best in the world. Also nothing can beat our SAWING MACHINE. It saws off a 2-foot log in 2 minutes. Pictorial books free. W. GILES, Chicago, Ill.

Portable Mulay Saw Mill,

With improvements recently made is unequaled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.

It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.



It makes smooth and even lumber, leaves no stubshot and will cut any sized log up to four feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to CHANDLER & TAYLOR, Indianapolis, Ind.

Also manufacturers of the **Phoenix Threshing Engine** and the **Eureka Drain Tile Machine.**

Mit and Humor.

"How dare you swear before me?" asked a man of his son recently. "How did I know you wanted to swear first?" said the spoiled urchin.

SOMEBODY has been hunting for the "Footprints of Vanished Races." He might look in the sawdust of a mile track after the close of a go-as-you-please tramp match.—*N. O. Picayune.*

DO you meau to call me a liar?" asks a ferocious old gentleman. "Well, no, not exactly," temporizes his friend; "but if I saw you in the company of Ananias and Sapphira I should say you were in the bosom of your family."

A TEACHER defined couscienee as "something within you that tells you when you have done wrong." "I had it once," spoke up a young towhead of six summers, "but they had to send for the doctor."—Binghampton Republican.

LORD Cockburn was seated one day on the hillside of Bonally with a Scotch shepherd, and observing the sheep reposing in the coldest situation, he observed to him, "John, if I were a sheep I would lie on the other side of the hill." The shepherd answered, "Ay, my lord, but if ye had been a sheep ye wad have had mair sense."

A SEVERE RETORT.—Dr. Byles's wit once met with a severe retort. Encountering a lady who, having declined an offer of marriage from the Doctor, had married a gentleman of the name of Quincy, he said: "So, madam, it appears you prefer quincy to biles." "Yes," she replied, "for if there had been anythiug worse than biles God would have afflicted Job with it."

The Influence of Climate.

The influence of climate upon a constitution subjected to a trying change in atmospheric conditions, in water, and in food, is often marked and disastrous. Disorders of the bowels and of the liver, frequently terminating fatally, are prone to attack the tourist by land or voyager by sea in unaccustomed latitudes—more particularly those near the equator. The best medicinal protection against irregularities of the bowels, stomach and liver, not only from the above, but whatever cause arising, is Hostetter's Stomach Bitters, a medicine in wide and increasing demand in sultry portions of this hemisphere, and also in the tropics. Travelers, emigrants, dwellers and temporary sojourners in malarious districts use it very extensively as a safeguard.

AND NOTHING MORE SIMPLE.

BONES OF ANIMALS DISSOLVED IN ACID.

BAUGH'S AMMONIATED DISSOLVED ANIMAL BONES.

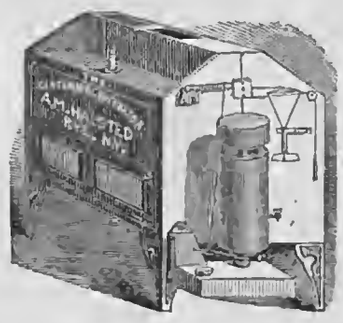
This article has been used for years by many of our leading farmers with excellent results, and is now one of the most popular brands we make. Price low.

☞ In view of the risk and cost of transporting acid in carboys, this article of Dissolved Bones presents great advantages to those farmers who have been making their own phosphates on the farm.

Circulars furnished on application. All *Fertilizing Supplies* at the lowest market prices.

BAUGH & SONS, Philadelphia, Pa.

THE CENTENNIAL INCUBATOR.



Another season's endorsement by such leading fanciers as W. T. Todd, Vermillion, Ohio, Jas. M. Lambing, Parker's Landing, Pa., G. O. Brown, Brookpandville, Md., E. R. Spaulding, Jeffray, N. H., Newton Osborne, Newington, Conn., and dozens of others.

The *only machine* for the farmer, fancier or amateur. It is simple, easily understood and managed. There is nothing complicated and likely to get out order It is perfectly safe, being entirely of galvanized iron and copper. It is elegantly finished, and a handsome article of furniture. It is neat and compact, occupying but little space. It makes no more smoke than an ordinary table lamp. You never have to get up in the night to look at it. *And it will hatch from 80 to 90 per cent. of the eggs*, and in a number of instances the past season *has hatched every egg or 100 per cent.*

EVERY MACHINE GUARANTEED. Send 3c. stamp for Illustrated Circular to

A. M. HALSTED, P. O. Box 23, Rye, N. Y.

American Fruit-Preserving Powder

AND LIQUID is the Cheapest, Most Reliable and Best-Known Method of preserving all kinds of **Fruits, Tomatoes, etc. Strawberries, Raspberries,** and all high-colored Fruits retain their rich color as well as flavor. One ounce of it (costing 3 cents) is equal to 8 lbs. of sugar in preserving property.

Established over ten years, and endorsed by thousands upon thousands of families. One trial will establish the fact that the **American Fruit-Preserving Powder and Liquid** will effectually prevent fermentation and preserve all kinds of **Fruits, Tomatoes, etc.,** and keep them the year round, or for years, in jars of any kind or size, or in wooden kegs and barrels, *without sealing air-tight.* Simply corked or tied down with a strong paper is all that is needed.

The fruit will keep *without sugar*, or any quantity of sugar may be added as desired.

Warranted to be as healthful as table salt.

The Fruit, etc., may be cooked little or much, as desired. They will keep without any cooking, or they may be cooked down into sauce. The method is simple and easy. None can fail if the Powder and Liquid is added into the Fruit, etc., in quantity as directed.

One package will preserve 256 pounds of Fruit, Tomatoes, etc., or 2 bbls Cider. Price **ONE DOLLAR** per package.

Give it a trial. If you cannot get it from your Druggist or Grocer, I will send it prepaid to any express office in the United States east of the Mississippi River, upon receipt of the price; or west of the Mississippi River and east of the Rocky Mountains for $1.25 per package. **Local and General Agents Wanted.**

Address L. P. WORRALL, No. 24 Liberty St., New York.

Farm Grist Mills

And Corn-Shellers.

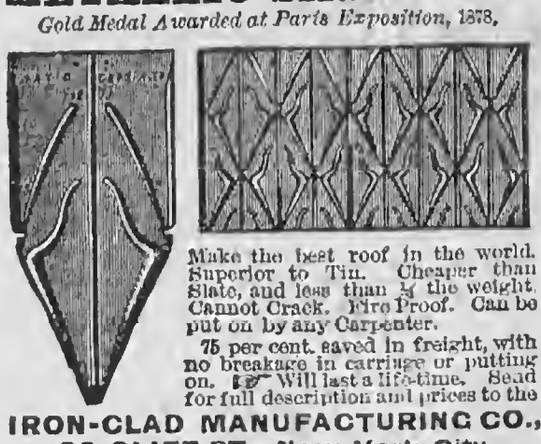
Over 25,000 Now in Use.

Every machine is guaranteed to give satisfaction or no pay. Price of Mill, $12. Shellers, $5. Every Farmer should have them. Send for Illustrated Circulars and terms to agents. Address,

LIVINGSTON & CO., Pittsburgh, Pa.

METALLIC SHINGLES.

Gold Medal Awarded at Paris Exposition, 1878.



Make the best roof in the world. Superior to Tin. Cheaper than Slate, and less than ¼ the weight. Cannot Crack. Fire Proof. Can be put on by any Carpenter.

75 per cent. saved in freight, with no breakage in carriage or putting on. ☞ Will last a life-time. Send for full description and prices to the

THE RURAL NEW-YORKER

A JOURNAL FOR THE SUBURBAN AND COUNTRY HOME

VOL. XXXVIII. No. 39.
WHOLE No. 1548.

NEW YORK, SEPT. 27, 1879.

PRICE FIVE CENTS.
$2.00 PER YEAR.

[Entered according to Act of Congress, in the year 1879, by the Rural Publishing Company, in the office of the Librarian of Congress at Washington. — Entered at the Post-Office at New York City, N. Y., as second-class matter.]

The Garden.

PIT FOR WINTER PROTECTION OF GARDENERS' STOCK.

I HERE present to readers of the RURAL NEW-YORKER the plan of a cellar I am building, and which, I think, will answer admirably the purposes for which it is intended.

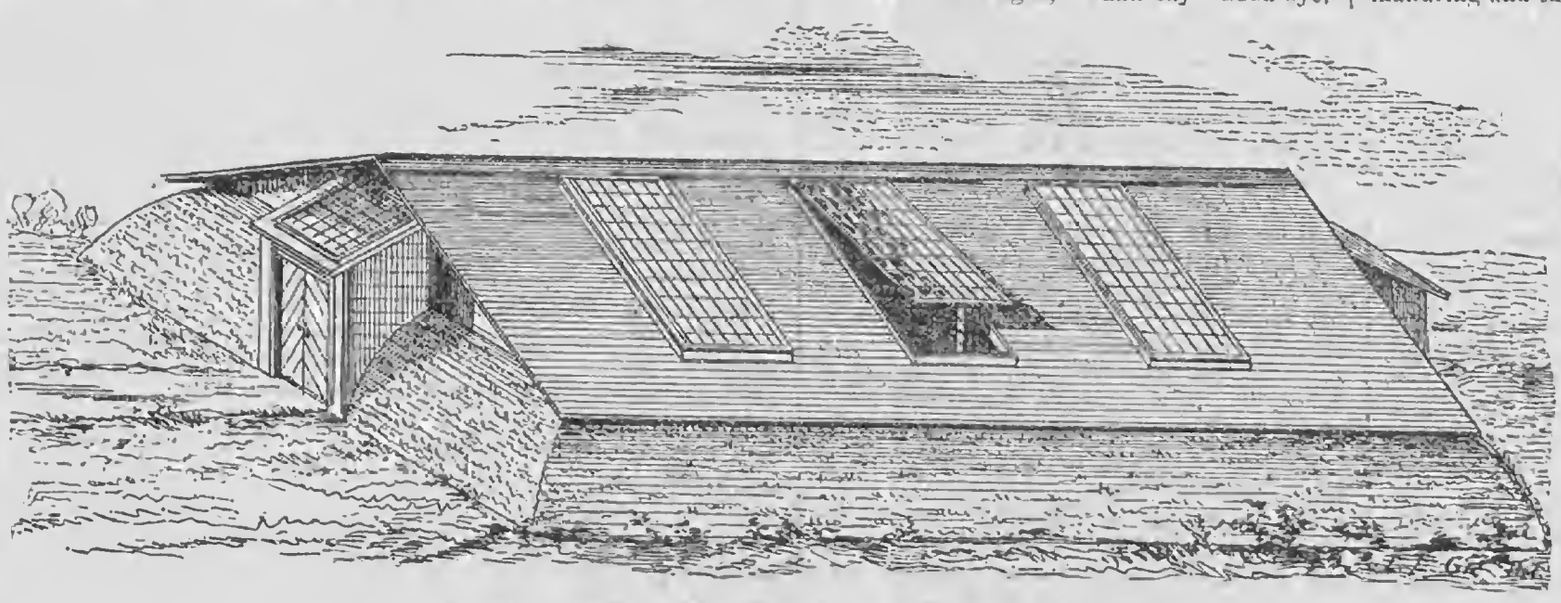
The floor is mainly for celery. At one end there are bins for potatoes, carrots, beets, etc. Along the sides and down the middle are benches like those in a greenhouse, only higher. There is a walk around the middle bench; this bench is intended for Roses which are to be kept there until it is time to put them in the greenhouse to force them for spring sale. The side benches are for apples, onions, etc. The cellar is 16x36 feet. Two feet of the earth were dug out for banking up on the outside. The walls are 3½ feet above the level of the ground and two feet below it, making the side walls 5½ feet high. These are boarded with inch planks, on cedar posts set four feet apart. The boards are nailed from the outside. The earth taken from the cellar is banked against them to a thickness of two feet at the top and five at the bottom, all around, except at the doors and windows. Both ends of the cellar, above the level of the embankment, are double-boarded on the gable-ends, with a space of eight inches between the boardings, to be filled with sawdust. Below this is the banking of earth from the pit.

The roof is shingled and double-boarded, having between the two boardings a space of four inches, which is to be filled with sawdust. It laps over the side walls a foot and a half, and from that point the ground is banked up so hard that it cannot settle, and after a good rain it is sodded all round, which gives it a nice green appearance in grass time and keeps it still warmer in winter. To have plenty light and air, I have on each side of the roof three sashes, 3x6 feet, like hot-bed sashes, hinged at the top, just as on a greenhouse, and at the lower end of each sash is an iron bar having holes punched in it, so as to raise the sash to a greater or less hight, for the purpose of ventilation, whenever desirable. Each sash fits closely into the roof, and is battened to prevent the entrance of rain. Underneath the sashes are shutters, which can be opened or shut, and between them and the sashes are spaces of four inches, which can be filled, whenever necessary, with straw or a straw mat. I don't think, however, that frost will penetrate through sash and shutter from the roof, though might from the sides.

In the most convenient end are double doors. The inside one is made like the door of a stable, having a window sash which can be opened or closed at pleasure. Outside this is a box as high as the door and four feet wide, so that the outside door will be four feet from the inside one. The outer door is made double, with a four-inch space for sawdust. The top of the box, between the doors, is double-boarded, like the outside door, and filled with sawdust. The sides of the box are protected by an earth embankment. On the other end of the cellar there is a window, guarded with a box like that protecting the door, only not so large, and having a shutter at the other end. A convenience of this sort will pay for itself every winter and should be used, in sizes to suit their needs, by all largely interested in flower or vegetable culture.

D. MYLIUS, JR.

Wayne Co., Mich.



PROTECTING PIT FOR GARDENER'S STOCK.

STRAWBERRY NOTES.

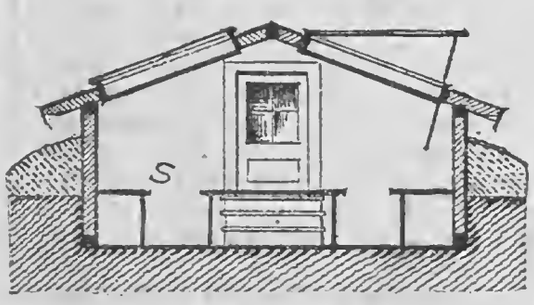
I read with interest the strawberry notes of Mr. Nash in the RURAL of August 30. He speaks of the *Old* Kentucky as a pistillate sort—are we to infer there is a new Kentucky? or what has he under that name? The true Kentucky, as we know it, is, so to speak, a twin brother of the Charles Downing, raised by the late J. S. Downer of Kentucky from seed of Downer's Prolific. It is perfect in its flower, a vigorous, strong grower, with tall foliage and fruit stalks, and, if my memory serves me, of a brighter scarlet color than the Charles Downing, being in this respect between that and Downer's Prolific, and about a week later than the former.

It was introduced about ten years ago—long enough to be called an old sort. We grew it a number of years, but discarded it on account of the low standard of the fruit in quality. In this respect it was much below Charles Downing on our soil, and although of good size, handsome, and late, our customers preferred the Charles Downing even to their close. I hardly think it possesses any shipping qualities superior to the Downing. I believe we had it *true*, and my memory is that it was perfect-flowering—hence the query: "What variety has Mr. Nash under that name, that is a pistillate?"

That one word tells us we each have in mind a different berry. There is far too much confusion in strawberry nomenclature, largely resulting from the carelessness of cultivators. A case in point:—A veteran and thoroughly posted amateur and an intimate friend of Mr. Downing, asked me a few weeks ago if I could furnish him a single plant of a certain variety, that I could warrant *true* to name. He procured quite a collection last season of Mr. A. Among them were six plants purporting to be the kind in question. He had taken good care of them in anticipation of the fruit this season, when, sad to tell, five of them proved to be untrue, and he was in doubt about the sixth one; in fact, the whole collection was so badly mixed, he had dug them all under and had resolved on a new departure; hereafter he would *try and get a single plant of a kind that was positively true*, to start with, and thus save himself all this vexation and loss of time and labor, and know what he was doing.

Sympathizing with him in his misfortunes from similar experience, I asked if he had called Mr. A.'s attention to the fact. "Yes, and his reply was that he got them of Hon. Friend B., and he knew the fault was not his." "Just so, but on learning the source whence they came, I am not surprised; but it speaks well (?) for the 50 years' experience, the numberless varieties, extensive acres, and the great profits that his friend B. boasts so persistently about. He is always ready to herald the great virtues of new things, as the most extraordinary of their kinds extant, and I wonder your friend A. allowed himself to be caught with such bait. There are large establishments where the details of the business are attended to with some commendable degree of accuracy and painstaking, but they don't make a great parade of their great profits and superior virtues before the public."

"That has been my experience," he replied, "hence my new departure. A single genuine plant of a kind, to start with, is worth



SECTIOAL VIEW.

more to me than any quantity of doubtful purity. To those who cultivate largely for the fruit alone, the slip-shod, careless style so prevalent, may answer, but for my purposes—experimental crossing, etc.—it would not do at all." Agreed unanimously! But coming back to Mr. Nash's Kentucky:—Has he been victimized? If so, what is it?

I am glad to know the Duncan has found a congenial spot with him. In perfection it is really too good to be cast aside. Probably no variety has shown the great variations caused by soils and locations in a more marked degree. A New York commission merchant takes pleasure in citing two farmers in Monmouth Co., N. J., one of whom grows the Wilson and the other the Duncan to perfection; yet neither can grow both, and a fence only divides their farms, and then he asks, "How do you account for that?" I give it up. Of the Sharpless I think it can be truly said that no variety ever sent out has given so great satisfaction, so far as growth is concerned, in so short a time. I have seen it in the very light soils of Monmouth Co. and the heavier soils of Essex, and everywhere the owners are astonished at its vigor and healthy foliage and rampant growth. One man says: "I never saw anything like it; if it will only produce a good crop of fruit that will stand shipping, and maintain its health and vigor, I shall say 'Good-bye, Wilson.'" Meanwhile we patiently await the verdict.

E. WILLIAMS.

Montclair, N. J.

GROWING STRAWBERRIES IN WINTER.—Strong plants from runners that appeared early in the summer, and which are now in six or seven-inch pots, can readily be made to fruit in any greenhouse or warm plant-room where they can get plenty of sun. Keep the plants in an open shed where they will be exposed to the frost and can still be kept dry, until the latter part of December; then they should be thawed out, the upper two inches of soil scraped off and replaced with well rotted manure, and henceforward treated as growing plants.

Field Crops.

WHEAT.

HENRY STEWART.

WHEAT is again the staff of life. Heretofore it had come to be considered as an unprofitable product, and thousands of farmers refused to grow their own bread. It was easier to earn the money to purchase a barrel of flour in other ways than to grow the wheat. But a "change has come o'er the spirit of our dream." Money is not so easily earned as formerly; prices of produce are low, and the wherewithal to buy flour is not so easily procured. Wheat is our staple agricultural product. The present season we have every reason to look for an unprecedented demand for our crop, and nothing will be more salable than wheat. Farmers, too, are learning that they can grow wheat more cheaply than they can buy it. The cost has been an imaginary bugbear—a creation of the fancy only. The labor involved has been figured up as so much money spent, when, in fact, the seed only has represented any money. So, in reality, the crop grown has cost absolutely nothing but labor and the value of the seed. This discovery having forced itself upon the minds of men, they are growing wheat for their own consumption, if not for sale. The product of this grain is increasing, even in Massachusetts, and all through New England and the Middle States unwonted sights of wheat fields gladden the eye. We look upon this as a favorable symptom of returning agricultural health and prosperity.

Now we would suggest that it is advisable to study how a maximum product can be reached. No one doubts or denies that it costs but little more to plow and cultivate the soil and harvest 50 bushels per acre than to grow 15 bushels; while the income is more than three-fold. The possible yield of wheat is 60 or 70 bushels per acre; eight quarters, or 64 bushels per acre, is a frequent yield with the best English farmers, but they hoe their wheat and hand-weed it, and use fertilizers liberally. I think it would pay any farmer to prepare one acre, at least, by two plowings, several harrowings, good manuring and the use of 500 pounds of superphosphate, and then sow half a bushel of seed in drills 16 or 18 inches apart, and cultivate the ground thoroughly and carefully as for a pet crop of corn. It would probably yield 60 bushels or over. Then let the cost be figured up; not the farmer's own labor, or rent of land, or taxes — because these either cost nothing or would be paid without this acre of wheat—but only the actual expenditure of money, counting the balance as pay for labor. I think the farmer will find his labor well bestowed, and if he can make 13 barrels of flour from that acre, he will have done a good thing for himself but a vastly better thing for his country in showing others, who still fold their hands and moan "it costs too much," that they are very much mistaken.

Drilling vs. Broadcast Sowing.

The advantage of drilling seed over sowing broadcast ought to be obvious theoretically, as it is certain practically. Yet there is just at present a new-fangled idea becoming popular, that in drilling, the seed is crowded in the small furrows and much of it is smothered and lost. No more absurd idea could be thought of. When a bushel of wheat is dropped in drills six inches apart, 600,000 grains, which go to make a bushel of moder-

ately plump wheat, are spread over 87,120 linear feet, thus depositing the grains about an inch and three-quarters apart. Nevertheless, we are asked to believe by those who are interested in disposing of a novel kind of drill (which is claimed to make a broad furrow, and so spread the grain more than a common drill) that the seed is crowded, one grain upon another, when the furrow is an inch and a half or two inches broad. A little figuring sets this matter right, and no one who uses a drill need fear to lose seed from the grains crowding each other when even a bushel and a half of seed are sown.

The Quantity and Selection of Seed.

From the above it may be gathered that a bushel per acre is pretty thick seeding, and that if we could drill a peck per acre so that the seed could be dropped evenly six inches apart each way, the ground would be entirely covered. The fact is, our seeding is too thick, if the seed is good and no plants are winter-killed. It is questionable if a large number of plants are not killed out during the winter by reason of thick sowing. It is common enough to find wheat tiller and spread so much that 30 or even 50 seed stalks grow from one root. This cannot happen without room. If such roots grew one foot apart each way and each root bore 20 stalks having each 50 grains, the crop would be 70 bushels per acre. If each ear had 100 grains, the crop would be 140 bushels per acre. I have just counted the grains in an average ear of wheat (Clawson) and find 35, and in the best ear I could pick out, I find 72 grains. I have grown Treadwell wheat with ears having 110 grains, and have counted 35 ears on one stool where three pecks of seed were sown and that was badly thinned out by a neighbor's pigeons. An English seed-grower by the constant selecting of seed from the longest ears and plumpest grains from those ears, has produced what he calls "pedigree seed," which is vastly more prolific than the ordinary grain. We see that it is in the length of the ear that we can gain in our yield, as well as in the multiplication of stalks from each root, and here a large field opens for individual effort of each wheat-grower in the improvement of varieties.

Professional Seed-Growing.

In every locality there is an opening for a business in seed-growing. Farmers at a distance from the larger cities and from seed dealers, find it difficult to procure good seed and would gladly pay double price, or more, for an extra selected quality. There is every inducement for an enterprising farmer to make money in this way. Let him prepare a piece of ground now in the very best manner, manure it well and apply superphosphate liberally; sow thinly, in drills; hoe and cultivate, if he will; pick out by hand before harvesting every cockle, garlic and other weed, which usually infest wheat; harvest carefully, selecting the longest, fullest ears; thrash by hand; winnow and sift again and again; and not content with that, follow the ancient maxim and "pick out by hand" the plumpest seed. Part of this he may sell to his neighbors who will soon find out what he is about, and the best he may sow for himself. Let him repeat this year by year until he makes a well-deserved reputation, and his fortune is made; he will certainly find more than he can do to supply a very narrow locality, and need fear competition but very little, for there is not one man in a hundred or a thousand, who possesses the pertinacity, perseverance, industry and carefulness, that are needed to succeed in such a work.

EARLY PLOWING FOR WHEAT.

It is extremely dry in this locality and this fact has brought to my mind the importance of plowing early for wheat. Our best farmers throughout this section of the country, begin to plow the oat and barley stubble as soon as the grain is cut, and find that the yield is from 20 to 50 per cent. better than when the ground is plowed merely in time for sowing. At present it is impossible to put the ground in good condition because of the drought; while that which was prepared from four to six weeks ago, had the advantage of the rains at that time and is now in fair condition.

The difference in the yield when the soil is plowed early and when it is plowed late, is probably due to this fact:—the free plant-food when the oats and barley are cut, has been nearly, if not entirely, exhausted, and the soil needs to be aerated and pulverized and moistened in order that it may set free a new supply for the coming crop of wheat. When the soil is plowed late, it is evident that it has had no opportunity to set free the proper amount of plant-food, and the yield of wheat is necessarily less than in the former case.

This half summer-fallowing, so to speak, I have found to be very advantageous. Our University wheat experiments—about thirty in number—are not yet thrashed, but after four years' careful experimenting, I am convinced that superphosphates are useless upon *pine* and *hemlock* lands, although they work like magic on maple and beech lands. I can assign, as yet, no reason for this, but the majority of the farmers in this locality have come to the same conclusion. I should be glad to hear the experience of others upon different kinds of soil, with phosphates.

The farmers here are, many of them, sowing Fultz instead of Clawson wheat, because the millers complain that the Clawson does not make good flour; but there is, nevertheless, a general opinion that the Clawson yields the most half-bushels. PROF. I. P. ROBERTS.

Ithaca, N. Y.

Entomological.

WHEAT INSECTS.

PROFESSOR CYRUS THOMAS.

WHEAT, having traveled over a large part of the world since it left its native habitat, has gathered on its march a host of insect enemies until now there is not a stage of its growth, from germination to maturity, in which it is not subject to the attack of one or more of these foes. Nor do they leave it when it is harvested, but follow it to the stack and barn; and thence to the granary, storehouse and mill. In the short space allowed here I can but briefly notice a few of the more destructive species.

WIRE-WORMS.—(ELATERS). It is probable that there are several species of these insects that injure the wheat in our country; but so far only one has been traced to the perfect state. This is a little black beetle about three-eights of an inch long, and is scientifically known as the Agriotes mancus—Say—As I have elsewhere stated, I have but little faith in such applications as salt, lime, soot etc. The starving process is the only sure remedy; plow up the ground and leave it fallow for a season; stir it repeatedly and keep it free from vegetation.

THE JOINT-WORM.—(Isosoma hordei, Harr.) This is a minute yellowish-white, footless, maggot, which forms and resides in little swellings at the base of the stalk near the first or second joint, on the sheath of the blade or in the joint. In its perfect state it is a minute, black, four-winged fly or hymenopterous insect. Its presence is indicated by the growth of the plant being checked when some eight or ten inches high, the lower leaves turning yellow, and the stalks becoming bent. As it remains in the stubble or straw during winter, the remedy is to burn the straw and stubble immediately after harvest.

THE CHINCH BUG.—(Blissus leucopterus, Say.). The U. S. Entomological Commission is now gathering facts in reference to this insect and studying its history, preparatory to an article in their next report. I have recently been studying the relation between its development and the meteorological conditions, and have been somewhat surprised at the approach to regular periodicity in Illinois, although this evidently depends on the character of the season. In Illinois the years of chief development were as follows: 1840, 1845, 1850, 1854-7, 1862, 1868, 1871, 1874.

Clean culture, burning rubbish, etc, in which they can winter, are the best remedies yet tried, where irrigation is impracticable.

From letters received by the Commission, this species appears to be almost unknown south of the latitude of Tennessee.

THE HESSIAN FLY.—(Cecidomyia destructor, Say.). The U. S. Entomological Commission is also studying the history and habits of this species with a view of noticing it in their next report. Space is too limited here to attempt the history and habits of it or the chinch-bug.

As the pupæ (in the flax-seed state) are on the lower part of the stalk, and usually not perfected until after the wheat is cut, burning the straw immediately after the harvest, if proper co-operation could be obtained, would ultimately eradicate this pest. The remedy is within the farmers' reach, if they will make use of it. Where winter wheat is cultivated, late sowing may be resorted to with good results, if the fall is favorable.

THE ARMY-WORM. (Heliophila unipuncta, Haw.), Although this species is chiefly destructive to timothy meadows, it generally does more or less, and occasionally serious injury to the wheat crop. It is, in fact, a cut-worm in its normal condition, developing largely and assuming a migratory habit under certain conditions and from certain causes not yet thoroughly understood.

In my controversy a number of years ago, I took the position that this species was two-brooded in Southern Illinois, and that it passed the winter in the pupa state or chrysalis. Notwithstanding all that has been said to the contrary, recent investigations made by myself and Prof. French, have proven beyond reasonable doubt that both my positions were correct. That it ever passed the winter in the egg state I think cannot be shown; hibernating in the perfect state is the exception. Of a large number of moths taken the past spring not one had wintered over. It may, therefore, be truly said that the history of this species remains yet unwritten. That the worm is not essentially migratory, I am confident from the fact that I have noticed in the same inclosure a portion remaining during the entire larval stage sedentary, acting as true cut-worms, while others of slightly different age were migrating. The sedentary ones were traced to the perfect state in order to be certain of their specific identity.

Ditching against them is, so far, the best practical means known of preventing them from entering into and destroying wheat or other crops. Fortunately a kind Providence has provided an ample check in the shape of a host of parasitic insects, so that we never see them largely developed for two consecutive years.

THE WHEAT APHIS.—(Siphonophora avenæ Fab.). This plant-louse appears occasionally on the wheat in great numbers, exciting the fears of the farmers who often suppose them to be the Hessian fly or wheat-midge. As a general rule they do but little injury, and soon disappear, especially if one or two copious rains fall. If the season should be dry, their drain upon the sap may result in serious injury, and especially in preventing the grain from filling out. No practical remedy for them has been discovered. It is easy to kill them on a small scale, but the attempt to do this over the field would cost more than the crops saved would be worth.

THE WHEAT-MIDGE.—(Cecidomyia (Deplosis) tritica. Kirb.). "Minute orange-red maggots, one-eighth of an inch long, crowding around the kernels of wheat, causing them to be shriveled and dry when ripe. The maggots descend into the ground and spin minute cocoons from which, in the following June, come bright orange-colored midges." [Fitch.)

The eggs of this insect are deposited in the chaffy scales of the flowers; where they hatch in eight or ten days, producing the little orange-colored maggots which, at first, are almost transparent; when fully grown they are about one-eighth of an inch long. They crowd around the growing grain, and by withdrawing the nourishment, cause it to become shriveled and aborted. Before assuming the pupa state, they usually go into the ground, where they at length spin a little silken cocoon, in which they remain until the following June, when they are transformed into bright yellow, minute two-winged flies.

In addition to the foregoing we can only allude to the following in the space allowed.

THE WHEAT-HEAD ARMY WORM.—(Heliophila Harveyi. Grote.). This species is closely allied to the common army-worm, but differs from it slightly in habits. It feeds upon the heads of wheat and other small grains and grasses in various parts of the northern United States. I have observed the common army-worm do the same thing.

THE WHEAT-THRIPS.—(Semothrips tritica. Fitch.) A minute insect found in the flower, and on the head of wheat, sucking the juices and thus dwarfing the grain.

THE GRAIN WEEVIL.—(Sitophilus granarius. Linn.). This is well known as injuring stored wheat, the little grub living and undergoing its transformations in the grain. The perfect insect is a little snout beetle about one-eighth of an inch long, with cylindrical body of reddish-brown color.

THE RICE-WEEVIL. — (Sitophilus oryzæ. Linn.) is similar to the preceding, the habits being nearly the same, the beetles differ only in this having two bright red spots on each wing cover. It usually infests rice, but often does serious injury to wheat, attacking it in the shock, stack and barn, and even before being harvested.

Stored wheat may be best protected by frequent winnowings and airings; if badly affected, drying by the Aldine process will prove effectual,

THE GRAIN-TINEA.—(Tinea granella. Linn.), is a minute caterpillar devouring the interior of stored wheat, tying the grains together and thus rendering them unsuitable to be manufactured into flour. This caterpillar is transformed into a minute moth the following season. It is an imported insect and very injurious, and generally well known.

THE ANGOUMOIS GRAIN-MOTH.—(Gelechia cerealella. Linn.) The usual habit of this species is to devour stored grain, it being one of the most troublesome species with which those who have stored grain have to contend in this country. I have also found that it, like the Rice Weevil, will sometimes attack the grain before the wheat is thrashed, and even while standing uncut.

For this and all species found in the granary, the best practical remedy is frequent winnowing, stirring and airing the grain. Kiln-drying will be effectual, but it is almost impracticable. If these insects should become very bad at a point where large quantities of wheat are stored and the winnowing should fail to eradicate them, it might be profitable to pass it through an Alden or some similar drier. In elevators ample provision for more thorough winnowing can be made if necessary, and this and frequent stirrings will generally prove effectual.

There are several other species that attack this valuable cereal, but these are all we can allude to at present.

Sheep Husbandry.

MUTTON AND WOOL—No 1.

PROFESSOR E. W. STEWART.

THE present discouragements in dairying will, no doubt, tempt many to change from that to wool-growing. I certainly do not advise any one to change from an established business, but to those who have determined to change from cows to sheep, or to those who are about to enter as fresh experimenters upon sheep husbandry, I wish to present a few points for their consideration. The conditions of sheep-keeping have very materially changed within the last twenty years, and more rapidly within the last ten. Formerly sheep were kept almost wholly for the fleece. The flesh of sheep was counted on more as horse flesh is now in France—to be utilized when nothing else could be done with the animals. When the sheep was too old to be profitable as a wool grower, its carcass was disposed of for any price offered. Perhaps more than half of all the carcasses were merely used for the tallow. Mutton has not been a popular food in the United States until within a few years, and even now it is not appreciated as it is in England. But the consumption of mutton is increasing rapidly, and sheep husbandry is destined to be prosecuted here as in England:—first, for the mutton and, second, for the wool. It is therefore important that the enterprise should be considered in all its aspects before entering upon it.

Not only has increased attention been given to mutton in this country, but a large market has opened for our best mutton in England, and this is likely to be extended to the Continent. Those who understand and will follow the best English system of mutton breeding and feeding, need have no fear of the want of a market. But the old system of sheep breeding and feeding—making the fleece the principal object—has no longer a profitable footing in this country, except on the Western plains and the Pacific slope. When land has more than a nominal value, the mere wool product can never pay. But sheep husbandry is destined to a great revival in the older States, and to be carried on with as much system, and every part of the business to be utilized as carefully as is done in England. If English farmers are able to produce mutton at a profit on land worth $200 to $300 per acre, surely the farmers of the Middle and Eastern States must be able to accomplish this on land worth only from one-fourth to one-third of these prices. It must be done with a breed of mutton sheep—good feeders, maturing early and bearing a profitable fleece. There are several breeds perhaps that might come under this description; but the writer believes the best result may as likely be reached with a judicious cross of mutton breeds upon the American Merino or its high grades. If the Cotswold, Leicester, or South Down be crossed upon the Merino or its good grade ewes, the result is a great improvement in both the fleece and carcass. The wool sells for a top price, and the lambs are sought by the butcher. The breeder should never use a grade ram, for then no one can tell the result, as the tendency is so strong to breed back toward one or the other of the original types, that there can be no uniformity in such a flock; whereas, by using a prepotent thoroughbred ram, his get will have a uniformity toward the fixed type desired.

Great care must be taken to select a male with an even and properly developed carcass, as well as a sound and vigorous constitution, and also an even fleece as regards fineness of fiber, as well as length and strength of staple. In other words, the breeder must have a standard toward which he seeks constantly to progress to perfect his flock. He will succeed, best if he fully understands that the sheep is plastic in his hands, that he may mold it almost at will, and soon create a breed of sheep to suit his ideal form and purpose. He is not confined to the types now existing, but he may modify them in the manner mentioned. As he is breeding for mutton first, and fleece second, he takes the male from the mutton type, and crossing upon the Merino or its grades—the most perfect wool-producing breed—he progresses toward the mutton type rapidly without materially losing in value of fleece, whilst he is greatly improving the Merino for mutton. The cross animal produced will have an increased vigor of constitution given by the Merino dam, and this cross continued, with proper judgment in selection, will become more adapted for the purpose intended—mutton and wool. The breeder having a purpose in view, keeps his eye constantly on the end desired, watches the

growth of his flock, and sees many points that would escape the casual observer, and he may thus select with a masterly judgement, the animals to be coupled. But all selection is vain without skill in feeding, which we shall consider in the next issue.

The Poultry Yard.

POULTRY NOTES.

Poultry Habits.

Of all farm stock, hens are the most easily taught. The education of hens can be commenced at any age; but best while young. They should be housed and shut in every night, and not be allowed to roost on sheds, well sweeps, or trees; even a neglect to shut the door on them for one night will cause the timid ones to seek a higher roost the next night, and that can only be found out-of-doors. This leads to laying out of doors—a great nuisance—and to constant loss from roving night enemies. At sunrise every morning call the hens around you, and scatter a full feed for them; let this always be done on the same spot of ground. Keep, in a convenient place, a reservoir of fresh clean water, if you have no running stream. At certain and regular times in the day, you will find the whole flock there. Throw no scraps of food around the dwelling, or you will teach them to become a house nuisance. Burn all the egg shells, or you will teach the hens to eat eggs in the nests. If you coop your chicks, take hen and brood to the hen-house as soon as the croop is dispensed with; otherwise, when winter sets in you will have to spend hours every night for a week before they will house well. Protect hens while sitting, by a light board or lattice cover to the nest, so they shall not be annoyed by other hens wishing to lay with them. In fact, any bad habit, or any one which does not suit your surroundings may be entirely broken up and changed by reasonable preventive measures.

Poultry Vermin.

There are many receipes for driving vermin away from poultry and houses. The inventors of these are shrewd; they know that people are naturally indolent in both body and mind; that they never guard against invasion, but wait till the enemy is upon them, and then buy up all the new-fangled nostrums, kill all the lice, and half-kill the hens and chickens, and at once begin to do some tall crowing. All poultry vermin delight in moist or damp places; in fact, they can't live anywhere else. That's the principle. Now what does it suggest? Why the suggestion is obvious; don't have any damp places, and that means a dry chicken house, a dry earth floor to it, a dry roof, no manure allowed to accumulate on the floor or under the perches, because that is always damp, and absorbs dampness from the air. Build two chicken houses; one in a low damp, ill-ventilated place; the other on a high, dry, sunny, airy spot, and let your flock choose; the most miserable old hen "that ever was," knows better what she wants than the most dignified, dandyish, intellectually civilized poultry fancier that the hen fever has ever produced.

Remember! a water-tight house, a ground or sandy floor, plenty of sunlight and fresh air, and your children will have to go to college to learn the entomology of the hen-house, instead of brushing vermin off of every egg they bring to the housekeeper. S. R. M.

The Herdsman.

STOCK NOTES.

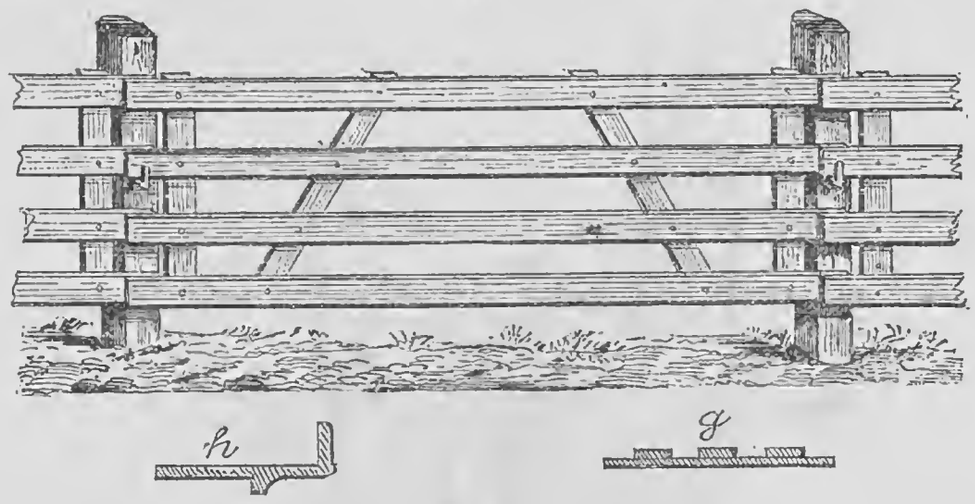
Fancy Points.—There is growing opposition nearly everywhere to the folly of making the production of "fancy" points the chief object in breeding Short-horns and Jerseys instead of aiming at large yields of beef or milk. It is recognized by all practical men that a white or roan Short-horn fattens as readily as a red, and that a Jersey off-color is every whit as good for the dairy as one of the most fashionable shade, provided that in each case the pedigree is equally good in regard to the beef or milk-producing qualities of the ancestors. While seeking to produce these fancy hues, the breeders are apt to neglect the points of intrinsic merit which originally gave these breeds their special value, and the deterioration or lack of improvement thus caused, is poorly compensated for by the high prices paid by a few wealthy men for particular colors to which fashion, not merit, has assigned a special value. The evils of this craze are as yet more marked across the Atlantic than here, inasmuch as the number of those who prize an animal more for its fashionable points than for its practical merits, is greater there than here. As the Old World, however, is accustomed to set the fashion for the New, there is danger of our imitating this folly as we have many others, and it is gratifying, therefore, to notice the efforts lately being made here to have the milking capacity of pure breeds of cattle recorded in the Herd Books. But even in this idea we cannot claim any originality, as the Dutch-Frisian Association requires a milk record of from 6,000 to 9,000 pounds of milk, according to age, to entitle cows to entry in the Holstein Herd Book.

Jottings.—In order to facilitate the acquisition of pure-blooded animals for breeding purposes by native agriculturists, the Moscow Society for the Encouragement of Cattle Breeding in Russia, have themselves undertaken the purchase of suitable stock from abroad, in their corporate capacity, on behalf of individual farmers unable to manage such operations personally. For this purpose buyers will be despatched by the Society in August and September in each year to likely markets in foreign countries. Instructions for purchases through the agency of the Society must be sent in to the treasurer before August 1 in each year, accompanied by exact directions as to the breed, age, and sex of the animals required, and by a remittance of 300 roubles in respect of each animal ordered. Unless the orders reach a certain number the Society will, for the present, be obliged to charge a commission for their services in effecting such purchases, but even then individual farmers will be able to acquire improved foreign stock at a far lower figure than they could do acting singly each for himself. * * * Canada's prohibition of the importation of "American" cattle within her borders, which was to have terminated on the first of this month, has been indefinitely extended, because the English government declared that should our neighbors remove the embargo from our cattle, the importation of animals from that country would be at once subjected to the same restrictions that hamper our trade with the Mother Country. * * * New York, New Jersey and Pennsylvania are acting in unison in their efforts to stamp out pleuro-pneumonia from among their cattle. All infected herds are still being isolated, while badly diseased animals are promptly killed and their owners compensated. A few cases have been reported from Delaware, Virginia and North Carolina, but no attention seems to be taken by these States to extirpate the plague. * * * Large importations of American cattle into England still continue, although they have to be slaughtered at the port of debarkation within 10 days after landing. Deptford is the only spot near London where permission has been granted by the Privy Council to disembark animals from this country, and the 2,600 beasts awaiting slaughter there at date of our last advices, might well have a depressing effect upon the prices of home-raised beef in the Metropolitan market. There the difference is great between the value of best and ordinary beasts, the latter bringing only at the rate of 12c. a pound, and the former fetching as much as 17c. for top price. * * * In the week ending Aug. 16, there were imported from this country into Liverpool 4,918 quarters of beef; 594 carcasses of mutton; 1,041 live cattle and 1,989 live sheep.

Farm Economy.

A CONVENIENT FENCE.

I send the Rural a sketch and description of a fence that I have found very convenient in certain places on the farm. It is in use on many farms in this locality, and, as far as I know, it is not patented. The fence consists of panels made of inch boards nailed together with clinch nails, and it is attached to the posts by iron hooks. It is most convenient when used along the highway or lane, as the panels are not fastened to the posts and can be easily lifted out at pleasure. Thus a load can be driven from any part of the field directly to the highway, escaping the necessity of driving a considerable distance over soft ground to get to a gate or pair of bars. It also has other advantages. When a post rots off, it can be easily replaced without injury to the fence. The panels, being securely braced, are stronger than the ordinary board fence, and as no nails are used in the ends of the boards, they are not liable to become split. The panels are made 12 feet in length, and consequently fewer posts are required than in the common post-and-board fence. The construction saves the necessity of climbing the fence, as one end of the panel can be lifted off the hook almost as easily as a gate can be opened. As the panels are entirely independent of the posts, they may be nailed together under shelter during the winter or in stormy weather, thus saving time. By using sharpened posts, a very good portable fence can be made, as they can be readily lifted out by means of a chain and lever. As the posts are entirely free from nails, they can be worked into firewood without damage to tools, after having been used.



A CONVENIENT FENCE.

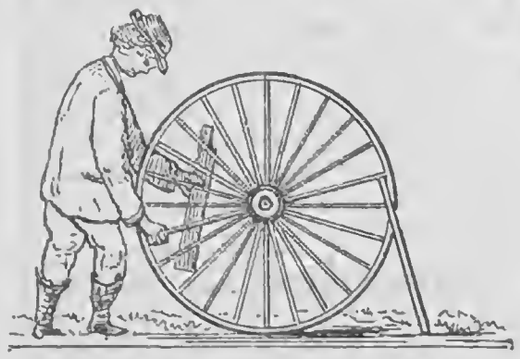
This fence may be made of boards six inches wide, either 12 or 16 feet long. Four 16-feet boards will make a panel, each board making one cross-piece. These cross-pieces are cut three feet nine inches in length, and the panel hung to the posts far enough from the ground to make the fence the required hight. The hooks are usually made of half-inch square wrought-iron bars. The bars are cut in pieces eight inches in length and bent at right angles two inches from the end. The holes should be bored through the posts, so that the hooks can be driven out and used again after the posts have rotted off. The bit used for boring the holes should be 1-16 larger than the square of the iron in the hooks. A hook made of cast-iron would be cheaper, and if made with a shoulder, as in the cut (h), would probably be as good. The posts are set or driven 11½ feet apart, as the panels lap six inches at the ends.

This fence can be nailed together very rapidly by using a gager, g, to regulate the distance of the boards. The cut shows how the gager is made. Lay four boards upon the ground the proper distance apart, and nail the end cross-pieces eight inches from the ends of the boards. It is well to have a measure marked on the hammer handle for this purpose. The middle cross-pieces are placed equi-distant and slanted as seen in the cut to form a brace: 8d. wrought nails are used. Lay the boards of the next panel on the first, but place them so that the cross-pieces will not come directly over each other, and so on, until a pile is formed as high as it is convenient to make, then tip them off one by one and clinch the nails.

This fence costs but little more than the common post-and-board fence, and it has many advantages, as has been stated.

Chemung Co., N. Y. G. Goff, Jr.

Another Wagon Jack.—Having for many years used the wagon jack recommended by Mr. Crane with the exception of the hoisting apparatus—which is not always convenient or particularly safe with a restive team—I suggest



an improvement. The above cut, I think, is sufficiently clear to need no explanation. It is not uncommon to see a man lifting with all his strength at the hub of a heavy wagon, when he might accomplish more with one hand with the help of a bit of plank, three or four feet long, leaving the other hand at liberty to adjust the support under the axle. M. B. Prince.

Warren Co., N. C.

The Apiarian.

NOTES ON BEE CULTURE.

It has often been told bee-keepers by the older heads, that the secret of success in bee-keeping was "strong stocks." Although I commenced with the theory, "that small stocks if confined within a small enough compass, would produce surplus honey in proportion to their numbers," I have met with ample proof that this theory is incorrect, and that small stocks are unprofitable. It was the strong stocks that gathered the surplus honey this season, although the weak ones had four times the attention the stronger ones had.

There are several ways in which strong stocks can be procured and selected. Wintering, in this latitude, generally means "the survival of the fittest." I think our severe winters are a positive advantage in bee-keeping. The poor, sickly stocks are destroyed, which would otherwise only linger along through the summer, give no surplus, and set our genuine busy bees a bad example by their laziness. The queen, being mother of all, doubtless influences to a great degree the characteristics of her progeny So we should be careful as to how we raise our queens. There always are a few stocks that, almost invariably winter well and give a goodly yield of surplus honey. These are the ones to raise queens from. In the same way let such colonies be the raisers of the drones. Thus, the bee-keeper will soon gain a predominence of strong stocks, and thus he gains the most important point required for success.

Next to strong stocks are good hives. In this latitude, the nights and mornings are cold during part of the honey season. The bees are prevented from commencing work in surplus boxes on account of the low temperature. The remedy is a hive constructed so as to retain the animal heat of the bees, and resist the outer extremes of temperature. A properly made chaff hive will be found to meet this requirement. The chaff, it must be remembered, should surround the surplus apartment as well as the brood nest, and there should be plenty of it. Another important point is the surplus arrangement. Our bee-keepers are, in my opinion, getting incorrect ideas upon this subject. I advise all to try section boxes only 1⅞ inches wide, instead of 2 and 2½, and wooden separators instead of tin, and see if they do not get more and better honey. The reason for thin combs is the honey ripens three times as fast in these as in the thick combs. Apiarian.

Adams Station, Albany Co., N. Y.

Dairy Husbandry.

THE TRUTH ABOUT IT.

[The object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life,—Eds.]

VALUE OF MILK.

Is the Factory System a Failure.

The low price of milk and milk products and the consequent losses of dairymen are serious enough to call for comment and consideration. Milk brings now to the patron of the factory but one-half cent per pound, or 17 cents per 16 quarts. A cow that averages 10 quarts per day through the season of seven months, returns to her owner the utterly inadequate sum of 10 cents, and a small fraction over, per day, or about $21 for the season. This is equal to about five cents per pound for the cheese made from the milk delivered by the patron. There seems to be something wrong when a great industry engaged in supplying a staple article of food, is carried on at a ruinous loss. I might point to the practice of making skim-milk cheese and that spurious mixture known as oleomargarine, which are turned out by the creameries, as one sufficient reason for the depression in the dairy business. There can be no doubt of the truth of this; for a poor article forced on the market carries the best down with it. This is an axiom—a self-evident truth—and a constant experience in business.

But there is another view to be taken of this matter. It is an unpopular one, but truth is often unpalatable and the truth may be told, or sought out, in spite of this. The factories do not work at a loss. Their expenses are paid, and paid by the farmers or patrons so-called. This is an evident truth. Heretofore, when the dairy work was done at the farm, this present outlay for labor at the factory was saved. It is a question worth considering at the present time if the avoidance of this labor in the farmer's home is not purchased at too great a cost; whether, in short, the farmers can afford to support the factories and employ them to do work for them, which might be done at home. We have been passing through a period of prosperity and high prices, during which we have contracted habits of ease and luxury which are inconsistent with circumstances such as now surround us. It is not to be ignored that this is a difficult problem; and that a solution is not offered as yet which may be satisfactory. I do not pretend to offer a satisfactory solution, but merely suggest that there is an opening for unprejudiced consideration. The fact exists that a great industry is not at present offering those engaged in it merely the common wages of a day laborer, to say nothing of interest on capital invested and

the natural depreciation of the stock used in it. And this fact certainly requires explanation. What is the truth about it? S.

A POINT IN FAVOR OF COLD-SETTING OF CREAM.—One advantage of the rapid methods of separating cream from milk is to be found in the fact, that thus the cream, and consequently the butter, are saved from any contamination likely to arise from changes taking place in the milk. I do not refer to simple souring alone. It is well known that under certain circumstauces,such as changes of feed, or even sudden changes of the weather, the milk is so affected as though apparently sound when drawn, to become bitter, or develop some foul or putrid flavor within twelve hours after being set for cream. This flavor is sure to be communicated to the cream. But if the cream can be removed from the milk before the latter has undergone such change,it is saved from deterioration from that cause, and thus sweet and sound butter can be made from imperfect milk. At this season of the year, especially, this is a danger to which all dairies are exposed, and I feel certain that the more quickly the cream can be raised and skimmed,the safer the dairyman is from losses from this cause. T. H. H.

Miscellaneous.

EVERY-DAY NOTES.

S. PARSONS.

Is the Japanese Persimmon Hardy?

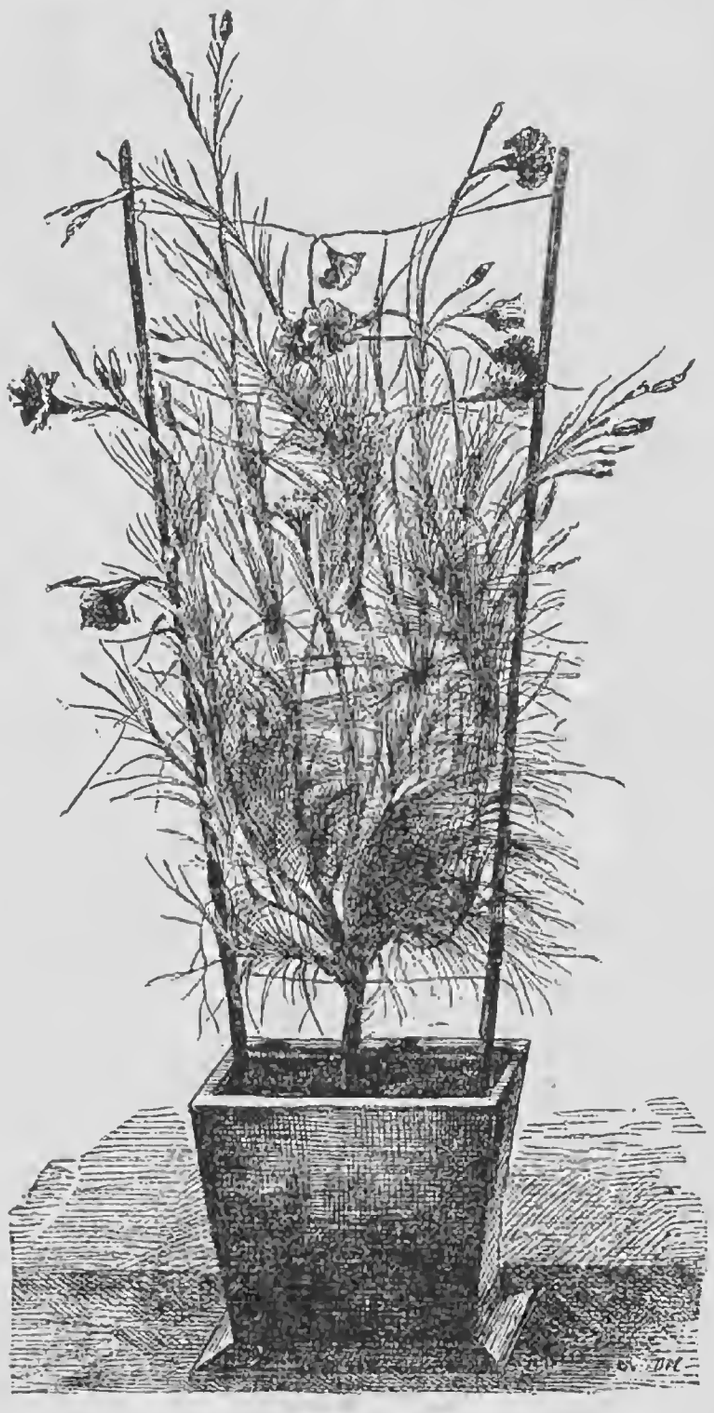
A FAIR answer to this question, viewed under the limited experience we as yet have, seems to be about as follows: During severe winters, five out of eight plants will die, if they have been recently transplanted. After moderate winters, scarcely two out of eight will be found dead by midsummer. It should be noted here that recently planted Japanese Persimmons often do not put forth leaves before midsummer. Of fruiting scarcely anything can be said, for hardly a single Japanese Persimmon has been planted long enough to produce the maturity necessary for fruiting. Indeed, no fruit can be properly tested in the short time as yet allowed the Japanese Persimmon. As the evidence now stands, therefore, I think we should be only justified in classing the Japanese Persimmon—for the single quality of hardiness—with the Madeira nut and the American Persimmon. The Fig is much more tender. South of Washington the Japanese Persimmon will doubtless prove hardy and gain a certain value. In the North, no large proportion will survive; but these few will be found valuable ornamental as well as valuable fruit trees, and, what is more, they will gain greatly in hardiness as they gain in maturity. Of course, these remarks are to a certain extent speculative and premature, but at the same time they are based on wider information than much of the wholesale condemnation of this fruit that emanates from the press everywhere after the last winter which was unusually severe for deciduous trees.

Hydrangea paniculata.

Fortunately for the varied attractions of lawns, the Hydrangea paniculata grandiflora has at last obtained general acceptance as an ornamental shrub of the first rank. But we must not merge the attractions of the lesser in the attractions of the greater, nor confuse Hydrangea paniculata with Hydrangea paniculata grandiflora. Few indeed know or realize that such a shrub exists as Hydrangea paniculata, but it is a very distinct plant nevertheless, possessing valuable peculiarities of its own. Instead of blooming in August and September, it flowers in late June and early July, a time when flowers are very welcome on account of their peculiar scarceness. These flowers are smaller than those of Hydrangea paniculata grandiflora, with erect, instead of drooping, trusses or spikes of inflorescence. They are also of a pure white color, that does not fade into purple and crimson decay, like H. paniculata grandiflora. The sterile flowers are, moreover, less numerous on the species than on the variety, and the leaves as well as the trusses of bloom are certainly smaller and less course. Practically, Hydrangea paniculata is unknown to the trade, but none the less does it deserve honorable mention for its date of blooming and fine general habit. Our own specimens came direct from Japan through the medium of Mr. Thomas Hogg.

Euonymus latifolius.

I have certainly never gathered strawberries from the strawberry tree (Euonymus), as the wily tree agent would have made his customers believe possible; but the fruit of the Euonymus in the fall has afforded me pleasure hardly to be surpassed by any delight of the palate. With the Euonymus, however, as with other shrubs, a prolongation of the period during which the beauty of fruit and flower flourishes should be diligently sought. This may be done by increasing our collections of varieties that bloom during earlier or later periods than others. One of the most striking of Euonymuses for coloring, of fruits, is Euonymus latifolius, and in many other respects it is also most noteworthy. The leaf is large and massive compared with the foliage of other varieties, and of a dark green. Its fruit, however, makes the special attraction of the plant. The flower is certainly pleasing, but the fruit is nearly three times the size of the fruit of Euonymus Europeus, and of at least as brilliant a color. Indeed, in every way, fruit, flower and foliage, the plant is large and striking. Yet one seldom sees Euonymus latifolius; doubtless because it is difficult to propagate except by grafting or budding and few think of grafting or budding a shrub. Few realize, moreover, the variety of form and size existing among different species and varieties of Euonymus, hence we need not wonder that Euonymus latifolius is overlooked and scarce.



A TREE CARNATION TWELVE YEARS OF AGE.

Clematis.—Second Pruning.

It is not generally known how universally the Clematis species and varieties may be induced to bloom the second time by cutting back the plant immediately under the flower that bloomed nearest the ground. Clematis Jackmanni which blooms the last of June, is only one instance where in a month or so after pruning abundant flowers appear; few varieties, indeed, surpass it in the freedom with which it thus blooms. When we consider how much the addition of this ever-blooming quality enhances the charm of Clematises, it seems surprising that an understanding of the fact has not been more generally attained.

A LETTER FROM MR. L. A. ROBERTS.

BLOOMFIELD, Conn., Sept., 1879.

AGAIN I have the pleasure of writing to you from this quiet town in the beautiful Valley of the Connecticut; and never in my recollection has there been an autumn here the opening of which was more pleasant or full of promise. An abundant crop of grass, the most important crop by far in this section, has been gathered, and the frequent showers have given quick growth to the second crop, rowen, or aftermath, as it is here variously called, and the fields are as green as in early June. The trees, too, show the effects of plenty of rain, and bear their full burthen of leaves which show no signs of changing or decay. What gorgeous coloring may be expected in October when the sharp frosts aid the dying leaves in parting with their moisture, and the hill tops and mountain sides put on their coats of many colors and become radiant in their autumn beauty. Those who have never seen a New England autumn know not all of Nature's variegated charms.

In the floral department the yellow of the Golden Rod vies in brilliancy with the red of the Cardinal Flower, while the many-colored Asters, the white of the Everlasting and the innumerable shades of the hundred of other flowers of the field, make a combination a painter would strive in vain to copy, while deep within the forest recesses are abundant varieties of Ferns, from the tiny one barely distinguishable to those of gigantic proportions, among which are many that our European friends strive in vain to cultivate and have nothing to equal.

The year will be remembered by the farmer as one of more than usual productiveness. In this immediate vicinity the principal crop for which money is directly obtained in any considerable amount, is tobacco. Until within the past two years the variety known as the Connecticut seed-leaf has been almost exclusively grown, but the Spanish or Havana is now taking precedence to considerable extent—being in demand for cigar manufacturers in place of the imported. The extraordinary size of the leaves of the "Connecticut" has made them desirable for wrappers, while the foreign tobacco is used for fillers. Cigars made entirely of the Connecticut-grown Spanish seem to give satisfaction both as to flavor and appearance, and the crop grown last year found ready sale for a much higher price than the seed-leaf. The habit of the Spanish differs from the other in that the leaves stand more upright, admitting of closer setting and easier culture. It does not sucker so much, and is topped higher, giving, as a rule, more leaves to a plant. For these reasons many growers believe the amount that can be produced on an acre is nearly, if not quite, as much as of the seed-leaf, especially if raised from seed that is the product of imported seed after two or three years' cultivation. The leaves grow much larger from such seed than they do in Cuba, or for the first year or two from imported seed.

The potato crop that was almost an utter failure last year, is this year remarkably good both in quantity and quality. The Early Rose is the variety most raised, but some of the more active and enterprising are trying other and newer sorts. The Early Vermont seems to be a little earlier here than the Rose, to yield better, and, so far as I can judge, is a better potato for the table. The Beauty of Hebron has not been extensively planted. I have one report from a quart planted that produced two and three-quarters bushels. Another man told me he planted half a bushel and had,he thought, double the quantity he ever before raised from the same quantity of seed.

Corn is looking fine. I have seen some fields that promise most satisfactory productions. The smaller varieties of kernel are usually preferred here. The Blount's Prolific seems better adapted to lower latitudes.

A noticeable feature here is the change in the cows. It is only a few years since the first grade Alderney was seen here. Now there is scarcely a farm without them, and they have been bred up until there are many very nearly full-blooded. The effect is seen in the increased amount and quality of butter produced from the same acreage of pasturing.

I was much interested in seeing Pond Lilies in bloom in one house-yard, and took the liberty of asking the method of culture, which I will give for the benefit of your readers. "I dug these roots," said the grower, "with my hands, when the pond in which they were growing was very low. When the water is higher we pull them up with a potato hook. I put in the tub about a foot of muck or swamp dirt, in which I planted the roots and then covered all with a layer of coarse sand or gravel just to keep the muck quiet when the water is disturbed. Then fill the tub with water. If this is done in May or Early June, the plants will push up and blossom the same season. As the water evaporates I fill the tub through the sprinkler of a watering pot, that the dirt should not be disturbed, and allow the water to run over a little that there may be more fresh than would be required to fill it. It is but little trouble and the result pays for it well. In the winter, I take the tub into the cellar where it won't freeze, and keep the soil moist. The roots may be changed to another tub in spring, if desired, but they blossom best when left in the same tub several years,for the thicker the roots grow the better. The blossoms open in the morning and close at night for four days, and I think this tub (about three feet in diameter) has given us between 40 and 50 blossoms. These roots were planted this spring, and will do better next year."

What floriculture, with the same labor, will give better return than this, and why are not Pond Lilies more generally grown?

Floricultural.

AN ELDERLY CARNATION PINK.

THIS Carnation Pink was started from a small slip procured in Elmira in March 1868, so that it is now considerably more than eleven years old. The stem only lacks one-eighth of an inch in being four inches in circumference. The body and principal branches are wrinkled and gnarled like an old Oak tree. Its production the past year of only a fraction less than *five hundred blows*, I am sorry to say came very near destroying it. Taken from the cellar in the spring, it seemed to be constantly going back instead of ahead; finally I concluded, that to save it, it would be necessary to cut the head entirely off. In time new buds began to make their appearance in all directions; and now it is one grand and magnificent bush of bright green stems. I shall not permit it to flower any this year, and so shall give it an opportunity to prepare for a good time next year.

The photograph from which this illustration has been taken, is not at all a fair example of what it now is, having been made about seven years ago. In conclusion, let me say, that a Carnation Pink cannot be made to live and do well in a hot room during winter. A cellar is the best place for it. Quite a number of persons have taken slips from this for a number of years, but not one has succeeded in producing the tree form, as in this instance. I have another one started that promises well.

Industrial Societies.

NEW JERSEY STATE FAIR.

[Special Correspondence.]

A MORE successful fair has probably never been held in the State of New Jersey than the one that was in progress at Waverly near Newark during the past week. The weather was beautiful, and crowds of visitors from the surrounding country and large cities were constantly pouring in upon the fair grounds. The State Agricultural Society has cause for congratulation both upon the excellence of the exhibits and the good management of the several departments, as well as upon success financially, the receipts surpassing those of any previous year.

The exhibits indeed were not so numerous as one might reasonably expect from so old a State. The writer has seen fairs in Western States whose resources are comparatively undeveloped, which far surpassed this one of New Jersey both as to quantity, and in certain departments, also in the quality of the exhibits. Here, for instance, was a marked absence of farm implements and machinery, although the fair was held at a point that could easily be reached by scores of large manufacturers. Fast horses are favorite animals in New Jersey, and the races formed a fea-

ture of special attraction. Curiosity-men, side shows, whose agents made the days hideous with their cries, and similar humbugs, were not lacking.

Horticultural Hall.

Aside, perhaps, from the live stock, the Horticultural Hall contained the most interesting and really edifying exhibits that were on the grounds. It held in all 1,500 entries. Particularly was the show of fruit praiseworthy. It was not, however, conspicuous by a large amount, but the excellence and beauty of the specimens cannot easily be surpassed. Apples were well represented. Some monstrous specimens of the King of Tompkins Co., and other large varieties especially caught the eye of the superficial observer. Excellent plates of the Gravenstein, Orange, Fall Pippin, Northern Spy, Washington and Porter, deserve to be mentioned. The collection of Pears was good. Bartlett predominated in quantity, but there were also many fine plates of such choice varieties as Louise Bonne de Jersey, Duchesse d'Angouleme, Beurré Boussock, Beurré Bosc, Souvenir du Congres, Beurré d' Anjou, Seckel, Urbaniste and many others.

Concord showed the same predominance among grapes as the Bartlett among pears. A hundred and twenty-six choice plates of this grand old variety, said to be entered by as many men, occupied a prominent position in this class. Rickett's Seedling grapes formed an interesting collection. This prominent Grape culturist exhibited fifty-five plates of very handsome fruit of between thirty and forty varieties, many of which are new. Brighton, Delaware, Isabella, Catawba, Clinton and most of the other acknowledged good varieties were present in fair quantities, together with a few varieties of hothouse grapes. As a novelty for this season may be mentioned a box of very late strawberries. Peaches and plums made a poor show, owing, perhaps, to the lateness of the season for these fruits.

The exhibition of plants and cut-flowers was rather deficient, and mainly was the latter class small and contained but common-place flowers. The Society does not encourage amateurs and gardeners to bring their floral treasures as strongly as the cause merits. The premiums offered for cut-flowers, bouquets and floral designs are but few and small. The many hundreds of flower cultivators that for miles around are found in this part of the State could, by proper inducement to a friendly competition, have made a magnificent show. Floral designs there were none to speak of. One, indeed, which suggested that the originator had some unpleasant experience, attracted some attention. It was a funeral design, and the words "Farewell Mother-in-Law" were worked in Everlastings on the shield. Plants in pots were not numerous. A couple of medium collections of foliage plants, a Banana in fruit and a handsome Pomegranate formed the chief attractions.

Vegetables were poorly represented. Beyond a fair collection of potatoes in which the Early Rose, Beauty of Hebron and Snowflake took the lead, there was nothing of special interest. One giant variety of potato was labeled Belle of the Valley, thirty-six tubers of which weighed forty pounds. Monmouth County made almost as fine a representation as the whole of the rest of the State in the line of vegetables. One farmer, Mr. J. H. Denise, of Freehold, deserves commendation for the example he set his brother farmers. This gentleman showed thirty-four kinds of well-grown vegetables and forty varieties of corn, of which the Gourd Seed Yellow and Big White appeared to be the best. Mr. D. D. Denise, of the same place, had also a good general collection in which were several watermelons, ranging in weight from 50 to 70 pounds. Wheat, rye and other grains were present in quantities just sufficient to show that the State afforded these products.

Manufacturers' Hall

was well filled with all kinds of furniture, utensils, etc., etc., relating to domestic life, and especially did the department of needlework, embroidery and wax work present a beautiful display. An embroidered fire screen by a Mrs. Funk, and some imitation of Persian Rugs, marked Mrs. Norton, deserve commendation, as does also some beautiful crewelwork in a variety of designs. Mrs. A. Stengel of Newark exhibited some beautiful waxwork, imitations of flowers, plants and other natural objects. Especially were her Night-blooming Cereus and Pond Lily so skillfully made that the uninitiated might easily be deceived as to their real nature. Canned fruit and cake were present in goodly quantity, but of dairy products, which ought especially to characterize an agricultural fair, there were but few to be seen.

The Poultry Show

was good. The Asiatic class was best represented, there being numerous handsome fowls of Light Brahmas and Buff Partridge and White Cochins. The Games, Spanish and Bantams were also present in goodly numbers. Of the last class, some very pretty birds of the Silver and Golden Seabrights might be seen. Two incubators were at work side by side, one exhibited by Dr. Mead, of Newark, the other by Mr. Halsted, of Rye, N. Y. Both seem to be very efficient machines. The main difference between them is, that Dr. Mead's is heated below the eggs as well as above, while Mr. Halsted's is heated above only. Water fowls were not plentiful. Some Pekin ducks made the best show in this class. Among the pigeons there were some very choice birds.

Implements,

as stated above were not plentiful. R. H. Allen, Walter A. Wood, B. Myer, of Newark, and the Warrior Mower Co., were the principal exhibitors. The last firm showed an excellent fanning mill among other machines.

Live Stock

made a good show. All the improved breeds of cattle and sheep were represented, Jersey cattle making perhaps the best show. David Bellis took 1st premium on Guernsey bull, Young Milford, and 1st for Jersey calf, 2d Duke Alexis.

J. Crane 1st premium for Ayrshire cows, Courtney, Derby 2d and Annie Wenthworth, and 1st premium for Ayshire bull, Curtis.

P. Ball 1st premium for Ayshire bull, Laird of Hillhurst.

A. D. Newell 1st premium for Jersey bull, Vein of Gold.

J. I. Holly 1st premium for Jersey cows, Favorite of the Elms, and Phryne, and for the Jersey bull, Much Ado.

R. H. Allen 1st premium for the two Durham bulls, Baron of Millburn and Baron of Lancaster, and also for Durham cow, Countess of Edgewood.

J. McCain took 1st premium for sheep, and 1st or 2d premium on all he exhibited, forty-two animals.

H. C. Ayres took 1st premium for Berkshire boar and sow.

J. K. Demott, M. Smith & Son, L. A. Exton and J. W. Whitevack took each 1st premium on swine exhibited. C. C. G.

PENNSYLVANIA STATE FAIR.

[Special correspondence.]

PHILADELPHIA, Sept. 20, 1879.

In point of attendance the fair was a great success. An average of more than twenty thousand per day have passed between the turn-stiles. The entries were large and good, especially in machinery, but the general management and placing of exhibits were confusing, unsatisfactory and unintelligible. The fair was held in what was the main building of the Centennial Exposition, and mixed with the exhibits of the fair proper, were the permanent displays of all kinds that have been standing about the building for several years. Those who came to the State fair consequently were sandwiched between and among these old shows without any intelligent arrangement, and it would have puzzled an expert to find any "department." As a consequence, visitors wandered about aimlessly, going the length of the immense building, fatiguing themselves to no purpose.

Live stock, with the exception of sheep and swine, were stalled in the building. The horses were plentiful in number, but nothing especially noteworthy is to be recorded of the animals. James Glover, of England, had a few fine draught horses. The prize for the best stallion on exhibition went to J. D. Baker, Ingleside, Pa., for his "Inkerman." There were Short-horns registered and unregistered, Devons, Dutch cattle, Ayrshires, Jerseys, Guernseys, and grades, but the finest of these were the Jerseys, both in numbers and quality. The herd of Jas. Young, of Middletown, Pa., contained some fine animals. The first premiums were appropriated by Messrs. Young, Cooper and Sharpless. David Selsor, London, Ohio, had the only Short-horns worth mention, while D. and J. Banker, Franklin Forks, Pa., carried off the honors in Devons. The swine were few and not so good as might have been brought together in this locality, which contains some noted breeders. T. S. Cooper had the only Berkshires shown, but they were remarkably fine animals, being the progeny of imported stock. The Essex strain was represented by J. S. Giles whose animals were not quite up to the standard. Chester Whites were in force. The herd of T. Walter & Son, West-Chester, Pa., being as a whole the best in the pens. The sheep were very fine. T. S. Cooper had a group of imported Oxford Downs, including a ram, that seemed about perfection. Mr. Sharpless's South Downs were also superior animals. The Merinos of Mr. Glass, were lineal decendants of pure Spanish stock and were in fine show condition. The Long-wools kept up the average of excellence of the display.

The best groups of farm products were those of the Solesbury and Cumberland Co., Farmers' Clubs. W. Atlee Burpee had two new melons, the one named "Bay View" being a cross between Cassaba and a California melon, which retains the flavor of the first and acquires the size of the last. Some were displayed weighing over twelve pounds. The other melon called the "Great American" is gourd-shaped, of a deep orange color inside and insipid to the taste. I doubt if it can properly be called a melon. We have secured the seed of both for trial.

The confusion in arrangements of exhibits was no where more apparent than among the implements. Most of the prominent makers had examples of their goods on the floor. Among them were the Walter A. Wood M. & R. Co., who took first premium on mower and self-binder; Nichols, Shepard & Co. had a very handsome engine and separator represented by Mr. W. S. McMillen, while the Buffalo Pitts loomed up between a Delaware machine on the one hand, and the excellent horse-power and the small thrasher of the Messrs. Heebner & Sons, on the other. Farm Engines were mainly represented by the firm above named, the "Peerless," Lovegrove & Co., and the Canton Monitor of C. Aultman & Co. Mr. Hershey sent two styles of the "Peerless," portable, and stationary and portable combined, which were handsome examples of farm engines. They received first premium. Rakes were shown by B. C. Taylor & Miner & Co. The Johnston Harvester Co. displayed their new light mower, combined machine and harvester in operation. It was one of the most interesting exhibits in the fair.

Mr. Moore, as manufacturers' agent, had a number of exhibits in charge, among which were those of Furst & Bradley M'f'g. Co., and A. B. Farquhar. All the principal grain drills were shown. P. P. Mast & Co. secured the Silver Medal on their combined grain and fertilizer drill. Nash & Bro. had their new pulverizer, the Bradley mower and Foust's hay-loader in charge, while Mr. Gardner had the Eureka mower under his supervision. The new Warrior mower and Randall's harrow formed one exhibit. The Halliday Wind Mill received first premium. The American Drier Co. showed their drier and a new combined furnace washer that can be made to serve as a furnace, washer, cooker and steamer. It is a useful and ingenious combination that is sure to become popular on the farm and in the household. There was the usual number of new churns, that like all things the gods love, are destined to die young.

The Geiser Separator, made by the Geiser M'f'g Co., carried off the honors in this class.

It is with regret that I have to speak of the inefficiency of the judges on machinery. They succeeded in performing their duties to the perfect dissatisfaction of all concerned. They meant well, perhaps, but such gross ignorance, stupid blunders, and mulish obstinancy has reflected discredit on themselves and the Society. It is unnecessary here to particularize, and indeed, I am sorry to have to mention the subject at all. If premiums on machinery were abolished altogether, it would inure to the advantage of all concerned.

BENSON, MAULE & Co. of Philadelphia, Pa., have on exhibition, among other things, their new Philadelphia broadcast seed-sower, which is a novelty and a good thing. The large size is made to be attached to any farm wagon by a very simple device, and when in position it sows perfectly the largest and smallest seeds, besides the various kinds of fertilizers. This sower is conspicuous for simplicity of construction, uniformity of sowing, durability, and especially breadth of cast. It has been uniformly successful in the field and has, at the fair, been awarded the first premium.

D. M. OSBORN & Co. of Auburn, N. Y., and Philadelphia, Pa., had a very large and complete exhibit of their well-known machines under the management of Mr. Herbert. The self-binding harvester, which has just closed its fifth season, has made an admirable record where records count, that is, in the field. It is particularly noticeable for the simplicity, strength and perfect controllability of the binder attachment. It works automatically, or is under the control of the driver at will, which makes it do perfect work in dense or thin grain. It is noticeably saving in wire, and if, at any time, the wire breaks from excessive strain, the machine itself threads the needle and works right along without stopping. The other machines included an independent reaper, a combined machine and an independent mower. In looking over the work turned out by this Company, an experienced man is attracted by its thoroughness, strength and perfect adaptation to its purposes. It is only in actual use that these qualities are truly developed, and it is there that the Osborn machines score their triumphs and secure the awards, which are commonly first premiums and always large sales.

THE SYRACUSE CHILLED PLOW Co. of Syracuse, N. Y., as usual, make one of the most complete exhibits in the machinery department. They have invaded foreign territory, so to speak, and occupy the space used by Spain during the Centennial. It is very thoroughly embellished with the "Syracuse," and the first prizes and silver medal that have been awarded the Company. The success of this plow is like nothing so much as the old stories of invasions by the Goths. It goes into a territory and before the season is over, it would seem as if no other plow had ever been known. This is the effect of a good implement and shrewd, energetic managers, who are "Syracuse" men first, last and all the time. During the fair the new side-hill plow, with shifting jointer, attracted great attention. A novel incident was a serenade by a brass band on Thursday, after the premiums had been awarded. Several of the musicians were agents for the "Syracuse," and displayed their enthusiasm melodiously. We congratulate Mr. Kemp on the perfect way in which he managed the display and his success in effecting sales of 500 plows.

JONES, FAULKNER & Co., Utica N. Y., have on invitation, and at the special solicitation of the Society made an instructive exhibit of cheese-making apparatus in full operation, that draws large crowds of interested spectators. The idea was to show Penusylvanians the appliances used for cheese-making in the best-known dairy district of the East, and it has been successfully carried out. Some thirty cheeses of good quality were made. The exhibit included their factory engine, improved steam vat (which took first prize at International Dairy Fair,) Ralph's "Oneida" cheese vat, which is designed for small factories and dairies, a new drop-bottom curd sink, curd mill, and the well-known Hubble gang press. There were also a revolving churn, milk weighing scales, and, in short, a complete outfit. The practical operations were under the management of Mr. Smith, while Mr. Jones supervised the general display. A part of the exhibit was sold during the fair.

PROMINENT among the lawn-mowers, was the Philadelphia, exhibited by the manufacturers, Graham, Emlen & Passmore. This machine is one of the pioneers of its class, and its success has stimulated more competition in similar models than has any other mower. It seems to have been regarded as the standard light-weight mower. Up to the present, something over seventy thousand have been made, sold, and sent all over the world. It seems somewhat strange that in examining this machine, the judges should not have been conversant with these facts. But as a matter of fact, the judge (only one of the three examined the mower) made himself somewhat ridiculous by his questions, and proved himself no ornament to the intellectual department of the Society. Under the circumstances, a premium could not be received with any great satisfaction to the exhibitor.

J. SEDGENER Painesville, Ohio, showed his improved "Nonpareil" mill, in operation. It crushed and ground corn, corn and cob, with or without shuck, bones and other substances, turning out a fine quality of meal in every instance. The mill is simple, durable and efficient. It runs equally well either way, and is such a mill as is always useful on a farm because of its general utility. C. H. E. R.

BENEFITS FROM FAIRS.

THE benefits that are to be derived from a well conducted agricultural fair—the horse racing being omitted—can hardly be overestimated, and yet a large majority of our farmers fail to work for its success. In fact, we often find that the principal part of the stock, etc., etc., on exhibition is placed there by persons who are not distinctly farmers, while the management, as well as most of the heavy work, devolves upon the same class.

This is not as it should be. The average farmer should also "put his shoulder to the wheel," thus making our fairs still more beneficial. Is it not possible for the RURAL correspondents to devise some method of inducing more of our farmers to work for the fairs? Our duty is poorly done if we only attend the fair for a day, or perhaps half a day, criticising all that has been done because it was not done differently, and explaining how we could have shown better stock, finer fruit, larger vegetables, etc., etc. A better way is to bring along samples of all things worth showing, and to place them on exhibition. Attend the fair with your family—for wife and children like to see fine things as well as yourself. Urge your neighbors to attend also, and when there, praise whatever you can, and where you cannot praise, keep silent—unless the thing ends up with a "hoss trot," in which case you are at liberty to utter your severest condemnations.

One thing I am glad to learn, and that is, all fairs that depend upon horse racing as their chief attraction, are, so to speak, "fizzling out." This is as it should be. As George McDonald says, "To succeed in the wrong is the most dreadful punishment to a man who is in the main honest." NELSON RITTER.

Onondaga Co., N. Y.

A LITTLE incident occurred at a Fair in Rutland county, Vt., that seems almost too good to be lost, and shows the necessity of appointing judges that know whereof they judge. The facts are these:—A gardener of some notoriety carried several articles to the fair, and among them beautiful specimens of the Egg Plant. The judges inspected the articles and very wisely awarded the gardener the fifth premium on a new variety of turnips, supposing they knew all about the Vegetable Kingdom. Our fairs ought to be so managed that ignorant blunders of this kind can be avoided.

Rutland, Vt. A. H. C.

Everywhere.

NEBRASKA NOTES.

KEARNEY, Buffalo Co., Neb. Sept. 3.

THERE are no variegated forests with their leaves of every hue imaginable, no falling leaves to tell us of the near approach of autumn out here on these vast plains, but the busy hum of thrashing machines, the silent, slow change of the beautiful green flower-clad prairies to brown, barren-looking plains—the innumerable grain stacks tell you they are not barren—tell us that the summer is past and autumn is surely at hand. And a glorious autumn we are having here. Although some are complaining that it is too dry, yet it is splendid weather for saving grain, of which there is a large crop, and the homesteaders—we are homesteaders here, not farmers—are in the midst of an abundant thrashing season. Small grain is not turning out as well per acre as it has for the past two years, but there was a great deal more sown, and our county has probably raised more wheat this year than it has done the past two years together.

Although a new railroad has cut off the marketing, in Kearney, of grain from the southern portion of this State and northern Kansas, the streets are more crowded with teams loaded with wheat than ever before, and buyers can scarcely handle the quantity brought in. Corn is an immense success here this year, and will yield from 40 to 80 bushels. per acre. Sod corn will yield from 40 to 50 bushels. We raised apples, pears, peaches, plums, cherries, grapes, raspberries, gooseberries, currants and strawberries in our county this year, and all have done well. Of course our orchards, vineyards and fruit gardens are young yet, the country being settled only five or six years, so we cannot yet expect a large crop of fruits. Along the streams a great many wild plums are growing, of which there is an immense crop, and some are as nice fruit as I ever saw anywhere, and I have seen some pretty nice plums, too.

Vegetables? Oh my! of all countries for growing vegetables this beats any in my range of travel. Only think of watermelons planted on wild sod broken up this year, without any manure or cultivation whatever, not even hoeing, yet weighing from 30 to 50 pounds!

The Pearl Millet sent me by the RURAL, I guess, I planted too early, and it did not all come up, but it has gone to seed, and if frost holds off another week or two, I think it will get ripe; but we do not have much use for a forage plant out here, as we have green grass the year round. The Acme tomato is a complete success, and has done better than any other kind we have ever planted. It will sell at from 25 to 50 cents more per bushel in market. The Defiance Wheat shriveled pretty badly, but it was probably from having been sown late. The flower seeds did not come up with the exception of the Japan Cockscomb, which is very nice. The Beauty of Hebron potatoes I have not dug yet; but think they have done very well.

Wheat, highest, new, 75 cts.; lowest, 50 cts.; present price about 63 cts.; corn, 20 to 25 cts.; oats, 15 to 18 cts.; rye, 20 cts.; barley, 15 to 40 cts.; potatoes, 15 cts.; butter, 20 cts. per pound; eggs, 8 to 10 cts. per doz.; flour, $2.50 per cwt.; hams, 10 cts; shoulders, 7 cts.; bacon, 8 cts. per pound; corn meal, $1.20 per cwt.; onions, 50 cts.; beans, $2 per bushel.

H. A.

RURAL SPECIAL REPORTS.

MASS., North Raynham, Bristol Co., Sept. 11.—Potatoes rotting somewhat hereabouts; but ours are looking well, and will, most likely, escape frost. Hay crop light. Apples scarce. Cranberries below an average. Grapes a good crop. T. G. L.

N. Y., Rome, Oneida Co., Sept. 8.—We have had the most severe and long-continued drought that we ever knew. It commenced in early spring and there has not been rain enough since to raise the streams but a trifle. We never saw them so low as they have been the past week. Pastures on dry land look almost as though a fire had run over them; and the after feed in meadows is very scant. The result is that dairymen are getting but little milk; and as cheese nets them only about four cents per pound, it makes them wear long faces. Newly-seeded ground will nearly all require to be seeded over in this section. Corn ears have not filled out at the end very well; but some fields are ready to be cut up. Potatoes are excellent in quality, but the yield is not more than an average one. They are beginning to decay in some fields. Wheat yields on an average about 18 to 20 bushels per acre; oats, about 40 bushels. Pear trees hang full; but apples are not very plenty. Plum trees are loaded. We picked the first ripe Golden Rural tomato, Aug. 14th. We think them very nice. We distributed all but eight plants among the members of our "Grange," but have not heard how they are liked. My Blount's corn is still the "great attraction" to all passers-by. Some of it is over fourteen feet high with the lowest ear eight feet from the ground. One stalk has ten ears, all set with corn; but I still fear that the season is not long enough here for it to ripen, as it is very green yet. One of the city subscribers to the RURAL in our Club, gave me his Beauty of Hebron, and that made six ounces of seed which I cut into 17 pieces and put one piece in a hill, the hills 18 inches apart. I selected the same size and weight of Early Rose, and cut them in the same way, planting them side by side on gravelly soil on April 16th. I applied one small shovelful of old stable manure on top of each hill, and covered the manure. Each kind got the same care, and I could not see any difference in the growth through the summer, nor an hour's difference in the time of ripening. We had 17 2-16 pounds of Beauty of Hebron, and 19 7-16 of Early Rose. They averaged about the same in size. We have two Voorhis watermelons about the size of a two-quart bowl. Defiance wheat was a failure. F. D. P.

N. Y., Erieville, Madison Co., Sept. 8th.—We have not had any rain to wet the ground in six weeks and the corn is drying up, so the the ears will be short and not filled out. My Blount's corn is a wonder to everybody that sees it. People stop to look at it, and want to know where I got it. I planted 125 kernels, 115 came up; the cut-worm ate off two stalks, and the rest of it is from 13 to 14 feet high and has from seven to nine ears set on a stalk, and if we don't have frost this month, I think I will get part of it ripe. I manured with hog manure. I had very bad luck with my Beauty of Hebron potato; it had eight eyes and I made eight hills, and when they came up the bugs ate off the tops and spoilt five, and the cut-worm spoilt two hills, so all I saved was one hill. I tended that faithfully, and the 4th of this month I dug them, and it was a hill of potatoes worth having, one tuber weighed one pound and nine ounces and there were six pounds and a half in all from one eye. Who can beat that? The Acme tomato you sent me is all it was claimed to be. I planted part of the seed you sent me and I had plants enough for myself and my neighbors, and they are all delighted with them. I trained mine to a stake and trimmed from the bottom, and the vines are some six feet high and are loaded with fruit. These are large and smooth and ripened uniformly all through, and of very nice flavor. The beets are looking fine. My Defiance wheat I sowed in drills, but the dry weather we had the fore-part of the season hurt it very severely, so I don't expect to get much. Of my flower seeds three or four only came up. I am very much pleased with my RURAL seeds; the corn is worth the price of the paper just to see what cultivation can do. Potatoes are rotting somewhat in this section; but there is a large yield. Butter is 12 to 14 cts. per pound; eggs, 11 cts. per doz.; wheat, $1.10 per bushel; corn, 50 cts.; oats, 30 cts. Apples are not plentiful.

S. J. V. C

N. Y., Fuller's Station, Guilderland, Albany Co., Sept. 8.—Fine growing weather; sowing wheat and rye; apples scarce—more in my orchard than in ten neighboring ones, because I kept the ground well worked and manured, and trees well trimmed, so that all about here own that my fruit is the largest and finest in this section. I have about 40 kinds and my trees bear every year about equally well. I don't think people trim their trees enough. I trim mine every year and get the highest price for my apples. My Blount corn is the wonder and admiration of all who look at it. I planted it May 13; now it is from 10 to 13½ feet high, averaging 11½ feet, with from two to nine ears on a stalk; some stalks are eight inches in circumference. I put no manure or fertilizer on it, but planted it on a good sandy loam, as I wanted to see what it could do in a practical way in our section. My opinion is that the season is too short for it here. My ordinary corn—the King Phillip—is a splendid crop this year. Buckwheat is extra-good; oats middling; hay fair; rye half a crop. A. M. L

N. Y., Hamilton, Madison Co., Sept. 9.—The Beauty of Hebron sent me weighed two ounces, and from it I raised 11 pounds of good-sized potatoes, although the "bugs" troubled them all the summer. As to their earliness, I think them a little earlier than the Early Rose. J. A. Y.

N. Y., Brasher Falls, St. Lawrence Co., Sept. 8.—Our Beauty of Hebron potato yielded sixty nice tubers, of which there are but few small ones. We are keeping them very carefully to plant next year. Only five kinds of the seeds came up. J. A.

OHIO, Bremen, Fairfield Co., Sept. 12.—Wheat crop excellent, and grain superior. Fultz has the preference with those who prepare the ground well. A large acreage will be sown this fall. Oats medium. Corn very good on good land, when the seed was sound. On thin land the fight with grub worms and much re-planting have resulted in a very light crop. Potatoes suffered from both Colorados and Cantharides. Paris-green is effectual in both cases. It needs care, however, to put in enough of the mixing material (sifted road dust is as good as any) to prevent *pure* Paris-green from injuring the tops. Beauty of Hebron promises well. Not extra-large, but of fair size, and nearly every potato marketable; quality very good. Peabody sweet potato, very early, but hardly as sweet as Nansemond when of the same size. Tried only this season. Apples almost a total failure after the great crop last year. Pears, better. Peaches and plums all killed, and most of the cherries. Dyehouse, however, is an exception, passing safely through the extreme cold of last winter and bearing a full crop of its fine fruit. Grapes have done better than for several seasons past. Sheep market very active; cattle slightly less so; hogs least. The dozen or more iron furnaces a few miles east and south, in Perry and Stocking counties, furnish an excellent market for fruits, vegetables and farm truck generally. R. J. B.

PA., Brookfield, Tioga Co., Sept. 7.—My White Prolific corn is doing its "level best," but I think it's too late to ripen. It has from two to five ears to a stalk, and in one place I noticed 12 *ears, the product of a single kernel.* My Beauty of Hebron potato had 14 eyes. I removed the first set of sprouts and put the eyes to work to produce a new crop, which they industriously did. From these 14 eyes I harvested 47 pounds of tubers, about 40 pounds of which were of marketable size. E. H.

ILL., St. Charles, Kane Co., Sept. 8.—Timothy meadows and high pastures are eaten very badly by the large white grub, being in many instances nearly destroyed. Grazing for cattle only on low ground or clover meadows. Hay and oats are average crops. The prospects were good for an immense corn crop, but the grubs and dry, hot weather have injured it to some extent; some say 10 per cent. and some put the loss higher. I think it will not be greater than 10, if so great. Potatoes a fair crop; we had frost on Sept. 5th, but it did no injury to vines. The returns for our milk per hundred pounds delivered at the factories are very low, the highest being 40 cents, with one or two exceptions for June milk. Most factories are running below this, and the prices all the past months have been proportionately low. The manufacturers are charging two cents for cheese and four cents for butter. Where butter alone is manufactured they take five cents, and the producers of milk in this county claim that the manufacturers have had all the profit there was in the milk, and wish them to reduce the price for making, but so far, I believe, all refuse, claiming two and four cents to be the lowest possible price for which they can afford to manufacture. Unless some change takes place for the better in behalf of the producer, many will go out of the business from necessity.

ILLS., Dover, Bureau Co., Sept. 5.—Thrashing is nearly over, and wheat is above the average in yield and quality. Oats yield from 45 to 65 bushels per acre. Hay was light—about one-third short on account of dry weather early in the season. Corn is large and looks fair for a large crop. Early Rose potatoes are good; Peach-blows and all late potatoes will be small, unless we have rain soon. My Blount corn is tall, too tall for us in this country. The wind breaks it down too much.

J. B.

ILLS, Sparland, Marshall Co., Sept. 12.—We have had a very dry season. Wheat and oats are light crops. Corn stood the drought well, and late rains will make it a fine crop. Potatoes will be scarce. Planted my Beauty of Hebron April 22; it contained six eyes and yielded 40 potatoes; am well pleased with it. The Golden Rural tomato is very nice and of fine flavor. R. W.

MICH., Litchfield, Hillsdale Co., Sept. 3.—No one reports the Blount's corn so high as mine, for some of mine stands 16 feet six inches, and 10 feet six inches to the top of the upper ear; it has only two full ears, the other shoots not having come to perfection, perhaps on account of drought, for it has been very dry and hot for the last two weeks. My Pearl Millet will average six feet and is coming out in heads from six to eight inches long. If frost will stay away ten days or two weeks, I will save some seed. I cut some off when about three feet high—it is now 18 inches high again. Neither the corn nor the millet was planted in very rich soil; it was a sandy, gravelly soil, without any manure. The Blount corn is a little late, though I have some that is ripe, so that I have gathered some for seed. I planted it on the 21st of April. It also grows too tall in the stalk; it would be a killing job to cut 10 to 20 acres of such corn. Then again, the ears are too small, it being an eight-rowed corn and from six to ten inches long. If the stalk could be reduced one-third or one-fourth and the ears enlarged in that proportion, then it would suit me better. I now have a yellow Dent, called the Queen of the West, which I like better. My tomato seeds that the RURAL sent me did not all come up. I got a few stalks that bear well, and that are now ripening as nice a fruit as ever I saw. I sowed some El Dorado and Russian spring wheat; the El Dorado was a failure; the white Russian has a beautiful white straw, a large, smooth head and a very nice, plump berry. I intend to give it another trial; the cold, backward spring caused it to stand thin. The people have about finished thrashing here; wheat has turned out beyond all expectations. Corn has been ripening up fast for the last ten days, on account of the dry, hot weather; but it is now raining, and that will stop its ripening. I never saw corn ear better; a great many stalks have two large ears. Potatoes are rolling out big; I take from 20 to 35 out of each hill, all fair potatoes. I have also got 700 hills of the Early Amber sugar cane planted, which is beginning to ripen; it is from eight to ten feet high. Wheat is selling for 92@95c.; oats, 20@23c.; live hogs, $3 per 100 pounds. G. K.

MICH., Memphis, Macomb Co., Sept. 8.—The seeds the RURAL sent me were of more value than the price of the paper. It has been so extremely dry here that it seems a wonder that vegetables have lived with the ground as dry as ashes two feet deep, but we have just had a splendid rain and hope is revived. I have been a little unfortunate with Blount's corn, as the chipmunks dug out eight hills, and a neighbor's cow broke in and injured several others; but as I planted only one kernel in a hill, there are about one hundred left that have done splendidly. The stalks are ten to twelve feet high, with from three to ten sets on a stalk; the suckers are eight feet high with ears. The Millet stands about seven feet high, a wonder to all who see it; its heads are twelve and fourteen inches long. I think some of the seed will get ripe. The Defiance wheat went with that old cow, except a few heads which I shall try another year. It promised very finely. The little potato I cut into 13 single eyes; two failed to grow, and three were destroyed by ground moles. I have just dug the the eight remaining hills, and the tubers weigh twelve pounds, some of them being four times as large as the one I planted. I selected an Early Rose of the same size and planted it in the same way, side and side; also a Snow-flake in the same way; the Snow-flake is not worth talking about. The Early Rose got ripe a few days the first. I have dug the same number of hills, eight, and they weigh 14¾ pounds. B. S.

MICH., Belmont, Kent Co., Sept. 9.—We dug our Beauty of Hebron last week and they were beauties, both in size and number. We had more than we could pile on a peck measure, all taken from seven hills which we made from the potato sent us. K. S. D.

WIS., Lavelle, Sauk Co., Sept. 11.—The season has been favorable to the growth of nearly all crops. A dry spell of nearly six weeks, however, injured late potatoes and caused corn to ripen prematurely. Wheat was a good crop, except here and there where it rusted. Blount's corn is from 10 to 13 feet high with from one to nine ears to the stalk, but little, if any, will mature. On the 5th inst. we had a frost which scorched the outside leaves. The Beauty of Hebron potatoes are nice-looking, but I've not dug them yet. Wheat is selling for 65 cents per bushel. W. S. B.

WIS., Oconomowoc, Waukesha Co., Aug. 8th.—The RURAL flower seeds didn't come up; Pinus edulis sprouted, but then thought it had done enough, Defiance wheat was good and Pearl Millet beyond my expectation. It's what every farmer should have. That Blount corn was planted May 10, and is now about 12 feet high, with an average of four ears to a stalk. The Beauty of Hebron did well and is a good potato. J. H. B.

MINN., Howard Lake, Wright Co., Sept. 14.—The Golden Rural Tomato ripened with me a little earlier than the Acme although the latter was planted a week sooner. The Acme however, is a nice sort; but I find more decayed fruit than ever before. I have been hoping that this was due to the heavy rains we had in July and not to any fault of the variety. From one small Beauty of Hebron potato I got over twenty sprouts while planted in a box. Then I set the pieces in the ground and continued to take the potatoes from the sprouts until the pieces decayed, so that I have a fine crop from so small a beginning. The first potatoes I "fingered out" for a trial before they were ripe and thought them better than the Early Rose of the same age, but, like many other new varieties, I now find them poor or not mealy at one end, though this may be due to this locality. Some of this variety were in bloom when not more than ten inches high, and the vines do not have so rank a growth as most other sorts when grown on rich soil. The Voorhis watermelon is good so far as the vine is concerned, but the first melon that set, dropped off and few others have set. The seeds sent me have afforded much pleasure to my neighbors and friends as well as to myself, for I have shared them with others. Farmers are jubilant over their fine crops of grain, nearly all of which rose and matured after having been badly lodged in the first part of July. Some are now busy thrashing, and a good deal of the grain ranks No. 1. S. A. M.

IOWA, Davenport, Scott Co., September 5.—I enclose you a slip cut from the Davenport Gazette, which will give you some idea of

what the Blount corn has done for me. I expect to get one of the premiums on it.

The clipping says:—"G. W. Strong, one of the C., R. I. and P. R. R. force in this city, has a patch of corn, grown from seed furnished him last winter by the RURAL NEW-YORKER, well deserving notice. The variety is a new one, called Blount's Prolific. Of the 127 grains furnished him and planted on his lot on Laurel street near Farnam, 102 grains grew, yielding five or six stalks to the grain, and from the whole about 1,000 well-formed ears have come. A single grain in one case produced 12 ears, all good. The corn is a common field corn, the stalks growing about 16 feet high. The great increase from the seed would indicate that it is a variety likely to come into general use."

All the seeds sent me have done first-rate. The Golden Rural tomatoes are very nice, and have done very well; but they did not ripen until eight days after the Canada Victor, and as they are a yellow tomato, they will not make a good market variety in this place. I dug my Beauty of Hebron potatoes to-day; I cut the seed into 17 pieces, of which 15 grew, and I have dug 81 good, large potatoes, any one of them large enough to use, being at least four times as large as the one sent me for seed, and a good many of them as large as my two fists. I shall weigh them and report. The Defiance wheat did not do very well, as the rust hurt it. The Pearl Millet looks splendid; it is just beginning to head out. I am somewhat afraid it will not ripen. It stands now about six feet high.

We are having splendid weather. The crops are all gathered except corn, and a bountiful harvest it has been. The farmers in this section are happy, and business is better here now than it has been within the last ten years. Our county fair begins here Monday, and we expect a big time, as it is the best county fair in the State. I have two hills of Blount corn in boxes to take to it. I forgot to state that my Blount corn was planted the 8th of May, and it will be ripe enough to gather in ten days, as it is all turned brown now.

G. W. S.

Mo., Clinton, Henry Co., Sept. 9.—I planted my Blount's corn on May 8, in my vegetable garden—a high prairie. The soil—clay—had been enriched with barnyard manure for several years and got another dressing in spring. The rows for the corn were three feet apart and it was planted 2½ feet apart in the row. Two severe storms prostrated some of the stalks, while insects and moles destroyed several hills. Many of the plants sent up from three to six suckers and some of these had three and four good ears apiece. The weather having been very dry, the corn that escaped the storms and other foes was cut short. I cut it on Sept. 4. I weighed the product of the 10 best hills, which, however, had not entirely escaped injury from the wind. The ears with the corn on them weighed 169 pounds and the husked grain, 36 pounds. If I had planted one-fortieth of an acre and it yielded at the same rate as those ten hills, I should have had 240 bushels per acre. With the Beauty of Hebron I am much pleased and also with the tomatoes. Pearl Millet is six feet high and will, I believe, mature seed. Very dry here now. Corn has been cut short by drought, but will average a full crop. Wheat sells for 77 cents.

W. A. H.

NEWMARKET, Shenandoah Co., Va., Sept. 6.—The long drought we had here is ended, and we are having a good season for some weeks. Farmers are getting ready for seeding; cutting corn will soon be in order. Times are pretty good here now. Wheat sells for 95c. to 98.; rye, 50c. to 55c.; corn, 50c. and oats, 30c.; butter, 10-12c.; eggs, 8c.; water and muskmelons plenty, from 5c. to 20c. each. Pearl Millet is seven feet high and in head. X. & Y.

ALA., New Market, Madison Co., Sept. 11.—The Blount corn promised to yield, according to best judges, 250 bushels per acre. The excessively dry weather, however, cut it short, so that it will only make 40 bushels. The Pearl Millet is *the* fodder plant *par excellence;* the dry weather did not injure it; I have cut it five times, and expect to cut it again. It yields an immense amount of forage; am raising seed. The Beauty of Hebron yielded finely; crops of corn, cotton, grass, peas, wheat, sweet potatoes, etc., are extra-fine. G. D. N.

CANADA, Cornwall, Sept. 9th.—The RURAL seeds were excellent. My "Blount's White Prolific" is fully 12 feet high, and promises to be all that is said of it, though I am afraid this part of Canada is too cold for corn. I planted it the last of May and I am doubtful whether it will ripen or not. Pearl Millet does well with me as fodder, though a great part of the seed missed, owing to the cold spring. Beauty of Hebron potatoes I have not dug yet. Defiance wheat is splendid. In this neighborhood the harvest promises to be abundant. Potatoes turned out to be better than expected, and will be sold here for 25 cents a bushel; apples are almost a drug, in fact, almost everything except corn promises to be abundant.

W. S. T.

The Querist.

ANSWERS TO CORRESPONDENTS.

Preparing Phosphorus Paste, etc.

J. W. S., Owensboro', Ky., asks how drawn butter is made; 2, how to prepare phosphorus paste for the purpose of destroying rats and other vermin.

ANS.—Drawn butter is an admixture of melted butter and flour. 2. Take eight ounces of common starch and pour over it one pint of water; stir and pass through a No. 60 sieve into an enameled dish capable of holding a gallon, and add a pint and a half of water and 24 ounces of flour. Mix thoroughly, introduce 24 fluid ounces of glycerine and heat on a sand bath, stirring constantly. When a plasma begins to form, take it from the fire, but continue stirring. After a few minutes, reapply heat, stir and set aside to cool. Mix six ounces of the plasma gradually with eight ounces of water in a porcelain measure and set in water nearly boiling. When hot enough, drop in two drachms of phosphorus. When this has fused, agitate the whole thoroughly and introduce as much more phosphorus, repeating the operation until two ounces of phosphorus have been added. After this, thicken the phosphorus emulsion with more of the reserved plasma, and finally, incorporate all thoroughly with the remainder. Preserve in small, wide-mouthed bottles, protected from the air. Such is the receipe according to which the article is compounded by manufacturers, but it is seldom that farmers have all the necessary conveniences, and, perhaps, therefore, it would be better for them to buy the manufactured article, as, at the best, it is likely that they could themselves make only a second-rate paste. Phosphorus paste is largely used in California for poisoning squirrels and other noxious rodents, and in the RURAL of May 23d, 1877, a writer there gives his method of preparing it, as follows:—Take a five-gallon oil-can; fill it one-third with water, and set it on the stove until it boils. Then mix cornmeal and flour, half and half, and stir it briskly in until a stiff mush is produced. Add two pounds of sugar and let the can cool for ten minutes out-of-doors. Then take a stick of phosphorus in a pair of pliers and plunge it in the mush until it has all melted. Melting it in the mush, instead of in water, prevents it from settling, is more economical of phosphorus and produces a more thorough mixture. It is important that the mush should be considerably below the boiling-point, otherwise the phosphorus will take fire. When the phosphorus has been melted, wheat is added until the mixture is too stiff to be readily stirred. The wheat becomes swollen, absorbs the water and the mass can be conveniently broken into lumps of suitable size. Of course, when only a smaller quantity than the above is needed, the amount of each ingredient here mentioned must be diminished proportionately.

Raising Watermelons.

T. D. B., Greenville, Ky., says that he has a good market for watermelons, but that he has never been successful in raising them, and he asks for instructions how to do so; 2, which is the better plan—to manure a few hills heavily or to have more hills; 3, whether we would sell him seeds of the Voorhis watermelon and the Golden Rural tomato.

ANS.—1, Prepare the field as for corn. Let the hills be made six feet apart. Enrich them with well-rotted manure. Work the soil and manure together. Plant from four to six seeds—four are enough if all should live—and then cultivate until the vines cover the ground. As soon as the first leaves appear they should be dusted with plaster, fine-sifted coal ashes or soot, to prevent the depredations of insects. The soil should be a sandy loam or a well-drained clay loam. We know of no advantage to be derived from planting in *hills*, as many understand the word. A little mound of earth seems only to shed the rain and to expose the roots to the heat and drying influence of the sun. The earth thrown over the manure and seeds should be as flat as the surrounding soil. 2, No. More hills. 3, We have never *sold* a plant or a seed. Our seed and plant distributions are free to subscribers.

Maggots in Cheese, Etc.

Tyro, The Dalles, Oregon, asks, 1st, what to do with a cheese half of which only has been eaten, yet the rest of it is full of the liveliest sort of maggots; 2d, should an out-door dug-out root house have a chimney for ventilation?

ANS.—The maggots are the larvæ of the cheese-fly, and among steady cheese eaters are merely picked out of the cheese when the cheese is eaten. In England where cheese is largely consumed, maggoty cheese is not objected to by many persons, but cheese and skippers are eaten together with mustard and vinegar. If you can bring yourself to this state of mind, or rather of stomach, the cheese may be used; otherwise it will have to be thrown away, or at least that part of it that is infested, if any of it is free. You should have kept your cheese from the fly by covering it with paper well buttered, not only over the outside but the cut part of the cheese as well. 2. A dug-out root cellar should have provision for ventilation, but a chimney would not be the right kind of ventilator, unless it was provided with some arrangement for closing it tightly in cold weather.

Removing a Wagon Bed Easily.

W. H. D., Chesterville, O., asks for a plan by which the bed can be easily removed from a wagon by one man.

ANS.—To raise a wagon box or bed, put a strong screw ring in each side near each end of the box. Fix a strong hook, with a bolt and nut to secure it, through a beam overhead in the shed. To this hang a pair of blocks and tackle. A two or three-wheel block will be the best. Arrange four hooks on the ends of the two ropes and fasten the ropes together in the middle with an eye or ring so that each hook may fasten to one of the rings in the wagon bed, and the eye or ring in the middle of the ropes may hook on to the lower block. Then one man can easily raise the wagon box to the beams by hauling on the rope which is rove through the blocks. When the box is high enough, the loose end of the rope is fastened to a cleat or ring in the wall, or to the wagon box itself. The box is thus hoisted out of the way, and when it is wanted, it may be lowered on to the wagon again. Hay racks, wood racks, and wagon boxes of all kinds may be thus hooked up to the top of a shed. One set of blocks and tackle will do for all, by having a set of stout ropes and hooks for each box or rack, which may be fixed to the beams.

About Blount's Corn.

W. E. B., Spartansburg, Pa., says under date of Sept. 1, that his Blount's corn is 15 feet high and still growing at the rate of four inches a day, and he asks whether it will tassel this year, and when he may expect the tassels to show.

ANS.—By the date when this issue reaches our friend, it is probable that he himself will be able to answer the conundrum he proposes to us—provided he has a telescope of even moderate power with which to bring the tassels low enough to be distinguished. We heard excellent accounts of this variety of corn, and thinking it would be a benefit to our friends to try it in their several localities, we decided, after mature deliberation, to make it a supplementary free seed distribution, and in order that it should have a fair trial, we offered a liberal premium ourselves for a good crop of it, and secured other premiums from friends of the RURAL to insure the same object. We are testing it now ourselves on the RURAL FARM, just as our friends are doing in all parts of this broad country, and so soon as the corn crop shall have been gathered, we shall "sum up" the results of our own experience with regard to it and of that of our friends "Everywhere."

When to Plow for Corn.

H. K., Copper Hill—one of three in the country—asks whether anything is gained by plowing up the sod in the fall for corn.

ANS.—Time is gained, if nothing else, and if one expects to be pressed for time, the sod may be plowed in the fall. But corn succeeds best upon freshly-plowed ground, and in the spring the sod will have made a good growth which will furnish abundance of the most acceptable food for the corn. The usual practice is to plow sod for corn as late as possible in the spring, and plant at once on the fresh, moist ground. A general practice is usually based upon reasonable grounds, and unless there is good cause for it, it is not wise to make innovations. The writer's practice is to top-dress the sod during the winter with fresh manure drawn and spread as it is made, and plow the sod in the spring in strips, so that each day's plowing can be planted the next day. The top-dressing causes a good growth of clover to be plowed under. With fall plowing this advantage is lost.

Miscellaneous.

J. S., Eagle, Wis., asks whether a brass cylinder and a galvanized iron pipe will impart any harmful properties to water for drinking purposes—the water being "hard."

ANS.—Brass is a compound of copper and zinc, and vessels made of it have been for ages in extensive use in Eastern countries for culinary and other household purposes without any injurious effects. The best pumps made for supplying houses with water are of brass and we have never heard any complaints of any injury to health from their use. Galvanized iron pipe is merely iron pipe coated with zinc, or zinc and tin, and is the best pipe in ordinary use for conveying water. The quality called hardness in waters is due to the salts of lime and magnesia present either as carbonates or in the form of sulphates and chlorides. In the wells of several districts such waters readily oxidize simple iron pipe and "taste" of the metal, while their action on galvanized pipe is much slower. Probably the best pipe in such cases would be tin-lined lead or galvanized iron with a coating of tin secured by dipping the pipes in a bath of melted tin after they have been galvanized in the ordinary way. The metal then adheres much more firmly than if it had been applied directly to the iron.

A. E. C., Hudson, N. Y., 1st. Wishes to plant an orchard, and his soil being light and sandy, but not very dry, he asks the names of six varieties of Pears that would be likely to succeed in such a location. 2. Several attempts have been made there to raise peaches, but they have all ended in failures which have been generally attributed to the proximity of the river, a quarter of a mile away; he, however, thinks the want of success due to lack of proper care of the trees after setting, and asks our opinion on the matter. 3. He intends to put up a tight board fence on the north side of his orchard, and asks how far away from the trees should it be. 4. Wanting to study Latin at home without a master, he asks what book he should buy to help him along.

ANS.—Bartlett, Clapp's Favorite, Howell, Seckel, Beurré Bosc, Lawrence. If "not very dry," the soil should be drained. 2. Good care would insure healthy trees, but it could not prevent the destruction of fruit buds. The proximity to water is an advantage. 3. Any convenient distance will do on the north side; on either of the other sides, it should be far enough away not to shade the roots. 4. Andrew's Latin Reader and Grammar or Harkness's Grammar and Reader.

W. S. F., Kingston, Mass., wants to know how to raise Clerodendron from seed; she has had some given to her; do they require to be kept wet or dry, in the sun or shade?

ANS.—Sow the seed in a well-drained pot, filled to within three-quarters of an inch of the rim with a fine, light soil, such as a mixture of leaf-mold and sand; cover the seed thinly and lay a pane of glass over the pot. The pot should be placed in a warm place in the greenhouse or room, and the soil kept moist. When the young plants are old enough to be handled they should be planted separately in small pots and kept moist, warm and partially shaded. As they grow, richer soil and larger pots will be required, and plants large enough to flower should be potted in a mixture of peat, loam and dried cow or sheep manure, with the addition of a little sand. With regard to the four climatic conditions mentioned in the last part of the question, we would advise to give a judicious mixture, as either one administered singly, might prove fatal.

W. M. K., Washington, D. C., asks our opinion of the Shropshire Damson and the Wild Goose Plum sold pretty extensively in that vicinity last season by tree-peddlers.

ANS.—Downing says: The Shropshire or Prune Damson is an English purple variety, rather obovate in figure, but little superior to our common sorts. The Wild Goose is an improved variety of the Chickasaw, which is nearly as large as the Green Gage. Skin purple, with blue bloom; flesh juicy, sweet, adheres to the stone. Season last of July. We would not advise to deal with tree peddlers, unless they are known to be responsible agents of reliable firms.

R. T., Garratsville, N. Y., asked in our issue of Sept. 13, what is the cause of coated wool in sheep, and the question was then answered, as we understood it. The author of "History of a Poor Farm," however, writes that our correspondent, in his opinion, may have meant "cotted" wool instead of "coated." The former is a sort of felting of the wool and a matting of it down on the sheep's back, caused by wet weather and absence of yolk, by which the wool is felted together. It is a sign of poor condition of the animals.

F. H. D. Corning, N. Y., sends specimens of a flower and asks whether it is worthy of cultivation.

ANS.—This is the Virginia Clematis—C. Virginiana. It is a very rapid grower—is covered with small white blossoms in early August, and is now (Sept. 10th), rather showy in fruit, which consists of whirligig, feathery tails. It is not bad for covering stumps or out-of-the-way places.

J. W. M., Oregon, Mo., asks what is the proper name of what is thereabouts called Grass Wheat.

ANS.—We do not know.

M. B. McC., Beaver Co., Pa., sends a wild plant for name.

ANS.—Gentiana Andrewsii—Closed Blue Gentian.

R. T. Sparland, Ill., sends a leaf, and asks the name of the plant that produced it.

ANS.—It looks like Hibiscus moschentos.

SATURDAY, SEPT. 27, 1879.

THE LESSONS OF ADVERSITY.

ADVERSITY has its lessons in agriculture not less than in politics, medicine, finance, morals. Of the latter we spoke in a late issue. Of those to be drawn from the present agricultural adversity and distress in England we spoke at considerable length a week or two before. If that distress shall lead even remotely to a change or modification of the laws of inheritance and entail, of rental of farms and the compensation to be paid to tenants for the "betterments" they make, of forestry and game, etc., which seem to us Americans not only oppressive and unjust to tenants but most unwise even for the landlords,—if this be the result, then that adversity will not have been without its wholesome effect.

In the different parts of our own country, various forms of adversity have at different times taught their various lessons. In parts of New York, some thirty years ago, wheat raising became almost the exclusive industry; soil and climate seemed to favor, and it paid better for a time than anything else. Every available acre for a few years was put to wheat. Not enough stock was kept to return to the soil in manure any adequate proportion of the fertility exhausted by the successive crops. Of course, adversity followed, crops dwindled. The fly, the "winter-kill" (another name for poverty of soil) and the weevil made havoc. Men of our own acquaintance who had raised two or three thousand bushels of wheat annually, now harvested hardly as many hundreds, and were finally forced to abandon the industry entirely, until the land, as if under the old Mosaic law, had enjoyed its sabbaths of rest. The farmers learned the lesson before the land was exhausted, and now under a wiser system of mixed husbandry, with rotation of crops, and more cattle and sheep, and the freer use of clover and manure, and the careful husbandry of all animal manure, both liquid and solid, the fertility is restored and retained, and even wheat in many cases is yielding nearly its former abundant harvests.

In parts of Illinois the same lesson is hardly yet learned. It was deemed at first that the marvelously deep, black soil had fertility exhaustless, and that manure was needless. Corn after corn, and wheat after wheat were raised and sold off of the farms, the straw and stalks were burned or wasted, and even the manure made by the few head of stock kept on the farms, was not properly saved or used. That which collected about the barns was voted a nuisance and seldom carted to the fields. The joke used to be that when the manure pile grew to be larger than the barn, *the barn was moved to a new spot!* The rich gifts of nature in soil and climate even led to shiftlessness and slovenliness in farming. Of course, reverse would come in time, and already on many farms, and even in whole districts, diminished crops, and frequent failures are teaching that the lavish gifts of Nature are not to be abused or overestimated, and that industry, economy, tidiness, and thoroughly good farming bring their due rewards there even as in the older and naturally less fertile States.

In the dairy districts of New York and Ohio the farmers are learning a new lesson, or rather the old lesson slightly varied. The high prices of dairy products during and after the war led to over-production. In many sections dairying became the exclusive industry. Every acre was devoted to permanent meadow and pasture, and every animal was a cow and every gallon of milk was jealously taken to the cheese factory. The calves were "deacoued" and not raised. Scarcely an acre was plowed in whole townships, and the farmers bought flour and potatoes for their families and shorts and grain for their cows and horses. Ordinary and regular farm work almost ceased, except to milk the cows and cut the hay in summer, and feed the cows and cut the fire-wood in winter. With no regular, steady, well-directed labor, men grew shiftless; fences and farms ran down; old meadows ran out. Simple top-dressing did not bring in the lost seed. Plowing, manuring, judicious rotation, and reseeding were needed. Had the price of dairy products remained high, this wretched state of things might have continued till the farms were even worse run down. Reverse was needed, and the sudden and tremendous decline in prices set men to thinking. It was plain they could not make a living on the old plan, and there must be a change. The orthodox creed that "the cow is better than the plow," began to be doubted. The land long rested from wheat and other grain and vegetables was found to produce fine crops if properly tilled, especially when tile-drained. More plows and other implements for the *cultivation* of the soil, we are credibly informed, were sold in these dairy regions, in 1877 and 1878, than in *twenty years* just before. The adversity in dairying thrust three lessons before the farmers and forced them to heed them:—that farm labor must be regular, persistent, well-directed, and fairly distributed through the year, to meet due rewards; that over-production in any one direction is unsafe; and that in the long run a system of fairly divided mixed husbandry is the best.

But enough of special examples. In general, it may be said that adversity sets men to thinking. It jostles them rudely sometimes, out of the ruts they were mechanically following. It sets them to searching for the causes of failure or distress. It makes them students instead of automatons, men and not machines. It teaches that patient, thoughtful, persistent, well-divided, well-directed effort is sure of reasonable reward.

AN INFLUX OF LABOR.

A very tidal wave of immigration bids fair to overwhelm this country with laborers. The recent report of the condition of labor in European countries made by our State Department has shown that this country is a paradise for the workingman, who here enjoys, not only a measure of comfort, but one of liberty and freedom, unapproached elsewhere. The knowledge of this gained, not only from widely published statements to that effect, but from many years' experience of friends, relatives and neighbors who have found a home here, has created wonderful excitement abroad. The English miners' association, numbering 200,000 workmen, has determined to move hither as soon as possible. English farmers and farm laborers are preparing to come over by thousands. Russians, Swedes, Germans, French, and other Europeans are either coming with all their property and capital, or are preparing to come, and are disposing their affairs with that end in view. Even the Icelanders are abandoning their glaciers, their rocks, volcanoes and sporting geysers, and are coming here where they can still have all these with other more desirable comforts in greater plenty than in their native home. What will be the end of it? Who can forecast the result of this gathering of the nations in this continent? Doubtless as what has occurred in this way heretofore has tended to develop the best interest of the country, so hereafter, civil freedom, material comfort, and ease of position, which every inhabitant may enjoy, will, in the end, make good citizens of these foreigners and the nation will be benefited.

PAY YOUR DEBTS AT ONCE.

FOR years thousands of our farmers have been harrassed by heavy burdens of indebtedness, the interest on which alone has been a grievous annual tax upon their resources. Not a few have been forced to abandon to their creditors the farms in the improvement of which many of the best years of their lives were laboriously expended. Thousands of others are still threatened with a like disaster. Crops nearly everywhere this year are good. Owing to a very unusually wide extent of misfortune to foreign farmers, the prices for farm products here leave a fair margin of profit to those who have raised them. Farmers, therefore, will have more money this year than they have been accustomed to handle lately—probably more than they will handle for some time to come, for we can hardly expect a repetition of this year's disasters to foreign crops, and it may be our own turn to experience such a misfortune next year.

In view, therefore, of the oppression of indebtedness in the past, and of the anxiety and sorrow it has brought upon so many homesteads throughout the country, what better use can be made of whatever money each indebted farmer can spare from the proceeds of his harvest this year, than to promptly employ it to free himself from the load that for years has been an affliction and a menace to himself and those dear to him?

Earnestly, therefore, do we urge all our friends who may be in debt to get rid of it at once. We have lately said a good deal about the evils of getting into debt; much more can be said about the blessings of getting out of it. Now is the acceptable time for doing so. However urgent may be, in your opinion, the desirability of expending your money in other ways, there is none which will bring you and yours more lasting satisfaction and advantage than by using it to clear your homestead of indebtedness with its persistent tax and trouble. You can do so now, wholly or in part. Providence alone knows when you will be able to do so if this opportunity passes by unimproved.

BREVITIES.

THE Farmer says that Indiana is now rejoicing over the largest wheat crop ever secured in the State.

IT will be found that strawberry runners are growing freely now. If *large* fruit be desired another year, cut them off as soon as discovered.

THE London Garden (Aug. 30) contains a beautiful colored plate of varieties of Iris Kæmpferi, seeds of which we are offering in our next seed distribution.

THE volume of mercantile business, judged by clearing-house transactions—one of the best criterions—is nearly one-third greater now than at the same time last year.

"Is Life Worth Living?" is the title of a book lately published in London by William Hurrell Mallock: a pertinent query in that connection would be "Is Death Worth Dying?"

IN the single item of oxen and bulls, the importation into the United Kingdom from this country has increased in value from sixty thousand in 1873, to nearly six million dollars in 1878.

A WRITER in an English agricultural paper says that they are fast getting Anglo-Americanized over there, and that the best thing they can do is to annex the United States. Here is richness for you!

WHICH of our fairs did it? What? Why offered a premium for the best device for irrigating purposes and misspelt the word, "irritating," whereupon a hen-pecked farmer straightway entered his wife for that premium.

THE silk crop of France is not half an average one; the grain crops are short and business is not too lively, yet financiers there, instead of seeking quiet in view of rough times, are unusually busy launching speculative companies.

THE valuation of California has fallen off $37 million, being $547 million against $584 million last year. The new constitution, Kerneyism etc, are believed to have contributed most to the shrinkage. The tax rate now is 62½ cents on each $100 worth of property against 55 cents last year.

MARRIAGES ought to be pretty plentiful here this year, as statistics show, more clearly perhaps than anything else, that there is a constant relation between the number of marriages and the character of the harvest—abundant crops, frequent pairings; harvest scanty, weddings few.

JUST fancy! week before last we actually shipped 4,160,000 bushels of wheat to the European Continent from the Atlantic ports, and 2,936,000 bushels to the United Kingdom, besides sending across the Atlantic 480,000 bushels from California and Oregon, to say nothing of 808,000 bushels of Indian corn, 67,000 barrels of flour, and a large amount of barley, etc.

TUESDAY, the 16th, was a great day for Kansas, when the young giant celebrated its quarter Centennial. At Lawrence a vast multitude of sturdy farmers and others met to commemorate the occasion, while speeches and letters from some of the most distinguished men of the country did honor to the anniversary. Success, a brilliant success, to this vigorous young member of the Union!

FRANCE has the largest wheat area, in proportion to population, of any country in Europe; but while England's average wheat yield is from 28 to 30 bushels per acre, that of France is only 15½. An increase of one bushel an acre there would amount to 16,000,000 bushels. This small yield is attributed to poor cultivation, and, in the South, to the dryness of the climate in spring.

ON the 11th inst. a number of delegates from the tenant-farmers of Ireland, England and Scotland, left Liverpool under the auspices of the Canadian Government, to investigate the advantages for settlement offered in the Dominion and report the same to their constituents. Some of our Southern and Western States would find it to their interest to be equally wideawake on the subject of immigration.

THE walking mania is likely to have a revival again this fall and early winter. Crazes of this kind, like those of other sorts, partake of the nature of an epidemic, breaking out at a great number of places at the same time. The baker's dozen of pedestrians who have just started on a six days' tramp around the sawdust arena in this city, are likely soon to have a host of poor imitators all over the country.

OUR principal exports of cattle are to Cuba, Canada and Great Britain. During the first six months of this year the average price of cattle exported to Cuba was $17; to Canada, $46, and to Great Britain, $96. Cuba is supplied almost exclusively from the ganut herds of Texas and Florida; Canada draws her supplies from the West in a thin condition, and after fattening them, ships them mostly across the Atlantic; while those exported thither from this country are usually in prime condition and belong to the best class of animals.

THE growth of our exportation of cattle to Great Britain during the last five years is as follows:

Year ended June 30—	Number.	Values.
		Dollars.
1874	123	103,800
1875	110	73,300
1876	244	31,220
1877	5,091	546,839
1878	24,982	2,408,813

As the season of cold nights and bleak days is again at hand, we would once more remind our readers of the necessity of shelter for stock, and of timely preparations for winter. So much has been said, year after year, on this point that a reminder alone seems here necessary. Judging by the earliness of frosts in the Northwest, winter promises to visit us unusually early this year, and no time should be lost in getting everything in good order before its arrival.

AMERICAN people of all shades of political faith are likely to extend a hearty welcome home to Gen. Grant, who has just landed in San Francisco from his triumphal trip around the world. Never has any personage, royal or famous, met with so hearty a reception from all classes in every land he has visited; and wherever he has gone, his presence has directed the attention of the people to this country, its advantages and resources, more forcibly than could have been done in any other way.

WE hear so much vague laudation of Old Country folks, and equally vague depreciation of ourselves, that it is pleasing to come upon some close figuring with regard to morals of both sections. From these it seems that here 47 million people consume yearly, 450 million dollars' worth of liquor, while in the United Kingdom 33 million people consume 687 million dollars' worth. We consume 1,021 gallons of alcohol per head, against 2.37 in Great Britain; of beer and wine, Great Britain's consumption is 3¼ times ours.

THERE seems to be a constant shifting of our population. In the political discussions now taking place, several startling figures in this connection have been vouched for as the results of careful statistical research. For instance, Ohio has received from the East 750,000 of her population, and parted with 770,000 to the West, while the census of 1870 showed that there were no less than 138,000 Southern-born residents of that State. A comparison of the statistics of a number of States proves that where one Northern man goes South to live, five Southern men come North to stay.

THERE is an increase of over 100 per cent. in the number of cattle exported from this country during the first six months of the current fiscal year, as compared with the corresponding months of the preceding year, and an increase of 270 per cent. in the value of such exports. The value of exports of cattle during the whole of the year ending June, 1878, amounted only to $3,896,818; whereas the value of such exports during the first six months of the current fiscal year, amounted to $4,974,328, or $1,077,570 more than the exports of the whole of the preceding year. A fine show this for our cattle trade, hampered as it is by European restrictions on our importations!

THE Germantown Telegraph says that "the last new plan for raising wheat is to sow one quart of oats to two of wheat, so that when the frost nips the oats, it falls and acts as a cover or mulch for the wheat. On a trial it is asserted that the crop of wheat was excellent, while in an adjoing field where the old mode was followed, it was very poor. The fact is that the former crop of wheat was so well-cultivated, that it proved to be a good crop in spite of the oats, not on account of it. Winter wheat requires no cover; and if it did, it would hardly be benefited in the result by the oats eating up one-half the fertilization of the soil." We think some account should be taken of what the oat leaves, roots and stems return to the soil.

WASN'T it Rochefoucauld who cynically remarked that there is always a dash of pleasure in learning of the misfortunes of one's friends? There are some to-day so hard-hearted as to agree with the old fellow in this opinion, especially in the case of those who gain by their friends' mishaps; and in the latter case there is probably some truth in the cynicism. While regretting the late "hard times," among our transatlantic cousins, it is hard to check a sense of satisfaction, because they've helped to make easier times here. The Report of our Bureau of Statistics for the year ending June 30 last, shows that the total exports of our merchandise and specie to Great Britain amounted to $363,013,646, while the total of our imports from that quarter, during the same period, amounted to only $111,971,766, an excess in our favor of $251,041,880. In other words, our exports to the United Kingdom were more than three times our imports from that country.

HITHERTO, ever since the outbreak of the late war here, with hardly a single temporary exception, every month has seen this country drained of its gold to pay interest on our debts in Europe, and for goods purchased there, etc. Not only is a vast amount of United States bonds held there on which interest must be paid by the National Government, but Europeans also hold much of the indebtedness of our States, counties and municipalities, as well as a large proportion of our railroad bonds, and stock in a multitude of manufacturing and other industries here, on nearly all of which they are drawing interest. In addition to these drains upon the specie of the country, a large amount of gold earned here is spent abroad by our absentee citizens. In spite of all this, however, so great have been our exports of late that, in addition to paying for all our purchases in the European and Asiatic markets, and for a large number of our bonds held by foreigners, the surplus price of them now causes a heavy importation of gold thence into this country. Since the middle of August this has amounted to $22,000,000, while $6,000,000 more are on their way hither, mainly from Paris, and it calculated that we shall have received from 40 to 50 million dollars specie from Europe by the 1st of next January. Fine times ahead!

Literary Miscellany.

GETHSEMANE.

BY ELLA WHEELER.

In golden Youth, when seems the Earth,
A Summerland for singing mirth,
When souls are glad, and hearts are light,
And not a shadow lurks in sight,
We do not know it, but there lies
Somewhere, veiled under evening skies,
A garden all must sometime see;
Gethsemane, Gethsemane—
Somewhere lies our Gethsemane.

With joyous steps we go our ways;
Love lends a halo to the days;
Light sorrows sail like clouds afar;
We laugh, and say how strong we are.
We hurry on, and hurrying, go
Close to the border land of Wo,
That waits for you and waits for me;
Gethsemane, Gethsemane—
Forever waits Gethsemane.

Down shadowy lanes, across strange streams
Bridged over by our broken dreams,
Behind the misty caps of years,
Close to the great salt fount of tears,
The garden lies. Strive as you may,
You cannot miss it in your way;
All paths that have been, or shall be,
Pass somewhere through Gethsemane.

All those who journey, soon or late
Must pass within the garden's gate—
Must kneel alone in darkness there,
And battle with some fierce despair.
God pity those who cannot say,
"Not mine, but thine," we only pray,
"Let this cup pass," and do not see
The purpose of Gethsemane;
Gethsemane, Gethsemane—
God help us through Gethsemane!

IN FOLLY'S NET.

CHAPTER V.

"DUST IN HIS EYES."

Miss McLeod walked straight up the broad carpeted staircase, to Lady Sholto's pretty drawing-room, and the Earl followed her in a rather ominous silence, which Jean did not quite care to break until they were safe from eyes and ears in the privacy of the drawing-room.

It was a very elegant apartment, hung with the palest blue satin, dotted here and there with rosebuds; a most charming Dubarry combination which all Lady Sholto's visitors admired greatly. The windows, which opened on to the ground, were hung with white lace curtains without, and within, with delicate blue satin with a border of rosebuds running all round them; the chairs were of the softest, most luxurious description, and in the center of the room was a cushioned *causeuse*, bearing on its center pillar a most exquisite bouquet of flowers, chiefly pale pink roses, and their green leaves. A fire was burning on the hearth, although the day was soft, and mild enough, and the windows were opened to admit the soft summer breeze.

Miss McLeod walked straight across to the fire, and stood there in silence; and as the Earl came up behind her, she leant back her saucy piquante face and said with the sweetest intonations:

"Well, Archie."

"Well, Jean."

"What are you looking so sober about? Are you angry with me?"

"Do you not think I have cause?" he said, gravely.

"Cause, of course not — most decidedly not; why should you? What cause have I given you?" she said, laughingly.

"Nay, if you do not know, I cannot tell you," he answered, gravely and a little sadly now.

"What have I done?" the girl said, with comic pathos.

"Jean," he said, sternly, "do you think it a right thing for you to drive that man's horses as you have done to-day?"

"Right!" she repeated, haughtily. "I really cannot see the harm."

"You are trifling with me, Jean," he replied, in displeasure. "Try and be serious for a few moments. Surely you must have known that though I so seldom lay any embargo on your actions, such a course could not fail to be displeasing to me."

Jean did not answer. There was the same little lurking imp of pride in her heart, making her eyes flash, and her lips curl in the haughtiest curves they could take.

"Why did you do it, Jean? It would be unlike you to do it from a deliberate impulse to give me pain," he said, in a moment.

"You do me so much justice then," she said, carelessly. "I did it—I did it—indeed, I can hardly say why—probably *pour passer le temps*—certainly for the pleasure of driving such charming horses."

She threw herself into an easy-chair as she spoke, looking up saucily.

"But, Jean," began the Earl, "it is possible to carry such things too far you——"

"Oh! pray don't begin to preach a sermon on flirtation," she said, interrupting him. "It is rather too late in the day. You knew I was a flirt before you asked me to marry you; if you disliked my ways you ought not to have done so."

There was a moment's silence; then Lord Ivor spoke in a tone of mingled displeasure and sorrow which went to Jean's heart:

"I loved you too well, Jeanie, to dislike any of your ways, as you call them, and I trusted you implicitly; still, as I say, you may go too far, and I am sure you would not wilfully give me pain."

"But this is a mere trifle, Archibald. You are so inconsistent; you say you have trust in me, and for a bagatelle like this you are vexed."

"This is not a bagatelle, Jean," he said, coldly (for though a man's anger is less easily raised it is also less easily laid than a woman's, and though Miss McLeod desired an armistice, she was too sure of the Earl's love for her to show that she did so). "I do not choose to have it said that my promised wife was driving about London with Mr. Blair."

"You do not choose!" Jean said, growing very pale. "Your tone is a strange one."

"Is it?" he retorted, angrily. "I grieve that it should be so, then; but in this matter I must be obeyed."

"Obeyed!" repeated Jean.

"Listen, Jeanie," said Lord Ivor, more gently, and taking her hands in his. "Must I believe that you love me so little as to disregard my wishes entirely?"

"Certainly not," she said, haughtily. "When your wishes are reasonable, you will always find me ready to accede to them; but I do not *choose* to be treated as a naughty child, and ordered to do this or to do that."

He dropped her hand, and turned from her in anger. Jean hesitated a moment.

"What is your objection to Mr. Blair?" she said, quietly.

"I have no objection—at least not much—to him personally," answered the Earl, oddly. "But I say that, in your position as my promised wife, you ought not seriously to encourage his or any other man's attentions."

"Oh! dear," and Jean shrugged her graceful shoulders. "Now I shall have a lecture on the duties of wives, I suppose. Well, I should like a little prospective information."

Then, changing her tone, she drew nearer the Earl, and slipped her hand caressingly through his arm.

"Don't let us quarrel," she said, softly; "it would be so disagreeable, Archie. Why, only last night you said you trusted me, and if you have the perfect faith in my love for you that you ought to have, you must have perfect faith in my actions. Come, kiss and make friends."

But the Earl's grave face did not relax, and Jean's color mounted angrily to her brow. She withdrew her hand from his arm with an impatient gesture, and turned to leave the room.

"You are most unjust and unreasonable," she said, passionately. "You know as well as I do that there was no harm in my drive home with Mr. Blair; and in future," she added, as she put her hand on the handle of the door, "I will ride and drive with him as much as I like—indeed, if the fancy takes me, I may even marry this objectionable Mr. Blair."

As the words were uttered, the door opened from without, and disclosed Lady Sholto, Miss Crawford and Mr. Blair himself; and the expression on their faces showed pretty plainly that they had heard Jean's little speech.

"Mr. Blair has come back to have some tea, Jean," Lady Sholto said, rather nervously. "Archibald, is that you? We have had such a charming afternoon."

Lord Ivor turned from the fire with a few commonplace words of pleasure at their enjoyment and return, his face covered with that mask of smiling indifference which most people wear in society sometimes; and Jean returned into the center of the room, with no remains of her late annoyance in her face, save that her head was held a little more haughtily than usual, and that a bright spot of angry color burned on each cheek. In a few minutes Lord Sholto appeared, and then the conversation, which had flagged slightly after the awkward *contretemps*, became more lively and general; and when, in about half an hour, Mr. Blair took his leave, Lord Sholto pronounced him a very agreeable, amusing fellow.

"You must ask him to dinner, Flo," he said to his wife.

"He is leaving town almost immediately," said Jean, suddenly; "going to Scotland. So you can put off your hospitality until you go to Sholto Hall."

"So I will, little lady," said his lordship, looking over at her with a smile. "You handled those chestnuts admirably this afternoon; there are not many women in London who would have done as well."

"Did you drive home in Blair's phæton, Sholto?" said the Earl, as Jean swept Lord Sholto a saucy *reverence*, and sailed out of the room.

"Of course I did. Capital horses he drives. Is that the dinner-bell? Vanish, Ida. Remember, Murray is coming to dinner."

For some reason or other Collins, Miss McLeod's maid, found her mistress very difficult to please in her dressing that evening; and although she was generally the least vain of belles, she did not seem satisfied with her appearance when her toilette was completed.

"Are you sure my hair is high enough?" she asked. "Put the flower in more to the left, Collins."

And again:

"I don't like the effect of those turquoise ornaments, Collins. Give me my pearls. No; I won't wear the pearls; I shall wear the cameo set Lord Ivor gave me."

And so on, until Collins was not a little relieved when the toilette was completed, and Miss McLeod stood before her pier-glass arrayed for conquest.

"He was very cross, but I was very provoking," she said to herself, as she went down stairs a brilliant vision of shining white silk and lace. "But I was in the wrong, so I must apologise. Dear old Archie, so much too good for such a worthless flirt as I am."

Lord and Lady Sholto and Miss Crawford were in the drawing-room, and Captain Murray, who was the only guest that evening, was coming upstairs, but when Jean entered the drawing-room her betrothed was not there, and for a moment the girl's heart stood still with a sudden fear that the Earl was really vexed; but Ida, seeing the sudden paleness and agitation, said in a low voice, as she passed Jean to greet Captain Murray:

"Lord Ivor is on the balcony," and Jean crossed the room and disappeared behind the lace and satin drapery, shading the window.

Lord Ivor was standing, leaning over the railing and though he heard the soft rustle of Jean's silken robes he did not turn his head, nor, when she put her hand softly through his arm, did he make any answering caressing movement.

"Archie, will you forgive me?" whispered Jean, with a tremor in the low, sweet voice.

He made no answer.

"Archie, I am very sorry," and the low tones were very unsteady now. "Won't you even look at me, and see how sorry I am?"

Such pretty pleading, was it in the power of mortal man to resist it? certainly not in Lord Ivor's, for he put his arm round her and drew her fondly to his side.

"Why did you not tell me that Sholto drove home with you?"

"Because it was no justification of my folly," she answered, frankly. "I believe he only came because he knew you would not like me to drive home with Mr. Blair. Archie, I did not mean to vex you."

"Own that you were very naughty," said the Earl, drawing her nearer to him, and looking down tenderly at the sweet face.

"Confess that you were very cross," Jean replies, with a touch of her old *espieglerie*.

"I was very cross."

"I was very naughty."

Both laughed, and Lord Ivor, stooping, kissed the sweet lips which made confession.

"So you are going to marry Mr. Blair, sweetheart?" he said, smilingly.

"Will you give your consent?" said Jean, laughing in her delight at that reconciliation which is not inaptly called "the feast of love."

"You had better not inquire," answered his lordship, as they went back into the drawing-room, little thinking that a day was not far distant when Jean's light words would come back to her with bitter significance, and when she would wish—ah! how vainly—to have them recalled.

CHAPTER VI.

"I detest that fellow, Kingston!"

The speaker was Mr. Blair, standing at his club window, three or four days after his visit to the Botanical Gardens. He spoke to Mr. Kingston, his *fidus Achates pro tem.*, and he spoke of Archibald, Earl of Ivor, who chanced to be standing on the steps of the club-house talking to one or two men.

"Most men do, when they have known Jean McLeod many days," said Harold Kingston, laughingly. "They are apt to see him through green-tinted spectacles."

"Pooh! it is not that, of course," said Andrew Blair, contemptuously. "But I hate those proud ways of his, so awfully high and mighty, as if he were going to carry all before him."

"He does most things he undertakes," said his friend, indifferently. "So would most men with physique, twenty thousand a year and an earldom at his back."

Mr. Blair muttered an execration, which made his friend stare.

"What makes you hate him so, Blair?" he said, curiously. "He does not interfere with you?"

"Something antagonistic, I suppose," said Blair, carelessly. "I never did like him. When he was a bit of a lad he gave himself airs. Now——"

"He is engaged to a very charming girl, in whom Mr. Blair has a very great interest," said Harold Kingston.

"And who has quite sufficient interest in Andrew Blair to make him a dangerous rival," laughed Blair, who was cutting off the end of his cigar.

"I dare say," replied Kingston, who had a very honest admiration for Mr. Blair; the admiration of a rather weak nature for a resolute, determined and unscrupulous one. "By-the-bye, Blair, is it true that Miss McLeod drove your chestnuts home from the park the other day?"

"Not from the park, my good fellow, but from the Botanical Gardens, and a very good whip she is. Just ring for a sherry cobbler, old man, and I'll tell you all about it."

The sherry cobblers were brought, and Mr. Blair, leaning back in his easy-chair, with an air of nonchalant complacency, told his story of Jean's unlucky drive home with him.

"The cream of the little adventure," said Mr. Blair, puffing slowly at his cheroot, "lies in this—its sting is in its tail, my dear Harold. Just as we pulled up at Lord Sholto's, who should come up in a hansom but the *fiance*. He looked furious. Miss Jean took it very coolly; but I saw that she was a little apprehensive of a quarrel, so I took leave as quickly as I could, and they went in together, to discuss the subject, I presume."

"This is interesting," said Harold, sipping his sherry meditatively. "Pray go on."

"Well, I went on my way, but just near the Albert Gate I met Lady Sholto's barouche; she stopped.

"Did not Miss McLeod keep you to have some tea, Mr. Blair?" she said. "Pray, come back with us, if you have nothing better to do."

"Of course I had nothing better to do, so I came back with them; and just as we reached the drawing-room door, we heard Miss Jean's voice, speaking as if she were not too well pleased.

"Indeed, I may take it into my head to marry this objectionable Mr. Blair," she said.

"By Jove! how furious Ivor must have been."

"Of course we all heard the words, although we all pretended we did not. We found his lordship looking, I must say, remarkably cool and composed; but his lady-love's eyes were more like stars than ever, and all her pretty color seemed to have concentrated itself in one spot on her cheek."

"Sounds like a magazine story," said Harold, laughing.

"Yes; and like most magazine stories, it is 'to be continued,'" said Andrew Blair, rather grimly, as he flung away the end of his cigar and rose from his lounging chair. "What are you going to do this afternoon, Kingston?"

"I am going to Burlington House to see the pictures. And you, *mon cher*?"

"I don't know; I am going to stroll down Bond street just now; I have some purchases to make before I leave town."

"Don't forget our Richmond dinner to-night," said Harold, calling after him as he turned to leave the room.

"No chance of that," said the other, laughing. "By-bye for the present."

And while Harold Kingston turned his face to towards Burlington House, Mr. Blair sauntered off in the direction of New Bond street, with an expression of deep thought upon his handsome face, and his mind so pre-occupied that he had no leisure to use his eyes and admire the many pretty women and charming costumes which he passed on the way.

As he sauntered on, his thoughts went back over a space of twenty years, and he was a boy again—a bold, dashing, dictatorial, bullying Etonian, full of life, health, and spirits, giving willing respect and obedience to no one, and tyrannising to the top of his bent over the younger boys whom chance and their own ill-luck threw in his way. No wonder that Andrew Blair, of Blair Gates, was no favorite among his fellow collegians. Big, strong and handsome as he was, plentifully supplied with pocket money and lavish in his expenditure, clever, bold, daring and heedless, he was in almost every particular a lad likely to become the hero of a school-boy faction, the head of some party, but, strange to say, he was not so. All his brilliant qualities, and they were many, were counterbalanced by a leaven of cruelty and oppression, which the boys were not slow to perceive and dislike; so that Blair's partisans were few and not taken from the better class of boys.

Looking back, Andrew Blair vaguely realized this—realized it with a pang of anger and vexation even after all these years; he remembered the jealousy and hatred with which he had regarded the more popular boys, and the way in which he made his fags suffer for his want of popularity. And as he strolled on there came before him clear as daylight, a scene in that vanished school life.

A retired part of the playground, out of the view of any authority, where no one was likely to interfere or discover any misdemeanor, a little dog, half dead with fright and pain, and some half dozen schoolboys with himself, Andrew Blair, at their head, throwing stone after stone at the wretched little animal, which was fastened to a post, as an illustration of the manner in which the martyrs of old met their deaths. For some short time this abominable pastime had continued uninterrupted, when another personage appeared upon the scene—a tall, slender boy of twelve or thirteen, with big, gray eyes and clustering curls of fair hair, who came running up, and, perceiving their amusement, burst into a storm of anger and contempt, while the handsome, aristocratic young face colored crimson with anger and distress.

"You cowards, how dare you!" he cried, passionately, flinging himself before the ill-used animal. "How can you be so cruel! Leave off, will you, or I'll go straight to Mr. Munster and tell him."

"Sneak! sneak! sneak!" shouted three or four voices. "Tell-tale—tell-tale!"

"I'd rather be a tell-tale than such cowards," the boy retorted, manfully. "I say, leave off, there's good fellows. Blair, don't let them—how can you! Your own little Tomtit!"

"By what right do you interfere, youngster?" said Andrew Blair, contemptuously. "Out of the way, I say, or you may get hit instead of the dog."

"I don't care," panted Lord Ivor, in his distress. "Stone me if you like, but leave the dog alone. Cowardly brutes as you are."

The words had hardly passed his lips when a stone came whizzing through the air and struck him on the cheek; the boy stood his ground manfully, although the pain and dizziness caused by the blow turned him sick and faint.

"Cowards," he cried again; then his strength gave way, and, staggering a pace or two, he fell forward fainting on the ground.

Andrew Blair, twenty years after, saw it all as plainly as then. he remembered the beautiful young face when they had raised him, the closed eyes and pallid lips, the golden curls, and the cut upon the fair round cheek.

"Served him right for interfering," he had said at the time; but it had not ended there, for all the school sent Blair to Coventry for the rest of the time; and his master, whom some garbled rumor had reached, reprimanded him severely and publicly, and that reprimand rankled still in his heart, and his dislike to Lord Ivor existed still, after all those years.

"If it had been any other man," he muttered, *sotto voce*, "I might have given her up, for after all, I, as an Englishman, don't care for stealing my friend's sweetheart or wife; but if I could win her from him, it would wipe out that old score. It will be no easy matter, though, especially surrounded as she is by his people; but, as sure as I live, I will make Jean McLeod my wife, by fair means or foul. She is charming, and well worth trying for; and if the game is a dangerous one, I risk nothing but failure. I can only lose her at the worst. I risk nothing," he repeated over and over again. "Emily will be furious, perhaps; but of course I never meant to marry her. How can I win her? How? how? 'All is fair in love and war.' I will leave no stone unturned. My Lord Ivor, look to yourself, a wolf is after your ewe lamb, and if I judge rightly, she is only too willing to become his prey. Bah! that's an ugly word under the circumstances."

The dinner-party that night at the "Star and Garter Hotel" was a large and brilliant one, and Andrew Blair was one of the most brilliant of the *convives*; he was in the highest spirits, and Lord Sholto, who was of the party, was confirmed in

his opinion that he was a very agreeable man, and as they drove back to town on the top of Lord Beecher's drag, he gave him a very cordial invitation to join the party of friends who were to assemble at Sholto Hall for the shooting season, an invitation which Mr. Blair accepted with an eagerness and *empressement* he could not quite conceal, and which raised in Lord Sholto's mind a doubt as to its wisdom, as he remembered the admiration Mr. Blair had shown for Jean McLeod, and the apparent charm he possessed for his brother-in-law's *fiance*.

"I hope Flo won't mind," he said to himself, rather ruefully. "One must be neighborly, and Blair Gates is not more than ten or fifteen miles from Sholto Hall."

Lady Sholto, however, did not mind, for the reconciliation between her brother and Jean had been so complete, and Jean's pretty tenderness to her *fiance* so charming that her fears had been allayed, and she said that Mr. Blair would make a very agreeable addition to their party, as well as Captain Murray, who had promised to get six weeks leave and spend it with them, and Lord Sholto, as he kissed his wife, wished heartily that this stupid London season were well over, and that it was the 10th of August, that they might all take wing for the Highlands and make havoc among the grouse on the moors.—[*To Be Continued.*

SCRAPING COTTON.

Oh! de noon-time, chillen, is creepin, dis way,
We'll soon hear de dinner horn blow.
Oh! take dem tie-vines—take 'em, I say,
An' pull for de end ob de row.
Oh! times a rollin' on!
Oh! times a rollin' on!
Slay de grass-cross-ways, clip de weeds clean,
Kase time's a rollin' on!

The clouds am a risin' way off in the sky,
I spec' it's gwine to rain pretty soon;
Hit's a mighty good sign when the fish-hawk cry
About dis quarter ob de moon.
Oh! time's a rollin' on!
Oh! time's a rollin' on!
Keep yo' hoes a dancin', handle dem blades,
Kase time's a rollin' on!

Oh! bend to yo' task and wrastle wid de sun,
Don't you mind de sweat a droppin' down;
Des peartin' up quick, 'till de work's well done,
De eatin' time'll soon be around!
Oh! time's a rollin' on!
Oh! time's a rollin' on!
Yonder comes de boss down de little turn row,
An' time's a rollin' on.

Oh! de lightnin' flash an' de thunder speak low,
De black crow's a sailin' wid de win';
Dah ain't a single sign of de crooked rainbow
At de place whar it ought to hab bin.
Oh! time's a rollin' on!
Oh! time's a rollin' on!
Let yo' muscles slip an' de goose-grease fly,
Kase time's a rollin' on!

An' now we 'lustrate to de po' sinner man,
By singin' him dis little song,
To take mighty care dat he aint behind han'
When de las' thunder clap come along!
Oh! time's a rollin' on!
Oh! time's a rollin' on!
Kick de debbil end ways, don't forget to pray,
While time's a rollin' on!

BOOKS RECEIVED.

A Manual of International Law. By EDWARD M. GALLAUDET, Ph. D., LL. D. New York: A. S. Barnes & Co.

THE study of international law, though of the highest importance to a correct understanding of modern history and politics, is almost entirely neglected except by specialists, and is nearly as unfamiliar to the average reader as Sanscrit literature or the antiquities of Cambodia. The cause of this is obvious. The text-books on the subject are usually voluminous, expensive and dull. The volume before us has been prepared with the design of furnishing a cheap and convenient manual for educational purposes, and on this account alone would deserve attention. We may also commend it for the interesting manner in which the subject is presented. Prof. Gallaudet begins with a brief account of the progress of international law from the first traces found in Grecian history to the present time. We should have been pleased if that part of the introduction relating to times anterior to the discovery of America had been more complete, and think that a few pages devoted to the general practice of the nations of Western Europe during the middle ages, as to privileges of heralds and those of the clergy, might have been made interesting. This code, a compound of ideas derived from feudalism, chivalry and Christianity, though frequently disregarded, was sometimes appealed to successfully by the vanquished; but, like all other codes supported only by public opinion, it was but a feeble protection where great interests were involved. The history of the law of nations subsequent to the discovery of America is a very valuable feature of the book, but we notice one statement from which we must dissent. The author dates the military and naval decline of Spain from the Seven Years' War. Most students of history will, we think, agree with us that the Spanish Empire had declined very decidedly before the commencement of the eighteenth century. Had it been otherwise, we could not account for the ease with which invading armies traversed Spain during the War of the Spanish Succession, and the capture of Gibraltar could never have been effected as it was.

The first chapter is on the general principles and sources of international law. This is essential to the completeness of the book and seems to cover the ground pretty thoroughly; but the second chapter which treats of the essential attributes of a state is less abstruse and, to our mind, much more valuable. What gives this chapter peculiar interest to the American reader, is the bearing it has on the questions brought up by the recent Civil War and the relations of the States to the federal government of our country. We think a few illustrations from the constitution of the United States of Columbia, might have been introduced with advantage, as this is as near the ideal of a federation as any state in existence. The "Monroe Doctrine" is frequently misconstrued, and Prof. Gallaudet's remarks on this point deserve attention. The third chapter which treats of the rights, powers and duties of States in a time of peace should be studied carefully on account of the important commercial interests involved. The general principles are stated with brevity and precision, and the illustrations are well-chosen. The section relating to naturalization might have been enlarged considerably with advantage; but is valuable as it stands; and that on extradition will be read with interest in the light of several important cases which have occurred in recent years. The right of exterritoriality and the privileges and duties of diplomatic agents and consuls are accompanied by historical facts, which will be new to many readers. The next chapter treats of the rights, powers and duties of States in time of war. We almost uniformly agree with the views expressed by the author, but will except the following points; During the Franco-German war, the German military authorities, finding that attempts to wreck trains were frequent, placed prominent French citizens on the locomotives as hostages. This is condemned by Prof. Gallaudet. Now, to our mind, the wrecking of trains or placing obstructions on railroads tending to that result is no legitimate military operation, and the measure adopted by the Germans was (as tending directly to prevent this, and as only exposing the hostage to a danger shared by his captors) justifiable. The condemnation expressed for the burning of the palace of the Emperor of China by English and French troops, is not as severe as it might well have been. This act of vandalism is scarcely paralleled in this century.

It was not necessary as a measure of warfare as the situation was not, under the circumstances, of strategic importance; it was not on account of the value of the property as this was entirely destroyed; besides, the emperor was a fugitive and the war was practically at an end. Accounts from British sources including the report of the officer (Lord Elgin) responsible for this action disclose its motive; it was done in revenge and from a desire to insult the misfortunes of Hien-fung, and by this humane process obtain satisfactory terms. Again, the indemnities demanded by Prussia from France and other states seem to us the most rational means of terminating a successful war. The fifth chapter treats of neutrality and includes a very interesting history of the subject, in which special prominence is deservedly given to the Alabama claims, and the Virginius affair. The last section of the volume is devoted to maritime prizes, and presents the facts in relation to these as well as possible, considering the diversity of legislation among nations in this respect. Taken as a whole we can commend the book to all who wish to include international law in their reading; even those who possess more comprehensive works on the subject will find it convenient for reference; and its conciseness, apt illustrations and the agreeable style of the author will commend the book to the general reader.

The Voice of Worship: By L. O. EMERSON. A collection of Music for Choirs, Singing Schools, and Musical Conventions.

The members of Choirs and Singing Classes, like other people, like what is new and fresh, although the new may not be better than the old. Hence Mr. Emerson's books, which appear with a certain regularity, and which are in every respect first-class, are always heartily welcomed. "The Voice of Worship" is somewhat smaller than previous Church Music Books by the same author, but is of lower price, its "nine dollars per dozen" carrying us back to prices "before the war." It has about 175 Psalm Tunes, 60 Anthems, and about as many Glees, with 100 exercises, Solfeggios, and easy tunes for Singing School use. The Anthems will furnish opening pieces for a choir during the greater portion of a year. The new Psalm Tunes will, it is to be hoped, enable us to hear some variety of singing, which will partly relieve the monotony of the ten or twelve well-worn congregational "airs," which are getting to be a little wearisome to musical ears, and the whole three or four hundred melodies in the book furnish abundant material, with which a wide-awake Singing School Teacher may make his winter classes a constant delight to all comers.

MAGAZINES.

GOOD COMPANY, NUMBER ONE, is a first and inviting issue of a new volume, with which subscriptions, *which should be sent now*, should commence.

The cover is new in color and design, both in excellent taste, and the latter *sui generis* among magazines. It is the work of Mr. E. J. N. Stent of New York.

After a charming bit of poetry by Lucrece, come some pleasant pages from Mr. Charles Dudley Warner, entitled, A Wilderness Romance. Next there is an account of Hospital Work in New York, carefully done and readable, by Mr. William H. Rideing. Following this are a sketch from life by Mrs. Harriet Beecher Stowe, and some verses by Miss Lucy Larcom, characteristic and therefore good. Miss Larcom has a second poem of one verse near the end of the number.

A gentleman who resided for several years in Japan gives a *resume* of the maxims of their social code. It is entitled The Politeness of Ogasawara.

Several contributions relate to foreign lands:—In the Fatherland, by a lady several years resident in Germany; A German School; and All Day Long in Paris, a pen picture of such a day as thousands of Americans have spent this summer.

For stories, Mrs. Kirk, who writes over her maiden name, Ellen W. Olney, has Mr. Scattergood's First Parish; Mr. Horace E. Scudder has, Do Not even the Publicans the Same?, and Elizabeth A. S. Chester furnishes Along the Line; all good specimens of their respective authors' work.

In The Laborer and his Hire, anonymous, a sketch from life, an intelligent factory operative gives his ideas as to the condition of his class. Something to Do, also anonymous, is by a well informed and competent person, who suggests a course at one of the training schools for nurses as well adapted to many young ladies who in these hard times want preparation for remunerative employment.

The other contributions include, A Committee of Five, a discussion of current fiction in the form of a sketch, by Mr. E. C. Gardner; Is there Not a Lie in our Right Hand? by Mrs. Edward Ashley Walker; Nature and Revelation; and verses by Mrs. Margaret J. Preston, Mrs. Julia C. R. Dorr, and Mrs. Mary Bradley.

The number concludes with The Editor's Table and "Talks."

JAPANESE POLITENESS.—The Japanese are born polite. Their parents were, and these in turn, came from centuries of polite ancestors. As an infant, the native's soft bones and waxen mind took shape from the national mold. From his mother's apron-strings—no figure here—he passed into the judicious care of elderly gentlewomen, learned in deportment, who instructed him, through years of pupilage, till proficient in all the niceties of an etiquette which, as we shall see, approached to the character of an exact science. Arrived at years of discernment, he could not fail to perceive that he not merely should be but must be a gentleman. Decorum was a part of his duty as a citizen, and rudeness a breach of the peace, if not indeed a capital offense. A due observance of the ceremonies was statutory law, and violation of them a misdemeanor which rendered the offender liable to the severest penalties which the linked tyrannies of law and fashion could devise. These regulations covered every relation of society and extended beyond to dictate the etiquette of devotion. Even the gods were to be worshipped in good taste.

The operation of this singular social code resulted in as beautiful a science of manners as the world has ever seen. As nowhere have manners been held in higher esteem, or more studiously cultivated, so never have they been brought to a nicer perfection in any age or country.

The relation of good breeding to goodness we may leave to the metaphysicians. We all feel the advantage which a polished address and culture give the possessor of such accomplishments. At the same time we can see how possible it may be that the very "prince of darkness is a gentleman." There is no scoundrel, after all, like the scoundrel in broadcloth. That the Japanese themselves perceive there is no necessary connection between formal and real courtesy may be seen from one of their popular maxims, which says that "Those skilled in speech and manners have little kindness."—[*H. R. Elliot in Good Company, Number One.*]

DEMOREST'S MAGAZINE FOR OCTOBER. Contents: The Truants—Oil Picture; The Spirit of Faith; The Rustic Bridge; My Sister Bell, Chapter II; Gone, Rose Geranium; Common Sea Weeds, Lizzie P. Lewis; Uncle Martin's Inheritance—Concluded, Augusta de Bubna; Charles Kingsley, Mrs. L. P. Lewis; Old Elsie, Mary Torrence; The Last Course, "Nuts;" Clocks, Past and Present, By Cadmus; Talks with Girls, "Opportunities," Jennie June; Laurel Blossoms, By Estelle; Half Hour Heroics, A Parlor Drama in One Act, Augusta de Bubna; A Summer Afternoon in Germany; In Jersey Sand, Charles H. Wetmore; Three Links Out of a Life, Grace Baylor; Correspondents' Class; Editorium. American Manufactures; Sea Weeds; Sketches in Algeria; Fifteen Years What? Common School Education; The Rustic Bridge; A Shopping Arcade; The Spirit of Faith; Afternoon Parties; The Truants; House and Home; The Law in New York as it Relates to Family, Lillie D. Blake—No. 3 Married Woman's Rights; Pure Tin; Something About Geraniums; Where does the Day Begin; Women of Yesterday and To-day; The Maid of Orleans; What Women are Doing; Young America's Corner. The Little Oddity, Chapter II. Elizabeth Bigelow; The Little Maiden; A New Fairy Tale, Eliza P. Mathews; Jackey Meadowlark's Adventure. Harry Allen; Written Numbers; New Use for Grasshoppers; Why? Illustrated Rebus; Fancy Work, Illustrated; Diamonds of Thought; Spice Box; Scientific Items; Domestic Science; Kitchen; Fashions, Fully Illustrated; Ladies Club; Answers to Correspondents; Literature; In the Mountains; Richfield Springs.

AFTERNOON PARTIES.—One of the most sensible of the new departures in social life which have taken place of late years consists of the afternoon receptions which are so fashionable a substitute for the great evening parties which formerly extended beyond midnight.

It is well known that gentlemen always detested these parties, and avoided them whenever it was possible. Thus, many ladies were prohibited from accepting the invitation of their friends to the annual "crush," and many persons were debarred from reciprocating the civilities they had received, by the modern growth in luxury and the necessity for supplying a gorgeous supper far beyond the capacity of their financial and household resources.

Evening parties are now principally confined to Germans and sociables, given by young people to young people, or small *musicales* and literary reunions, which have a definite purpose, and for which guests are selected with special reference to their interest in these topics.

The regular weekly or fortnightly receptions of an informal character serve to create a number of social centers, each one of which is a *rendezvous* for harmonious spirits, but the afternoon "At Home" is the only successor and the most popular substitute for the social necessity which compels persons who go much into society to, at least once during the year, bring their friends together, and, by one effort, wipe out many minor social obligations.

No special entertainment is needed for a "regular" afternoon reception beyond the refreshments, which are served from a table set either in the dining-room or an extension parlor. Sometimes these consist of pickled oysters, salad, and small sandwiches, in addition to ices, cakes, biscuits, tea, coffee, and the like. But quite often the first of these are omitted and the table supplied only with the lighter viands.

Invitations during the season are always sent a week or more in advance—three weeks is not too much of a margin where people are very fashionable and the society large—but, of course, the more formal the invitations, the more fine and ceremonious the entertainment is expected to be. Ordinarily the waiter who opens the door directs the guests to the dressing room, where they lay aside their wraps. The hostess stands inside the drawing-room door and receives each one as they enter. This is the only formality. The guest is then at liberty to look about for friends, accept the invitation of some gentleman to get an ice, or a cup of tea, and in half an hour make her way back to her carriage, or on foot to her home, in time to superintend the wants of her own family, receive a party to dinner, or prepare for the opera, or spend her evening in mending stockings, as circumstances may determine. The duties even of a woman in society are very multifarious, and some of those who are paraded as the most brilliant leaders are the most efficient in the performance of minute details which belong to home and family life.—*Demorest's for October.*

LIPPINCOTT'S MAGAZINE for October opens with a very bright and amusing article, by Margaret Bertha Wright, depicting the rambles and experiences of a party of American artists in Italy. The illustrations are in keeping with the text, being full of vivacity and point. The fourth chapter of Dr. Oswald's "Summerland Sketches" treats of "The Western Sierras," and is not inferior to the former installments either in the interests of the narrative or the beauty of the illustrations. A third illustrated article, "Chamois-Shooting with the Emperor of Austria," is by W. A. Baillie Grohman, author of "Gaddings with a Primitive People." "Sunday in England" is the production of an English writer, who treats his subject with that intimate knowledge which none but a native could be expected to exhibit. William L. Stone, author of the well-known life of Sir William Johnson, relates the biography of Lady Harriet Acland, whose heroic character and eventful career give her a prominent place in the annals of conjugal devotion. Edward C. Bruce writes instructively on "American Landscape-Gardening." H. M. Kennedy gives an interesting account of "The Study of English in Germany," and Mrs. E. B. Duffey describes "The Buried Wealth of South Jersey."

"Through Winding Ways," which has proved one of the most attractive serials ever published in the Magazine, is concluded in this number, and there are several short stories suited to different tastes. The "Monthly Gossip" is entertaining as usual, and the number on the whole is as readable as any of its predecessors.

For Women.

THE CHEERFUL HEART.

"THE world is ever as we take it,
And Life, dear child, is as we make it."

Thus spoke a granddame, bent with care,
To little Mabel, flushed and fair,

But Mabel took no heed that day
Of what she heard her grandma say.

Years after, when no more a child,
Her path in life seemed dark and wild,

Back to her heart the memory came
Of the quaint utterance of the dame:

"The world, dear child, is as we take it,
And Life, be sure, is as we make it."

She cleared her brow, and smiling thought,
"'Tis even as the good soul taught!

And half, my woes thus quickly cured,
The other half may be endured."

No more her heart its shadow wore;
She grew a little child once more.

A little child; in love and trust,
She took the world (as we, too must,)

In happy mood; and lo! it grew
Brighter and brighter to her view.

She made of life (as we too, should)
A joy; and lo! all things were good,

And fair to her, as in God's sight,
When first he said, "Let there be light."

IN BEHALF OF MOTHERS-IN-LAW.

DEAR MISS RIPLEY:—I do not know whether this will meet with your approbation as a proper subject for an agricultural paper; you are the best judge of that. Pray grant me a little of your valuable time—my motive is a good one.

I have often wished to see something on the subject before I ventured, but having waited and failed to find any one courageous enough to speak her mind, I will wait no longer.

When I was a little child it was very fashionable to have tea parties. A few congenial friends met at my mother's to chat and have a good time. The children of these ladies came after school and stopped until their mothers were ready to go home. After the older ones had their tea, we little folks had ours, and what a happy time we had. Bread and butter never has tasted as sweet since then. These gatherings are bright spots in my life, that I love to think of. I was not a very strong child, and could not romp and play as hard as the others; and being very fond of listening to the conversation of my elders, I often heard remarks that puzzled me. I was too young to un-

derstand them, and as I never forgot anything I heard, after many years I came to realize their meaning. On a certain afternoon I heard the following, which left an indelible impression on my mind:

"No man shall curse me after I am dead and in my grave." This was said by Mrs. H., the mother of a family of fine, bright girls. "No man shall curse me in my grave, for I intend to make good housekeepers of my girls and teach them how to work, and then their husbands cannot blame me if they are not competent."

"You speak as though you were sure they would marry," said Mrs. T.

"Oh, no, I am not sure of anything of the kind, but it is natural they should; and if they do, I hope they will be a comfort to their husbands. And should they not marry, their knowledge will do them no harm."

Now I am coming to my subject. What right has a man to curse the mother of his wife because the wife does not know as much when he marries her as his mother does after twenty or thirty years of experience? Men do it, and as soon as they are married the mother-in-law becomes a bugbear.

It is always the wife's mother who has so many faults; no one would dare to say a word against his mother, yet the wife must submit to have her mother finely rated and not dare resent it, for if she was to take her mother's part it would only call down on her devoted head more of her husband's slurs. No doubt his mother has just as many faults, but the wife has good sense enough to keep her opinion to herself. There has been too much said against mothers-in-law, and I never read of but one man that was manly enough and had courage enough to come out and say anything in their favor, (may peace and happiness always fill his home). These chivalrous fellows think it a fine thing to ridicule some one's mother or sister. They apparently forget their own mother is or may be one of these unfortunates. No right feeling man will encourage it; it is ungrateful and mean. Of course, they do it for a little *fun*, and it's such a good joke, so smart and manly to make fun of and hurt the feelings of women old enough to be their mothers or grandmothers; women who already have had so much to bear and contend with; whose hearts are heavy with sorrows and trials that no one knows of but God. Some one of these kindly gentlemen comes and takes her child from her just as she is becoming a comfort to her and useful in many ways; sometimes it is an only daughter or an only child. The girl loves her husband and goes with him a happy bride to make his home bright, and with every intention to do her duty cheerfully. Very soon she finds that her dear mother is of no account. The faithful one that cared for her in her helpless infancy, watched over her in sickness, "wakeful when others slept:" who made every sacrifice for her cheerfully, overlooking her faults; loving her better than any one ever did or could; knowing this and loving her mother, the wife must not say, "my mother does this or that well." Oh, no! her mother cannot make bread or cook as well as his mother, who does everything better than he ever knew any of *her* folks to; yet he could eat their pies and cake, and other nice things before he married his wife. Her mother was all right then, because he intended to take from her one of the treasures she loved so well.

Do you think he would allow one reflection on his mother? No, not he. There would be such a breeze in that home that his wife would never dare to open her mouth to utter one word again on that subject. If he has so much love for his own mother, and is such a model son, why is it he cannot love his mother-in-law a little, or at least, speak of her in some other way than the "Old Woman," and treat her with respect, if only for the love he bears his own mother.

I know of a man who next to his own mother counts his mother-in-law, the greatest blessing he had. She was always welcome in his house. He said she more than paid her way, by looking after his interest, and he always felt free from care when he left his little ones with her. She would mend for him, repair clothes that he thought were beyond hope; she was interested in all that concerned him; would talk with him about his business, and, in short, made herself so necessary to his comfort, that he was sorry when her visit came to an end. Why should she not feel interested in all concerning him; he stands to her as her own son, if he loves her daughter, is he not near to her? are not his children her children? does not her blood run through their veins? Is it strange that she inquires into all their affairs, and interests herself about them, if her child has gone from her home, she has not gone from her heart. She is just as much interested to-day as she was before her daughter married. Her only motive is to aid them, and help them carry their burden, and if she could she would take it all on herself, so that they could be relieved of what worries them. Because she is just what she is and loves them so well, she cannot see them unhappy without wanting to be in their confidence and sharing all their trouble with them. She is called a "prying old woman;" his mother, however, can do and say anything, or she can neglect them, it is all the same, "*mother means well*."

I expect you are losing all patience with me; do, dear Miss Ripley, bear with me a little longer, I will soon have had my say. Do you not think the newspapers have had a great deal to do with this? Have they not been the greatest enemy mothers-in-law have had! are they not very much to blame for the feeling against this class of women? I am surprised that any mother's son would encourage or take any part in such disrespectful allusions, and as long as men encourage this coarse sort of joking, mothers-in-law will be obliged to hear their best motives traduced. I once thought a step-mother's position a thankless one, now I think a mother-in-law's is fast becoming a most trying one. If you think this fit for publication and it will do any good, I will feel that I have freed my mind and that I can bear a little more, with a better grace, for I am a MOTHER-IN-LAW.

LETTERS FROM A COUNTRY GIRL—No. 17.

MARGARET B. HARVEY.

Painters and Painting.

PERHAPS some of you, my friends, have come to wonder whether I knew anything else than art, as I have talked so much on this subject. Well, patience, sister, I shall soon be done. But I dislike to dismiss it altogether without saying something about its history,—for, I know, if you have become interested in it at all, you will want to learn more of its past. So, preparatory to my taking up literature, and as a fitting introduction thereto, I will give you a list of some of the old painters. Such information, I am sure, is, at present, a dead language to many. Happy shall I be if I can interpret it to one!

You observe that the names are arranged in chronological order, so that they signify not only the flight of time, but the growth of art itself. In a few cases, authorities differ by several years as to dates. If I were you, I should cut out the list and preserve it for future reference. I forgot to say that I have placed, after the name of each painter one of his best known works, as an aid to memory.

ITALIAN PAINTERS.

Cimabue (died 1240.)
Madonna e angioli.
Giotto (1276–1336.)
Portrait of Dante.
Memmi (Simone), (1280–1344.)
Petrarch's Laura.
Taddi Gadi, (1300–1366.)
Annunciation.
Fra Angelico, (1387–1455.)
Angels.
Masaccio, (1402–1429.)
St. Ann, Madonna and Child.
Gozzoli, (1424–1484.)
Angels.
Bellini, (1426–1516.)
Madonna and Child.
Leonardo da Vinci, (1446–1499.)
Last Supper.
Perugino, (1466–1499.)
Portrait.
Garbo, (1466–1524.)
Descent from the Cross.
Fra Bartolomo, (1469–1517.)
Annunciation.
Albertinelli, (1470–1520.)
Descent from the Cross.
Michael Angelo, (1475–1564.)
Last Judgment.
Giorgione, (1477–1511.)
Jacob and Rachel.
Francia, (died 1557.)
Madonna enthroned.
Titian, (1477–1576.)
Adoration of the Holy Family.
Raphael, (1483–1520.)
Transfiguration.
Andrea del Sarto, (1487–1530.)
Madonna enthroned.
Buon Consiglio, (flourished 1500.)
Mater bon Consilli.
Correggio, (1493–1534.)
The Handkerchief of St. Veronica.
Bordone, (1500–1570.)
Madonna.
Voltara, (1509–1566.)
Descent from the Cross.
Vasari, (1512–1574.)
Portrait.
Tintorreto, (1512–1594)
Crucifixion.
Palma Vecchio, (1518–1574.)
His daughters.
Paul Veronese, (1528–1588.)
Marriage at Cana.
Baroccio, (1528–1612.)
Hagar and Ishmael.
The Caracci.
Ludovico, (1555–1619.)
Agostino, (1559–1601.)
Annibale, (1560–1609.)
Antonio, (1583–1618.)
Guido, (1575–1642.)
Ecce Homo and Mater Dolorosa.
Domenichino, (1581–1641.)
Last Communion of St. Jerome.
Strozzi, (1581–1644.)
Esther and Ahasuerus.
Daniel Crespi, (1590–1630.)
Portrait.
Guercino, (1591–1666.)
Sibyl.
Claude Lorraine, (1600–1682.)
The Flight into Egypt.
Sassoferrato, (1605–1685.)
Madonna.
Lorenzo Lippi, (1606–1666.)
Portrait.
Salvator Rosa, (1615–1673.)
Battaglio.
Carlo Dolce, (1616–1686.)
The Infant Jesus.

Next I should advise you to read carefully Mrs. Jameson's little work on the early Italian Painters. You will find among them a host of lesser lights, which you perhaps had better pass. Look up all those given in the list and pause long enough to gain a pretty correct idea of the characteristics of each—only, don't go off into ecstasies as the author does, or you will be woefully shocked when you come to read Ruskin. Next, by rights, I think, you ought to lay aside a sum sufficient to purchase small photographs of some of these great paintings to which your book alludes, a portfolio filled with such treasures would form an elegant addition to your parlor. Large heliotype engravings of many of the most famous pictures, cost only $1 apiece. You can order either, of any great publishing house. When you have finished the work in hand you will probably be filled with enthusiasm, and "adoration of the old." This is well—we must love the child if we would revere the man. But you have yet to learn, that the world, and art with it, have advanced. Be on your guard, however, for the second time lest on the other hand, you be drawn to overrate the new.

You might have read Ruskin's Modern Painters first, as I did, but I think it a better plan to take it up after Italian Painters. The work is a large one,—of five ponderous volumes. You had better take this from a library as it would be very expensive to buy, and it is the least bit out of date. Whether or no, at first you understand the drift of the author, you can scarce fail, to be captivated by the wonderful beauty of his language.

The first object of the book is a defence of Turner, after that of all modern artists. That is, an assertion of their right to be criticised, favorably or unfavorably, upon their own merits without any comparison between them and ancient models. So, as you read on, you will see that of all Mrs. Jameson's idols, only a few absolutely escape censure. Fra Angelico, Massaccio, Titian, Raphael, Tintoretto and Paul Veronese faring about the best.

I would say to you now, look up every name to which an allusion is made, and if possible, procure at least one picture of each. I can give you now some of the older painters belonging to other countries than Italy.

FLEMISH PAINTERS.

Van Eyck (1366-1426) (Hubert), and Van Eyck (1390-1440) (Jan.,)
Altar Piece of St. Bavons.
Quentin Matsys (1466-1529.)
Descent from the Cross.
Hemling (1470-1495.)
Marriage of St. Catherine.
Rubens (1577-1640.)
Descent from the Cross.
Van Dyke (1599-1641.)
Hundred Portraits.
Rembrandt (1606-1669.)
Lesson in Anatomy.

SPANISH PAINTERS.

Velasquez (1599-1660.)
Murillo (1618-1682.)
Immaculate Conception.

GERMAN PAINTERS.

Albert Durer (1471-1528.)
Martyrdom of St. Bartholomew.
Holbein (1495-1543.)
Dance of Death.

These, I think, are the most important of the old masters. Your modern galleries—comprising such painters as Sir Joshua Reynolds, Benjamin West, Angelica Kauffman, Wilkie, Haydon, Calcott, Constable, Ary Scheffer, Turner, and so forth—you may easily form for yourselves. It will be a little more difficult to arrange, as a fixed fact, a collection of painters of to-day—such as Fortuny, Messonier, Rosa Bonheur and Millais—as they have scarce as yet reached the Encyclopedia and Biographical Dictionary. Yet, remember, photographs are cheap.

As to an American school, we hardly have one as yet—nor will we have, while our young artists waste their powers and disown their country by painting European peasant girls and German castles. But so long as we have Bierstadt to give us our own majestic mountains, and Moran to interpret for us our own sweet woods and meadows, we need not fear. This great country, with the grandest of history, of national characteristics, and of scenery, will yet be the home and inspiration of a truer and better art than the world has ever known.

Photographs of statuary are as easily procurable as those of paintings. Now you ought to read Taine's "Philosophy of Art in Greece." Perhaps you will believe, while perusing its pages, as most people do, that ancient sculpture cannot be surpassed. I will not discuss the subject, for I have not sufficient knowledge upon it, but when you have before you the Venus de Medici, the Torso, Venus de Milo, Apollo and Diana, place beside them Bailly's Aurora, and ask yourself seriously, is it not lovelier than any of them?

Accept authority gratefully — those who have studied anything very likely know more about it than those who have not, or why need any of us search for knowledge? — still, as the little fellow said, "What's the use of having a finker if I mustn't fink?" The more we know, the more inclined we are to learn of others, but, at the same time, the more disposed we are to trust to our own judgments. It is not nearly so hard to form a pretty correct artistic taste for ourselves as many seem to think.

SOME MOTHERLY HINTS.

THE RURAL came yesterday, and as usual I turned to the *Woman's Club* as quickly as possible. In answer to "Vida" I think a few plain rules for taking care of children never come amiss. "We know not what a day, or hour, or second, may bring forth." Dr. Nelaton said to his class of medical students, "If by accident you should sever the carotid artery, the patient would bleed to death in four minutes, *therefore, there is no time to be in a hurry.*"

There are diseases that every mother knows children are subject to, and perhaps "they *may have no time to be in a hurry.*" The plans ought to be laid for certain emergencies in cooler moments. For croup, scarlet fever, cholera-infantum, poisoning, etc. I have found out what to do. Gertie has just come through the scarlet fever. The moment I suspected the cause of her sickness which was not more than half an hour, I went to work. In a few hours when the doctor came, he gave no medicine and said "she was very sick, but her mother was doing all he could have done." But I will pass on and show how quick a mother's wits need to act by giving a little of my experience.

First, I must confess that I am not a farmer's wife. I do it with fear and trembling: Must I be cast out of this delightful circle on that account. Wait a moment! There is one thing I think may redeem me. I am the daughter of a whole-souled farmer. So I proceed by your leave.

We live over my husband's store. In one part of it is a wareroom, and in that were paper bags of Paris-green prepared in pound quantities to be ready for customers, but the packages were not tied.

I had a new girl. My faithful one who shares every care, was away on a vacation. In the midst of work one morning, those "jewels of mine" vanished, in what seemed an instant. I started in pursuit, passing through the store. No one was there, from thence to the ware-room. What was my horror to see Gertie and Fred marching from one end of the room to the other, pouring the Paris-green from the bags as they marched. The room was full of the dust, their shoes and clothes were thoroughly powdered with it, neither my husband nor his clerk were to be seen, and customers were coming in besides. I led the children to a retired corner and took off every bit of their clothing but an under chemise, sent the girl to the freight house to call my husband and to the next house for his mother. Another old lady came in her place, and I felt as if she would know just what to do, but she did not—"could not think of a single thing" she said. "Well, Fred must have an emetic," I said, for the powder was on his tongue, so I hastily mixed a teaspoonful of mustard, and the same of salt in a tea-cup of water to give him. Just then my husband questioned. "Do you really know what you are doing?" "Yes," I answered, I know this will empty the stomach of poison or pennies either," and I opened Dr. Chase for reference. In my haste I could not find the place, although my husband said afterward "that I passed it over and over," which proves how much better it is to have knowledge in your head than in books.

"I know it any way," I affirmed, and so we gave him a dose quicker than it takes me to tell of it, and after he vomited we gave him the white of an egg to swallow.

It was a hard ordeal for the little fellow, and I'll not forget his appealing look for me to help him, or his hopeless expression when he found that mamma too had turned against him. Perhaps it was not strictly necessary, as there might not have been any poison in his stomach, but I wanted to be on the safe side. What I inhaled gave me an unpleasant feeling in my throat. If one was sure of poison I would advise the same treatment at the earliest moment, besides sending for a physician.

Lakeshore, Sept. 11. MARGUERITE.

"HILLSIDE" GLEANINGS.

IT is autumn again, and in this chilly climate everything begins to show that the "harvest is past, the summer ended." Only the gleanings remain. Once more we ask ourselves the question "What has the summer done for us?" Are we wiser and better for communing with mountain and shore—? are our spirits refreshed by the voice of the waves? did the trees of the forest have any message for us during the summer holiday? Or were we so taken up with bank failures, and the rise and fall of stock, the changes of fashion, the busy treadmill of the sewing machine that we say now it is over. "I had no time." Alas! I fear for too many of us, this is the truth. This tendency to see only the gloomy side of life reminds me of a lady who visited me when roses were at their bonniest this summer. There was the queenly damask—the pale pure white—the moss and hybrid perpetuals, with a host of tea and noisette roses of every rich or creamy shade. I was myself enchanted with their beauty and fragrance, but she looked from one to the other, and remarked at length—"What a pity the rose chafer has spoiled the leaves."

Yes, here and there in spite of our efforts the rose chafer had worked mischief, but, though it detracted from the beauty of the foliage, it could not spoil the glory of a perfect rose, and there were thousands in bloom around her. But the habit of looking at the faults in everything, picking out flaws and imperfection was such that it prevaded everything and spoiled the enjoyment of the bonnie June roses. I thought at the time it was a lesson we all might profit by. While we can, let us enjoy the beauty around us.

ANNIE L. JACK.

CORRESPONDENTS' CORNER.

WILL some one of the readers of the RURAL furnish for publication, a poem which was published during the war, two lines of which are:

"Now I'm all that's left you, Mother,
They are numbered with the slain."

One verse begins with—

"On the hights of Lookout Mountain."

I saw the poem when I was a little girl, and have often wished to see it again. CORA N. WATSON.

Will you please tell me through the columns of the RURAL what will take the stiffness out of my hands after washing, so as to enable me to practice on the piano. Do you approve of the use of Sulphur soap for the skin, or the use of any other soap? H. W.

ANS.—The first question we submit to the RURAL ladies. Perhaps some of them may be able to give the desired information. Pure white Castile is best and safest for use on the skin. If the skin of the face and hands is tender, Gluten soap, manufactured by Health Food Co., is to be preferred. It is composed largely of gluten, and has little alkali in it.

The following was sent us in response to the inquiry in RURAL of Sept. 23:

HOME, SWEET HOME.

'Mid pleasures and palaces, tho' we may roam,
Be it ever so humble, there's no place like home;
A charm from the skies seem to hallow us there,
Which seek thro' the world is ne'er met with elsewhere;
Home, home, sweet, sweet home,
Be it ever so humble, there's no place like home.

An exile from home, splendor dazzles in vain,
Oh! give me my lowly thatched cottage again;
The birds singing gaily, that come at my call:
Give me them, sweet peace of mind, dearer than all;
Home, home, sweet, sweet home,
Be it ever so humble, there's no place like home.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

CREAM, DOUGHNUTS, DRIED PUMPKIN, COOKIES AND A REVERIE.

ANNIE L. JACK.

"You can make anything good with cream," she said, as we sat at tea on an island one pleasant afternoon. It was an impromptu picnic, and we were discussing the different cakes before us after partaking of each as one can only when the air and wind add to the usual appetite an enjoyment of food that is never felt when partaking of a regularly cooked meal.

"Yes, those doughnuts were made with cream. I use fine flour and cream-of-tartar, and can judge pretty well the proper consistency. I am glad you like them. Pumpkin pie? yes, dried pumpkin of a year ago. The reason of the light color you admire is that I was careful to dry it quickly and not give it time to catch any burn or dust. If put away in paper bags, it will keep for years."

"But how do you make these cookies so crisp?"

The lady who made the reply was famous for her cookies, so I took the recipe for the benefit of RURAL readers:

One cup sugar, half cup of butter, one cup of sweet milk (cream is better, and dispense with the butter if you have it); two eggs, four cups of flour, or enough to enable you to roll the dough. Put in the whites of eggs and flour last. Roll out with as little handling as possible and bake quickly. Keep them in a dry place, but not *close*, or they are apt to become soft.

The waves of the beautiful blue lake dashed up at our feet and mingled with the conversation. "Darling little white caps," as one of the party called them, danced on the waters, and afar off we could see that glorious Mount Royal, from which Montreal derived its name.

What a rest to weary hands and brain is a day like this, afar from even the petty bustle of village life, where, as the white wings of vessels glide past, we cannot help thinking how suitable the lines:—

"The stately ships go by
To the haven under the hill,"

and then some busy steamer puffs and rushes past in the near distance, reminding us of civilization seen but not felt by us. And even amid the clatter of dishes, the useful exchange of recipes and the light, pleasant laughter of friends, we seem to feel a stillness, and the little trials and larger ills and disturbances of the busy world fade for the time before Nature's wonders, and we say

"What are they all in their high conceit,
When man in the bush with God may meet?"

LOG-CABIN SKETCHES; OR, JESSIE SEABRIGHT'S DIARY.—No. 9.

MAY MAPLE.

JULY 10.—The heat grows more intense as the season advances; every day I am thankful for a good searching draft of air through our cabin chamber. The logs have all been thoroughly whitewashed, since the last jottings in my journal. And the shingles and rafters overhead have been covered with clean newspapers. So the rooms, though so low that I can only stand up in the middle, look clean, airy, and therefore pleasant. A partition crosses the middle of the chamber, with a door in direct range with the windows, and another, stretches across the side of one room, thus making a sort of closet for barrels and boxes, odds and ends that help more or less to make a room appear untidy. The partitioning was made of "building paper," and was the result of a dozen yards of knitted carpeting. These new walls were covered with wrapping-paper tinged with buff color, which cost one shilling per pound, and was paid for in ruffle hemming by hand.

A tiny can of buff paint that cost thirty-five cents, and was paid for in "garden truck," makes my pine bedstead look quite presentable, and a low chest, also painted buff, makes a very good seat by the east window, which looks out upon the garden, now brilliant with flowers and luxuriant vegetables, where an hour or two are spent each day in removing weeds and stirring up the soil. It is a pleasant outlook in the afternoon when the scorching sun has passed over to the western horizon.

A board nailed to the wall with a couple of braces, and covered with paper, answers for a toilet stand, and each room has such a convenience. Some swinging shelves, for books, papers, collar boxes, etc., were made of pasteboard shoe boxes, given me by the boarding-house matron, strung on heavy cord, made of wrapping twine. A handkerchief box was laced together at the ends for a wall pocket for my guest chamber. I often wonder if I should take more pleasure in fitting up a handsome residence, with means at my command, than I do in contriving improvements for my lowly cabin home. I am sure if pioneer women were more engaged in making the best of their surroundings, they would find less occasion for complaining of their humble lot, besides making themselves and their families comfortable and comparatively happy.

"But," says one, "there's no use in fixing up an old log house, for you can't make anything else of it, if you try; and, for my part, I'd rather save my strength and money to adorn a new house, which we shall probably have in a year or two at most."

But the years pass away and others follow in seemingly quick succession, and yet no new dwelling makes its appearance. The old home grows more and more dingy, and more and more dilapidated, as also do the hearts and tempers of its possessors, until there are frowns out-of-doors and frets within. Happiness and contentment spread their wings and fly to more congenial homes, and the grave at last gives a resting place, to the unhappy hearts that have never found the fountain of all true enjoyment, because they were unwilling to collect the sweets from every flower. They failed to obtain many blessings, because they did not "do with their might, what their hands found to do."

DOMESTIC RECIPES.

Baked Indian Pudding.

If Mrs. H. C. G. will try the following recipe for baked Indian pudding, she cannot fail to be pleased with the result, as it is the original recipe of an experienced housewife.

One quart of sweet milk. Heat about half of it. Mix half a teacupful of Indian meal smooth with a little of the cold milk and pour into the scalding milk, stirring meanwhile. Then add one spoonful of flour mixed smooth with more of the cold milk and one beaten egg. Sweeten, and season to taste, with a little salt and lump of butter if desired. Now add the remainder of the cold milk. Bake two hours.

Crab Apples.

No jell can exceed in looks or flavor, that which is made of crab apples. Some may not know that by taking out the core, the jell will be far nicer-looking.

A nice dessert can be made by stewing cored crab apples in sugar very slowly, with a lump of butter. Extract of lemon may be added. Placed on a platter or covered dish, it has a very appetizing appearance. If steamed and sprinkled with sugar, or laid in a sauce dish of sirup, they make a nice sauce for tea.

AUNT EM.

Eggs for Winter Use.

About this time farmers' wives begin "laying down" eggs—or rather standing them up for winter use. As good an article as I ever tried for the purpose, is fine sand, which will keep cool if placed in the cellar, bran, oats, etc., are apt to heat. Place them so as not to touch each other on the smallest end. The philosophy of this is, I suppose, that if placed on the smallest end, the yolk will not settle and stick to the shell, which causes the egg to become unfit for use.

QUESTIONS ANSWERED.

To Wax Natural Flowers—Balsam Apples.

I. D.—Dip the flowers into melted paraffine or spermaceti—a melted candle will answer—withdrawing them quickly. Have the liquid only hot enough to maintain its fluidity. The flowers should be dipped in one at a time, held by the stems and moved about for an instant to get rid of air bubbles. This process is too severe for many delicate specimens melting them, as it were together, and of others, the heat will change the color.

From the Balsam Apple—Momordica Balsamina—a liniment is made by infusing the fruit deprived of its seeds in sweet oil or spirits and used for rheumatism, chapped hands, flesh wounds, etc. The fruit is also crushed and used in the form of a poultice for wounds.

To Dry Corn.

K. L.—Boil the corn for five minutes, take out and when cool cut each row through the center with a sharp knife and scrape out the corn. Dry on plates around the stove or in the sun. If out-of-doors protect from insects. When wanted for use, soak in tepid water just enough to cover, for a few hours, then boil ten minutes, season with cream, pepper and salt, and serve hot.

Martynia proboscoda. (Unicorn Plant.)

R. H. Crane: Gather the pods when about half grown or while tender and succulent—if left until the flesh has hardened they are worthless—and pickle them the same as you would cucumbers.

Canning Tomatoes.

J. M. Gunn: We should not advise you to can your tomatoes in glass but in tin quart cans or stone jugs, holding two quarts or a gallon. If tin be used, skin, slice the tomatoes and drain in a colander, or sieve. Then press the solid part into the cans through the small opening at top, and solder the cover on at once. Immerse the cans in boiling water and let boil for ten or fifteen minutes. Take out and puncture with a sharp instrument like an awl, to allow the air to escape, then immediately re-seal. When stone jugs are used, boil the tomatoes the same as you would for the table, for twenty minutes or half an hour, then pour hot into the jugs, which should be previously rinsed with scalding water. Drive in the corks softened in boiling water, and cover with a cement made of beeswax and resin. This last method of preserving tomatoes will, we think, please you best for your own family use.

Color from Cloth.

Tyro wishes to make a rag carpet and has a quantity of her husband's clothing to cut up for that purpose, but all are so dark colored that she would like to take out the dye and re-color them a brighter shade. We know of nothing that will do this without injuring the fabric, but if any of our readers can aid *Tyro* we would be pleased to publish their experience.

News of the Week.

MISCELLANEOUS.

MONDAY, September 22, 1879.

The trial of Henry J. Gully for the murder of Cornelia Chisolm ended at DeKalb, Miss., last week in a verdict of acquittal, after a deliberation of less than half an hour by the jury. With the picture of this terrible affair and the pathetic story of Mrs. Chisolm so vividly before the public mind, this verdict is likely to be looked upon at the North as a failure to do justice to a very brutal fellow. But there is no telling from the meager reports of the case how the jury may have been influenced by the judge's charge or the technicalities of the law. The trial seems at this distance to have been fairly conducted. The cases against the murderers of Judge Chisolm and his young son John are yet to be tried. The worst feature in the prosecution of the murderers is that the evidence taken on the trial showed that Philip Gully, a brother of the man just acquitted, and 32 other rioters, were indicted for Chisholm's murder two years ago, but that no arrests have ever been made, no bail required and no steps taken toward a prosecution in these cases—a state of affairs almost inconceivable in a community having a grand jury and a prosecuting attorney at all. Gen. Walker intends that the enumerators for the next census shall number one to every 4,000 inhabitants, instead of one to every 20,000, as formerly, and quicker work correspondingly will be made of it. He recommends that persons peculiarly fitted to know the population be selected, as assessors, postmasters in small places, schoolmasters and country physicians. In Germany and England, the school-masters are very much relied upon in taking the census, being well fitted by their daily habit of precise listing and registering.

Of the 125,000 Mormon population, it is claimed that only one-tenth are living in polygamy, that is, that only one-tenth of the male adults avail themselves of the privilege of having more than one wife, poverty and other considerations preventing the rest. Of these only a portion have married since the law of 1862 and a prosecution must follow within five years of the crime, which consists in contracting any marriage subsequent to the first, when the first wife is living. Gov. Emery, who is well-liked and much respected by the way as governor, recommended to Secretary Schurz that Congress make the crime of bigamy to consist in the constant intercourse and living with more wives than one.

The political movements of the week may be briefly summarized. The Wisconsin Democrats are at a loss for a candidate for Governor, Mr. Alexander Mitchell, who was nominated for that office last week, having telegraphed from Europe an absolute declination. Mr. Mitchell is said to be "probably the richest capitalist in the entire Northwest," and so much the best candidate his party could have selected that his refusal to run leaves them in distress. The Wisconsin Democracy being elated two years ago with its reduction of the Republican majority, imagined that all it needed to carry the State was the Greenback vote, which it accordingly solicited with a rag-money platform. The result was disastrous, and this year it resolved that "the constitutional currency of the country and the basis of all other should be gold and silver coin," which, perhaps, was as far as it could go with any show of consistency. The Maryland Republicans held their Convention on Friday, adopted verbatim all of the Saratoga platform which relates to national affairs, except the section referring to Democratic ill-treatment of "Old Union soldiers," and nominated Mr. James A. Gary, of Howard County, for Governor, ex-Postmaster-General Cresswell declining to have his name brought before the Convention. The Massachusetts Greenback-Labor party met in Faneuil Hall Friday, and, after a tumultuous session, nominated General Butler for Governor and Wendell Phillips for Lieutenant-Governor, and adopted a platform which asserts that "the Greenback philosophy has been grandly vindicated" by the stoppage of contraction in 1878 and the receiving of greenbacks for custom duties, and that the coin resumption of the Republican party is a sham and a delusion. Kearney will read with surprise that his Eastern friends believe "labor-saving machinery is a boon of God to the sons and daughters of toil," though they want "the contract system of convict labor abolished."

Governor Robinson has just accepted the renomination for Governor of this State, tendered to him by the Democratic State Convention that lately met at Syracuse. John Kelly, the Tammany "boss," who with his followers "bolted" from that Convention, and was nominated by his "heelers" as a rival candidate for the Governor's chair, is energetically at work organizing his adherents in this city, and wherever there are any considerable numbers of them throughout the State. He says that he has not the slightest expectation of winning the coveted honor himself, but he feels confident that he will be able to draw votes enough away from Robinson to defeat him. The anti-Tammany men, however, say that Robinson's hostility to Tammany will so benefit him in the rural districts that any losses he may suffer here from Kelley's oppositions will be nearly counterbalanced elsewhere. Many of the followers of Tammany Hall, too, will vote for the regular nominee of their party. In the Republican party of this State there are also some signs of discontent with the nomination of Cornell for Governor. It is stigmatized as a "machine" nomination by a few kid-gloved "Simon-Pures" who think they are honoring politics by meddling once a year or so with an election, and are then disgusted unless they are permitted to "boss the job." About half a hundred of these, most of whose names are now for the first time seen in print, have issued an address advising other malcontent Republicans not to "bolt" the ticket nominated at Saratoga, but to "scratch" Cornell's and Soule's names. The Democratic "bolt," however is likely to do more mischief than the Republican "scratch."

Gen. Grant arrived in San Francisco on Saturday evening. Great preparations had been made by the citizens to give him a welcome such as had never been accorded to any one on the Pacific Slope. The Secretaries of War and the Navy telegraphed to their subordinates in California to co-operate in every way with the citizens in welcoming home America's great general. The following is a summary of this morning's telegraphic accounts of his reception:—The great court of the Palace Hotel last evening, when Gen. Grant arrived, was lighted by electricity, and the hotel and its court and the street were crowded. At 10 o'clock the doors were thrown open, and a barouche containing Gen. Grant was driven within the building. As he alighted, however, Madame Fabbre and a chorus of five hundred voices opened from one of the balconies with an ode of welcome, and it was announced to the great multitude in the street that the General would appear on one of the balconies after he had had time to take off his overcoat. As soon as the review was finished the soldiers and sailors, veterans of the late war, repaired to the sand lots with a field battery and fired a salute. After a chorus had been rendered, Gen. Grant, in response to repeated calls, appeared on the balcony of the fourth story and bowed to the shouting populace, and Mayor Bryant appeared and announced that as soon as the General had finished his dinner he would show himself. In a few minutes Gen. Grant appeared, and Mayor Bryant called for order, and the General, mounting a chair, which was passed over the heads of the multitude, was again greeted with cheers. He said:

FELLOW CITIZENS OF SAN FRANCISCO: After twenty-five months absence, I am glad to meet you, and assure you of my cordial thanks for the kind greeting you have given me. I shall stay in your city long enough to greet you more fully.

The General then withdrew. The reception Committee, in the tug Miller Griffith, ran alongside the City of Tokio, about three miles outside the Heads, and as the China, George W. Elder, Ancon, and St. Paul, with their decks black with hats, slowly rounded to, the party went on board. The General and his suite were on the bridge of the Tokio, and the Committee were conducted immediately to him. At about the same time the Government steamer McPherson, with Gen. McDowell and staff, ranged alongside. There were no formalities. The band of one of the steamers played "Home Again," and Gen. Grant was welcomed to the Pacific Coast. The General said that he had ridded himself of some of his superfluous flesh, as he weighed 186 pounds when he sailed from the United States, and now pulled down the scales at 159. On the trip from Yokohama the weather was fine. The departure from Yokohama was attended with elaborate ceremonies, at the instance of the Japanese Government, Gen. Grant and suite being accompanied from the Mikado's palace by the entire Cabinet and all the foreign Ministers. Troops lined the way to the station, and as the City of Tokio steamed out of the harbor salutes were fired. Gen. Grant made no public appearance except to take a ride in Garden Gate Park with Major Bryant yesterday.

The United States marshal, with an execution against the city of Elizabeth, N. J., for defaulting on its bonds, found no property that could be attached. It is stated that the appointment of a receiver for the city will be asked. Daniel Drew had been in his usual health during Thursday. At 6 o'clock he dined with Darius Lawrence, the broker. He returned to his son's house after dinner. Although he complained of feeling slightly unwell, he insisted that no one should sit up with him. About 10:15 Drew walked into the room occupied by Lawrence, and said he felt much more unwell. Medical assistance was at once summoned, but before it arrived Drew was dead. The physicians attributed his death to epilepsy.

FOREIGN.

Thomas C. Scott, the well-known English agricultural authority, writes that the government and trade estimates show that the surplus of wheat in America, Russia and in the East is 4,040,000 bushels less than the aggregate deficiency of the various countries, and that a rise in the prices of breadstuffs is therefore anticipated. Lord Derby, speaking at South Point, England, Thursday, recommended public and private economy for a time, as trade must infallibly revive, seeing that England was not, like the Continental powers, wholly occupied with armaments; and said the furtherance of emigration schemes was more

likely than strikes to be useful in lessening the evils of bad trade. The Emperor of Germany lately visited Alsace, which he wrested from the French in 1870. A Strasbourg dispatch says, upon the entry of the Emperor William many of the shops were closed. Only the official buildings were profusely decorated. The French newspapers have become much more outspoken concerning Alsace and Lorraine, the inhabitants of which provinces have become also much more estranged from the Germans than they were two years ago, when the Emperor William visited Strasbourg and met a comparatively cordial reception.

In England there appears to be a growing discontent against the Beaconsfield government. The recent outbreak in Cabool has served to increase this greatly; and the capture of Cetawayo, in South Africa, has done little to diminish it. There is a strong impression that the peace is in danger of being broken ere long. Germany and Russia are by no means friendly. Although the two emperors are amicable enough, Bismarck and Gortschakoff are directly hostile, and the belief is widespread that the outbreak of hostilities between the two countries is only a question of time, and that of a short time, too. Austria and Germany, according to the latest rumors, are about to guarantee the integrity of each others' territories. This will be bad news to Russia which objects to Austria's occupation of Bosnia, and bad news to Italy which hopes by hook or by crook to gain possession of Trieste and the adjacent territory. In Spain the chief or only matter of interest seems to be the approaching marriage of young King Alfonso.

The European beet sugar crop is estimated at 1,610,000 tons this year, against 1,600,000 last year. In the Kieff districts of Russia, which are generally fertile, the price of wheat and rye per 30 pounds' weight, which was 80 and 50 copecks respectively in 1868, is now 125 and 75 copecks: a copeck is worth about three-quarters of a cent. A Cape Town dispatch says: Sir Garnet Wolseley hopes that Chief Secocoeni will yield without fighting. This is doubtful, as only lately the Kaffir chief was with difficulty dissuaded from murdering two English officers sent to him with a flag of truce to treat concerning an exchange of prisoners. Details of the capture of Cetewayo show that, while the king was being watched on one side by Lord Gifford and his scouts, Major Marter, with a detachment of dragoons, approached him from the other. Lord Gifford, whose presence was unknown to the king, intended to defer the attack until night-fall to prevent his escape into a dense bush. Cetewayo had caught a glimpse of the dragoons, but thought that in consequence of the ground they could not approach quietly. Major Marter directed the removal of all noisy accoutrements and sent the native contingent ahead. These surrounded the kraal where the king had taken refuge and Marter then rode up and called Cetewayo to come out. The king, after some parley, complied. He preserved a dignified demeanor and asked to be shot immediately.

Sara Bernhardt has written a letter formally denying the current report that she has signed a contract with Jarrett of London for her appearance in the United States. The news from Afghanistan grows worse every day. It was at first believed or hoped in India that the attack on the embassy at Cabool was a sudden outburst of fury on the part of mutinous soldiers and the mob, and that Yakoob Khan was deeply grieved by it and tried to prevent it. But this theory had to be given up before the news that there were signs of a general rising among the tribes, and that Yakoob Khan had apparently no authority over anybody. Later accounts point to his complicity with the massacre, or at all events his subsequent acquiesence in it, and it is now reported that Cabool is covered by a considerable Afghan army. Though this is said to be sensation, General Roberts, who commands the British avenging force, evidently cannot advance with the army now at his disposal and will have to wait for reinforcements, which come tardily, and for means of transportation, which are deficient owing to the enormous destruction of camels by the late expedition. The snow falls in the passes early in December, and after that communication becomes difficult or impossible, so that it may be said that he must be in Cabool and have made himself comfortable in winter quarters by the first of December at the farthest. He can probably do this, but it is an arduous enterprise, and its success will not solve the problem. For after having taken Cabool the question presents itself: Can the Indian Government afford to conquer and occupy Afghanistan; and if not, who is to rule it in a manner satisfactory to England? Yakoob Khan, as an instrument of British policy, has broken to pieces.

Holland is, in some sense, the dairy farm of Europe. Some statistics recently collected show that its cheese export in 1878 was 66,365,000 pounds, half of it going to England, which received from this country, in the years ending in 1878 and 1879, 141,654,000 and 123,783,736 pounds respectively. In the case of butter the conditions were reversed, Holland exporting 49,934,200 pounds to England, and this country 38,248,016 pounds last year, and 21,837,117 the year before. In round numbers, this country and Holland export to England about 3,000,000 centals of cheese and butter, or about half her foreign supply, and one-fourth her total consumption of these articles. Of the butter sent out from Holland, more than half is artificial, but the returns from this country give no hint of the oleomargerine exported here. The slaves on the Cuban plantations have demanded their liberty, and their masters have promised it if they will engage to work three years for wages. Many slaves are running away, and the local authorities have asked Captain-General Blanco what they shall do. The Spanish Government will propose to the Cortes that all the slaves be given their liberty July 1, 1880, on condition of seven years' obligatory labor with wages paid. King Mtesa, ruling near the Victoria Nyanza, in Africa, has abolished slavery. At least half a million of slaves are to be liberated this week.

Ask Fifty Ladies in succession what perfume they consider the most delicate, the most pure and salubrious, the most permanent, and in all respects the most desirable, and forty-nine of them will answer MURRAY & LANMAN'S FLORIDA WATER.

The only safe and sure cure for Gravel or Urinary troubles, is Hop Bitters. Prove it.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Sept. 20, 1879.

BEANS AND PEAS.—There has been a good export call for marrows, and the market is generally firm at quotations for both new and old mediums and marrows; new not abundant. Old, red kidneys, weak, and 75's are not asked for largely. Green peas in good supply and something steadier, with lighter daily receipts; $1.32½@1.35. Canadian, in bulk and bond, 70c.; So. B. E. peas, $2.75@3 per 2 bush. bag, with sales. Beans, medium, new, $1.47½@1.50; other, $1.35@1.45; marrow, new, $1.47½@1.50; other, $1.30@1.40; pea, new, $1.47½@1.50; other, $1.30@1.40; white kidney, new, $1.45@1.50; red kidney, new, $1.45@1.80; old, $1.65@1.75.

BEESWAX.—There is little trade, and 22@23c. quoted. Exports for week, 3,225 lbs.

BROOM CORN.—Offerings are moderate and demand fair. Brush and short broom, choice, per lb., 5½@6½c.; do., common to good, 4½@5¼c.; hurl, good to choice, 4@5c.; do., common to fair, 3½@4c.; red and crooked, 2½@3½c.

BUTTER.—Receipts for the week, 48,457 pkgs.; do., last week, 58,032 do. Exports, 32,325 pkgs., 25,625 of which are for Great Britain. An exportation of over 66,000 packages in a fortnight is an event for the butter trade, and the market responds to it with strong and higher figures. Early in the week there were sellers who thought the new situation of the market was more of snap than hold, but at the close all dealers, both State and Western, name the new rates with confidence. Some of the coolest merchant receivers, however, still advise country owners not to check receipts by putting imaginary values upon butter, feeling it to be safer to meet the demand, so that winter will not be struck with a heavy surplus. Accumulations have been a terror all summer, and one of the brightest points in the market is the fact that sellers can now devote their undivided attention to fresh regular supplies. The local trade is good, and shippers are paying the inside range, taking full lines of grass and tubs. State, pails and tubs, choice, 20@21c.; best, in lines, 19c.; good to prime, 17@18c.; fair to good, 15@17c.; firkin and tub, dairies, choice, 19c; good to prime, 16@18c.; firkin dairies, 15@16½c.; Welsh tubs, choice, 17@18c.; other, 14@16c; poor, State, 12@14c.; creamery, finest, 24@25c.; other, 20@23c.; sweet cream, 22@23c.; Western creamery, 23@24c; other, 19@22c.; creamery, poor, 19@20c.; Western, imitation creamery, 13@16c.; dairy, fresh, extra, 16@17c; best invoices, 15@16c.; good to prime, 13@14c.; fair to good, 12@13c.; poor to fair, 11@12c.; factory, best invoices, June, 12@13c.; fair to good, June, 11@12c.; best invoices, late made, 11½@12c.; fair to good, 10@11c.; poor to fair, 9@10c.

CHEESE.—The feeling has been a decidedly feverish one all through the week. The country sales were decidedly higher at the opening, and a corresponding advance was held here. Shippers pursued the same course noted in the previous week, when a sharp rise had taken place or refused to meet the figures in anticipation of a more favorable market to them later on. They were, however, forced in later in the week through a rise abroad and freer orders, and some little competition set in to secure the choicest productions, which had the effect of even further advancing prices, as the supplies coming forward were very moderate. The market closed strong at for fancy at 9¾@9¾c.; good to prime at 8¾@9c.; fair to good at 7¾@8½c.; half-skimmed at 6¾@7¾c.; skimmed at 5¾@6¾c. State farm dairy: Fine, 8½@9c.; good to prime at 7¾@8c.; fair to good at 7@7¾c.; skimmed at 5½@6¾c. Wisconsin factory: Fine at 9c.; good to prime at 8@8½c. Ohio factory: Cheddar, fine, at 9c.; do., fair to good, 7@7½c.; flat, fine, 8½@9c.; flat, good to prime, 8@8¼c.; flat, fair to good, 7@8c.; half-skimmed, 6½@7½c.; skimmed, 5@6c.

Liverpool rable, 44s.

Receipts for week, 96,171 boxes; do., last week, 91,733; exports, 63,980 do.

COTTON.—There has been an active excited market, and closing at for September, 12.13@12.14c.; October, at 10.56c; November, at 10.31@10.33c.; December, at 10.25@10.30c.; January, at 10.25c.; February, at 10.47@10.49c; March, 10.60@10.62c.; April at 10.78@10.75c.; May at 10.85@10.90c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Apples are wanted, and the arrivals of new are closely sold at firm prices. Peaches are in fair demand at full prices. Small fruits are quiet.

New North Carolina apples, 5½@6c. for fair; 7@7c. for choice; 8½@9c. for fancy sliced. Patent evaporated apples, choice, in cases, at 11c@12c.; do. fair to good, 8½@10c.; N. Y. State sliced, choice, 5@5¾c.; do, quarters, choice, 4½@5c.; Western quarters, bright, new, 5@5c.; common and old, 2½@4½c.; new N. C. peeled peaches at 14@15c.; do. Georgia, 11@14c.; old unpeeled halves, 4½c.; do., quarters, 4c.; new halves at 5@5½c. Blackberries at 8½@8½c. for new. Raspberries, 29@30c. Pitted cherries at 20@21c.

EGGS.—Receipts for week, 6,979 bbls.; do., last week, 5,637 do. The demand is good, and new and higher prices are strong. Some shippers are mixing limed with fresh; this practice should be at once avoided, as buyers will not accept a second time marks that have been thus trifled with.

Near points, 21c.; State and Penn., 20c.; Western and Canadian, 19@19½c.; off grades, 18c.

FLOUR.—Trade has been extensive, including large orders from home trade as well as export sources, and prices are higher and strong.

Latest sales are at $4@4.50 for poor to very fancy superfine State; $4.60@4.80 for ordinary to very good extra do., odd lots and lines; $4.80@4.90 for very good to choice do.; $4@4.50 for inferior to very fancy superfine Indiana, Iowa, Michigan, &c.; $4.60@4.80 for inferior to good shipping extra do., and $4.85@4.90 for good to choice extra do.; common to choice white wheat extras, $5@5.85; choice to fancy do. at $5.80@6.40; red and amber winter wheat, inferior to very choice trade and family, at $4.85; round hoop Ohio at $4.65@5.00, and trade and family brands of do. at $5.10@6.15, the latter rate for choice; St. Louis, $5.00@5.85 for inferior to very good extra; $5.85@6.65 for very good to fancy; Minn. clear, very inferior to very fancy, at $4.30@6.00; do. "straight," very inferior to strictly fancy, at $5.40@6.50, and patent poor to very fancy at $5.50@8.00; unsound stock at from $3.00@5.75; city mill extra at $5.00@5.90, fair to fancy, for West Indies; do. for England, $4.60@4.90 for ordinary to very choice; do. trade and family extras, $5.75@6.75; do. for South America, $5.60@6.20 for standard to choice brands; No. 2 at $3.30@4.00 for very inferior to very fancy (the latter an extreme).

FRESH FRUITS.—Exports of apples, 1,246 bbls. For the moment there is a rush of apples, and special table and retailing sorts only command the two-dollar and above price. Pears have arrived very liberally. Bartletts pressed for sale, as they are mostly yellowed up. Peaches have kept steady all the week, with little variation from the annexed rates. Grapes low. Plums firm, but are about as high as they can go, with a view to steady business.

Apples—Blush Pippin, up-river, ₱ bbl., $2@2.25; do., Western N. Y., $1.62@1.75; do., Gravenstein, $1.75@2; do., Alexander, $1.75@2; do., Fall Pippin, $1.50@1.62; do., 20 oz. Pippin, $1.50@1.62; do., Maiden Blush, $1.50@1.75; do., Calvert, $1.50; do., Cranberry Pippin, $1.75; do., Strawberry, $1.50@1.87; do., Detroit Red, $1.50@1.87; do., Golden Sweet, $1@1.25; do., mixed lots, sour, $1.37@1.62; Jersey, fair to good, $1.25@1.75. Cranberries—Cape Cod, choice, per bbl., $8@9; do., Jersey, choice, per crate, $1.75@2.25; do., light colored, $1@1.50. Pears—Bartlett, State, good to prime, $4.50@5; do., up-river, extra, ₱ bbl., $4.50@5; do., fair to good, $3@4; do., Boston, per bush. box, $1.75@2; Duchess, Jersey, per bbl., $2@2.50; Sheldon, do., $2@3; Louise Bonne, do., $3@3.50; Virgalieu, do., $2@3; Beurre Bosc, do., $2.50@3, Seckel, $2.50@3.50; Swans' Orange, $2@2.50; Flemish Beauty, State, do., $2.50@3; do., up-river, do., $2@2.75; cooking, $1.50@2. Peaches—M. & D. Smocks choice, per basket, 90c.@$1; plain, 65@80c.; do., white, prime, $1@1.25; do., plain, 70@80c.; up-river, Crawford, extra, per basket, $1.25@1.50; do., fair to good, 75c.@$1; N. J., Crawford, extra, ₱ basket, 1.25@1.50; do., good to prime, 75c@$1; do., poor to fair, 40@60c. Grapes—Del., State, 18 3-lb. boxes, $2.00@3; do., in baskets, ₱ lb. 3@7c.; do., up-river, bulk, ₱ lb., 5@7½c.; do, Catawba, 18 3-lb. boxes, $3@3.25; do., loose, ₱ bbl., $8; Concord, State, 18 3-lb. boxes, $1.50@2; do., in baskets, ₱ lb., 4@5c.; do., up-river, bulk, ₱ lb., 3@3½c; do., N. J., bulk, 2@3. Plums—German Prune, bbl., $12@14; Quackenboss, $10@12; do., ₱ ½ bu. cr., $1.75@2, Purple Egg, bbl., $4@10; Reine Claude, $5.50@7 ₱ ½ bush. crate, $1.25@1.50; Couper, ₱ bbl., $7@8; Damson, do., $5.50@6.50; N. J., ₱ ½ bush. crate, $1@1.25. Watermelons—Maryland, per 100, $8@15; do., N. J., $8@12. Nutmeg melons—Hackensack, prime, per bbl., $1.25@1.50; do., poor to fair, 50@75. Whortleberries—Jersey, per box, 75@90c. Nuts—Receipts lately quite liberal and trade dull. Holders not offering concessions, but the tone of prices is weak. Peanuts, Va. hand-picked, $1.65@1.70; extra prime to fancy, $1.45@1.50.

GRAIN.—All articles have been active, the export demand large and speculation brisk, with prices much higher and strong. Latest sales of wheat are of No. 1 amber at $1.20; No. 2 amber at $1.18½@1.19½; do., September delivery, at $1.19@1.19½; extra white at $1.24; ungraded amber at $1.14@1.18; No. 1 white at $1.20½@1.22; do., September option, at $1.21@1.22; do. for October at $1.20@1.22; do., November, at $1.21@1.22; No. 2 white, at $1.20@1.20½; ungraded white at $1.17@1.22; No. 1 red at $1.20; No. 2 red at $1.19@1.21; do., September option, at $1.19½@1.21½; do., October option, at $1.19½@1.21½; do., November, at $1.19½@1.21½; do., steamer grade, at $1.18; ungraded red at $1.12@1.19; mixed winter at 1.17½@1.18; No. 2 Chicago and Milwaukee spring, new crop, at $1.12@1.14½; New York No. 2 spring new at $1.13½@1.14; do., September option, at $1.12; do., October, at $1.12½@1.13½; No. 2 northwest spring, October at $1.14; No. 3 spring at $1.08@1.10½; ungraded spring at $1.06@$1.12. Rye at 72@74c. for Western. Corn at for New York No. 2 at 51@52c.; do., September, at 51@51½c.; do., October, at 51½@52c.; do, November, at 52½@53c.; New York steamer mixed at 50@50½c for spot lots; ungraded Western mixed at 51@52c.; No. 2 white, in lots, at 57@57½c; round yellow at 62@63c. Oats at New York No. 1 white at 38c.; New York No. 2 white at 36@36½c; New York No. 3 white at 34½@35½c.; No. 1 at 36½c.; No. 2 at 35½@36c.; do., October, at 35½c.; No. 3 at 34½@35c.; New York rejected at 33c.; ungraded mixed Western at 34@36c.; white do. at 36@40c.; white State at 38@41½c; mixed State at 35½@36½; No. 2 Chicago at 36½@36½c.

HOPS.—Emmet Wells in his circular says: "Aside from the export movement, which continues heavy, very few hops have changed hands. About one-half of the arrivals this week were new hops, and of the 2,450 bales shipped to London nearly 2,000 were old. If hops continue going out of this port at the same rate as since the first of the month our markets will soon be cleaned out of old stock, and when our brewers step in to buy, they will have to take new hops at the going prices. New have opened at rather too high a figure to give much encouragement either for export or for speculation, and until we know what stand England will take on our pet ales, little business will be done. No very choice hops of the new growth have as yet reached our market; it would therefore be difficult to say what such would bring. Such as we are now receiving are taken up at from 3@36c."

	Bales.
Receipts for the week	1,869
Total receipts since September 1, 1879	5,283
Total receipts for same period in 1878	1,458
Export clearances for the week	2,450
Total exports since September 1, 1879	7,659
Total exports for same period in 1878	605

Quotations are for New Yorks, new crop, 28@36c.; Eastern, new crop, 28@31c.; Wisconsin, new crop, none; Yearlings, growth 1878, 7@18c Olds, all growths, 4@10c.; Pacific coast, growth 1873, 9@14c.

OIL-CAKE.—Western is quoted at $27.50@28 per ton.

POULTRY AND GAME.—The demand for live poultry has fallen off since the Jewish holiday, wants have been filled; and easy prices are quoted.

Chickens are extremely low; N. J., 10@11c, ₱ lb., Southern and Western, 9@10c.; N. J. & W. fowls, 10@11c.; Southern, 10c. Roosters, 5@6c.; Turkeys from all points, 10@12c. Ducks, price 38@70c. Geese, extra, $1.50; other, $1@1.20.

Dressed poultry is lower with State, and Western shippers enlarging supplies beyond the wants of this end of fall. Near points control the best trade until the weather becomes settled cool; and if there is a lack of stock it can be easily filled up by city killers. Turkeys, Phila., dry-picked, 15@16c., State and Western, 13@14c. Young, 12@13c. Chickens, choice, 15@16c.; other, 12@13c. Fowls, Phila., dry-picked, 15@16c.; N. J., 13@14c.; other, 10@12c.; Ducks, spring, 15@17c. dry-picked, State do., 14@15c.; ordinary, 12@14c.

Supplies of game are moderate, and prices are stronger with the advancing season. Venison now on table. Partridge, State, $1.00@1.62 per pair; Western, $1.25; grouse, 85@90c.; woodcock, State, 85@90c.; Western, 80c.; Eng snipe, per doz. $1.25; plover and big yellow legged, $1.75; small snipe, 40@50c.; wild pigeons, $1.25, light. Wild ducks doing better; red heads, 50@60c. per pair; Mallard, 40c.; teal and common, 30@35c. Reed birds and mixed small, 25@30c. per doz, few needed.

PROVISIONS—Have been excited, active and higher. Mess pork closed at, for September, $8.90 asked; October at $8.85; November at $8.90@8.95, and the December option at $8.90@9; January at $9.35@9.45. Bacon at 5¾c. for long clear and 6c. for short clear. Lard—Western steam at $6.40@6.42½ for spot lots; $6.47½ for October; $6.17½ for November, and $6.10@6.12 for December. Stearine at 6¾c. for Western and 6¾@6¾c. for city. Tallow at 5¾@6c. for prime. Beef hams at $15@15.25. Beef—Plain mess at $10.25@11; extra mess at $11.50@12; packet at $11.50@12; tierced beef, city extra India mess, at $19@22, and Philadelphia do. at $18.25@19.

SEED.—Clover is quiet at 6¾@7¼c. Timothy is in demand and quoted strong at $2.45@2.50.

TOBACCO.—Export demand is still very light and home trade moderate, but prices held firm.

VEGETABLES.—Exports of potatoes for week 1,725 bbls. Potatoes rule low: as the export demand has fallen off, and the local trade is yet using miscellaneous items. Early Rose, $1@1.25; Peerless, 87@1.00; Sweet N. J. & Del., $2; Va. and other common, $1.50@1.75. Green corn, per 100, 75c@$1.00; cucumbers, L. I., per 100, 40@50c.; pickles, per 1,000, $1.25@1.50; tom toes, L. I., near-by, per crate, 30@50c.; string beans, ₱ bag, 75@1.00; potato Lima beans, per bag, $1.75@2.00; Lima beans, flat, per bag, $1.50@1.75; do., shelled, ₱ bu. $4@5; squash, marrow, ₱ bbl., 50@75c.; cabbage, flat Dutch, per 100, $3@5.00; onions, white, per bbl., $1.75@2; red, Eastern, ₱ bbl, $1.50; do., Chester, ₱ bbl., $1.37@1.50 yellow, ₱ bbl., $1.50@1.75; beets, N. J., ₱ bbl., $1.00; Russia turnips, Jersey, ₱ bbl., 50@75c.; carrots, ₱ bbl., $1.00@1.25; egg plant, L. I and near-by, per 100, $1.75@2; peppers, bullnose, ₱ bbl., $1.25@1.50; pumpkins, per 100, $2.00@5; Cauliflower, ₱ bbl., $1.50@4.

WOOL.—Demand continues active, and there is a very strong market.

Ohio, Pennsylvania and Virginia.—XXX and Picklock, 40@42c.; XX, 38@40c.; X, 36@40c.; No. 1, 40@42c.; No. 2, 36@38c.; common, 34@35c.; combing, 40@44c.

New York, Michigan, Indiana and Wisconsin.—XX, 34@36c.; X, 33@36c.; No. 1, 37@40c.; No. 2, 34@36c.; common, 31@33c.; combing, 38@44c.

Iowa, Vermont and Illinois.—X and XX, 32@35c.; No. 1, 36@40c; No. 2, 32@35c.; combing, 37@39c.

Missouri, Kentucky and Tennessee.—Washed fleece, 37@40c.; unwashed do., 30@33c.; unwashed combing, 28@33c.

Pub-washed Wool.—Choice, 40@44c.; fair, 38@40c.; inferior and burry, 30@33c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Sept. 20.

BEEVES.—Receipts for the week, 12,699 head; do. last week, 11,821 do. It has been a bad week for sales; a good many unsold car-loads have been lopping upon the market, and on Friday there was a bad break in prices. In a few cases 10@10¾c. was obtained, but 9½@9¾c. were thought full prices for prime to above native steers. For ordinary to good, to dress 55@57 lbs., 7¼@9¼c.; poor, to dress 54 lbs., 6¾@7c.; Texas, 6¾@6¾c., and some at the close as low as 6c. Exports for week, 835 live cattle; 4,881 quarters beef; 1,415 carcasses mutton.

COWS AND CALVES.—Supplies are greatly ahead of previous seasons. Some weeks of late over 200 head have appeared in the offering, or more than double the number for former comparative dates. A good many common cows arrive and have to be quoted down to $20@25 per head, and a very good class of animals do not go above $40@45.

VEAL CALVES.—There is trade enough to sustain 6¾c. for tops, and that says all. Prime fed, 6c.; poor to good, 4@5½c.; grassers, 2½@2¾c; buttermilk, 3@3½c.

SHEEP AND LAMBS.—Receipts for the week, 38,320 head; do. last week, 30,255 do. There is no special animation to note. Lambs, if anything do better than sheep. Sheep range 3¼@5¾c.; lambs, 4½@5¾c. the latter for heavy prime.

SWINE.—Receipts for the week, 29,723 head; do. last week, 22,115 do. There is a good strong tone for hye at $3.50@3.75; with light at $4 per 100 lbs.

New Jersey dressed pork, 40 to 70 lbs., pigs, 6¼@6½c.; 70@100 do., 5¾@6½c.; 100@150 do., 5¾@6c; 150@200 do., 5@5¾c. City dressed, $4.75@5.50.

American Fruit-Preserving Powder
AND LIQUID is the Cheapest, Most Reliable and Best-Known Method of preserving all kinds of **Fruits, Tomatoes, etc. Strawberries, Raspberries,** and all high-colored Fruits retain their rich color as well as flavor. One ounce of it (costing 3 cents) is equal to 8 lbs. of sugar in preserving property.
Established over ten years, and endorsed by thousands upon thousands of families. One trial will establish the fact that the **American Fruit-Preserving Powder and Liquid** will effectually prevent fermentation and preserve all kinds of **Fruits, Tomatoes, etc**, and keep them the year round, or for years, in jars of any kind or size, or in wooden kegs and barrels, *without sealing air-tight.* Simply corked or tied down with a strong paper is all that is needed.
The fruit will keep *without sugar*, or any quantity of sugar may be added as desired.
Warranted to be as healthful as table salt.
The Fruit, etc., may be cooked little or much, as desired. They will keep without any cooking, or they may be cooked down into sauce. The method is simple and easy. None can fail if the Powder and Liquid is added into the Fruit, etc., in quantity as directed.
One package will preserve 256 pounds of Fruit, Tomatoes, etc., or 2 bbls Cider. Price **ONE DOLLAR** per package.
Give it a trial. If you cannot get it from your Druggist or Grocer, I will send it prepaid to any express office in the United States east of the Mississippi River, upon receipt of the price; or west of the Mississippi River and east of the Rocky Mountains for $1.25 per package. **Local and General Agents Wanted.**
Address L. P. WORRALL, No. 24 Liberty St., New York.

Reading for the Young.

FALL WORK IN THE GARDEN.

THE season for out-of-door gardening is now nearly over; there still remains, however, some little work that should be attended to before cold weather comes. If not already done, it is now high time to plant bulbs of Lilies, Hyacinths, Tulips, Snowdrops, Narcissus, etc. Every member of our society should have at least a couple of Lilies. To have these beautiful flowers to perfection, dig the soil out of the bed or border to the depth of eighteen inches, and fill the hole with a compost of peat, manure and leaf mold about a foot deep; the remaining six inches may be rich garden soil mixed with peat. The bulbs of strong growing Lilies should be planted about four or five inches deep; for the weaker sorts three inches deep will do. The White Lily—Lilium candidum, L. longiflorum and L. tigrinum, the Tiger-spotted Lily, are the most common. They are hardy, but they will flower better next year if they are covered with manure during the winter.

Hyacinths should be planted now. Set the bulbs about eight inches apart and two inches below the surface. The ground should be enriched with well-rotted manure and finely pulverized. Plant also some in pots, soak the soil with water and set them away in a cellar in a cool place for five or six weeks. At the end of this time the bulbs will have formed roots, and they can be transferred to the room or greenhouse where they will flower.

The pots may also be set in a pit in the ground and covered up with soil. This will keep the soil in the pots moist and the temperature even—the most favorable conditions for the formation of roots.

Tulips are planted like Hyacinths, only closer and not so deep. For winter flowering, three or four bulbs may be set in a pot large enough to hold one Hyacinth.

Now is also the time to sow seeds of apples, pears, grapes, peaches, plums, etc. All kinds of nuts can now be sown also. Sow all these seeds in drills about nine inches apart and regulate the depth that each is to be buried by its size; the smaller ones are to be covered but little, the larger ones more. Cover the bed during the winter with long manure. After everything is cleared off the gardens, the ground should be spaded but not raked and lay in this condition over winter. This fall spading should never be neglected; on stiff, clayey soils especially, it is very beneficient.

UNCLE MARK.

THAT GOOD DOG JACK.

SOME dogs, in their love and affection for their masters, have at times equaled human beings in their constancy, and even surpassed them in the marvelous intelligence with which they foresee and avert approaching danger. The following example, related to us by one of the ladies of the story, may prove interesting. Two girls, daughters of an English country doctor, were once out for a walk together. It was an autumn afternoon, sunny and pleasant. They were accompanied by their little dog, named Jack, who was a clever little terrier, and more than once had proved his claim to be considered, as indeed he was, their protector while out walking. Their father often said he felt "quite happy when Jack was with them; he was sure no harm could come to them." The two girls pursued their walk merrily. The fine afternoon tempted them to go further than they ought, however, and by the time they turned the dusk had fallen and they were afraid they would be late for tea. One of them proposed to take a short cut through a wood with which they were so well acquainted, having very often gathered blackberries in it on a summer afternoon. The other agreed, and so they arrived at the edge of the wood and prepared to enter it. "All the same I am rather afraid," said Dora, the younger of the two; "there have been several robberies in the neighborhood, and I saw some very odd-looking men pass our door to-day; besides, I am wearing my new watch which papa gave me on my birthday." "Oh, nonsense!" her sister replied. "It is nearly six o'clock now, and we shall be late. Be sure no one will wish to harm us." "I wish I were as certain as you are. But what's the matter with Jack?" Just as she had said this, Jack advanced toward them, and planting himself in the middle of their path, sat down and whined. "That is odd," said Dora. "I never remember him doing that before." The other girl derided her fears, and attempted to pass the dog; but he caught her dress in his teeth, and held her so firmly that she hardly dared to set herself free. One more effort she made, but Jack was resolute; so at last, seeing how determined he was to prevent their further progress, she gave up trying.

"Well, well, you stupid little brute!" she said angrily. "I suppose we must go all that long way round." So the two sisters abandoned the idea of taking the short path through the wood, and went home by the safe high-road. When they arrived, how grateful, how unutterably thankful did they feel to their little protector, whose intelligence had been so far superior to theirs, and had saved them despite themselves. A man had been found in the wood shortly after they had left it, murdered and robbed, it was conjectured, by the tramps who had passed through the village in the morning. Thus Jack had preserved his mistresses from meeting perhaps a similar fate. Their gratitude, it is needless to add, was profound toward their little four-footed protector, who, we are glad to hear, lived to a good old age.—*Chambers' Journal.*

LETTERS FROM THE COUSINS.

UNCLE MARK:—You say all readers of the RURAL are welcome to join the Horticultural Club, I have taken great interest in it, so I would like to become a member. Flowers are my special pets. I have a great variety and take much pleasure in caring for them. If any of the club grow Fuchsias let me advise them to plant some in the ground next summer where they will be shaded from the noonday sun. I have a bed of them on the north side of the house. It is really "a thing of beauty" if it does not prove quite "a joy forever." But the great desire of my heart has been to have some nice hardy shrubs. We have succeeded well with the RURAL seeds. I have some Weigela plants nearly a foot high now. I have been trying to improve a wild flower that grows here, it is a perennial and a good bloomer, the plants grow about three feet high. I will send you a flower and leaf for name.

AN OREGON FARMER'S WIFE.

Tangent, Oregon.

[You are welcome to join the club. The flowers and leaf sent are those of the Moth Mullein, Verbascum Blattaria. This species, like all the Mulleins, is introduced from Europe, and it now grows wild along roadsides and in waste places all over the country. It is hardly worth cultivating. U. M.]

DEAR RURAL COUSINS:—Good-morning! Is old Jack Frost going to kill all of our flowers? We have had three or four quite hard frosts, but they have not done any harm to speak of. My Dahlias are blossoming quite profusely at present. I have four different kinds, and also some house plants which look very nice. Ivy speaks of autumn as being his favorite season. I think mine must be spring, when the flowers begin to show their faces in the cold days of April. All the seasons bring pleasure with them. I have read some of Sir Walter Scott's poetry and also Poe. Milton I know nothing about; Shakespeare I do not like. For prose writers, Mrs. Holmes, Mrs. Evans and Mrs. Stephens, are my favorites. E. E. Rexford is a good writer, both in prose and poetry, and others too numerous to mention. None of the cousins have spoken of music. I love to hear good music, both instrumental and vocal. My favorite music is that of the Sabbath School, for it means something more than to please the ear. Cousins, I guess that Ivy was our interesting correspondent from the Sandwich Islands, and I believe also that he lives in New York city. Ivysrest may be the name of his residence, and perhaps he occupies a small corner in the RURAL office. This letter is getting most long enough for the waste-basket.

Here is a recipe for a pudding. It is good I know, because we have used it and like it very much.

Queen of Puddings: One pint white bread crumbs, one cup white sugar, one quart of milk, grated rind of one lemon, the beaten yelks of four eggs, one-half cup of butter, all to be mixed and delicately baked in a shallow pan; when cool, spread over with the fruit of peach preserves, drained free from sirup, or with very thick fruit jelly; then beat the whites to a stiff froth, sweeten with powdered sugar, add the juice of the lemon, spread over the pudding and brown, to be eaten cold, with cream. It is better without the cream. This letter is too long already, so I will wish you a kind good-night. OLD MAID.

Hillsdale Co., Mich.

[This is a very good letter from Old Maid; she is, however, mistaken in her conjectures about Ivy.—U. M.]

DEAR UNCLE MARK:—I saw that you wanted the members of the Horticultural Club to report how their plants were getting along. Mine are not getting along as well as I wish they were. I have taken the best care I know how of them, but they do not seem to grow although they blossom very nicely. Some kinds are very large, though and doing splendidly.

I have not a very great variety of flowers this year, for I have not the room, but next year I hope to have more. On my bed I have Asters, Zinias, Marigolds, Phlox, Scabiosa, Verbenas, Portulaca, Petunias, Mignonette, Snapdragon and Cockscomb. My Verbenas, Petunias and Marigolds are very large, while the rest of my plants are quite small. The ground is rich, and I have kept it well weeded and mellow. What next to do I do not know. I hope that when the cooler weather comes they will do better. ALICE B. GIFFORD.

Chautauqua Co., N. Y.

DEAR UNCLE MARK:—I am very glad, indeed, to see so many new members joining our Club, and I hope that there will be a great many more. I would like to know how the cousins raise peanuts and pop-corn. I have noticed that some of them wrote they had planted these; if any of them will tell me I shall be much obliged. I have had a number of radishes, but they are so bitter that we can hardly eat them; I guess I did not water them enough. I liked Ivy's letter very much. I think that Lizzie Hay ought to write again, she has not written us a single line since last spring. Dolly Varden's letter was very nice, it was so lively. My flowers are getting along very nicely indeed. I have such a lot of Portulaca, it is coming up everywhere. The Grapevines look very well, only the fruit is so long in ripening. In a few days we have all got to go back to school again; but I must close now, or my letter will go into the waste basket. Your affectionate niece.

New York City. LIZZIE E. BLAIR.

DEAR UNCLE MARK:—This summer we picked 78 boxes of red raspberries out of our garden. Sold 55 boxes at 10 and 12½ cents per box. My flowers are nice and don't you believe it, I had two nice watermelons which were larger than the rest, and somebody stole them. So I took my dog "Dick," he is a savage hunting dog—and chained him up there, I wish all the cousins had such a dog.

FRANKIE M. A. BROOKS.

Dane Co., Wis.

UNCLE MARK:—I belong to that class of cousins somewhat advanced in years, but still I have a great desire to join your Horticultural Club. I have been thinking it would benefit many cousins out of their teens if they would only do what their hands find to do. I have some pet flowers, of which I think much, and would like to tell about them if I was only a regular accepted cousin. Our plants of Lilium auratum and lancifolium have just faded away, and beautiful and sweet do not do justice as expressions of them. Lilium Humboldtii I could not get acclimated here. Should I be an acceptable member I will call again. Yours truly, J. W. MAPLE.

Oregon, Mo.

UNCLE MARK AND RURAL COUSINS:—I have much enjoyed reading your letters in the RURAL, and would like to become a member of your club. I am very fond of flowers, but have not much of a variety to write about. I planted an Almond about two months ago, scarcely expecting it would come up, but it has, and is growing finely. Can you tell me what kind of culture it will require, and whether it will live out of doors or not in our land of frost and snow? I will write no more now, but will write again some other time if this is acceptable. I am 14 years old. ELLEN BECKWITH.

Chenango Co., N. Y.

[The Almond must be grown in a pot and kept in a greenhouse in the winter.—U. M.]

UNCLE MARK:—I wish to join the Horticultural Club. I have read the letters with great interest and cannot resist the temptation any longer. I have a small flower garden and a fine collection of house plants, among which are sixteen different kinds of Geraniums and seven kinds of Coleus, five species of Cactus, three of Begonia, and a number of other plants, which include Amaryllis, Fuchsias, Calla Lilies, Musk plant, Cigar plant, two kinds of Sea Lily, Oxalis, Strawberry Geranium, Coral plants, &c., &c. But I must close, otherwise you will not want to hear from me again.

Oneida Co., N. Y. CLARA M. WOOD.

DEAR UNCLE MARK:—I have been very much interested in the children's letters, and would like to join the Horticultural Club. I have a nice patch of cucumbers. I sowed radishes twice with seed from the store, but they didn't come up as well as Mr. Vick's seed. I am fourteen years old and go to school; when school is out we are going to have a picnic. We have taken your paper eleven years and think we cannot get along without it. We have picked about 35 bushels of peas for market.

Yours truly, ELLA PADDOCK.

Wyoming Co., N. Y.

DEAR UNCLE MARK:—I wish to enroll my name upon your list of nieces. I am eleven years old, and have been the reader of the RURAL for a long time; I like very much to read the letters from the young cousins. I have been living in Kansas only about seven months, and like it very much. I expect to have a little garden next year, and would like to join your Horticultural Club. Hoping you will accept me, I will sign myself,

Allen Co., Kans. STELLA M. PRATT.

The Puzzler.

ENIGMA.

[THE following beautiful poem, by J. P. Johnston, author of "Galileo" and other poems, is a literary curiosity, and a very ingenious enigma. The name of a lady is here entwined in verse, as a sweet flower hidden in a garden. Who can find it? W. B. D.]

As, in some garden's most uncultured maze,
A lovely rose, with virgin sweets arrayed,
Which breathes a soft and tender perfume round,
Concealed the while from thy most prying gaze,
With eager quest when you at length have found,
You gladly pluck, nor leave it there to fade;
So I—too happy task—have here entwined
A sweet, rare blossom—a most blooming treasure—
A flow'ret, radiant with all light and pleasure,
And tend'rer beauty, though I fear 't will find
No recognition, since it lies enshrined
In my rude verse—a most entangling measure.
Then closely con it till the spell is known,
So deeply hidden, yet most clearly shown.

☞Answer in two weeks.

ACROSTICAL ENIGMA.

My first is in flower but not in seed,
My second's in plant but not in weed,
My third is in silver but not in brass,
My fourth is in something we spy through a glass;
My fifth dwelt in heaven ages ago,
My sixth comes in breezes that merrily blow,
My seventh's in the rivulet murmuring along,
My eighth in the plodder that lists to the song,
My ninth in the traveler, weary and sore,
My tenth's in the caller that knocks at your door.
My eleventh aids the lady that trips o'er the green,
My whole in the RURAL may weekly be seen.

☞Answer in two weeks. MARY W.

HIDDEN CHANNELS.

1. I dinna ken, Ned, you rascal.
2. I am well! In G tongues are salted.
3. The peacock burned to death.
4. Bah! a married flirt is disgusting.
5. I owe no man a cent.
6. Meg! rip open that seam.
7. His talent I crave.
8. That Riki rides well.
9. See the camel, Eda?

☞Answer in two weeks. LITTLE ONE.

PUZZLE.

THE first letters of what five months in the year form the name of a great hero in Mythology.

☞Answer in two weeks.

RURAL SPECIAL REPORTS.

(Continued from page 627.)

IOWA, Florence, Benton Co., Sept. 10.—Wheat was almost a failure here last year, owing to dry weather and the chinch bugs; it yielded only from five to six bushels per acre; but some pieces of Odessa wheat, sown last fall, yielded 30 bushels an acre. Oats and corn are very good crops, the latter is out of the way of frost now. Blount's Prolific has some stalks 11 feet high with four or five ears apiece, and I think it will ripen before frost hurts it. Beauty of Hebron and Early Rose were planted side by side; but the Beauty came up about ten days before the Rose and was growing ever so nicely, when, lo! a frost struck it out of sight, for some time at least, but I've managed to get half a peck of as nice potatoes as ever grew. The Acme tomato is the finest I ever cooked or ate in any shape. We have canned and ate all we wished, and now a bushel hangs ripe on the vines. My next neighbor took a pocketful home for seed; he says they beat anything in the tomato line he ever saw. The lettuce was good, but the beets were a failure. Only a part of the flower seeds came up. The weather has been dry and so are a great many of the wells. Some of our farmers have to go a mile or more to get water for their stock. Some of the sloughs that even "the oldest settler" never knew to have dried up, have done so now, and the fish in them have all perished. Farmers have plowed scarcely anything. A. E. S.

NEB., Purple Cane, Dodge Co., Sept. 4.—We are situated on the north side of the Platte River, which is four miles off. We have the bluffs close to our backs, and see those on the south side of the Platte, say seven miles distant. The intervening country is as flat as a pancake, and in the fall, after frost, of about the same color. Houses and barns surrounded with trees spot the bottom pretty thickly. This pancake upon which we live and move, etc., etc., can be seen 20 miles to the east and to the west. The purple bluffs bound it all round, and just now are saw-toothed with stacks of grain, which seem to shoot up daily, as if Nebraska were just cutting her eye teeth. Yonder to the left is a crowd of men, horses and red machinery, nearly enveloped and hidden in a cloud of golden dust, from which a humming sound enlivened by frequent shouts and cheers, shows that king Barleycorn is having his beard shorn. Just south on a stubble field is a three-horse team and an iron vehicle prancing around the edges, turning under all trash, weeds, etc., for next year's crop of wheat. Along the bank of the river are now in sight three trains of cars, *en route* for San Francisco. In the foreground is the RAWHIDE, not such a one as old-time schoolmasters used, but made of bona-fide water, mud, rushes, reeds, weeds and crookedness. This meanders along through the country and produces crops in abundance of frogs, mosquitoes, snakes, green-head flies, and gives shelter for innumerable blackbirds and brown cats, for we can see their tails sticking up straight out of the reeds all the summer and fall. There are also water hens, thunder pumpers, wolves, polecats, weasels and badgers, and rabbits more than sufficient. The middle of this Rawhide is cattail; then, going toward the banks, common reeds, slough grass, and, along the top of the low banks on each side, a belt of sunflowers. Ribbon gardening is done here on a large scales, as the Rawhide is about 40 miles long. This stream takes its name from an Indian tragedy of revenge enacted on its banks about 20 years ago, and is an enduring monument to the fact that our coppery brethren were the originals of the so-called "skinners," which are now an established order of society.

S. R. M.

TENN., Humboldt, Gibson Co., Sept. 2.—The RURAL NEW-YORKER of Aug. 30 is very interesting, particularly the Pomological Department. I am pleased to see the merits of the new, and also old varieties of fruits discussed. We should hold fast to all old and new varieties which are really good and valuable in every respect. Mr. W. C. Barry, speaking of the Alexander and Amsden peaches, says they were ripe with him this year by Aug. 8; with us they were ripe on June 8. Last year we had them ripe on the 28th of May. Now this makes just two months' difference in their time of ripening between Rochester, N. Y., and Humboldt, Tenn. Our Alexander was two or three days earlier in ripening than the Amsden, which was about all the difference we could see, and ten days ahead of the Beatrice. The Summer Rose apple is one of our best summer apples, and profitable. A few years ago we shipped several barrels of them to Louisville, Ky., when the market was crowded with peaches; yet about the middle of July we received six dollars per barrel containing three bushels apiece—a better price than we ever received for any other variety of winter or summer apples.

Crop prospects with us are unusually promising. We have an abundant rain for fall plowing and seeding. We have no yellow fever in our State outside of Memphis and its vicinity. B. F. T.

PERSONAL ITEMS.

De Lesseps has started, in Paris, a weekly newspaper to advocate his Panama canal.

The Countess of Tankerville, and her eldest son, Lord Bennett, are among the latest converts to the Church of Rome.

The first-born of the colored Senator from Mississippi was baptized in a Cleveland church the other day as Roscoe Conkling Bruce.

Monclar, an eminent French agriculturist, proposes to feed cattle, sheep, and pigs on provender containing savory herbs, to give flavor to the flesh.

Six misbehaving young men were taken from their beds by a mob at Wesley Chapel, Ind., tied to a fence in a row, and whipped almost to death.

Gen. MacDougall, commander of the British forces in Canada, is bitterly accused because he drove through a funeral procession with his four-in-hand.

Austin Buchard, uncle of President Hayes, an old and honored citizen of Windham county, died in Fayetteville, Vt., Monday afternoon, aged eighty years.

Prince Henry XX. of Reuss, having married Mlle. Clotilde Loiset, a German circus-rider, Prince Hatzfeld has espoused her sister, Mlle. Emilie, who followed the same profession.

The death is announced of Mr. Chapman the leading entomologist of Scotland, after a lingering illness, accelerated by the failure of the City of Glasgow Bank, of which he was a shareholder.

The Rev. J. S. Anderson's immorality resulted in his expulsion from a pastorate at Charles City, Iowa. He then opened an office as a physician, but the people would not tolerate him in any professional capacity, and a masked mob drove him out of town.

Queen Isabella does not mean to have the trouble with King Alfonso's second wife, which she had with the first. She has had an interview with the prospective bride and thus renders her verdict:—"What a charming girl! How happy I am that she is to be the wife of my son."

Colonel Thomas Scott has returned from his journey abroad a strong and well man. "I never felt in better health in my life," he said, as he stepped from the steamer. He obtained sufficient pledges of pecuniary assistance abroad, to assure the completion of the Texas Pacific railroad.

The Archduchess Christine, who will soon be Queen of Spain, is described by a German lady as having a tall and slender figure, a loveable face, blue eyes, dimpled cheeks, somewhat fair hair, small hands, almost like a child's, ditto feet, and a silvery voice. Altogether a very graceful figure.

A lady living near Little Britain, Pa., received a piano as a wedding present several years ago. She has no taste for music, but says it attracts the cows in to be milked, and the children pound upon the keys at the proper hour for that purpose. It has, accordingly, been placed in the spring house.

Elisha Grimes said in a prayer meeting at Little York, Ind., that he was wholly prepared to die. George Jones called him out of doors a few minutes afterward, and killed him with a knife. It is conjectured that Jones thought Grimes, professing readiness, might as well die at once, for no other motive has been discovered.

A mob broke into a jail at Pentonville, Neb., took out Barney Thomas, a horse thief, and started for a convenient tree to hang him on. It happened that a party of Barney's friends were lurking in the neighborhood, having made an ineffectual attempt to get him out of the prison. They fell upon the lynchers suddenly, rescued the prisoner, and escaped with him.

Martel Fearing was repeatedly visited, at Plain City, O., so he says, by the ghost of an old hunter, who declared that there was a valuable deposit of lead on the farm. Under the unearthly guidance, Fearing dug night after night to find the mineral; but the ghost did not direct any precaution against accident, and finally the shaft caved in, injuring the miner fatally.

Z. C. Cowley, an aged bachelor, of Wyoming, N. Y., advertised his desire "to correspond with a lady of suitable age, with a view to matrimony." Margaret Backus, 60 years old, a maiden inmate of the Rochester poorhouse, responded with a letter, in which she enclosed a photograph of herself taken ten years ago. The result was a meeting followed by a wedding.

John, second Duke of Montague, directed his tenants and dependents not to work or kill their disabled horses, but to send them to his fine park at Broughton, where anecdotes of his kindness are still told. He had a frightful dog, of which he made a great pet, because he said that no one else would be kind to anything so ugly. He was one of the first prominent apostles of kindness to brutes.

Brigham Young mixed the Mormon Church property with his own in a way that, in law, left it all at his death as one estate. The executors, who are Mormon dignitaries, undertook to separate the two equitably; but the heirs, consisting of the original and only lawful Mrs. Young and her children, have had a receiver appointed, and it looks as though they would finally get the entire amount.

When Gambetta drove to the great review in Paris, the officer who rode humbly at the door of his carriage in command of the escort was heir to the ancient Dukedom of Montmart. He may have Princes of the house of Bourbon in waiting on him a few years hence, when he is President of the Republic. The son of the Genoese grocer of Camors is going as far in France as the son of the Venetian Jew has gone in England.

Mark Twain sent the following reply to a request for a contribution to the battle-flag day expenses at Hartford:—Out of the poverty left on hand by an interminable European trip I very gladly put up the inclosed twenty-five dollars in furtherance of the good cause which you represent. There is nothing nobler than for religion to support patriotism, and nothing wiser than for both to uphold and encourage domestic economy—therefore I subtract this sum from the pew rent.

The Princess of Wales is described as never more radiant than of late, "not even on the morning, sixteen years ago, when in that jaunty hat and mauve poplin dress she stepped ashore at Gravesend, and afterward rode through London, taking triumphant possession of all our hearts." On a recent occasion she "looked almost as young and quite as charming in a costume of black and white striped silk, and it was easy to see how proud she is of her boys."

A little Hop Bitters saves big Doctor bills, long sickness, suffering and perhaps death.

Attention, Owners of Horses!

THE ZINC COLLAR PAD is the only permanent and reliable pad for sore-necked horses or mules, that has ever been produced, and has been greatly improved since Jan. 1st, by being specially fitted to first-class tight and loose-topped collars. The new pad of proper sizes will fit either. Being of smooth metal, they do not wear the mane, and always dispense, when needed, their medicinal virtues. There are over a million and a half of them in use. Pads made of other material can only temporarily have any curative properties whatever, and soon become worthless by abrasion in cleaning them. The Zinc Pads are sold by leading Saddlery Houses throughout the country, and harness makers generally. Ask your Harness Maker for them. Manufactured by ZINC COLLAR PAD CO.,
BUCHANAN, MICH.

THE FARMER'S FAVORITE
WINE & CIDER MILL.
IT HAS NO EQUAL IN SIMPLICITY,
GRINDS FOUR DIFFERENT GRADES OF PULP.

We make three sizes.

Russell's Improved

FARM ENGINE.
With or Without Traction Attachment.
Easily Managed, does Good Work and More of it than any other Engine.
See What People Say of It:
From John Beckel, New Washington, Crawford Co., O.—The Ten Horse Engine we bought of your agent, J. F. Lederer, four years ago, can't be beat. We have not paid out one dollar for repairs since we got the engine. Have not looked after or opened our Pump since we got it. It starts every time we want to pump, makes no difference, high or low steam. It stands perfectly still without stay rods. Can take down without screwing the wheels together and breaking the spokes so that your wheels are to fill every season. It stands perfectly quiet by drawing the lock or putting four blocks under the hind wheels. It is perfectly safe from fire. We can keep steam up easy. Any boy can fire. We think it is the "Boss of the World."

RURAL SPECIAL REPORTS.

NEB., York, York Co., Aug. 30.—We had a very wet season for this state through harvest, consequently there is considerable sprouted wheat. We have had splendid weather since harvest was over, and farmers are now busy thrashing out the golden grain which is turning out so light that it makes a good many look rather disheartened. Wheat is worth from 50 to 65 cents, an advance of freights having cut down the price five or six cents per bushel. A good many are sowing fall wheat this season, hoping thereby to get in ahead of the chinch bugs. The barley crop was nearly lost through the wet weather. Oats are a good crop. Corn promises an immense yield. Late potatoes suffered badly from the beetles. Timber grows very fast here; I have some Cotton-woods that have grown over six feet this season, and other timber shoots up proportionately. Wheat runs about 10 to 12 bushels per acre; oats 30 bushels. Hogs are worth $2 to $2.50. Some farmers have their plowing already done for next year's crop. GRANGER.

MO., Hermitage, Hickory Co., Sept. 4.—The Pearl Millet you sent me, was planted about May 1st; the dry weather coming on, many of the seeds did not grow, but what did come up, is "immense." Who said that it would not ripen? I left some eight or ten hills to ripen or grow rather, as I did not think it would ripen, and now I have almost enough ripe seeds to sow an acre, and if frost delays two weeks longer, I shall have a nice lot of seed. The Blount corn is good, but the cut-worms, squirrels and raccoons left me only about half. I presume they thought I was farming on shares, and they did not wait for an equitable division. M. N. N.

PAMPHLETS AND CATALOGUES.

"THE PARKS AND GARDENS OF PARIS." Second revised edition. This is a work that we heartily recommend to every lover of the horticultural. Its author is the founder and editor of the London "GARDEN," a weekly periodical, the best of its kind published anywhere. "The Parks and Gardens of Paris" is a large book of 550 pages, and illustrated with hundreds of original and beautiful engravings. The title is somewhat misleading to Americans. It is not at all confined to a mere description of the parks and gardens of the French capital as such; for the author points out all he has there seen that is worthy and all that is not worthy of imitation. This he does as only a practical, educated horticulturist of refined taste can do. His censures, approvals and praises are all alike sincere, and being guided by excellent judgment, do not fail to carry conviction with them. The book is full of instruction and one reads it from beginning to end, delighted that he is learning so much. The first nine chapters are given to the consideration of the chief parks and squares of Paris. Among the most interesting subjects treated of in the rest of the book, are those under the following headings: Trees for Cities; The Cemeteries of Paris; Winter Gardens; A Few Notes on Private Gardens; The School of Horticulture of Versailles; The Cordon System of Fruit Growing; The Paradise, Doucin and Crab Stocks; Some Notes on Fruit Gardens; Fig Culture in the Neighborhood of Paris; Fruit Culture; How are we to Improve? Implements and Appliances used in French Gardens; The Market-gardens of Paris; Asparagus Culture; Mushroom Culture in Caves under Paris; Flower, Fruit and Vegetable Markets, etc., etc. We wish that those of our countrymen who have to do with *our* parks and squares, could be induced to read this book from beginning to end. It is published by Macmillan & Co., of London, and the price is twenty-five shillings, or about $6.00.

GRAY'S Botanical Text-Book, Part I, Structural Botany. By Asa Gray, L.L.D., etc. Published by Ivison, Blakeman & Co., New York and Chicago. The first edition of this work was published in 1842, the fifth in 1857. Each edition has been in part re-written—the present entirely so. Dr. Gray's First Lessons in Botany are, as the title indicates, for beginners, while the present text-book is intended to thoroughly equip a botanist for the scientific prosecution of systematic botany and to furnish the needful preparation to those who proceed to the study of vegetable physiology and anatomy and to cryptogamic botany. This is the first of a series of four volumes in contemplation. The second (Vegetable Histology and Physiology) Dr. Gray has assigned to his colleague, Professor Goodale; the third (Introduction to Cryptogamous Botany), to Professor Farlow and the fourth (A Sketch of the Natural Orders of Phænogamous Plants and of their Special Morphology, Classification, Distribution, Products, etc.) Dr. Gray "hopes rather than expects himself to draw up." We hope that his hopes will be realized and that his expectations will be wholly disappointed.

Gray's botanical works and writings are models in their way, and they are so accepted wherever botany is studied and the English language is understood. He is possessed of the faculty in a remarkable degree of selecting the plainest and strongest words of the language to express his thoughts. Simplicity, brevity, yet fullness and cleanness are characteristic of everything that he writes.

A CRUMB OF COMFORT.

Jonathan.—"They *du* say we sent you this darn'd weather! Don't know 'bout that! Anyhow, I guess we'll send you the Corn!!

Farmer Bull.—"Thank'ee kindly, Jonathan, but I'd rather ha' done without both!!!"

WHAT OTHERS SAY.

CULTIVATING WHEAT IN ENGLAND.—Our readers well know that we have not favored what is called the new system of "cultivating" wheat, which for the last couple of years, in the Eastern part of our State, has caused some excitement among our farmers. In pursuing the "new" method it was fortified by the statement that it had been adopted by the best farmers in England to the exclusion of all others. In our reading we could not see that this statement was endorsed to any considerable extent, though some years ago it became somewhat practiced. The editor of the RURAL NEW-YORKER, wishing reliable information on the subject, wrote to Dr. J. B. Lawes, of Rothamsted, Eng., and received the following reply:

"No one here cultivates wheat, nor has thin seeding ever made much way. At the present moment the great bulk of the wheat grown in this country is drilled in rows about five inches apart, and the seed used is about two bushels per acre. It stands to reason that if one plant of wheat has possession of one or two square feet of soil, its power of growth must be increased; but except upon garden soil, or upon farms in excessively high condition, I feel sure that thin seeding will never be successful."

This would seem to settle the question, alike as it regards cultivating, thin sowing and drilling-in the crop. In England, where labor is cheap and a ready demand for every bushel of wheat that can be raised at good prices, they are quick at taking up every new idea that looks to an increased production at reduced cost; and this ought to cause American farmers to hesitate to adopt a system that has been tried and abandoned under circumstances so clearly condemnatory of it. — *Germantown Telegraph.*

Subduing and Avoiding Fever and Ague.

Of all chronic diseases, fever and ague is perhaps the least conquerable by the ordinary resources of medicine. There is, however, a remedy which completely roots it out of the system in any and all of its various phases. This celebrated anti-periodic is vegetable in composition, and is not only efficacious, but perfectly safe, a thing that cannot be predicated with truth of quinine. Hostetter's Stomach Bitters is, besides, a most efficient means of defense against malaria, as it endows the physique with an amount of stamina which enables it to encounter miasmatic influences without prejudice to health. Persons about to visit, or living in, foreign countries, or portions of our own where intermittent or remittent fevers prevail, should not omit to lay in a sufficient supply of the great Preventive, both to avert such diseases and disorders of the stomach, bowels and liver common to such localities.

FARMS MINNESOTA AND DAKOTA HOMES
W. & ST. P. R. R.
OVER 1,000,000 ACRES OF
FINE FARMING LANDS
IN MINNESOTA AND DAKOTA,
For sale by the WINONA & ST. PETER R.R. CO.,
At from $2 to $6 per Acre, and on liberal terms.
These lands lie in the great wheat belt of the North-West, and are equally well adapted to the growth of other grain, vegetables, etc. The climate is unsurpassed for healthfulness.
They are Free from Incumbrance.
Guide Book, Maps, etc., containing full information, sent free.

CARPETS.
WE HAVE NOW OPEN A LARGE ASSORTMENT OF
NOVELTIES.
MANUFACTURED BY OURSELVES
Expressly for Our Retail Trade,
CONSISTING OF
AXMINSTERS, MOQUETTES, WILTONS, VELVETS, BRUSSELS, TAPESTRYS, THREE-PLYS, AND INGRAINS
of a SUPERIOR QUALITY,
INCLUDING MANY EXCLUSIVE DESIGNS,
which we are offering at
VERY LOW PRICES.
WE ALSO OFFER A LARGE SELECTION OF
TURKISH, SMYRNA, AND EAST INDIA RUGS AND MATS,
IN NEW AND CHOICE DESIGNS OF OUR OWN IMPORTATION,
ALSO,
OIL-CLOTHS, LINOLEUM, LIGNUM, &c.,
AT LOW RATES.
J. & J. DOBSON,
CARPET MANUFACTURERS AND RETAILERS,
40 AND 42 WEST 14th ST., N. Y.,
Near Sixth Avenue Elevated R. R. Station.

Arboricultural.

THE YELLOW WOOD.

(Cladrastis tinctoria.)

This is best known as Virgilia lutea, though Cladrastis—not Cladastris as it is often printed—is now its accepted botanical name. There are urgent reasons why especial attention should be called to this tree, the more at the present time as we approach the fall transplanting season. Let us at once hasten to remove the misconception that seems very generally to exist, that it is difficult to transplant. This seems entirely without any fact to support it. We once received a tree from Rochester, not less than four inches in diameter. During transportation, the branches and upper part of the main stem were so badly injured that it was necessary to cut it back to a mere stump four feet in hight. This was seven years ago. The tree is now the best of our four specimens, one of which—two inches in diameter—was ordered at the same time from a neighboring nursery and cut back as it is usual to prune transplanted trees. From our own experience, therefore, as well as from extended inquiry, we find that, in the place of being one of the most difficult, it is one of the easiest and safest trees to remove.

The Yellow Wood belongs to the Pulse or Leguminous family, like the Pea, Locust, Wistaria, Red-bud or Judas Tree, Kentucky Coffee Tree, etc., etc. It is found in Eastern Kentucky southward along the western base of the Alleghanies, though it is quite hardy in Rochester, and we know not how far North of it. Our engravings of the leaflets, flowers and fruit are from the specimen above referred to as having been received from Rochester seven years ago. It bloomed last June for the first time. The flowers, which are white, are sufficiently portrayed by the engraving. The petiole bears usually seven leaflets of an ovate shape, from two to six inches in length, the the terminal one being the largest and of a more orbicular shape than the others. The petiole itself is about eight inches long, slender, green and swollen at its base, so as to resemble a horse's foot, beneath which is the bud for the next season's growth. The tree may be called a fast grower. Our best specimen, planted, as we have said, seven years ago, is now thirteen feet high, with a proportionate spread in all directions. It is said that it has a tendency to grow faster on one side than on the others. We have observed this tendency, but it is one easily overcome. The bark is always smooth and clean and quite in keeping with the many and marked traits of this tree, which is, in our judgment, one of the most elegant known to ornamental grounds. Gracefully curving, especially in the early part of the season; sufficiently, but not densely foliaged, airy, shapely, though informal—as between the weeping trees that seem ostentatiously sorrowful, and the upright trees that seem pompously unbending, the Yellow Wood is the happy medium.

THE YELLOW WOOD.

SAMUEL PARSONS.

I confess to a very decided preference for the old liquid, musical name, Virgilia lutea, as botanically applied to the tree commonly called Yellow Wood. But the proper authorities have declared for the more difficult and rasping name, Cladrastis tinctoria, so we must even submit. Whatever may be said of the name, however, the Cladrastis tinctoria,. or Yellow Wood, is worthy of much praise for its many excellent qualities as an ornamental tree. Why it is not used more I cannot imagine. Unquestionably it has been widely known for at least 50 years, having been noticed by Michaux at the very beginning of this century. It abounds chiefly in Tennessee, associated with the Kentucky Coffee Tree, Red Mulberry, Walnut, etc. The wood is, of course, of a deep yellow color, whence the name. In branching, leafage and flowers, our specimen is simply admirable, and it is only a fair example of a Yellow Wood of its age grown under tolerably favorable circumstances. The smooth and slightly wrinkled, light-colored bark swathes the rounded growth of trunk and wide-spreading branches in a way that makes one think of some agile, clean-limbed animal. It is literally a tough, brittle-wooded tree, of very eccentric growth, picturesque in both trunk and branches. The leaves are those of a leguminous plant, light-green, small and by no means thick, but growing rather on the outer parts of the branches. As the light falls on it at times, we might think it a round-headed, large-leaved Locust, were not the branches and trunk so distinctly characteristic.

The crowning beauty, however, of the Yellow Wood is its flowers, which, unfortunately, do not come every year by any means. But they do not need to be scarce to render them precious, for their beauty is an all-sufficient recommendation. Seen under favorable lights during June, these blooms, hanging in loose trusses, white and Wistaria-like, are worthy rivals and mates for either the Laburnum or Wistaria. Their effect is also much enhanced by the peculiar light foliage and rounded formation of the tree.

Indeed, I am confident that if people would only seek out and realize the beauty of the Yellow Wood, it would require but a few years to secure well-developed specimens on numerous lawns; whereas now it is a rarity and wonder wherever seen in positive excellence.

FRUIT OF YELLOW WOOD.—REDUCED HALF.

(SEE PAGE 639 FOR FLOWER AND LEAF.)

THE INFLUENCE OF FORESTS ON CLIMATE.

PROFESSOR LEVI STOCKBRIDGE.

In quite recent times, books, periodicals, associations and National and State governments have been calling public attention to the very rapid decrease of our forest area and the consequent climatic effects. The discussion of the subject thus far has not served to educate our people in relation to the true and full meteorological influence of this decrease; but it has served to create the quite general belief that extensive forest tracts have an effective power in increasing the rainfall in their vicinity, and, to some extent, has stimulated to the planting and protection of them for this purpose. Yet it is more than doubtful if they have any such influence.

Primitive New England and New York were described as being a country of "boundless and interminable forest;" but to-day they are so stript of this leafy covering that the fuel and timber to supply the imperative wants of the people, must be imported from Canada or the Gulf States. And yet, had an early record been kept, it would undoubtedly have shown that the rainfall on this territory was no greater in the ten years between 1669 and 1679 than between 1869 and 1879. It is an evident fact, that in relation to forests increasing rainfall, or that, by their planting and growth, a rainless can be changed to a rainy country, error has been inculcated, and this a few considerations will prove.

Forests do not make or impart to a country its general or controlling climatic conditions. These, as a law, are the result of its peculiar location in relation to large bodies of water and their currents, and the great wind currents which ceaselessly circle around the globe in but slightly deviating courses. These currents of the ocean and the air, which are not materially affected by the topography of the land, carry heat and moisture, and, importing them beneath their regular and fixed track, make one region a perpetual desert and another rich and beautiful with the numberless forms of plant growth. In determining the kind, quality and quantity of the products of the different countries of the earth, meteorological influences are superior to those of the soil, and in all these respects forests themselves are the result, and not the cause, of existing climatic conditions. The most dense and magnificent forest growths of the world are found where the air currents direct from the ocean in tropic climes, and loaded with moisture, precipitate it most copiously; and they are the most scant, or entirely wanting, where they are made comparatively dry by passing over hot deserts or lofty mountain ranges. But again, if the rainless regions of the earth are made such because the air currents which move over them in unvarying tracks, are nearly destitute of watery vapor, it is impossible that forests should influence them to give forth rain, which they do not contain, or so change those currents as to bring to them the moist rather than the dry air.

But though forests cannot permanently increase the amount of the rainfall of any section or in this respect produce any radical change in its condition, yet public attention should be so awakened to their importance in other directions, as to cause their protection and planting on a grand scale wherever the rainfall is sufficient to maintain them in the permanent occupancy of the lands. Their first great value is a pecuniary one. Though slow of growth, forests are a soil crop, and should be harvested when ripe, as much as wheat or grass. And if all the land in the New England and Middle States which nature seems to have designed for that purpose—because it is of little value for anything else—were growing wood and timber, it would be but few years before the annual cutting from it would have a value of many hundreds of millions of dollars without lessening its area. In Massachusetts at the present time, notwithstanding its rocky hills have been so generally bereft of their forest growth, the annual value of the harvested crop is more than ten millions of dollars, and the area growing wood is now continually and largely increasing. Forests on mountains and their foot-hills, have a local influence on climate, of great value if the range is interspersed with valleys and slopes occupied for farm purposes. Cold air at rest can be easily endured; but during the fall, winter and spring months the fierce winds of New England tax the utmost endurance of an iron constitution, and have a withering effect on ani-

mals and plants exposed to their full rage. Against these winds, forests thus located act as a screen or shelter for farms and homesteads, checking the force of the blast, breaking its direct current and thus practically elevating its temperature to a point at which it is not injurious.

In extensive forest tracts, both the soil and the air, are warmer in winter and cooler in summer than the soil and the air of the open country. Therefore when the country is varied by field and forest, great extremes of temperature are ameliorated. In winter, the forest warms the frigid air of the open country, making it more tolerable, and in summer it tones down the torrid heat, and acting as a condenser, lessens the loss of soil water by evaporation. Forest soil has a covering of leaf mold many inches or feet in thickness, which acts as a mulch to prevent freezing and evaporation, and is capable of absorbing and holding more than its own weight of water. In cold weather when the earth is not covered with snow, the bare fields are frozen to a great depth, but forest lands little if any. On hills and inclines of the open fields, a large proportion of the rain water, at all times runs from the surface to the streams in the valleys, but this is especially true in winter; then the frozen ground in a hilly country is like the roof of a many-pinnacled house. The falling rain passes immediately to the gutters, or valleys, and increasing its volume by additions from every eminence and gulch, rushes onward to the lower levels a devastating flood, but leaving the lands from which it came so dry that vegetation in summer is soon parched. In the forest, however, the soil, summer and winter, is open and porous. This condition and the mold retain the water of great rains and prevent a large proportion of the surface-wash, allowing it to percolate gradually to the source of the springs. This retardation of the water of excessive rains and melting snow in its course to the valley outlets, and its gradual drainage therefrom, make the springs, brooks, and rivulets among the hills perennial, instead of being, at times, rushing torrents, and again dry water-courses.

In these ways, forests though they do not create certain climatic conditions, serve a most important end in regulating and equalizing them. Efforts should therefore be continued to preserve the wood-lands we now have, and to increase their area by planting. In this connection, several important questions arise, such as: what lands should be planted to forest; what kinds of trees should be planted; and the part the Government should take in the work; but time now forbids their discussion.

Agricultural College, Amherst, Mass.

Floricultural.

FLOWERS FOR A SMALL GARDEN.

JAMES TAPLIN.

These few notes are intended for the unprofessional readers who require a few flowers during the hot months, both as ornaments to the garden, and also to afford a few cut flowers for a friend. We usually see quite a number of flowering shrubs, Pæonies, and other hardy plants, which make the garden gay in the early part of the summer, but after July there is too often a scarcity of flowers; this is not to be wondered at with the professional florist, there being but little demand for flowers at that season, the buyers of flowers being then at the watering places and other hot-weather resorts. Many lovers of flowers, with limited incomes, live in the country during that season, and should have a good display of flowers at that time with very little trouble and at small cost.

There are but few autumn flowering shrubs, but one of the best is the Hydrangea paniculata. This plant, unlike most of the genus, is perfectly hardy and a fast grower. We have a plant, not more than five years old, with over two hundred large panicles of bloom. It will grow in any garden soil, but should be planted in a moist place, or receive abundance of water when in flower. It commences to flower early in July, and the flowers last into autumn, and then make a welcome addition to the collection of dried Ferns and grasses, and are also among the most charming flowers to skeletonize.

I have no doubt most RURAL readers keep a few Geraniums and other tender plants through the winter, and also buy a few Coleuses and other things for garden decoration; but, although these plants are showy and make a good display, they are of little use for cut flowers. A few Heliotropes are useful, but few manage to winter them successfully, without a greenhouse; but the plants are so cheap, and grow so fast that two or three will give cut flowers until frost. A few seeds of the fine varieties of German Stocks and Asters are excellent for both decoration and cut flowers; Double Zinnias, also, and Dahlias are showy, and the roots can be kept in the cellar with potatoes and Cannas. A pinch of Mignonette and annual Candytuft are nice, and the Drummond Phlox will flower all the season. I am glad to see the Gladiolus planted in more small gardens than formerly, but many of the varieties are very poor. This should not continue, as good mixed varieties can be bought for a few cents each. By making several plantings at intervals of two or three weeks, these may be had in flower from June to October.

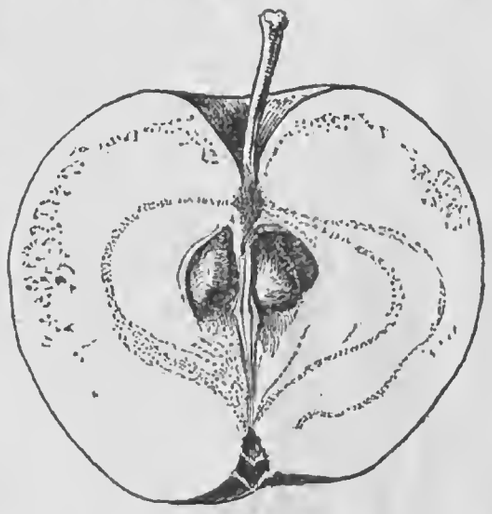
The Japan Lilies are also very showy and quite hardy. These bulbs should be planted in the fall, and not less than six inches deep. A plant of the Pampas Grass is very ornamental on a lawn but it requires protection in winter, which is easily given it by means of some hay or leaves. Monthly Roses will give flowers all the season, if planted in rich ground, well-watered and kept free from insects and mildew; of course, they require a little protection in winter, but the killing of a portion of the top does little harm, if the bottom is safe. The so-called hybrid perpetual Roses of the European grower seldom flower oftener than once in the season in this climate, but the plants are quite hardy if on their own roots. The grafted plants are of little use, the stock not being suitable for this climate. I have wondered that some one has not tried grafting on the Prairie Queen class of Rose.

Maywood, N. J.

Pomological.

PRINGLE'S SWEET SIBERIAN.

The name of Cyrus G. Pringle, of Charlotte, Vt., has become pretty well known to the farmers and horticulturists of this country, and even abroad, by his contributions to the list of new and valuable varieties of garden and field plants. His Snowflake, Alpha and Ruby potatoes; his Conqueror and Little Gem tomatoes; his Champlain and Defiance wheats, have been widely disseminated and generally approved. But while in these easier, or at least more rapid, lines of improvement this skillful and patient hybridist has made a strong mark, it is probable that the future has in store for him still greater successes. His experiments with grapes have resulted in the production of several varieties of decided merit, which are now undergoing the severe test of general trial. His endeavors to improve the apple, with the special aim of developing hardiness adequate to the endurance of the severe climate of the northern portions of his own State, promise valuable results. He was stimulated to these latter experiments many years ago by the complaints of the writer regarding the difficulty of finding any kind of apples except those of Siberian origin, that were hardy in northern Vermont. Mr. Pringle, in reply to my remarks that he would be a very polite man who would accept for eating a second Siberian apple, said he thought he had a Siberian that even I would eat, not only a second but a hatful of, if I were hungry. I said I should be indeed glad to see and try such an apple, and the following September he sent me a box of the fruit illustrated here as "Pringle's Sweet Siberian." Subsequently he sent me cions from the tree, and I now have a number of trees, 10 years old from the root-graft, which have been bearing profusely for the last three years.



PRINGLE'S SWEET SIBERIAN.

The Pringle Sweet was a chance seedling, an accidental hybrid, which came up in Mr. Pringle's garden, and is regarded as probably a cross between the Siberian Crab and the Northern Sweet. The original tree had recently come to bearing at the time of the above-noted conversation, and the goodness of the fruit set Mr. Pringle upon the track of crossing the Siberian Crab with pollen from our best and hardiest apples. The results are not yet, of course, thoroughly worked out, but I have confidence that they will be far from abortive.

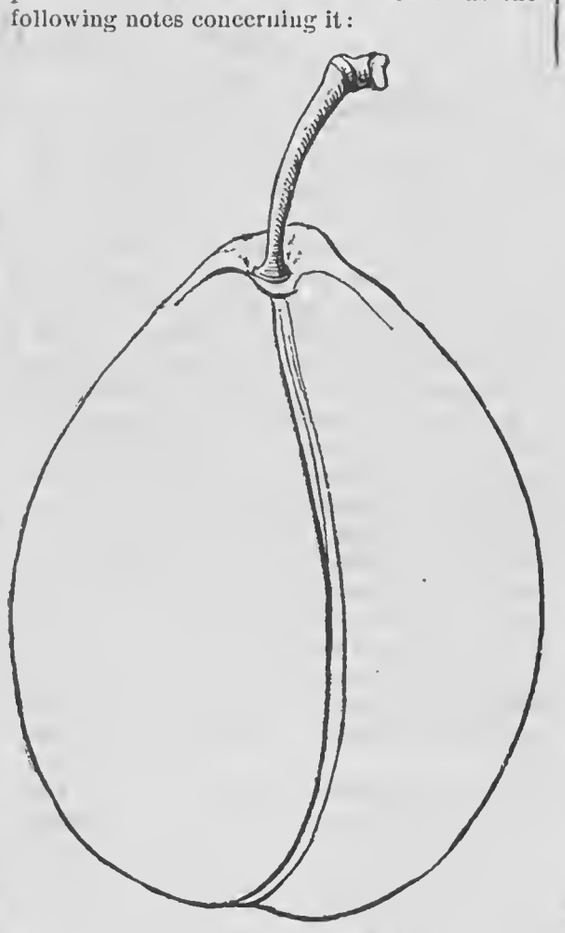
In size Pringle's Sweet is below the medium, but runs very even, few specimens being less than six inches and few more than seven inches in circumference. In color it is a deep, russetty yellow, with bright crimson splashes on the sunny side. The season is early September. Flesh, yellow; core, small; flavor, a rich sweet, with no astringency when fully ripe. Tree, a remarkably thrifty, upright grower, extremely productive in alternate seasons, and as hardy as any Siberian Crab. In this latter particular it is much superior to Van Wyck's Sweet, which, though also of Siberian parentage, is not sufficiently hardy for the severest localities. In fact, the Pringle is the only sweet apple of its season that I have found entirely hardy and at the same time of fair size and good quality. Though small, its excellence, especially as a baking apple, causes it to be highly valued in my family, where hardly less than a peck a day is baked for the table as long as the supply lasts.

T. H. HOSKINS.

Orleans Co., Vt.

A LARGE PLUM.

The accompanying cut was made from a plum sent us by G. H. and J. H. Hale, of South Glastonbury, Conn. The fruit is uncommonly large, and it seems to be a distinct variety, as it has not as yet been identified with any other plum. The above-named firm sends us the following notes concerning it:



A NEW (?) PLUM.

"This fruit has attracted a good deal of attention during the past few years. The fruit sent you, is of about the average size for this year, but much smaller than the average last year, when the largest specimen was 4¾ by 2¾ inches in diameter. The history of the tree is as follows: About ten years ago it was purchased from Rochester, N. Y., with a lot of other trees, as a Pond Seedling; but on coming into fruiting, the fruit was found to be much larger and darker than those of that variety. At the meeting of the American Pomological Society in Baltimore, in 1877, we compared it with some fifty varieties exhibited there, but could find nothing in any way like it. We called it a Pond Seedling, but all the experts there said it did not belong to that variety, but they could not tell what it was. A prominent pomologist thinks it might be a possible instance of a bud variation, a single bud upon a Pond Seedling having sported, as it is no more strange that a single bud upon a tree should sport, in the way of bearing enormous fruit, than it is that a peach bud should sport to produce a Nectarine or the reverse, both having occurred. We have been testing it by budding on other trees, and have one of them in bearing this year and it produces the same fruit as the original tree. We have saved the fruit from the curculio this year, by covering the whole tree with a large hood made of mosquito netting, which does very well for a single tree; but for a whole orchard we think the jarring process the best and certainly the least expensive."

INFLUENCE OF STOCK ON GRAFT.

The article in the RURAL of August 16, by S. B. Peck, on "The Influence of the Stock upon the Graft," was read by me with much interest. Some 25 years ago, I wrote a brief article upon the subject, which was published in the Transactions of N. Y. State Agricultural Society, but it is only within two or three years that I have seen the subject noticed by others. I think, as I wrote in that article in the Transactions, that the Gilliflower Apple is as sensitive to the influence of the stock as any there is, and I would suggest that Mr. Tyler, mentioned by Mr. Peck as experimenting, try cions from a good and juicy Gilliflower in a juicy sour stock, and also in a dry, sweet stock, cut cions from these grafts and regraft on the same tree for two or three years in succession; also cross-graft from one to the other; then, as they begin to fruit, submit them to experts and let them observe the difference.

Conventions discuss regarding the flavors and qualities of apples with much zest, but do they ever think how much the specimens they are discussing may have been improved or deteriorated from the influence of the stocks in which the grafts were set? In many cases the disputants are like the two knights who saw different sides of the same shield.

I am very glad that this subject is attracting attention and that discussion is being had, and think some experiments may be made, which will restore many old favorites to their former popularity.

E. J. HULING.

Field Crops.

WHEAT IN ILLINOIS.

W. B. DERRICK.

The Winter Wheat Crop

of Illinois for 1879, is the largest and best ever produced in the State. According to the report of the State Department of Agriculture, the acreage of winter wheat was 2,440,809. This was exceeded by the wheat acreage of 1863, '67, '68, '69, '74 and '75; but the total yield, 45,417,661 bushels, is the greatest, being over eleven million bushels more than in any preceding year. The value of the present crop, nearly forty millions of dollars, at the low average price of 87c. per bushel, August 1, will not return the producer as large a number of dollars as the crops of 1864, '66 and '67, but as our money has appreciated in value, and will purchase more goods of all descriptions than during the times of general high prices, the Illinois farmers will derive more benefit from their present winter wheat crop than from any preceding one.

The Average Yield Per Acre

is given in two estimates, one of 18¾ bushels, and the other of 19⅜ bushels per acre, for the State from the general averages of all the different counties. The yield varied considerably in different parts of the State, the average in some counties being much higher than in others. In Ogle county, the average yield is 25 bushels, and in Stephenson county, which joins Ogle on the north, and is one of the extreme northern counties of the State, the average is 24 bushels per acre. These estimates are as nearly correct as is possible, as the actual yield on thrashing the crop demonstrates. In this locality the acreage was not large; as until the last three years, winter wheat has not done well here—this being the spring wheat region. The present average yield throughout the State is the largest on record, and is especially large in the northern counties. Secretary Fisher, in his August report of the State Department of Agriculture, says:—"The extra care in seeding last fall has amply repaid the grower for the additional expense and labor in the largely increased yield reported in such cases. The exceptionally large average yields reported generally, consist of new varieties of wheat recently introduced." There is a lesson in this worth remembering in the East as well as in the fertile West, that extra care in seeding will bring an increased reward.

The Varieties of Wheat

that produced the best in this section the past season, are the Fultz and Tappahannock. The Clawson was also grown to a limited extent and proved satisfactory, and the Silver Chaff was again tried, but it blighted somewhat and will not be largely sown here this fall, but enough will be put in to give it another trial. I trust the objections raised against the Fultz and Clawson wheats by some of the Eastern millers will finally be overcome by the improvement of the quality of the wheat through cultivation, or some improvement in the mills for the manufacture of flour, which will save these productive varieties from being discarded.

Winter Wheat Seeding

is now mostly finished in this section. Some commenced sowing the last week of August, and that which was first sown is up and looks well. A large amount has been sown among the standing corn, and cultivated in with a one-horse cultivator or drill, between the rows of corn. As the corn is never—or "hardly ever"—cut off here, as in the East, but is husked from the stalk, the standing stalks prevent the snow from blowing off in winter, and the wheat is thus protected. There is a large increase here in the acreage of winter wheat this fall, and if the crop again proves successful, it will take the place of most of the spring wheat hereafter.

Spring Wheat in Illinois.

The report of the State Department of Agriculture says: "The acreage of spring wheat (303,736) is but little in excess of that of the previous year (302,048). The average yield per acre (11 bushels) of spring wheat, is much below that of winter wheat (19⅜ bushels). The drought during the growing season, and the injury in many localities by chinch bugs, have reduced the yield much below that of a good average. The quality is good in counties where the crop was not injured by chinch bugs and unfavorable weather. The spring wheat crop of 1878 was 3,870,251 bushels; the

present crop is 3,376,400, a decrease of nearly half a million bushels (493,842). The 1878 crop was valued at $3,189,203, while that of the present year is valued at $2,663,882, a decrease in one year of over half a million dollars (525,321)" Thrashing began as soon as the harvest closed, and as the weather has been favorable, most of the grain is now thrashed and has been secured in fine condition.

Ogle Co., Ill.

THE BEAUTY OF HEBRON POTATO.—Owing to favorable reports read in the RURAL during the season of 1878, I concluded to plant a barrel of this variety of potato last spring. I selected a clover sod plowed about nine inches deep, gave it a good covering of barnyard manure, and harrowed it in—soil, a gravelly loam. The potatoes, cut to one and two eyes, were planted on April 15th, in hills three feet apart, two pieces to the hill. At the same time I planted in the same field Early Rose potatoes of medium size, cut lengthwise, two pieces to the hill. Thorough cultivation and two hoeings were given to both and the weeds were pulled late in the season. Results—the Beauty came up three days before the Rose with stalks strong and vigorous. The tops died and the tubers matured at least ten days before those of the Rose, while the yield from ninety-eight hills of each was about a peck more of Beauties than of Roses. The tubers, too, were larger, smoother, and more salable. I am offered 45 cents per bushel for the Rose and $1 per bushel for the Beauty.

Walden, N. Y. RURALIST.

Farm Topics.

WHAT OTHERS SAY.

Common Roads.

Professor R. C. Carpenter, of the Michigan Agricultural College, has lately published an address delivered by him at a Farmers' Institute, on the Transportation of Agricultural Products, from which the following timely extract seems worthy of weighty consideration.

THE common roads have never been used in competition with the railroads since the railroad system has been fairly established. The capabilities of railroads are so much greater than those of common roads that since Stephenson perfected the railroad system, and showed practically what might be expected from it, little attention has been paid to the improvement of the common roads. While it is certainly true that it will not pay to invest a great sum in the improvement of common roads, it is equally certain that it will pay to improve them to a much greater extent than has been done in the past.

The following table shows the average draught over different kinds of roads, from experiments by Sir John Macneill; also the load for a team over each road, deduced on the supposition that an average horse "can exert a steady pull of one hundred pounds, at a speed of 2½ miles an hour for ten hours each day." In the table the net load is assumed as two-thirds the gross load, but in practice it will be found less more often than greater. The cost is also given on the assumption that wages of man with team and wagon are $2.50 per day; which furnishes a means of comparison of the different roads, but except in a few cases, it will not give the exact cost of transportation.

KIND OF ROAD.	Level Road—Proportion that resistance bears to whole load.	Load for two Horses. Net Load.—Two-thirds of Gross Load. Gross Load in Tons.	Net Load.—Two-thirds of Gross Load. Tons.	Net Load.—Two-thirds of Gross Load. Bushels.	Cost per Mile, Assuming Cost of Wagon, Team, and Driver $2.50 per Day.—Distance 25 Miles. Each Ton.	Cost per Mile, Assuming Cost of Wagon, Team, and Driver $2.50 per Day.—Distance 25 Miles. Each Bushel.	Maxmium Distance Wheat worth $1 per Bushel can be drawn.—Miles.
Smooth stone pavement	1-68	6.8	4.52	151	.024	.0007	1,430
Broken stone road on rock foundation	1-49	4.9	3.27	109	.031	.0009	1,111
Broken stone road on earth foundation	1-34	3.4	2.28	76	.044	.0013	770
Gravel road	1-15	1.5	1.00	33	.100	.0030	333
Good earth road	1-11	1.1	0.73	25	.137	.0041	244
Common sandy road	1-7	0.7	0.47	16	.213	.0064	172

The cost of these roads can not even be approximately given, as cost of grading, turnpiking, and putting on the road covering differs so much in various localities. The cost of maintaining is somewhat in proportion to the traffic or tonnage.

The least cost of a gravel road containing 3520 cubic yards of gravel per mile, under the most favorable conditions, will probably be not less than $800 per mile, $400 of which should

FLOWER OF YELLOW WOOD.—SEE FIRST PAGE FOR FRUIT.

be expended in each of the first two years. Under some conditions the cost will amount to four to six times this amount. If the road is well made, the cost of annual repairs will be small; say for the next eight years $50 per mile, that is, a man and team at work constantly would keep in repair fifteen miles. This would give us an average annual cost during the first ten years, for a good gravel road, of $120 to $520 for each mile. For a second term of ten years its cost per mile would be less. A broken stone road would give an average cost of probably twice this amount for the first ten years, whereas, for the second term of ten years its cost would probably be less than that of a gravel road. These figures would indicate a greater economy in a gravel road than is usually supposed. To illustrate this we will take an example which is certainly not unreasonable. Suppose that after a road is improved, 20 loaded teams per day pass over it, carrying per team a load of 33 bushels of wheat or its equivalent, at a speed of 2½ miles per hour. The traffic over the road would amount to 660 bushels per day, and its cost of transportation would amount to $1.98 per mile (see table) per day. To have carried the same amount over our ordinary country roads would have cost $4 22 per mile per day. So that the improved road gives a saving of $2.24 per mile for each day. If we suppose that this traffic is maintained for 300 days in the year, the saving will be $672 per year per mile, and this will probably not be too high an estimate, for when the common roads are much affected by bad weather in spring and fall, the traffic over the improved road will probably be increased to an extent sufficient to make up deficiencies in the traffic that may occur in the winter season, at which time the cost of transportation is about the same over common and improved roads. If the average cost of gravel roads be taken as $250 to $400 per year for each mile, the saving

LEAVES OF YELLOW WOOD—REDUCED HALF.

with the small traffic specified, viz.:—two teams each hour—is enough to pay the cost and a good interest (50 to 100 per cent.) on the investment. Such considerations as these tend to show that time spent in improving the roads, is not entirely thrown away. These figures would also seem to indicate that we are paying in extra cost of transportation over poor roads, a tax which would do much toward building good ones: A poor road is a toll collector that needs no gates to exact its dues. All who pass over it must pay in diminished loads and extra time a tax proportional to its wretchedness. If the general public could be made to feel that waste of time and waste of money are equivalents, and that extra time spent in traveling over the road could profitably be employed at home, some steps would be taken that would lead to an actual improvement in the condition of our common roads.

Farm Economy.

HISTORY OF A POOR FARM.—No. 17.

Growing and Feeding Fodder Corn.

It was in July that we began cutting green sweet corn for fodder. Early Minnesota and Narragansett, planted for ears for market, were ready to pick then, and as the ears were picked the stalks were cut and fed. The late oats were nearly finished and oats and corn were fed alternately. The milk increased a few days after the corn was fed, and has kept up in quantity very well until now (Sept. 20), when the late planting (there is one yet later, planted July 22) is being cut. This is six or seven feet tall and quite fresh and green, having just come into tassel. The cows are gaining a little on this fodder, which is Blount's Prolific corn, and which grows rapidly and is very succulent and heavy—a small bundle weighs 30 pounds, and three of these form a day's ration.

"Do you weigh your fodder every day?" asked Mr. Martin, to whom I had just read over what I had written.

"That is not necessary. Fred can put you up a bundle that weighs within a pound of that, every time you ask him," I replied.

"Fred always was a good figurer," remarked my old neighbor, "and could guess the weight of a load of hay or a fat pig better than any of us."

"That comes of close observation," I remarked. "When a man weighs a load of hay, or a dressed pig, or a bundle of stalks, it is very easy to carry the memory of it in his mind to help in a future judgment."

"Some can do that and some cannot," remarked Mr. Martin; "if a habit of doing it is once formed it is easy; otherwise not. Nine out of ten of our neighbors here cannot tell you the size of any one of their fields, or how much seed they sow per acre, or how many bushels they have reaped on any one occasion in their lives. It is all a matter of total ignorance of everything. No accounts kept, and no accurate knowledge of anything whatever."

"Well, we don't do in that way here," I rejoined; "we know precisely what we are doing in every particular. The fodder is cut and tied in bundles, as it is cut, with bands of tarred twine. The bundles are loaded onto a wagon, and a day's supply is brought in at once every morning. One day's feeding is always kept ahead in the barn, so that the fodder is wilted before it is used, and in rainy weather wet fodder is not given. In the morning it is cut and fed with the meal; at noon it is given whole, and in the evening it is cut and mixed with meal. Each cow gets a bundle, on the average; some eat less and some more; what is left in the troughs is wheeled out to the pigs. Fred has been measuring the yield to-day. We use 69 bundles, or about 2,000 pounds, daily, and it took very nearly 400 feet of row to yield the 2,000 pounds. The rows are three feet apart, which gives 14,520 feet of row to the acre; at five pounds to the foot of row, this gives about 36 tons to the acre. I don't know of any other green crop that gives a better yield for the same cost.

"How long does an acre feed your 23 cows?" asked the old gentleman.

"That is easily figured up. If we use one ton a day, 36 tons will last the 23 cows over a month. This is the best we have done so far, but a field of eight acres which is now being cut for winter fodder, also planted with Blount's corn, is 10 feet high and so thick that it is impossible to crawl through it across the rows. Being so thickly planted in the row, the stalks are not much more than an inch thick, but the rows being three feet apart, the fodder is green to the bottom, and there are many half-grown ears."

"I should say that fodder corn is as good as any root crop," remarked Mr. Martin, "It costs less to grow, and is more certain. Roots this year are a poor crop, and will cost a good deal more than corn."

"Weight or bulk is not the criterion by which we should judge of the value of any crop," said Dr. Jones. "The feeding value depends on the character of the fodder and its nutritious constituents; and in some degree on its digestibility. A recent analysis of fodder

corn made at the Connecticut Experiment station, gave the following

Water	85.7	per cent.
Ash	1.23	" "
Albuminoids	1.20	" "
Crude fiber	4.95	" "
Carbohydrates	6.73	" "
Fat	18	" "
	99,36	

Sugar beets contain the following, according to the tables of Professor Wolff.

Water	81.5	" "
Ash	8	" "
Albuminoids	1.0	" "
Carbohydrates	15.4	" "
Crude fiber	1.3	" "
	100,00	

Now a ton of sugar beets has more than twice the feeding value of the same weight of fodder corn, and a still greater advantage is that the roots may be kept fresh and succulent during the winter, while the fodder corn cannot, and loses in digestibility very much in the curing. I think fodder corn is by no means as valuable as even the poorer roots, mangels and turnips, for instance, or even cabbage."

"Corn fodder is more easily handled," remarked the old gentleman, "and any one can grow it, but few can grow roots. They are a difficult crop to grow."

"Roots, especially sugar beets, will not be a popular crop at present," remarked Mr. Martin; "our system of farming is too rough and slipshod for them to be very profitable. They require the highest kind of farming, and although they may in fact be worth more per ton, ten tons of corn fodder can be grown as easily as one ton of beets, with our average farming. There are many crops of turnips grown about here which will not make 200 bushels per acre, that is, about six tons. This crop of fodder corn will weigh six times as much while green, and quite as much when dried. Now which is the most profitable? 'You cannot make a silk purse out of a pig's ear,' and you cannot make a good crop of roots out of a poorly-farmed field, and before you talk of feeding crops, you must grow them."

The Poultry Yard.

THE BEST BREED FOR AMATEURS.

A. M. HALSTED.

What is an Amateur?

first of all, or rather who are amateurs? Those who raise poultry for eggs and flesh to supply their own tables only? or those who breed poultry as a hobby and amusement to develop some specially fine points; who compete for prizes at some of the exhibitions, but who sell no fowls, except occasionally a pair or trio which are "too fine to kill," and yet not needed in the breeding pen?

Both of these classes are amateurs, yet each looks at his fowls in an entirely different light. One takes a culinary view of them and makes all his selections of breeding stock to that end. The birds that produce the most eggs, that are earliest fit for the table, and that are hardy and best able to take care of themselves, are his choice. The other makes these qualities a secondary consideration, his ambition being to produce something to excel his friends in beauty, in breeding qualities and in size—if in the Asiatic, largeness; if in the Bantam, smallness.

The readers of the RURAL will doubtless be largely of the first class of amateurs, and to them I will address this article, leaving the consideration of the second point for another communication. But even in the consideration of this half of the subject it will be necessary to sub-divide it again, for one person may be, and frequently is so situated that he can keep a few

FOWLS FOR THEIR EGGS,

but cannot raise any chickens. To such an amateur I should recommend some of the non-sitting breeds: either Hamburghs, Houdans and Spanish or Leghorns: *which*, will depend upon his fancy and the suitability of his location. If his poultry yard is on low, damp ground, and exposed to cold storms, he does not want the Hamburghs, for they are too subject to roup when exposed to such conditions. If living in the far north where the winters are intensely cold, neither Spanish nor Hamburgs will be found profitable; they are too tender—good summer layers, but very poor in extremely cold weather and while molting. If located in mountainous localities where hawks abound, the Houdans should be his last choice, for their overhanging crests completely hide from view the approach of any enemy from above; and if the crests are very large, from any direction. If situated where the fences are low, and the flower or vegetable garden is close at hand, neither the Hamburghs nor Leghorns will shirk their share of "garden work," unless their wings are clipped. In such a spot, other things being favorable, the Houdans or one of the Polish varieties will cause least trouble, and, next to them, the Spanish. Of the four above-named breeds, the greatest yearly production of eggs will be, first, from the Leghorns; second, the Hamburghs; third, the Houdans, and, fourth, the Spanish. In table qualities I would place the Houdans first, with the Leghorns second, and Hamburghs third. Of the Leghorns, my preference is the Brown, as being more hardy, larger-bodied, of earlier maturity, equally good layers, and better for table.

The next thing to consider is the kind best adapted to the wants of the amateur who wishes

Fowls for both Eggs and Meat.

My experience with the Plymouth Rocks has been of only two years' duration, and if it continues as it has begun, I should place them among the first in this class, as they are with me good layers, mature early, good broilers, and large-bodied when full-grown. Next I should place the Dark Brahmas with the Light Brahmas third, the difference in favor of the Darks being in their better laying qualities and their more plump condition as broilers. The Light variety, however, are the largest at maturity. With both varieties of Brahmas, there is one drawback, the hens are so large that in sitting they are very apt to break the eggs, and when they tread on a young chicken, which, being so clumsy, they will frequently do, the little thing is usually crushed out of all semblance of life.

For the same reason, and for their persistence as sitters, I reject the Cochins.

Next to the Brahmas, I place the Dorkings, and of them, first the colored variety. Large, plump bodies of the very highest quality of flesh, of fair earliness in maturing, and of good but not extra laying qualities, they have been for many years the type of excellence in the English markets. In France the Houdan takes the same rank for quality as the Dorking does in England. But although a far better layer, it is a non-sitter and necessitates the keeping of some common fowls as sitters. If this were allowable in a question of this kind, I should place them next to the Plymouth Rocks for general utility.

Both Plymouth Rocks and Brahmas have this excellent recommendation: they are very quiet, and will rarely attempt to fly; even a three-feet fence will usually keep them within bounds. The Dorkings and Houdans are both more active and need a high fence or clipped wings. I might add the Games as a desirable breed—and they are in both laying and table qualities—but their pugnacious disposition is so annoying to most people that their good qualities are overlooked or ignored.

With all the above, not a little lies with the fancy of the amateur. Should he prefer Houdans, he will make Houdans the breed which suits him best and gives him the best returns. If it be the Leghorns, none will suit his palate either in eggs or flesh so well, and their superior beauty is something that ought, in his opinion, to be apparent to everyone. If Brahmas fill his desire, then their good qualities more than overbalance those of any other breed.

The would-be amateur, who is looking for some breed with which to stock his poultry yard, may let his fancy have some voice in his selection of any of the above-named breeds and still find he has chosen wisely.

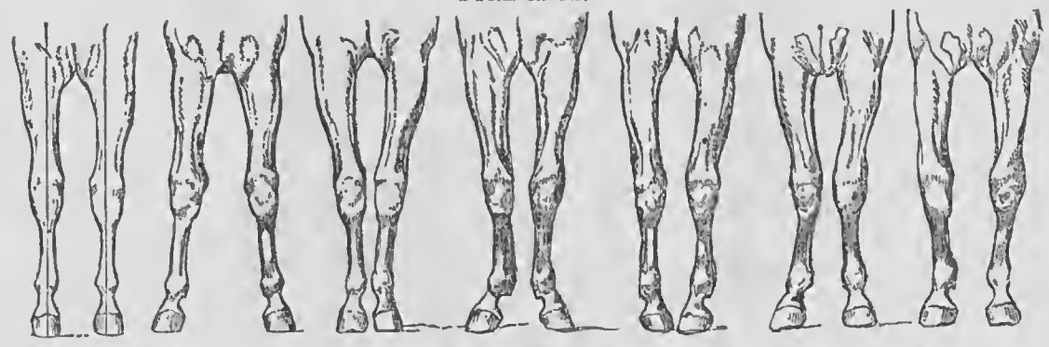
The Horseman.

HORSES' LEGS.

IT is within the experience of nearly every horse owner that more trouble is caused by ailments of the legs than by those of all the rest of the body combined. A large proportion of these are due to malformation or faulty disposition of the limbs, and to lay plainly before our readers the chief shortcomings in the way, we reproduce here the accompanying excellent illustrations redrawn from the English Agricultural Gazette. The cuts with the annexed brief explanations so clearly illustrate the various forms of horses' legs to be ordinarily met with, that little if any further description is necessary.

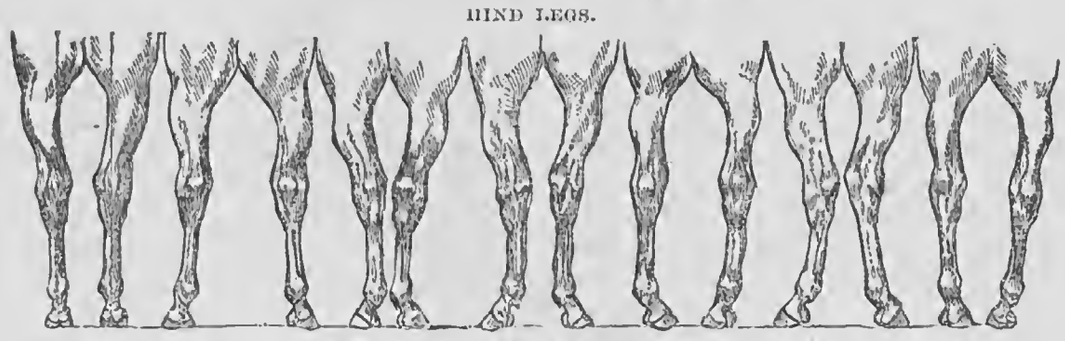
A plummet dropped from the point of the shoulder of a well made animal, will reach the ground at the point of the toe, when a healthy horse is resting on its limbs. If the foot is to the rear of this, the equilibrium is lost, the action clambering and unsafe. If the line falls "without," the legs are too close; if it falls "within," the legs are too far apart. Where the limb quits the trunk, it should be well developed, since here dwells the power by which the lower parts of the limbs are impelled. The flesh should bulge out; for a thin forearm is incompatable with excellence in a horse.

FORE LEGS.



1. Standing true. 2. Too wide. 3. Too close in front. 4. Duck-footed, with cannon twisted outward. 5. Cannons twisted inwards, and pin-toed. 6. Calf-kneed. 7. Knee too open

HIND LEGS.



1. Standing correctly. 2. Too wide 3. Too close behind. 4. Duck-footed behind. 5. Bow-legged and pin-toed. 6. Cow hock. 7. Too open.

Toward the knee the swelling should gradually diminish, leaving upon the surface of the joint a broad, clean and firm appearance. The forearm should be long, the shin comparatively short, for the reach depends mainly on the former, and no muscles of any importance are located in the latter. Though not absolutely straight, the shin should present no obvious inequalities. The bone should be compact, giving to that portion of the limb, when viewed from the front, an appearance of being almost too thin; but from a side view, the lower part of the leg cannot well be too broad; for width and strength are here synonymous. This applies equally to the hind and fore legs: to the hind legs below the hock as well as to the fore ones from the knees down. Each here should be thin when seen from the front; neither can well be too deep when viewed from the side, and both sets should appear solid and feel almost as hard as metal. With regard to the hind legs, a line let fall from the stifle, should reach the ground barely in front of the hind toe, for hunting and draft horses. When the toes recede, as in racing stock, beyond this line, it is a token of a speedy formation. The distance from the stifle line and the toe, may vary from four to eight inches, when the animal is standing at ease.

By bearing in mind the faults indicated in these cuts, note will be taken of misplaced legs and feet, which are frequently the cause of many of the ailments to which horses' legs and feet are subject, such as splints, spavins, thorough pins, curbs, wind galls, sprung tendons, etc.

Sheep Husbandry.

A CHANGE IN FARMING.—COMBING WOOL.

COL. F. D. CURTIS.

AMERICAN farmers should produce, if possible, those things which are imported. This is a wiser political economy than attempting to sell in an overstocked market at home, and to be obliged to send the surplus abroad to convert it into money. A change of policy in this respect would relieve overdone farming in many respects. If one-third of the cheese and butter farmers in the State of New York would fatten their poor cows for the butcher, and sell the good ones to the other two-thirds, and then if these, too, would get rid of their poor milkers, there would be a large increase in the percentage of profit with those remaining in the dairy business. The one-third who go out, should engage in sheep husbandry and grow combing wool, which brings the highest price, and nearly all of that used in this country is imported. The dairyman transformed into a sheep man, would find himself in a new world, as it were. His labors would be so much lessened that he would find time to make many improvements about his home, although his former occupation was not nearly as laborious as many others. There would be the greatest change in the house, with no milk to skim, or churning or butter making, or cheese making, rubbing and turning, there would come a millenium of rest and opportunity for doing a thousand things the hard-worked wife and daughters' could never get time to do before. In spring time the women could find healthful occupation as shepherdesses, with all the romantic associations of out-door life. Here would be, in caring for the sheep, a kind of work not unsuited to females and not half so laborious as dairy work. The cow stables could readily be changed to places for sheltering and feeding sheep. The stanchions being removed and portable racks put in, all would be ready for the sheep.

We recommend combing-wool sheep for the dairy sections, because their wool will bring, on an average, ten cents a pound more than the average price for the lower grades. Furthermore, it will be a business with a long future, as there is such a scarcity of such wools, and but a limited portion of our farmers will ever produce them. The reason for this statement lies in the fact that combing wool in this country and high farming go together. We infer that a class of farmers, who have had the enterprise to develop and build up the factory system of cheese making and the creameries which have made the dairy sections of New York noted the world over, could take hold of sheep and grow combing wool successfully. It must be understood at the outset that this is the most difficult as well as the best paying branch of sheep husbandry. The unnatural influences of climate must be overcome and a new system of feeding be inaugurated.

In the first place, what is combing wool? It is a staple of wool four inches and upwards in length, with as much brightness or luster as possible. The longer the staple and the more lustrous, the more valuable it is. The breeds of sheep which furnish the best combing wools are the Cotswold, Lincoln and Leicester. Sheep of these breeds vary in the length of staple and in the luster, even when fed the same. Some have more open fleeces than others, with long, wavy wool. These sheep have the brightest and best quality of combing wool, but they are never so hardy as the thicker and shorter-fleeced sheep. Such sheep must be carefully housed in cold, wet weather. A medium between the two would be the most desirable, as a little less value in the wool will be found to be more than made up in the hardiness of the sheep. The thicker and shorter-fleeced sheep usually shear as much in weight as the longer and wavy sort, if not more. They are also more easily fattened on account of their stronger constitutional qualities.

A leading exhibitor at the Utica State fair, last year, had a few wavy-fleeced sheep on exhibition, and as they won the prizes, this year he selected none but the wavy ones, and got no prizes. Last year the awards must have been made on the character of the wool, and this year on the character of the sheep. The latter is the most important.

Industrial Societies.

EXHIBITION OF NEW YORK STATE HORTICULTURAL SOCIETY.

(Special Report.)

THIS Society held an excellent exhibition of fruits and flowers at Madison Square Gardens, this city, on the 17th, 18th and 19th inst. The fruits formed the most attractive feature. Messrs. Ellwanger & Barry took first premium for the best collection of pears; their collection contained 116 varieties, in which were the following excellent ones:—Beurré Hardy, Doyenné Boussock, Duchesse Precoce, Beurré Bose, Horton, Canandaigua, and Mikado, a new Japan variety which has just fruited for the first time.

J. H. Ricketts exhibited also a large variety of pears, for seven of which he was awarded first premiums. His seedling grapes, however, were the most interesting of his exhibits. Among these, the Welcome, Lady Washington, Naomi and the Bacchus are new varieties of merit.

The Rev. E. P. Roe was awarded first premium for the best new seedling apple, and also for the best new seedling peach.

C. J. Copley was awarded first premium for the best three bunches of each of the following grapes: Eumelan, Senasqua, Creveling, Salem, Rogers's No. 33, Elsingburgh, and Elvira. Mr. Peter Henderson took first premium for the best six varieties of foreign grapes; these were: Muscat of Alexandria, Victoria Hamburg, Black Hamburg, Royal Muscadine, Muscat Hamburg and Charles Worth Tokay; the last is a beautiful clear grape.

There was an excellent display of potatoes. B. K. Bliss & Son exhibited 150 named varieties, for which they were awarded first premium, being the best collection, and 50 new seedlings that were not named, Mr. P. Henderson took first premium for the new potato, St. Patrick, which was considered the best new

seedling exhibited. It is a beautiful, large white potato. Other vegetables were not plentiful, but all shown were first-class.

The exhibits of cut-flowers and plants cannot be designated as large, comparatively few of our prominent plant growers having contributed. Of the plants, four beautiful Waterlilies deserve to be mentioned. One is the Lotus, or Sacred Bean of India—Nelumbium speciosum—flowers six or seven inches aeross, pinkish, tipped with rose. The others are Nymphea cœrulea, blue, N. Devoniana, rose, and N. dentata, white.

John S. Bush took first premium for his collection of hot-house plants; J. Lowell, of Patterson, N. J., first premium for Geraniums. The Parsons and Sons' Company, of Flushing, L. I., were awarded first premium for a choice collection of evergreens, among which Pinus Massoniana aurea, a beautiful, golden-leaved Pine, especially attracted the attention of visitors. The same firm also took a special premium for their collection of hardy deciduous plants. These were nearly all novelties, very few of them being in common cultivation. A varigated Snowball, recently imported from Japan, and a white-flowered Hibiscus were perhaps the most attractive plants in this collection. F. Rosenbeck, of Bayonne, N. J., made an exhibit of Ferns; he was awarded first premium for the six best Tree Ferns

The best new plant was exhibited by W. C. Wilson, for which he received first premium; it is an Oleobachia palustris. Fine displays of cut-flowers were made by James Vick, Peter Henderson, Dr. F. M. Hexamer and others. Dr. Hexamer received first premium for the best collection of Gladioli and also for the best twelve varieties. Floral designs, bouquets, etc., were quite numerous.

The Society does not encourage amateurs to compete for premiums as strongly as might be desired. The horticultural interest, which it may be presumed the Society has at heart, will best be served by inducing private cultivators everywhere to produce as good specimens and in as large variety as can be furnished by specialists. C. C. G.

NEW YORK STATE FAIR.

Second Notice.

[Special correspondence.]

THE stock show was very full and satisfactory. The novelty was the herd of Mr. T. A. Cole which he has called "Holderness," or "American Holderness"—a most unfortunate title. They are, in my judgment, worthy of a distinctive name, and such a name would make their fame. They are a breed of his own making and compare well with any of the other milch and butter breeds. He bought a cow in 1855, from imported stock, called Holderness. The stock from which she sprang had been imported several years before. From the purchased cow and her bull calf Mr. Cole has produced a herd uniform in appearance, and the members of which seem to be excellent dairy animals. They are large-uddered, large and even-teated, have as rich orange skins and interior of ears as the Gueruseys. In color these so-called Holdernesses are black and white; the black shading from reddish-brown to black in the older cows. The calves are said to be bright-red when dropped. In form they are more like Short-horns than like "Holstein" or Holland cattle, which they resemble in color only. There are now several hundred of the breed and they are in the hands of a number of farmers who value them highly.

The herd of Swiss cattle exhibted by L. Houghton were remarkably good animals. They have a Jersey look, are very hollow in the back and have fine hind-quarters.

The Jerseys were a very nice lot, but nothing extraordinary. L. I. Burditt & Son's "Commander-in-Chief" was a fine bull, as was also "Rowley" belonging to H. and C. H. Holmes. Starin's "Dexter of Staatsburgh" was a very stylish creature. Isaac H. Kelsey's "Marshall" had a magnificent color and fine points. "Ash-Bud," belonging to C. R. Agnew, seemed to be a nice animal, but was lacking the much-admired solid color. Mr. Jno. D. Wing, the Vice-President of the Society, had his usual string of handsome animals. Col. Curtis depended more on quality than quantity for merit. His "Princess Caroline" had a very rich color, and other good points. Mr. Wing's "Oak-leaf" made the fine record of 63¼ pounds of butter in 30 days. L. W. Ledyards "Fernwood Gift" was distinguished by a very fine head. One seldom sees a better in this country.

The Devons of Walter Cole, A. F. Bronson, and B. F. Peck were above the average. John Merryman and Erastus Corning about monopolized the Herefords, and Messrs. Sam'l. Campbell, J. F. Converse and Eugene Ham showed the cream of the Ayrshires. Smiths and Powell, and the Unadilla Valley Stock Association had the largest display of Holland cattle. Mr. Haight's herd of Short-horns were notable for the milking pedigree of the animals. The gem of the lot was "Baron of Milburn." This fine bull was bred by Mr. Haight (calved March 6, '77.) His ancestors on the female side include such splendid milking stock as Baroness, Double Rose, Red Rose 2d, Lady Barrington, and Rose Ann. It will thus be seen that the "Princess" strain, so famous for its milk qualities, is strongly indicated. We may in the near future present the likeness of the Baron to our readers, as he is well worthy of his fame. The bull is now the property of Mr. R. H. Allen who bought him on the fair grounds, and has added him to his herd at Chatham, N. J. The Baron has taken the first premium at both the N. Y. and N. J. State fairs.

The Sheep and Swine were more than an average lot. Mr. Proctor had fine Berkshires; Col. Curtis had good examples of Victorias, and Durocs, and J. S. Woodward excelled in Essex.

Smiths and Powell took about all the desirable stakes in the horse class with their excellent Clydesdales and Hambletonians.

Machinery.

All departments of machinery were well filled, and many new things shown. Especially is this the fact regarding "creameries," as in addition to the "Cooley Creamer," made by the Vermont Farm Machine Co., there were the Ferguson Bureau Creamery, a new device shown by Moseley & Stoddard, one by Bunnell & Brown, and two or three by other individuals. It looks as if the current was setting strongly in the direction of "creameries." The Chadborn & Caldwell Manufacturing Co. have a very pretty exhibit of the "Excelsior" lawn mower, and the Dairy Supply Co. have the most complete display of appliances designed for the dairy, including their Monitor pendulum churn. The only other churn on the same principle is the Davis oscillating, made by the Vermont Farm Machine Co.—a new churn, very highly spoken of. The Blanchard churn is shown by a local dealer. Jones, Faulkner & Co., and Chas Millar & Son, have complete exhibits of cheese-making apparatus, while the Boomer & Boschert Press Co., opposite, have their cider-making machinery in full blast, under the skillful direction of Mr. Boomer. Further a-field, we come to the heavy machinery. The Iron Turbine wind-mill made by Mast, Foos & Co. of Springfield, Ohio, and the "Stover" are the most prominent objects. There are mowers and reapers galore. Bradley & Co., besides their regular styles, show a new manual-delivery binder, which, with the Walter A. Wood binder, was driven about the grounds to show the mode of operating. They attracted great attention. R. H. Allen & Co. had their Dutton new mower, which has a new and peculiar mechanism that is simple and very pleasing. We shall speak more fully of this invention in the future. Of potato diggers and potato bug exterminators, there were several devices shown. There was a test of the potato plows, which was satisfactory to the several exhibitors, at least. C. H. E. R.

FAIR OF THE QUEEN'S COUNTY AG. SOCIETY AT MINEOLA, LONG ISLAND

[Special Correspondence, Sept. 25.]

This is the last day of this, the champion fair, of the great island of Long Island. The grounds of the Association and surrounding country are much flatter than a pancake, so that a box as large as a piece of chalk, may be made to serve as an observatory from which a view "far as the eye can reach" spreads on every side. There, within a mile is the City of the Plain—Garden City—founded by the late A. T. Stewart—a city in the country, a quiet monastery-like, beautifully-somber city, with streets that lead nowhere in particular, and isolated, melancholy-looking houses.

Fully 16,000 people have attended the fair, and it has been the most prosperous season since 1869, when the Society was enabled to pay off its debts. There is little worthy of note. Mr. William Crozier took first premium for Jersey bull three years or over: for Jersey bull over one year and under two; for Guernsey bull one year old, and second premium for Jersey heifer. All Mr. Crozier's cattle are fed on the soiling system. He has 40 head of cattle; 23 South-Down lambs, six horses and twenty pigs on his 40-acre home farm. J. W. Barnum took first premium for Short-horn bull "Oxford Lad"; for Short-horn heifer one year old and for Short-horn calf. Beacon Farm (Delamater) exhibited 16 fine Holsteins and took eight first and second premiums.

For fat hogs, a Chester-white, weighing 900 pounds, took first premium. The display of poultry was highly creditable. Strange to say, there were more Plymouth Rocks than all others together. There was one pair of the queer Japan Silkies, many Silver-spangled Hamburghs; and many Golden-penciled Hamburghs, than which there is no cleaner, or prettier breed; the polished little Silver-laced Bantams, and finally the dignified, handsome French breeds, La Fleche, Creve-cœur and Houdan.

Trophy was the best tomato. St. Patrick, a new potato, attracted, much attention for its length, size and comeliness. There were 14 Early Rose potatoes, weighing 14 pounds, which took the first premium for heavy weights. Prickly Comfrey, Pearl Millet; Early Amber Cane were exhibited among many commoner forage plants.

Among implements Walter A. Wood exhibited one of his celebrated self-binding harvesters; R. H. Allen & Co. one of Hughes' Castor-tooth smooting harrows, the principal novelty in which consists in the swiveled vibrating teeth. Horse-racing, here the first attraction, was watched through stifling clouds of dust, with intense interest by fair women, brave men, children and babies. C.

Miscellaneous.

A VARIEGATED TUBEROSE.

AMONG the latest novelties in floriculture is a variegated Tuberose, of which we represent a part of a leaf, showing the colored margin.

Mr. J. T. Rhea, of Griffin, Ga., with whom it originated, writes us as follows concerning it:

"Two years ago I discovered this plant growing in a bed of Tuberoses and observed that each leaf had a distinct yellow margin running from base to tip of the leaf. I watched it bloom and discovered nothing peculiar about the flower. At the usual time of taking up my bulbs, I laid this one aside carefully, and next spring took the little sets from the main bulb and planted all in a separate row, but in the same patch with other Tuberoses. Each one grew with its distinct yellowish-white stripe on the margin of the leaf, and now I have nine growing bulbs, and believe they will perpetuate their identical markings. The plant grows as vigorously as any other, and presents a marked effect in a growing bed of Tuberoses"

Of course, cases of this sort are usually more interesting for their novelty than even for any special beauty they may develop; but in the present instance the novel variegation is really an additional attraction to the ordinary appearance of a bed of these flowers.

SUGAR FROM SORGHUM.

MY success in making sugar from sorghum has exceeded my expectations. During a visit from a St Louis expert in sugar-refining yesterday, he assured me that my "molado" would average me 40 per cent of dry sugar. I swung some out to-day and got 50 per cent of first granulation. I attribute this success to three causes: improved varieties of cane; more correct modes of working, and the introduction of centrifugal machines. As to varieties of cane, I planted seven of them, two of which I have now finished working up with success; namely, Early Amber and hybrid sorghum. The first is now well known; the second is supposed to be a cross of the old China and Imphee and originated in Pennsylvania. My next working will be on a new variety named Amber Liberian.

So far as I can see there is nothing to impede general success in this industry but the lack of experts and a prejudice against changing the customary routine of farming. Success depends entirely on the defecation of the juice at the boiling point without the use of any chemical agency, except lime. Western farmers have not been encouraged to engage largely in the business this season, as this is considered an experimental year in sorghum sugar making, but still my small works are taxed to the utmost. The works consist of a No. 4. heavy Cook evaporator of copper, and a heater, together with setting tanks and a small copper finishing pan of my own make.

Madison Co., Ill. C. M. SCHWARZ.

ZINC LABELS.

I NOTICE, in the number for Aug. 30, "Professor Gale recommends, in the Kansas Farmer, the use of strips, of zinc for labels." I can show you such labels made and written upon with common lead pencils as much as eight years ago, and if you visit my garden, you will find many such labels, fastened to Gladiolus, Rose and other stakes. They are cheap and durable, lasting a lifetime, if cared for. I find many garden and fruit yards entirely devoid of labels, and others marked by a piece of shingle or stake, written on with pencil. These, as every one knows who has tried them, are very unreliable, as they soon break down or the writing becomes obliterated. I go to the tin shop, obtain some waste pieces of zinc, cut them into strips about 3½ inches long and ½ to ¾ inch wide, punch a small hole near one end, purchase a few yards of copper wire—ordinary bell wire—cut it into pieces about six inches long, put a piece of the wire in each piece of zinc, give it a twist—and my label is prepared ready for use. I keep a box of such ready for whenever needed. I think every one who will try the zinc label will forever after discard wood, and those who have never labeled their trees and plants will be highly gratified with the experiment, and will ever after adopt the plan. GRISWOLD.

BOOKS RECEIVED.

INVESTIGATION OF DISEASES OF SWINE and Infectious and Contagious diseases incident to other Classes of Domesticated Animals. This volume of 292 pages liberally illustrated, is issued by the Department of Agriculture, Washington, D. C. Of it, 177 pages are occupied with the reports of the nine veterinarians appointed in July 1878 by Com. Le Due as inspectors to investigate "Hog Cholera." In the remainder of the book pleuro-pneumonea, rinder-pest, glanders and various other diseases of domesticated animals are discussed. After a more careful examination of the work than has hitherto been possible, we shall refer to it at length hereafter.

Quarterly Report of the Chief of the Bureau of Statistics relative to the Imports, Exports, Immigration and Navigation of the United States for the three months ended March 31, 1879.

WHOLESALE PRICE LIST of the Bloomington nurseries for the fall of 1879, Bloomington, McLean Co., Ill. In this Messrs. J. S. Tuttle and A. Follett, the proprietors, state that the rates given will not be binding after this fall.

CATALOGUE of the Bow Park Herd of the Canada West Farm-Stock Association of thoroughbred Short-horn and Clydesdale Horses.

W. S. LITTLE'S SEMI-ANNUAL CIRCULAR of Wholesale Prices for the autumn of 1879. Commercial Nurseries, Rochester, N. Y.

The Apiarian.

THE MANAGEMENT OF BEE-KEEPERS.

IT has occurred to me that a word on the management of bee-keepers, would be in order at the present time, when there is little to be done in the management of bees. It has been my misfortune to visit so many wickedly indifferent and incomparably lazy apiarists, that if I address this notice to them I hope to be held excused by my intelligent go-ahead and successful brother bee-keepers. By those who are short of cash, and cannot sell their honey I am frequently asked the question: "What shall I do?" Well, let me tell you, and that very briefly. In the first place, get up early in the morning, and, after you are up, don't sit on a log with your hands in your pockets, but *go to work*. Fix up your apiary so nicely that every neighbor that comes along will want one like it. Then you can sell him some bees, and possibly a 100 pounds of honey. Stick up over the hitching post, a neat sign, saying, "BEES AND HONEY FOR SALE," and have your honey so nice and tempting, when anybody calls, that the visitors cannot help buying. Never send your honey to be sold on commission, but sell it at home. Make a home market. Get the reputation of producing honey in the best marketable shape, and your honey will never go a-begging for customers.

If you are in debt, stop outgoes; put your money in your pocket and button it up. Keep putting in all you can get, but don't let any get out. There is a philosopher's stone for you in a nut-shell. Scrape up all your beeswax on rainy days, but do not send it off by mail or express and lose half in charges: if you cannot sell it near home, club with your neighbors and send a barrel of it by freight. If you cannot sell all your honey and wax for cash, trade for something you know you have *got* to buy. Wear old clothes, and be careful of them. Be careful of everything. Do not make many mistakes and blunders, but make everything and every day count something. Yes, and Sabbath day, too; give God the best day's work of the week, in laying up treasures that do not pass away. J. G. BINGHAM.

Everywhere.

RURAL SPECIAL REPORTS.

VERMONT, Williamsville, Windham Co., Sept. 23.—On May 10 I turned over some green-sward that had been in grass ten years, spread and harrowed in a light dressing of green manure from the barn cellar. On May 13 I put horse manure that had been worked over by hogs, in the hill for Early Vermont and Beauty of Hebron potatoes and Blount's White Prolific corn. My Beauty of Hebron weighed 2½ oz. It was cut into 13 pieces—there being 13 eyes—and planted in 13 hills. The vines came up quickly and commenced cracking the ground to make room for tubers in the hill two weeks earlier than Early Vermonts. They yield more, and are as nice-looking as I have seen this year. On Sept. 16 I dug them and got 31 5-16 pounds. One potato weighed one pound two ounces, and several were a pound each. I planted 70 hills of corn, two kernels in a hill; in seven days 140 stalks appeared above ground, all looking thrifty. Some of the stalks stand 12 feet high today. I took one stalk 12 feet four inches, and two others with more fully developed ears and a sample of Beauty of Hebron potato to the Windham Co. Fair, and received a premium of 50c. on each. On Sept. 4 I counted 281 ears silked, and on Sept. 16, 363. I think some of it must be full in the milk, but the season will be too short to perfect the whole of it.

We had a slight frost on Sunday morning—the first this fall. It nipped vines but not corn leaves.

Definance Wheat rusted badly by July 1st, consequently the heads are but poorly filled. The Lost Nation Wheat is the variety in favor here now. I shall try Defiance on a different soil. Pearl Millet came up, but soon turned pale and died—some frosty mornings, probably, the cause. Planted the second time, a few came up, but to-day they stand not more than three feet high, a total failure. S. M.

CONN., Poquonock Bridge, New London Co., Sept. 17.—Our Beauty of Hebron is just splendid. Planted side by side with the Early Rose and Early Vermont, with precisely the same treatment, the Beauty far excels both the others *in every respect.* M. W.

NEW YORK, Upper Red Hook, Dutchess Co., Sept. 12.—In this section, as far as rain is concerned, this has been an exceedingly favorable season for farmers. With the exception of a slight drought during the latter part of April, the ground has been kept almost continually moist with numerous and copious showers, and vegetation of all kinds has made a fine growth. Corn looks well; there is a large show of stalks, and it is cared accordingly. Many farmers are busy cutting it. Potatoes gave a fair yield, but the wire-worm has injured them to a slight extent. Rye and oats are hardly loaded as well as last year. Sowing is about completed. Fruit of all kinds we have had in abundance, pears being especially plentiful. Of apples there is a large yield for an odd year, many orchards giving almost a full crop. Most of those from this locality will be shipped to England, and speculators are active. The RURAL has done a *noble* work in distributing such valuable seeds, and is entitled to the thanks of the whole country. The Beauty of Hebron potato is a grand success. I dug mine lately, and everybody was astonished at the yield. From a little potato, weighing not over three ounces, I have grown 21½ pounds of splendid tubers. Five of them weighed over a pound, the two largest, one pound and three ounces each. One of them measured 16¼ by 8¾ inches (outside measure); no small ones among them. The seed potato was cut into 11 pieces, all single eyes. I made ten hills of them. All came up, but one, I believe, was destroyed; another grew in the shade and did not do as well as the others. They were planted in rich garden soil, of rather a moist character, which has been well manured for three or four years. I hoed them but twice, and kept the weeds away. For the purpose of comparison, I dug nine hills of Early Rose which grew alongside and received precisely the same treatment, except that whole potatoes were planted; they weighed but 12½ pounds; this is quite a difference. I did not notice much difference in the time of ripening, though the Beauty was planted a few days later than the Rose. A correct name has been applied to them; they are really *beauties;* the large, handsome and symmetrical tubers were a pleasure to behold, and every one will be saved and planted next spring.

W. S. T.

N. Y., Canaserga, Albany Co., Sept. 18.—My Blount's corn was planted May 19. It grew unusually tall and has from four to seven ears to the stalk, but I fear it will not ripen here. Although the Pearl Millet seems to have been a failure at the RURAL FARM, it is a success with me, 150 miles to the north of that place. It is now in full head and nearly ripe. The Beauty of Hebron potatoes are indeed beauties. Several weigh a pound apiece, and I raised 50 pounds from the single specimen sent me. The ornamental beets are not large, but the foliage is beautiful. The Bronze lettuce raised alongside the Hansen, is fully as good. I have bushels of Acme tomatoes from the seed sent me, and they have a uniform size and ripen perfectly about the stem. I have quite a large number of Hollyhocks, Hibiscus, Weigelas and Calliearpas growing finely. J. E. M.

N. Y., Coxsackie, Greene Co., Sept. 15.—From the Voorhis watermelon seed I gathered two melons on Friday last, and had one of them for dinner on Sunday. I think it was the sweetest melon I ever ate. It weighed 24½ pounds. The other weighs nearly the same. I have saved all the seeds. My tallest stalk of Blount's corn is 14 feet high; and the greatest number of ears on a stalk is six. I had 45 pounds of Beauty of Hebron tubers from my own seed potato, and from the two which a couple of RURAL subscribers in town gave me.

J. H. L.

N. Y., Fulton, Orange Co., Sept. 22.—The two small Beauty of Hebron potatoes sent me I cut into 12 pieces with one eye in each piece, and planted one in each of a dozen hills. From these I dug one heaping bushel of fine, good-sized tubers which are far ahead of Early Rose or Early Vermont in the same field. Half a peck of them took the first premium at our local agricultural fair which has just ended financially successful and to the satisfaction of all our farmers. Pearl Millet was a failure. Crops are first-rate except apples which are poor. F. W. G.

N. Y., Sharon Center, Schoharie Co., Sept. 15.—From two ounces of Beauty of Hebron potato, containing nine eyes, I have dug 17¾ pounds of fine tubers. The Acme and Golden Rural tomatoes are both fine; but the Acme ripened 10 days earlier than its comrade. I don't know where to get a more perfect tomato. Defiance wheat is shriveled up. I won't say a word yet about Blount's phenomenon. Tailby's Cucumber is good; but Green Prolific is far ahead of it in productiveness. S. L

N. Y., Potter's Hollow, Albany Co., Sept. 17.—Last spring I got a barrel of the Beauty of Hebron potatoes from an advertiser in the RURAL, and divided them among my neighbors, all of whom make good reports of them. One to whom I gave three potatoes, has raised 50 pounds from them, another had a bushel from eight hills. I think this will prove a valuable variety, one that will take the place of the Early Rose, which is failing hereabouts. The Acme tomatoes were fine. A. P.

N. Y., Bridgeport, Madison Co., Sept. 22.—I planted the Beauty of Hebron potato about the first of May. It weighed about one ounce. I had ten hills, with a single eye in each. I dug them on Sept. 6 and got 26 pounds of as fine tubers as I ever saw—all large, no small ones. My Blount corn is a curiosity; but not a profitable one in this locality, although it is from 11 to 12 feet high with from four to nine ears to a stalk. S. F. S.

N. Y., Bethlehem, Albany Co., Sept. 12.—My Beauty of Hebron potatoes were dug yesterday and yielded about a peck of the nicest tubers I ever saw. I have had such success with those of the last RURAL seeds that I tried, that I shall plant all of the next seed distribution.

J. VAN A.

N. Y., Orient, Suffolk Co., Sept. 21.—The farmers are busy digging potatoes. My Beauty of Hebron potatoes are of fine appearance and the best I ever ate. I shall plant them next spring in preference to the Early Rose.

S. L. T.

N. Y., Honeoye Falls, Monroe Co., Sept. 14.—The Beauty of Hebron potato yielded 41 pounds by weight. Corn is 11 or 12 feet high and still going up. M. R. P.

MICH., Mayville, Tuscola Co., Sept. 12.—Defiance wheat was with me a signal failure. It shrank very badly and was generally worthless. 'Twas sown on light sandy soil—a piece not particularly favorable for wheat. The Beauty of Hebron sprouted very tardily, the sprouts were thin and spindling, and I was greatly disappointed, but as the season advanced, it grew better and stood the drought first-rate. The yield from a fraction less than two ounces of seed was seven pounds four ounces, or about sixty-fold. Blount's corn started well and grew vigorously on light, sandy loam well fertilized. It stood the drought well and is now vigorous and hardy and just in the milk. It is probably too late for this climate. I count as many as four stalks from one kernel, with from three to five ears to a stalk. It would indeed be prolific, if warm weather lasted a month or two longer. The Pearl Millet was a failure with me. The beets and lettuce did well. The Acme tomato was splendid—the *ne plus ultra* of the early luxuries. W. L.

MICH., Osseo, Hillsdale Co., Sept. 15.—The Blount's corn stands 12 feet high, with from two to eight ears on a stalk. On one stalk there are roots 20 inches from the ground. Our crops here have been beautiful. I have some Minnesota Amber sugar cane that makes the best kind of sirup, and if this is allowed to stand six months, it will turn to soft sugar without draining. The sirup is of an amber hue and far better than any molasses I ever ate. Commissioner Le Due sent the seed here, and quite a large number of people are testing it. C. E. T.

WIS., Louisville, Dunn Co., Sept. 12.—Pearl Millet was a failure. From nine eyes of the Beauty of Hebron, I raised 22 pounds of nice tubers, so I think I can claim the palm on that score. Tall as our Blount's corn is, a flood in the fore part of July nearly drowned it to death, so that I "step down and out" from among the competitors for corn premiums. Our crops here are nothing to brag of. Wheat yields only from five to ten bushels per acre; oats, about 30 bushels. Corn is out of the way of frost. It is nearly all hard, but dry weather has made the ears small. Potatoes are a good crop. Prices are: corn, 30c. per bushel; oats, 15c.; potatoes, 15c.; wheat, 70c. for No. 1. Help has been scarce this summer so that wages have been about $16 per month for the season. The outlook for farmers is rather gloomy, still large numbers of them are sowing Odessa wheat. F. M. S.

WIS., East Troy, Walworth Co., Sept. 18.—We have had no good rains in two months; the pastures are dried up, and we are feeding sowed corn. Winter wheat yielded from 20 to 50 bushels per acre; spring wheat, from 8 to 20 bushels, and oats from 30 to 60. Potatoes are a fair crop, and corn a heavy one. H. A. T.

MINN., Rieeford, Houston Co., Sept. 16.—We have been getting plenty of rain this month, but it has been almost too late to help any growing crop. It has been a great help to the plowing, however. Our crops were rather poor and thin, but what we did raise was of the best quality. Our Beauty of Hebron potato yielded well, we got 33 potatoes from the one, with no extra care. Corn is nearly all cut; the yield is good. Fruit is a fair crop. Wild fruits are in abundance. S. S. S.

MO., Springfield, Greene Co., Sept. 14.—We have had an unusually hot, dry season; but our crops, as a rule, are very good. Fruits of all kinds, however, were failures; but we had a few grapes and are getting a few apples, but not half enough for home consumption.

E. A. W.

VA., Nokesville, Prince William Co., Sept. 18.—Our wheat crop is less than half the usual yield. Corn has been hurt by drought; the late sort may make a fair crop, however. Peaches are too plentiful for profit. Pearl Millet I raised last year and this. I think a great deal of it. The Beauty of Hebron did well for the season; we haven't eaten any as we want all the tubers for seed. We have a live grange here. I think that a stranger coming to this section could tell its boundaries by the superiority of the improvements within its limits. B. C.

LA., Shreveport, Caddo Parish, Sept. 13.—The oat crop is good in this section. No wheat is grown here. Cotton is good and the weather fine for gathering it. Blount's corn turned out satisfactorily. The Beauty of Hebron rotted in the ground—it arrived here too late.

S. W. S

TEXAS, Salado, Bell Co., Sept. 8.—The drought still hangs over us, shutting out all prospect of rain soon. The thermometer moves steadily from 94° to 96° every night and day. Most of our farmers estimate that it will take from 8 to 10 acres to yield a bale of cotton; the usual yield in good seasons is an average of half a bale per acre hereabouts. Corn is being gathered; not only is it short, but of poor quality. Fruit is nearly an entire failure. Many are collecting their cattle and driving them north and west to hunt for water as well as grass. The fine springs at this place are yet flush; but it is distressing to see people come from eight or ten miles with barrels for all the water for use at home. The RURAL, always welcome, has been a blessing to me this year.

E. G. M.

TEXAS, McKinney, Collins Co., Sept. 13.—Wheat sowing is now in full sweep, although the weather and ground are still dry. Stock water is scarce, the rainfall this season having been only 2¾ inches. For cotton picking the weather has been fine; the yield will be about half a crop; but prices are much better than last season. Our section is blessed with good health. W. N. W.

CANADA, Oxford Center, Ont., Sept. 13.—Fall wheat is good; it will yield about 30 bushels per acre. Spring wheat is very poor; it will not be an average crop. Oats are very heavy. There is a fair prospect of a good crop of potatoes. Apples will be scarce this season. Pears are an exceedingly good crop; they are now selling at from 50c. to 75c. per bushel. The weather has been exceedingly dry through the last of August and the first part of September, making the ground very dry for fall seeding. A large area of fall wheat will be sowed this season. V. R.

CANADA, Newry Station, Perth Co., Ont., Sept. 16.—All the RURAL seeds I planted, did well. The tomatoes were the finest ever grown in these parts, and ripened earlier than any others. The yellow ones were especially excellent, the flavor being very fine and the skins thin. I am saving the seeds of both kinds. The Pearl Millet is a failure so far north. It grew pretty well, but an early frost has cut it down. The wheat rusted badly, but grew well and had fine ears—it deserves another trial.

A. J. C.

The Querist.

ANSWERS TO CORRESPONDENTS.

Inquiries about Fodder Plants, &c.

M. M. S., Bieber, Cal, asks, 1, what kind of roots has Guinea Grass, and whether it would be likely to catch on tule slough for hog feed; 2, what kind of root has the English Gore Vetch and whether it is good for hogs; 3, what kind of grain is Egyptian corn and what are its merits as a crop; 4, Our friend got a quantity of seeds from Arthur Taylor Watson, of Mo., who advertised what he called West India Green Valley Grass. It was to produce from 2,000 to 3,000 bushels of seeds per acre. Of the two dollars' worth our correspondent received not a single seed ever sprouted, and a desire is expressed to learn whether the thing was equally a fraud elsewhere. A small packet of the seed is forwarded to us for name. 5, Our opinion is asked about eye-cups for improving the eye sight of short-sighted persons.

ANS.—1. Perhaps Sorghum halepense is meant. This grows like corn and should be treated in every way the same. If you were to send us the flowers or seed heads we could speak more intelligently. 3. Vetches are not raised for their roots, but for the stems, leaves, tendrils and pods. All domestic animals are fond of them, but they are chiefly used as forage for cattle and sheep, especially for the latter. Analysis shows that in nutritive properties they are equal to clover. The stems are from one to two feet, and the pods as many inches long. The latter contain from 10 to 13 globular seeds, which are a favorite food of pigeons and poultry. 3. There are several varieties of what is called Egyptian corn, such as China corn and Brown and White Egyptian; but they are all of the species producing a drooping panicle; hence it has been named Sorghum cernuum. The seeds are about the size of small apple seeds, some white, some brown. The white seeds make a fine flour for pancakes, etc. These plants are said to produce large crops of grain—200 bushels or more to the acre. It may be, but we cannot believe it. As for fodder, none but Sorghum halepense is worth cultivating. The others rarely sucker. They throw up one tall, heavy stock, like corn, about eight feet in hight. But Sorghum halepense will produce an average of eight stalks to a seed. The stems are small, the leaves large. This grows to the hight of about ten feet and will bear cutting once. We have the several sorts growing at both the FARM and RURAL GROUNDS and shall speak more fully of them in a few weeks. 4. This "Green Valley Grass" *is* Sorghum halepense mentioned above. The seeds you send are *not* those of this plant. 5. We are not willing to say that the eye-cup is altogether a worthless invention. We remember that they were advertised some twenty years ago. We have never heard of a case in which they improved the sight permanently. In many cases, used cautiously, they effect a temporary improvement, but in several cases within our knowledge, this improvement has been followed by a relapse to a worse condition than before their use.

Leached and Unleached Ashes.

W. M. K., Washington, D. C., asks what is the worth of soap-boilers' leached ashes as compared with the unleached article.

ANS.—The most valuable fertilizing ingredient in wood ashes is the potash they contain. In the process of leaching a large part of this potash is abstracted; but a good deal still remains. Now, unleached ashes are dry and loose, while the leached sort are much more compact, so that a bushel of the former contains considerably less ashes than one of the latter. Accordingly, in spite of the withdrawal of a good deal of the potash from the ashes in leaching, a bushel of the leached ashes often contains as much, or nearly as much, potash as one of the unleached kind, owing to the greater compactness of the article. The poorer the leaching, of course, the richer the ashes in potash. Moreover, other fertilizing ingredients of the ashes, especially the phosphates, are but little affected by the leaching and are therefore proportionately increased in the leached ashes. By measure, therefore, there is often but little difference for fertilizing purposes between a lightly compressed bushel of unleached ashes, and a bushel of the poorly leached sort; but if taken by weight, the unleached ashes are nearly as valuable again as the leached kind.

Show Points of Plymouth Rocks, etc., etc.

E. H., Brookfield, Pa., asks 1, what are the exhibition points of Plymouth Rock fowls;

2, which is the best for the Lemon—budding, side, cleft or whip grafting; 3, where can lemon cions be obtained; 4, is the Star Insurance Company of this city a reliable concern.

ANS.—Plumage throughout, a bluish gray, each feather distinctly and finely barred with darker gray. Beak, bright yellow; comb, small and straight; bright red wattles and ear-lobes; medium-sized wings on which there should be no white feathers. Tail, rather small and upright; bright yellow legs standing well apart, and as free from dark scales as possible. The fowl should be of medium size, and as evenly-colored throughout as possible. No splashes of white, or reddish or brassy feathers are allowed in any part of the plumage. In exhibiting, the hen and cock must match in color of plumage and legs. 2. Orange trees should be budded, not grafted; the latter practice may be employed, but the former is preferable. 3. For buds apply to John Saul, Washington, D. C., or address a letter to Mrs. Increase Sumner, Starke, Florida, inclosing stamp for answer, and she may kindly give information where buds of a good variety can be procured directly from Florida. 4. Yes.

Planting and Tending Grape Vines.

C. T., Millersville, O., asks what is the best time and mode for planting grape vines; 2, which are the best varieties for family use; 3, what is the proper mode of cultivating them.

ANS.—For several reasons it is preferable to plant grape vines in the fall. The circulation of the sap commences very early in the spring, and if the planting is deferred until then, any wound the vine might receive would cause it to bleed and lose much strength. Again, the soil is seldom fit to plant in as early in the spring as vines should be set out, whereas in the fall it is always ready. If they are planted at this season, too, all wounds will heal during the winter, the roots will be settled in their bed, and even new roots may sometimes form, all of which combine to give the vine a good start in the spring.

As to situation, a full southern exposure is preferable in the Northern States, and sometimes necessary in order to ripen the fruit of late and tender varieties, and if the land descends toward the south, so much the better. If there is a choice of soils, one having a limestone foundation should be chosen in preference to all others. A wet soil must be underdrained, and in all cases it should be pulverized to the depth of 20 inches or two feet, either with the trench plow or spade. In planting the vine, it is well to set it four or six inches deeper in the ground than it stood before; it will then send out fibrous roots from the portion of the cane under ground, which will greatly strengthen it. The distance apart will vary with the variety and the system of pruning adopted. If trained on the fan-shaped system, strong growers should be some fifteen feet apart, and some cultivators have of late advocated even 20 to 24 feet; for weak growers, eight or ten feet are sufficient.

2. Of varieties suited for home use may be named the Concord, Adirondac, Delaware, Isabella, Catawba, Rebecca, Rogers's No. 33, Creveling, Lady, Salem, Iona and Martha.

3. As for pruning, training and cultivating the grape vine, so much is to be said that we can here give only an outline of the work. For complete information we would refer our friend to some comprehensive treatise on the subject, and, above all, he should visit some successful grape-culturist and see for himself how a vineyard is managed. A trellis running east and west is preferable to any other kind of support. It is made by setting good cedar posts 20 or 25 feet apart, between which wires are stretched as tightly as possible, and about ten inches apart. The common or fan-shaped form of training consists mainly in spreading the branches in a semicircle over the trellis. No rule can in this case be laid down on paper for the pruning of the vines, beyond the statement that the growth should be well balanced and that all the young shoots should be shortened to from four to twelve buds, according to their strength and the space they are to occupy. Nowhere should the branches crowd each other, and old, unproductive wood should be cut away, and young wood laid in its place.

Another method of training, to which we are inclined to give the preference, consists in forming two leading branches, one on each side of the stock, and these are to produce the bearing wood which is each year pruned back to spurs. To train a vine in this shape, the young plant is, after the first season's growth, cut back to two strong buds near the base. These two buds will, the next season, send out two branches, which should be tied to the trellis horizontally in opposite directions, and when pruned the second year, shortened to six buds each. The third year these buds will send up the bearing branches, and the whole system of pruning will now consist in pinching the summer shoots, or laterals, and cutting the bearing wood down to one strong bud each year.

By this system the vines may be planted eight feet apart, both weak and strong growers occupying about the same space.

Keeping Dahlia Bulbs in Winter, etc.

E. V., Oxford Center, Ont., Canada, asks 1st, the best plan of keeping Dahlia bulbs during winter; 2d, the best time for planting grape-vines for glass-house or cold-frame; 3d, the best kind of Strawberries, early, medium and late, to plant for family use.

ANS.—1. Keep them on shelves in a dry cellar out of danger from frost. Place them singly on the shelves; if piled one upon another, there is danger of their rotting. Should the cellar be damp, it is best to cover them with dry sand. Dahlia roots should be taken up on a fine, sunny day, the earth shaken off very carefully that none of the roots be broken loose, and they should then be placed in the sun to dry till toward evening, when they can be brought under shelter. 2. In the spring, as early as the plants in the grapery are started. 3. For early, Pioneer, Duchess; for medium, Charles Downing and Sharpless; for late, Kentucky.

Miscellaneous.

Mrs. E. H. C., Pekin, N. Y., asks 1, when is the proper time to trim an evergreen hedge of nearly two years' growth; 2d, the best variety of Primrose for winter blooming; 3d, will Verbenas that have just begun to blossom continue if potted and taken into the house.

ANS.—1. We could answer this question better if our friend had told us what kind of evergreen it is. It will be best to defer the trimming till next spring. Just how much to trim off, to get the best possible result, must depend upon the vigor of the hedge, the desired shape, etc.; no rule can be laid down that will answer for all cases alike. An evergreen hedge, however, should never be trimmed severely; three or four shearings during the season of growth are preferable to a severe one at the end of the season. 2. The single Chinese Primrose, Primula Sinensis, is most easily managed and blooms profusely; if the flowers are wanted for bouquets, the double-flowered is the best. The latter is best propagated by cuttings. Seed of the single variety sown now will flower in the spring. 3. It may, if potted carefully; but it is seldom that old Verbenas that have been used for bedding purposes, do well in pots afterward.

Ivy, Ivysrest, N. Y., asks, 1, how can apple trees be made to bear the odd years; 2, what are the salaries of brakemen, firemen and engineers on the railroads; 3, is it safe for a person who has lost the sight of one eye to run an engine.

ANS.—Apple trees that are in the habit of bearing only every other year, may generally be made to reverse their fruitful years by picking off the blossoms, or the young fruit as soon as they are formed, which, of course, should be done without injuring the spurs. It is better, however, to thin the fruit only moderately, so as to have a crop every year. Overbearing one season so exhausts the tree that it can form no fruit buds for the next. 2. Salaries vary on the different roads and on different trains on the same road according to the responsibility connected with the posts. Brakemen get from $25 to $40 a month, firemen from $2 to $2.50 a day, and engineers from $75 to $90 a month. 3. We should not consider it safe.

J. W. L., Smith's Grove, Ky., asks 1, whether a variety of corn known there as Gen. W. G Le Due's Improved Prolific, is the same as Blount's Prolific; 2, whether McCabe's Universal History is, as it claims to be, without a superior.

ANS.—There is no "Gen. Le Due" corn that we have ever heard of. 2. We don't know the work; but we have little faith in the utility of Universal Histories. The field they pretend to cover is too large for one man to do it justice, and such a meager smattering of information as they can impart, is of little benefit for utility or ornament.

C. S. B., Detroit, Mich., refers to an Editorial Brevity in our issue of July the 26th, in which it was stated that Prof. Lazenby found a cheap, safe and effective remedy for the cabbage worm in the application of a few quarts of tar in a barrel of water, and asks whether coal or pine tar should be used.

ANS.—Professor Lazenby writes us that he has used both coal and pine tar with almost equally good effect, but that he gives a slight preference to the former.

E. L. J., New Haven, Ct., sends a worm which he has taken from a tree in the garden and asks for its name.

ANS.—The worm was dead and crumbled up when it reached us, so we are unable to tell anything about it. Insects sent for name should always be in the imago state. Larvæ molt and change in their appearance so often that they cannot be named with certainty.

J. W. T., New Richland, Logan Co., Ohio, asks where can Defiance wheat be bought; and at how much a peck, and whether it is the sort sent out by the RURAL last season.

ANS.—This is now offered for sale by several seedsmen. B. K. Bliss & Sons of this city are the introducers. We have sown it as a winter wheat and distributed some of it to our friends. The price is now quite low.

J. R., Owasco, N. Y., asks whether a glass pipe can be used in a cistern, instead of a lead one, without discoloring the water.

ANS.—Certainly it can. Were it not for the expense, the risk of breakage, and the difficulty of making bends and joints, glass pipes would be the best, as they certainly are the cleanest, for conveying water.

L. H. D., Newark, O., asks how often must the progeny of a Short-horn bull and a good dam be crossed by Short-horn sires, before they are reckoned as good as Short-horns.

ANS.—Four crosses are allowed to constitute animals substantially as good as a pure-bred Short-horn; that is, the female progeny of a Short-horn sire and an approved dam, must again be crossed by a Short-horn bull, and this must occur a second and a third time, when the offspring of the fourth cross is considered as good as a pure-bred Short-horn.

W. S. A., Petersburg, Va., asks, 1, what varieties of Grapes should he plant for a succession throughout the season; 2, what Plums would be likely to do best in that latitude.

ANS.—Try Lady, for earliest white. For early, Hartford Prolific, Concord. For medium, Ives's, Scuppernong, Delaware. For late, Iona, Clinton, Norton's Virginia: 2, Plums, Damson and Wild Goose.

Mrs. J. B., Owasco, N. Y., asks if Pelargoniums can be wintered in a box in the cellar the same as Geraniums. 2. She raised some Stipa, or Feather Grass, last year which did not blossom this summer, and she asks when it will.

ANS.—1. Yes. 2. The Feather Grass will blossom next summer.

S. S. S., Ricefield Minn., asks whether, when a fruit tree is killed and another grows from the roots, the latter can properly be called a seedling.

ANS —Yes, if the stock was a seedling in the first place, before it was grafted, and the tree is killed off below the graft.

J. H. G., Glenville, N. Y., asks what is the color and season of Mold's Ennobled Oats; also whether it is an early or late sort and whether a well grown berry is longer or shorter than the ordinary kind.

ANS.—Black. Season medium. Longer.

K. Mc. N., Bloomville, Ohio., sends a twig for name.

ANS.—Euonymus Americanus, or American Strawberry Bush; found in the forests from the latitude of New York and southward. It is often cultivated.

S. L., Sharon Center, N. Y., asks whether the Bronze Ricinus will stand the winter out-of-doors.

ANS.—No.

J. I. B., Grundy Centre, Iowa. asks for the name of a reliable grain dealer in this city.

ANS.—R. A. Yellowlee, 45 Pearl St., N. Y.

Dairy Husbandry.

THE FARM DAIRY.

W. J. B., El Dorado, Kansas, asks for a trustworthy article on cheese making on a farm.

ANSWERED BY HENRY STEWART.

The factory system has almost completely destroyed the farm dairy. This may be a convenience to the farm household, but it is a question if the convenience, ease, or exemption from the labor of the household dairy has not been purchased at too great a price. The labor involved in making cheese is not, or need not be heavy, disagreeable or exacting. By proper mechanical labor-saving contrivances, all heavy lifting, slopping and other work which might be considered undesirable under our present popular notions, may be avoided. The factory system, too, has the effect of producing a homogeneous product. All factory cheese is alike, unless a difference may be made between good and bad, but here the variety ends. The methods in use are not productive of variety. In fact, the whole conduct of dairying from the talk and discussions of the Convention to the work of the "make" and curing room, has an unavoidable tendency to produce sameness in the product. There is nothing else that so palls upon the appetite as a constant repetition of the same thing, and may it not be for this reason, among others no doubt, but for this chiefly that we have seen cheese a drug in the market at five cents a pound, and dairymen mourning over their losses. With a diversity of system there will be a diversity of product, and the farm dairy is productive of just the variety of quality and character that is needed to please a diverse public taste. Practical experience is not sufficient for improvement; on the contrary, it tends to draw people into ruts and narrow channels; but when accompanied by inventive ability, there are no bounds to the extent of the improvements that may be made in any industry. Thus the farm dairy by the necessary employment of a hundred heads and minds, where now but one is at work, offers a great opportunity for the betterment of the dairy industry.

It is an encouraging sign when inquiries are made about the best system of farm cheese making. It shows that a beginning is made in returning to the practice of a legitimate domestic manufacture upon the restoration of which, to a considerable extent, may depend the return of prosperity to the dairy interest and its larger extension in the future. Farm cheese making is apt to fail most frequently for want of specific and accurate knowledge of the small details. Long experience gives this, but it is apt to be a "rule of thumb" and not one of strict weights and measures. There is no work on dairying yet published that gives the needed detailed information with accuracy, so that with the proper appliances used with thermometer, scales, and measure, a cheese of some kind may be made as a beginning upon which to found a practical experience that may be rapidly available. For the use of beginners, if not for older cheese makers, we give some of the needful

Details of Farm Cheese-Making.

The best cheese is made by what is known as the Cheddar system. In this a certain amount of acidity is developed in the curd before it is pressed. The process is as follows:—The whole milk (unskimmed) is used. If a whole day's milk is required, the evening's milk is cooled and stirred at intervals before retiring, and in the morning is again stirred and brought to a temperature of 78 to 84 degrees, the former for warm weather and the latter for cold. This milk is poured into a vat which may be heated by means of a pipe from a boiler, or upon a stove kept in the cheese room. Or the vat may have a false bottom of zinc for the purpose. The morning's milk is strained warm into the vat and the whole is well mixed by stirring. Half a pint of infusion of rennet for each 100 gallons of milk, is then poured into the vat and the whole once more stirred. The infusion is made by steeping a cured stomach of a calf in one quart of salt water for three weeks, when it is bottled for use. At this strength the milk will be curdled at the temperature previously mentioned, in one hour.

The stomach is prepared as follows:—take the true stomach, not the paunch, of a sucking calf just killed, turn out the contents and fill it with salt; then hang it up in a cool place to dry; after that pack it into a paper bag and hang it up in a dry place for a year, when it will be ready for use by merely putting it in water. The curd when made is sliced with a curd knife crosswise, perpendicularly and also horizontally, to bring it into cubes of moderate size, so that the whey may separate. The mass is then heated by means of hot water let into the pipes, or the false bottom and sides of the vat, until it shows a temperature of 100 degrees. This should take half an hour. The hot water is then drawn off and the curd stirred in the hot whey and broken up more finely. After standing half an hour until the curd has settled, the whey is drawn off and set to cool, when the cream which rises upon it, may be skimmed off and saved for butter. The vat is covered with a cloth and the curd left another half hour, when it is cut into pieces, turned, covered and left for half an hour again, when it is again cut and left for 15 minutes. During this period it will have become slightly acid to the taste. Care must here be exercised lest the acid become too much developed. The curd is now torn to pieces, cooled and put into layers in the vat to drain for half a day, until it is dry and tough. It is then broken up, and ground in a curd mill, two pounds of salt to the 100 of curd are added, and then it is placed in the hoop in a cloth and pressed. The pressure is about 2,000 lbs. for a 60 lbs. cheese. The cloth is changed daily for three days, when the cheese is taken from the press and bandaged, unless the bandage has been put on at the last pressing. It is then ready for the curing shelf where it is turned daily and kept in a steady temperature of 65 degrees.

A less troublesome system may be practised, but with some gain in the amount of labor and attention required, there will be a loss in quality of product. The utensils required can be purchased very cheaply at any of the dairy-furnishing stores, and by using the most improved ones, the work is made very light.

THE
RURAL NEW-YORKER.
PUBLISHED EVERY SATURDAY.

CONDUCTED BY
ELBERT S. CARMAN.

Address
THE RURAL NEW-YORKER,
78 Duane Street, New York City.

SATURDAY, OCT. 4, 1879.

APPLICANTS for seeds are requested not to stick their stamps to the letters. This practice causes us much trouble and the stamps are often destroyed in the attempt to sever them from the paper. *Leave them loose in the letters.*

AN IMPORTANT QUESTION.

IT seems to be agreed on nearly all hands that there is about as much loss as gain in cheese production at the present prices. By this condition of the industry the farmers of the country are the only actual losers. The factorymen take care to make a profit of some sort even from their patrons' losses, while the long line of middlemen between the producers and consumers pocket enough to check the consumption of the latter, and thus aggravate the misfortunes of the former.

Several causes contribute to the present depression of this branch of farm industry. For our enormous exports of cheese the British working classes have been the chief customers, and the working classes of Great Britan are now so hard-pinched by the depression universal there, not in agriculture alone, but in all sorts of industries, that they have often to be thankful for the bread without the cheese, or with a much smaller chunk of it than usual By the middle and upper classes, who also use cheese liberally, the home-made sorts, or varieties imported from the neighboring Continent, are more highly prized than the great bulk of that received from this country. We have been catering to the taste and pockets of the masses, and, unfortunately for us and them, the emptiness of the latter now prevents the free indulgence of the former. Owing to the falling-off in the purchases consequent greatly on this restriction, our supply would be too large for the production of even a few years back, and is much too large, to be profitable, for the present make. To secure "paying" prices, therefore, either our markets for cheese must be enlarged, or our production of it curtailed.

The two most practicable ways of increasing our sales seem to be, first, to make a greater variety of cheese, so as to tempt more liberal purchases by appealing to a wider range of taste, and, second, to create a greater home demand for this highly nutritious kind of food. As remarked by Mr. Stewart elsewhere, the chief or only difference in factory cheeses, is that between the good and the bad; while there certainly would be a wider opening for diversity in each of these kinds, and for the production of several intermediate sorts, should cheese be more extensively made under the varying conditions that exist on our farm dairies. Is a return, then, to home cheese-making the only means of obtaining this desirable diversity of product; or will not the factories vary more, here and there, the character of their make?

At fairs and dairy conventions a great deal has been said of late as to the necessity of increasing the appetite for cheese among our countrymen; but a pretty close outlook for the last couple of years has failed to discover a single practical step towards doing so, with the possible exception of the holding of that International Dairy Fair in this city. A fair price for a good article, and a size of cheese suitable for the immediate use of a single family, are two of the foremost means for popularizing the product; but while cheese has been bringing at the factory only six to seven cents per pound, it has been retailing for from 12 to 14 cents at the neighboring grocery, and for from 16 to 18 cents, or more, in city stores. And, worse still, the article, instead of tempting the purchaser to buy it again, is generally so poor that it lessens his taste for cheese. Then, again, who with a moderate-sized family is willing to buy a forty or fifty-pound cheese to have much of it mold before it can be used? For one such man, hundreds would be tempted to purchase a five or six-pound cheese. Yet no effectual pressure has ever been brought to bear upon retailers to moderate their greed, or upon factorymen to help their patrons to a larger market by making smaller cheeses.

Although the price of cheese will probably rise temporarily this fall and, perhaps, the coming winter, still the prospect seems gloomy for our present production. In view of the difficulty of enlarging our market promptly by either of these means, the sensible course in the present emergency seems to be to adopt the other of the above-named alternatives—to curtail our cheese production. To do this to advantage, however, will necessitate the substitution of some more profitable industry by those who are unwilling to work for nothing or at a loss and enterprising enough to step out of the trodden path when it has become too encumbered for progress. What shall this other industry be—long wool raising, as Col. Curtis elsewhere suggests, or what?

MORAL EDUCATION.

INTELLECTUAL education is the great panacea proposed for all social evils. It is advocated as the only means wherewith to check the progress and work the final suppression of crime. While it must be admitted that the tendency of education is to prove this statement true, it should not be accepted wholly without qualification. Intellectual education becomes a blessing, a source of happiness, to the possessor and to the world only so far as the moral qualities keep step with the intellectual in development. An unscrupulous intellectual giant is a being to be feared and shunned rather than admired and sought; for though men of this kind possess the greatest power to do, it is hazardous to intrust them with opportunity to use their power. The many swindling railroad presidents, directors of mining corporations and insurance managers furnish sufficient proof of this.

What, therefore, the world needs is not merely minds with great scope of action, minds that can conceive and carry out magnificent schemes, but they should also be awakened to the responsibility that is inseparable from power, to a sense of the obligation that trust imposes; and this may properly be called moral education. The word, morality, as commonly used, is frequently given a meaning much too shrunken and narrow to convey all that it really comprises. The standard dictionaries define morality as the duties of men in their social character. This clearly includes all the points of right and wrong, that turn up in human intercourse, and is not confined simply to a right private behavior.

The world calls the man moral and honorable who is not lewd and degraded in his tastes, who leads an irreproachable life in his family relations, and pays due respect to society, though elsewhere, in order to enrich himself, he may cause untold suffering and misery by fraudulent dealing. It is this view of morality that in this country, perhaps more than in any other, should receive special consideration. It should be inculcated on the young that, though clothed with the mantle of respectability, it is no less immoral to defraud others by tricks and sharp dealing than it is to be a common thief, drunkard or outcast from society.

OUR CORN PREMIUMS.

COMPETITORS for the several hundred dollars' worth of premiums which the RURAL NEW-YORKER offered last Spring for the largest yield from the Blount's corn which we sent to them, will soon begin to make their reports. We ask them to be as explicit as possible in their statements, since we desire to publish all of them that we can find space for, from which any information of value can be gleaned. Our friends will, therefore, please state the kind of soil; whether it is sandy or clayey; the kind of manure used; how often cultivated; whether the culture was hilled or flat; whether in hills or drills; how far apart; what special causes affected it injuriously or otherwise; the greatest number of ears to a stalk, etc. We would state that in the awarding of premiums the strictest impartiality shall be observed. We have nothing to do with the *names* of our competitors, but only with the largest well-authenticated yields.

The future demand for our meat supply is a matter of interest and importance to all stock owners. Are our present European sales simply a streak of good luck, or are they likely to continue? There can be no doubt but that our transatlantic sales, instead of diminishing, will increase. The population of Europe is increasing much faster than its meat supply, while the improvement in the condition of the lower classes, which is occurring slowly but steadily, must inevitably lead to an enlarged use of animal food. Despite occasional reductions of the wages of laboring people, the tendency of these is constantly upward, and with higher wages will come a more generous meat diet. If Europeans used only as much meat as we use now in proportion to the respective populations, their present meat supply would be entirely inadequate. The fact that our present export of live stock to Great Britain is constantly increasing, in spite of the restrictions upon it, is a pretty certain guarantee of the permanence of the trade. In view, therefore, of this growing market, it is the duty of our farmers to improve their stock steadily, and this can be done effectually only by the use of pure-bred sires; for the introduction of good blood into a herd by this means will often increase its value 25 per cent. in a few years.

Hardy Begonias are becoming very popular in England for bedding purposes. They are found in a number of colors, as scarlet, yellow, buff and white. They are propagated by seed, which, if sown early in the spring in boxes in the greenhouse, produce plants that may flower in the fall; or cuttings may be taken in the fall, kept growing during the winter in-doors and planted out next spring. These plants bloom in the fall, and will continue to bloom profusely, even after the frost has destroyed other bedding plants. They seem especially well adapted to shaded and partly shaded places where other bright bedding plants refuse to do well. The roots are tubers and may, in the middle latitudes, be left out all winter by giving them a good covering with soil and litter. In the Northern States they may be taken up, packed in boxes, and wintered, like Dahlias, in a frost-proof cellar or similar place. Under pot culture they also succeed well, and may be kept in a cold-frame, like Violets, for winter flowering.

BREVITIES.

JAMABUKI is the native name of the hardy shrub Rhodotypus kerrioides, as we learn from the Loudon Garden.

OUR POTATO NUMBER will be issued, probably, Oct. 11th. All articles intended for that number should be in the editors' hands prior to Oct. 5th.

DURING the week ending Sept. 6, there arrived in England from this country and Canada, 1,827 head of cattle; 6,140 sheep, and 389 pigs; also 3,225 quarters of beef, and 630 carcasses of mutton.

AUSTRALIA and New Zealand are among the very best customers of England for her choicest breeds of cattle, sheep, and horses, preferring chiefly the Short-horns among the first and the Clydesdales among the last.

ARE other animals besides man sensitive to ridicule? Certainly some of them are; for instance, dogs often show that they are hurt at being laughed at, while the sportsman's feathered prey strongly object to be made "game" of.

ALL packages sent to us containing fruit, flowers, etc., to be named, must be prepaid in full. And our friends must remember that if any writing whatever is contained in such packages, they must be be prepaid at the rate of letter postage, if sent by mail.

THOSE English farmers that came out to Texas a couple of weeks ago, are reported to have brought an aggregate sum of $150,000 between the 80 of them, or nearly $2,000 a-piece, to say nothing of the skill experience and lusty strength with which they enrich this country. Long live such immigration!

THE Yellow Wood, the subject of several of our illustrations this week, never produces fruit in England. Though tardy in its spring leafage, it holds its leaves and they retain their fresh, green color until after frost. We have never before seen faithful portraits of the leaves, flowers and fruit of this beautiful, but little known tree.

THOSE who propose to experiment in pitting green food for forage, should construct the pits at once according to the directions we have several times given. A good experiment would be to divide the pit or silo into several compartments and in each store a different kind of plant,—for example, Pearl Millet, coru, sorghum—so as to determine which would ensilage best.

SOME of our contemporaries call J. B. Lawes Professor—some Doctor. The truth is, Oxford University conferred upon him the degree of LL.D. Now for more than twenty-five years his name has been known as that of the most efficient agricultural experimenter in the world, and we have a feeling that Doctor or Professor applied to the respected name of J. B. Lawes belittles it.

A BERLIN official report lately issued shows that from August 1, 1878, to August 1, 1879, about 5,000 hams, 60 sides of bacon, 500 shoulders of pork, and 125 roulades were examined. Of these there were reported to the police authorities containing trichinæ, 109 hams, 161 sides of bacon, 7 shoulders, and 4 roulades. Trichinæ were also found in two pigs slaughtered in Berlin.

WE have been saving seeds of the following grapes: Delaware, Lady, El Dorado, Martha, Iona, Secretary, Goethe, Wilder and Salem. We shall send a few of these to each member of the Rural Horticultural Club within a week or ten days. We advise our young friends to plant them *at once* in well-drained pots of good garden soil. The Youths' Department will furnish all particulars.

THE hold that Blount's corn has of the earth is remarkable. The stalks average, in our plot of a quarter of an acre, scarcely less than ten feet; while those in our usual field of corn are not over eight. Now during a recent gale which blew down about half of the corn in our part of the country, Blount's suffered the least. It is worthy of note also, that the corn in our usual field was *hilled up*, while Blount's was not.

PROF. CALDWELL expresses the opinion in the N. Y. Tribune that taking into account the eminent fitness of the nitrogen in nitrate of soda for plant-food, and the uniform good quality of the fertilizer, it would appear to be well worth while in many cases to use it. It is brought from the western coast of South America where there are immense quantities of it. A good deal comes from Chili—hence the name of Chili Saltpeter. It is quoted here at $4 per cwt. which would make the nitrogen cost about 26 cents per pound.

AT the recent exhibition in this city of the New York State Horticultural Society we had the opportunity of seeing the two new seedling grapes, Rochester and Monroe, produced by Messrs. Ellwanger & Barry, of Rochester, N. Y. The bunch of each exhibited was rather small, but quite compact. Rochester is of a brownish-red color; the berry is small and quite sweet; but the skin is very thick and tough, which is a serious drawback to this otherwise promising variety. Monroe is black; berry, small, juicy and very vinous. It will not become popular as a dessert fruit, but as a wine grape it may prove good.

FROM returns presented to them from time to time since January last, insurance men in Liverpool have made some interesting calculations as to the average percentage of loss to live stock, during the voyage across the ocean. Of cattle the loss now is three per cent. of the number shipped; while that of sheep is only two per cent. The heaviest mortality is among pigs, which amounts to ten per cent. The loss among all classes of animals is much less now than when the live stock trade was established; for then the deaths of cattle often amounted to 25 per cent. Now the animals have ample space, a special attendant, and good care during the voyage; formerly they were huddled as closely as practicable and nearly left to shift for themselves during the passage.

WITHIN the past twelvemonth the Nihilists of Russia have set fire to several cities in that country, and thus caused a number of deaths and much suffering and desolation. The last atrocity of the kind of which they have been guilty, is the burning of the city of Kiev, capital of the most fertile province in the Ukraine, and situated on the Dnieper, 270 miles north of Odessa. The miscreants fired this city of 70,000 inhabitants on a stormy night in no less than seven places, causing a large destruction of human life within the two days during which the flames raged, besides an enormous loss of property. If assassination and incendiarism are the best arguments Nihilism has to offer in its own behalf, the sooner the followers of this insensate gospel of destruction are themselves destroyed, the better for society.

FROM a private letter from W. R. Lazenby, of Cornell University, we take the liberty to publish the following extracts:

"I have just returned from visiting some of the agricultural colleges in the west, and have garnered some rich treasures of observation and experience. I saw much to gratify and please. Am more and more convinced that the advantages of any one section are just about counterbalanced by some disadvantages, and a great deal more depends upon the *person* than upon the *place*. I have yet to find a locality where idleness is compatible with thrift, or where men grow rich by doing nothing. Many of the institutions visited—notably the Ill. Industrial University, Mich. Ag. Coll. and Iowa Ag. Coll.—are meeting the demands of the West very fully and very satisfactorily.

WE have been traveling among farmers a good deal of late, and find that many of them do not know what the difference is between bone superphosphate and bone phosphate. They call both *phosphates* as if they were merely different brands of the same fertilizer. We have many times explained the difference in these columns at length. It may be well, however, to state in a few words that they are essentially the same in fertilizing constituents, with the essential difference that the phosphoric acid of the superphosphate is immediately available to the plant, while in the phosphate it is not. If *immediate* effects are desired, therefore, use superphosphate of lime or bone superphosphate which is the same thing; viz., bone dissolved in sulphuric acid. If slower and more lasting effects are desired, use phosphate of lime or bone phosphate or bone flour, which are all the same.

ALL over England local emigration societies are being formed, all affiliated with "The Workingman's National Emigration Society." Their object is to aid members to emigrate either to this country, to Canada or to Australia or New Zealand. Any workingman may join on the payment of three, six, nine or twelve cents a fortnight. At intervals a certain number of members are chosen by ballot who are entitled to a grant of £10 if going to Australia or New Zealand, and to £6 if coming to America. The money is paid to the shipping agent, however, to prevent misappropriation. Those who have no intention of emigrating themselves are urged to contribute, inasmuch as the departure of others will have a tendency to raise their own wages and better their condition by rendering their services of more importance. From present indications it would seem that the exodus from that country is only commencing. It is highly probable, therefore, that the tide of British immigration will soon set in rapidly on our shores. Our capacity for expansion, however, is practically unlimited, and we can extend a cheerful welcome to all labor-seeking newcomers, who will soon add to the number, power and prosperity of our citizens.

Literary Miscellany.

THE WORLD FROM THE SIDEWALK.

Did you ever stand in the crowded street,
In the glare of the city lamp,
And list to the tread of the million feet
In their quaintly musical tramp?
As the surging crowd go to and fro
'Tis a pleasant sight, I ween,
To mark the figures that come and go
In the ever-changing scene.

Here the publican walks with the sinner proud,
And the priest in his gloomy cowl,
And Dives walks in the motley crowd
With Lazarus, cheek by jowl,
And the daughter of toil, with her fresh young heart,
As pure as her spotless fame,
Keeps step with the woman who makes her mart
In the haunts of sin and shame.

How lightly trips the country lass
In the midst of the city's ills!
As freshly pure as the daisied grass
That grows on her native hills.
And the beggar, too, with his hungry eye,
And his lean, wan face and crutch,
Gives a blessing the same to the passer-by
As he gives him little or much.

When Time has beaten the world's tattoo,
And in dusky armor dight,
Is treading with echoless footsteps through
The gloom of the silent night,
How many of these shall be daintily fed
And shall sink to slumbers sweet,
While many will go to a sleepless bed
And never a crumb to eat!

Ah, me! when the hours go joyful by,
How little we stop to heed
Our brothers' and sisters' despairing cry
In their woe and their bitter need!
Yet such a world as the angels sought
This world of ours we'd call,
If the brotherly love that the Father taught
Was felt by each for all.

Yet a few short years and this motley throng
Will all have passed away.
And the rich and the poor and the old and the young
Will be undistinguished clay.
And lips that laugh and lips that moan
Shall in silence alike be sealed,
And some will lie under stately stone,
And some in the Potter's Field!

But the sun will be shining just as bright
And so will the silver moon,
And just such a crowd will be here at night,
And just such a crowd at noon.
And men will be wicked and women will sin,
As ever since Adam's fall,
With the same old world to labor in,
And the same God over all.

[*Chicago Tribune.*

IN FOLLY'S NET.

CHAPTER VII.

"PARTING IS SUCH SWEET SORROW."

It was the 8th of August, and, as is usual at that time of the year, the station of the Great Northern Railway presented a scene of bustle and animation at the hour of the departure of the northern express, and the porters were rushing here and there with piles of luggage of all sorts; servants in and out of livery were hurrying hither and thither in search of their masters and mistresses, of tickets, of luggage, of vacant seats in the carriages, many of which were full, or "engaged."

At the door of a saloon carriage three or four people were standing looking on the confusion around them with the calm self-satisfied air of those who had surmounted their difficulties, and could afford to stand idly, and look at other people surmounting theirs.

This group consisted of four persons, two of either sex; and the quiet, ladylike attire of the two women, and the respectable appearance of the men, one of whom wore the dress of a Highland gillie, easily stamped their position in life as belonging to the upper class of servants. In effect, the young Scotchman was a confidential servant of Lord Sholto's; the other man was his lordship's valet; while the two women were Lady Sholto's maid and Miss McLeod's; the former a pretty, *piquante* Frenchwoman, the latter, Collins, a more staid, steady Englishwoman.

"And what does your young lady say to the Earl not coming with us, Mrs. Collins?" said McCormie, the Scotchman, pleasantly.

"She says nothing Mr. McCormic; but I suppose she thinks the more," said Collins. "She did not seem to care much at first what dresses I packed, until his lordship said he would follow in three or four weeks."

"That's very unlike mademoiselle," said Lady Sholto's maid, laughing. "She is always *si coquette*, that it is quite a pleasure to make her toilette, I should think. Now, miladi is not like her; I don't think she cares much. 'Anything you like, Lisette,' she says. 'Milford does not notice so long as I look nice.'"

"Few men do, Miss Lisette," said McCormie.

"Yes, few among *vous autres Anglais*," she answered, laughing; "but the men of my country always look, and that is why the French ladies understand toilette so well. Ah! there is milord."

McCormie started, and went hastily forward to meet Lord Sholto, who had just entered the station with his wife and sister, both attired in the most becoming of traveling costumes.

"Ah! McCormie," said his lordship, carelessly, "Is all arranged?"

"All is ready, my lord," was the respectful answer. "This is the carriage."

"Ah! a saloon, with an inner compartment," said his lordship, in a tone of satisfaction. "That is capital! Of course you have forgotten nothing, McCormie, such a question is a superfluous one for you. Have Lord Ivor and Miss McLeod arrived?"

"Not yet, my lord."

"It would be very awkward, and," Ida added, glancing at her watch, "they have only a few minutes now."

At this moment Lord Sholto's voice outside was heard exclaiming:

"Here you are, young people; I thought you had entered into a conspiracy to miss the train."

"No, Archie was loyal and would not," said Jean, laughing. "I begged and entreated him to do so, but in vain."

"Archibald, that young woman will give you no end of trouble," continued Lord Sholto, laughing. "If I were engaged to her, I should not let her go to Scotland for three or four weeks without my supervision and authority."

"But I have yours," said Jean, laughing; "is not that enough?"

"My supervision, yes; but I have no authority, you see," laughed his lordship. "You look bent on mischief, and you are certainly arrayed for conquest. That is a most bewitching costume."

"So Archie has just told me," said Jean. "I am glad it gives satisfaction. If you would like the address of my tailor, it is Ulster House, Connaught Street."

"Many thanks. I shall not fail to make use of it."

Jean's costume, which suited her admirably, was a skirt of kilted tweed of a soft brown color, a closely fitting Norfolk jacket of the same material, and a quaint, deerstalking hat of the same shade as her dress, under which her sweet face looked charmingly bewitching and piquant.

"You have just a minute and a half to take leave in," said Lord Sholto, in a moment; "which leaves Jean just half a minute to get into the train. I will be considerate enough to turn my back on you, Ivor."

The Earl laughed as he thanked him with a slight bow; he had been standing silent during the merry war of words between his brother-in-law and Jean, and his handsome face was a trifle graver and paler than usual.

"I wish you were coming, Archie," she said, softly, as he held her little gloved hands close pressed in his, looking down at her from his tall hight with a gravity which was almost prophetic, as if he foresaw the terrible sorrow their separation would bring upon them both.

"I wish so too, my darling," he said, gravely: "but, you see, I cannot. Be a good child, Jean,' he added, half-seriously, half-laughingly, "Don" get into any scrapes while I am not there to get you out, and write every day, love."

"Yes, without fail," Jean said, earnestly, then with a touch of her irrepressible gaiety, she went on: "You won't mind if I send you a post card sometimes, Archie. You would ruin me in stamps otherwise!"

"Jeanie," he said, reproachfully, "don't you care at all—sometimes I think you don't care for me one bit. I feel utterly miserable this morning—as if some foreboding of evil to come were hanging over me; while you——"

"Shall I stay, Archie?" she said, softly. "Aunt Margaret will be glad to keep me."

"No, no, my darling. I am not so selfish," he said, quickly. "Go and enjoy yourself."

"You are overtired," she said, gently. "Let me stay, Archie, I don't like to leave you like this."

"I'm a fool, I think," he said, impatiently. "I let my love make me very foolish where you are concerned, Jeanie."

"Time is up, Ivor, very sorry," said Lord Sholto smilingly, over his shoulder.

"You must go, love. Good-by," said the Earl. "Take care of yourself, and don't fail to write; if you miss a day, I shall think something has happened."

"Good-by, Archie, dearest and best," she said, with a sudden tenderness of voice and gesture; and, regardless of the crowd around them, he strained her to his heart in one passionate, hurried embrace, and Jeanie's sweet eyes filled with very unwonted tears as she sprang into the carriage, and Lord Sholto, with a hurried handshake to his brother-in-law, followed.

The doors were banged, last farewells exchanged, and the northern express glided out of the station, and the last glimpse Jean McLeod had of her *fiance* showed him standing bareheaded as he watched the train and saw the last of the bonnie face he loved so well framed in the carriage window.

When they met again, the shadow of a terrible trouble had fallen upon them both, and Jean's light heart was "fit to break" with a sorrow which she had brought upon the life of the man she loved more than life itself.

The long, wearisome journey—long and wearisome, no matter how many contrivances you can devise to shorten its length and lessen its weariness—was over at last, and Lord Sholto's party arrived at Glossin, which was the nearest station to Sholto, where the carriages and Highland servants were awaiting them, the latter ready to greet 'the laird' with great delight, while Lord Sholto's spirits rose high at the thought of being once more in his native land.

At Glossin, too, they met several friends and acquaintances, and the officials at the little station were having a busy time of it, between travelers, luggage, and hampers, and were all in full activity.

"Are you not glad to be here, Ida?" said Jean, whose eyes and cheeks were radiant with her delight and pleasure at being once more in the "land o' cakes" which she loved so well. "Florence, don't you smell the heather? Oh! my dear country, how I love you; there is no country in the world like you!"

And the day came to Jean McLeod, when she was ready to curse the day on which she set foot in the land.

Sholto was nearly fifteen miles from the station, for it was situated in the midst of wide-spreading moors and hills, and Lady Sholto and Ida, already wearied with their journey, were in no humor to share Jean's raptures at the wild, rugged scenery through which they passed, and were no little pleased at Sholto Hall rising like a haven of rest in the distance.

The house had been built according to a plant made by the late lord; and for although within it was everything that could be desired, without; it presented a strange mixture which surprised those who beheld it for the first time.

The view from the windows, over hill and dale, was a lovely one, the valley just beneath the hill was well cultivated, and the river rolled on swiftly through wooded banks; there was a small space of green pasture land, and then the hills and moors, the mountains of dark heath, the purple bloom of the heather, the roar of the distant waterfall.

Jean stood at her window for sometime drinking in the loveliness of the landscape as it lay flooded in golden light; but as she gazed the sunlight faded, a heavy black cloud hovered over the scene, and then a great sudden thunderclap burst over the castle, and sent Jean, white and shuddering, back into the center of the room.

"Is it an omen," she said, aloud—"is it an omen? Oh! if sorrow is to come to us, let the greatest share be mine, and spare Archie."

And when Collins came up a few minutes after she found her mistress struggling with an hysterical passion of tears, which she could only account for by the thunder and the over fatigue of the last two days.

CHAPTER VIII.

LOST ON THE MOORS.

"As for you, Mr. Blair, I don't think anything in the world would induce you to give up a day's shooting."

"You could make me do so easily," said Andrew Blair, quietly.

It was a glorious day in September, about six weeks after the arrival at Sholto Hall, and Miss McLeod and Mr. Blair were standing together on one of the terraces before the castle, passing away the few minutes which elapsed between breakfast and the departure of the shooting party for the moors.

Mr. Blair was a late addition to the party at Sholto Hall; he had arrived about a week before, having been for some time at Blair Gates superintending repairs, restorations and renovations which demanded, or which he chose to imagine demanded, his own personal supervision. His advent at Sholto had given very general satisfaction, and Jean, especially, had hailed it with delight, for she was tired of the visitors at Sholto, and Lord Ivor had not yet been able to leave town; for, detained at first by parliamentary business, he had afterwards been kept by the illness and death of a college friend to whom he had been greatly attached; he was expected almost daily now; but meanwhile Jean had declared herself *ennuyee a mourir* and desperately in want of some new excitement, and this Mr. Blair's arrival gave her, for she took unfeigned delight in his society.

"Could I?" said Jean, laughing, in answer to his assertion that she could easily keep him from a shooting expedition. "I doubt it; if I asked you to stay at home to day and read Tennyson to us poor, deserted woman folk, would you do so?"

"No," he answered, promptly; "but if you ask me to stay at home and read to one of the woman folk, I will do so with the greatest pleasure."

"An excuse, a base subterfuge," said Jean, with scornful laughter.

"Try me," he rejoined, quietly, and the dark eyes went to hers with an expression of passionate admiration, under which Jean's brown orbs sank.

She was looking lovely as the morning itself in the prettiest of flowing white morning-dresses with a profusion of lace and rose-colored ribbons about it, and a rose in her bosom, and looking down at her Andrew Blair felt his heart beat with a fierce, longing desire—fiercer more intense than he had known yet—to make this woman his wife, to possess her rare loveliness for his own, to press his lips to the tender crimson mouth, and to feel her little clinging hands in his.

"Do you like Tennyson, Mr. Blair?" Jean said demurely.

"Not so much as the man whose poem you are carrying in your hand," he said, quietly.

"Owen Meredith? Do you not really? I never heard anyone who had the courage to confess to such heresy," she said, gaily. "I admire your bravery and would emulate it if I could."

He stretched out his hand and took the book from her fingers, opening it at random.

"Do you remember these words," he went on, immediately, and read:

"'And I know that all is hopeless,
And that which might have been
Had she only waited a year or two
Is turn'd to a wild regret, I know,
Which will haunt us both, whatever the scene
And whatever the path we go.'"

Jean was silent. In a moment Mr. Blair continued:

"And this one," he said. Listen:

"'Away, away, the dream was vain,
We meet too soon or meet too late;
Still wear, as best you may, the chain
Your own hands forged about your fate,
Who could not wait.

"'What! you have given your life away
Before you found what most life misses?
Forsworn the bridal dream you say,
Of that ideal love whose kisses
Are vain as this is."

As he concluded the lines he dropped the book on the grass at their feet and covered his face with his hands. Jean's face paled; it was not in her nature to hear, unmoved, the passion in his voice, the unutterable pathos of his broken tones.

There was a moment's silence.

"Forgive me," he said then, in a lighter voice. "I have no right to obtrude my misery into your bright young life. What are you going to do today?"

"I really don't know," she said, trying to speak carelessly, but with a softer tone in her voice which his jealous ear quickly distinguished. "I am so tired of sitting at home that I am half-inclined to walk over to Glenholme and sketch the ruins of the old church there."

"It is a very long walk," he said, turning away his face to hide the sudden gleam of triumph which flashed into his dark eyes. "Quite six miles."

"Seven miles, Lord Sholto says. I am a capital walker."

"May I meet you and walk home with you?" he said, in a low pleading tone. "It will be getting late for you to return alone if you go unattended; surely you will not refuse me such a pleasure," he added, entreatingly.

"I do not think I need trouble you," she said, hesitatingly and hurriedly.

"Trouble! It will be the greatest pleasure. Ah! surely, Miss McLeod, you will not refuse me such a crumb of comfort?"

She stood hesitating, her eyes fixed on the ground and her little hands nervously clasped together while she restlessly turned round and round her fingers the flashing diamond ring which Archibald had placed there some months ago, in token of the engagement into which she had so freely entered.

He glanced down on the little jewelled hand.

"Ah! he said, suddenly. "I forgot; forgive me."

Jean's fair face flushed; something in his tone stung her pride.

"If you really care for it, and it is not much out of your way," she said, a little coldly, "I shall be very glad to have your escort home."

"Thank you," he said, gravely and quietly, and his tone was eloquent of gratitude.

"We're off, Blair," said his host's voice from a lower terrace. "Are you coming with me to-day or not?"

"I am coming," he shouted back. "When will you start for your walk, Miss McLeod?" he added, hastily, as he attempted to fasten his pouch, but his fingers were so very unsteady that Jean, unconscious of a dozen pairs of eyes regarding her from below, volunteered her assistance.

"Directly after luncheon," she said.

"Thank you. Good-morning," he said, and before Jean had guessed his intention he stooped and kissed the little white fingers on which the diamonds gleamed, and, turning, went hastily down the terrace steps to join the sportsmen, while Jean, a little angry, a little pleased, a little touched, for no woman is insensible to the devotion of any man, whether she loves him or not, went up to her room to ponder over Mr. Blair's words, his strange agitation, and his evident devotion to herself.—*To be continued.*

ORIGIN OF THE NAMES OF STATES.

Maine was so called as early as 1623, from Maine, in France, of which Henrietta Maria, Queen of England, was at that time proprietor. Popular name—The Lumber or Pine Tree State.

New Hampshire was the name given to the territory conveyed by the Plymouth Company to Captain John Mason, by patent, November 7, 1629, with reference to the patentee, who was Governor of Portsmouth in Hampshire, England. Popular name—The Granite State.

Vermont was so called by the inhabitants in their Declaration of Independence, January 16, 1777, from the French *verd mont*, the Green Mountains. Popular name—The Green Mountain State.

Massachusetts was so called from Massachusetts Bay, and that from the Massachusetts tribe of Indians, in the neighborhood of Boston. The tribe is thought to have derived its name from the Blue Hills of Milton. "I have learnt," says Roger Williams, "that the Massachusetts were so called from the Blue Hills." Popular name—The Bay State.

Rhode Island was so called in 1664, in reference to the Island of Rhodes, in the Mediterranean. Popular name—Little Rhody.

Connecticut was so called from the Indian name of its principal river. Connecticut is a Mocheakan-new word, signifying long river. Popular name—The Nutmeg or Free Stone State.

New York was so called in 1664, in reference to the Duke of York and Albany, to whom this territory was granted by the King of England. Popular name—The Empire or Excelsior State.

New Jersey was so called in 1664, from the Island of Jersey, on the coast of France, the residence of the family of Sir George Carteret, to whom the territory was granted.

Pennsylvania was so called in 1681, after William Penn. Popular name—The Keystone State.

Delaware was so called in 1703, from Delaware Bay, on which it lies, and which received its name from Lord de la Ware, who died in this bay. Popular name—The Blue Hen or Diamond State.

Maryland was called in honor of Henrietta Maria, Queen of Charles I., in his patent to Lord Baltimore, June 30th, 1632.

Virginia was so called in 1584, after Elizabeth, the virgin Queen of England. Popular name—The Old Dominion or Mother of Presidents.

Carolina was so called by the French in 1564, in honor of King Charles IX., of France. Popular name of South Carolina—The Palmetto State; of North Carolina—The Old North or Turpentine State.

Georgia was so called in 1732, in honor of King George II.

Alabama was so called in 1814, from its principal river, meaning *Here we rest*.

Mississippi was so called in 1800, from its western boundary, Mississippi is said to denote the whole river, *i. e.*, the river formed by the union of many. Popular name—The Bayou State.

Louisiana was so called in honor of Louis XIV., of France. Popular name—The Creole State.

Tennessee was so called in 1796, from its principal river. The word Ten-as-se is said to signify a *carved spoon*. Popular name—The Big Bend State.

Kentucky was so called in 1792, from its principal river. Popular name—The State of Dark and Bloody Ground.

Illinois was so called in 1809, from its principal river. The word is said to signify *the river of men*. Popular name—The Sucker or Prairie State.

Indiana was so called in 1809, from the American Indians. Popular name—The Hoosier State.

Ohio was so called in 1802, from its southern boundary. Popular name—The Buckeye State. Meaning of Indian word Ohio, *Beautiful.*

Missouri was so called in 1821, from its principal river. Indian name meaning *muddy water.*

Michigan was so called in 1805 from the lake on its border. Indian name, meaning *a weir for fish.* Popular name—The Wolverine State.

Arkansas was so called in 1812 from its principal river. Indian name. Popular name—The Bear State.

Florida was so called by Juan Ponce de Leon in 1572, because it was discovered on Easter Sunday, Spanish, *Pascua Florida.*

Wisconsin was so called from its principal river. Indian name, meaning *wild rushing river.*

Iowa was so called from its principal river. Indian name, meaning *the sleepy ones.* Popular name—Hawkeye State.

Minnesota is also an Indian word, meaning *the whitish water.*

California, a Spanish word, and named from an arm of the Pacific Ocean. Popular name—The Golden State.

Texas, a Spanish word, applied to the Republic. Popular name—The Lone Star State.

Kansas is an Indian name, meaning *the smoky water.*

West Virginia. So called after Virginia.

Nevada is a Spanish word, meaning *white with snow.*

FACTS ABOUT PHILATELY.

PRAKRAMA.

I.—What it is and why it should be studied.

THE study of Philately or stamp-collecting was almost unknown in 1860, but has since increased so rapidly in popularity that the time appears to be not far distant when enthusiastic collectors will be found in every town in the United States and Europe. Already the stamp business has attained considerable proportions; the literature on the subject is extensive, several periodicals being devoted exclusively to it; the auction sales (one of which I described a few weeks ago in the RURAL) are largely attended; and, for the crowning triumph of the new science, an International Congress of Philatelists met last year in Paris. But all this has been accomplished by the efforts of individual collectors, and the subject of Philately is seldom noticed by the press. This neglect has been so general that I think the following facts relating to stamps and the way to collect them may induce at least a few to engage in my favorite pastime. As I am writing, not for the advanced collector, but for the beginner and those not collecting, I will begin with a statement of a few of the advantages gained by the study and a brief historical sketch.

The first advantage in practical importance is that it is an aid to the study of geography. The location of a country, island or city is remembered more readily by the collector when it is associated in his mind with an interesting or rare series of stamps. How many of those who read this and are not Philatelists can think instantly where Sarawak, Curacao, Cundinamarca, Reunion Island, Angola, New Caledonia, St. Lucia or La Guaira are? A second advantage is that the currency of a country is shown by its stamps. At an early stage of his investigations the collector will find, not merely this, but that the money of one country may differ from that of another in which the standard coin has the same name, and that the value of a national coin may be suddenly changed. As an illustration, I will select the postage stamps of Uruguay. The collector will notice that while the values of the 1859 issue ranged from 60 to 240 centesimos, the highest value of the 1864 issue is only 12 centesimos, and only 20 centesimos the following year. How can this be accounted for? The explanation is that in 1859 one real (100 centesimos) was worth 11 cents, and that the currency was changed and one peso (100 centesimos) has since been worth 77 cents. The Philatelist is not likely to forget that a milreis in Portugal is worth nearly twice as much as in Brazil.

Historical events are frequently commemorated by stamps. For instance: on the deposition of Queen Isabella II. of Spain a postage stamp bearing her portrait was surcharged (printed over), "Habilitado por la Junta Revolucionaria" (issued by the Revolutionary Junta), thus recalling the provisional government; while the surcharge subsequently adopted, "Habilitado por la Nacion" (issued by the Nation) shows the existence of a republic. Then the portrait of King Amadeus appeared, and was soon replaced on the stamps by a seated figure of Liberty, showing that the nation was again under a republican government. The present issue with the head of Alfonso XII. proves that the duration of the Second Republic was very brief, while the "Impuesto de Guerra" (war-tax) stamps tell us of the long civil war, and we may see on the "Carlist" stamps the portrait of a pretender to the crown.

Another example may be found in the postage-stamp history of Naples. During the Dictatorship of Garibaldi the national arms were erased from the dies used in printing the stamps and the cross of Savoy substituted, a prophesy of the coming Kingdom of Italy. That the dream of a united Italy was not fully realized at once is proved by the emission several years later of a new series of stamps for the Roman States, on which the tiara and keys are shown. On the first French postage stamps we see the head of Liberty; this is replaced during the Presidency of Napoleon by his portrait, while the inscription "Repub. Franc." remains unchanged. This is succeeded the next year by "Empire Franc.," and in 1863 the head of the Emperor is encircled by a laurel wreath, emblematic of his Italian victories. In 1871 the head of Liberty again appears, a memorial of the downfall of the Second Empire and the restoration of the Republic.

In a collection of stamps we also find portraits of the reigning sovereigns of many countries, or perhaps, if the State is a republic, those of eminent citizens. Sometimes the national arms are shown. In a few instances the inscriptions on stamps are in more than one language, thus showing (except in the new stamps issued as provided by the Universal Postal Union, with inscriptions in the language of the country emitting them, and, also, in French) either that the country was conquered and had not acquired the language of its conquerors like the States of India tributary to Great Britain; or that the citizens are gradually adopting a foreign language for commercial purposes as in Japan. We can even trace some indications of national character in the stamps of a country. This may seem paradoxical but I think a comparison of the early German issues with those of France will confirm it. From revenue stamps in addition to the geographical and historical information, we may learn something of the business transactions of a nation from the nature of the documents, or (in other instances) articles of commerce, which are considered profitable subjects for taxation. For instance, a country destitute of foreign commerce would not find "Foreign Bills of Exchange" of sufficient importance as a means of raising revenue to issue special stamps for them.

The beauty of a collection of stamps in fine condition will be to many a greater attraction than their historical value. As specimens of engraving many postage and more revenue stamps would deserve preservation. As instances I may mention the splendid sets now used for postage by Honduras, Peru, Ceylon and the United States, and the revenue stamps of Chili, Transvaal, Mexico and Ceylon. Most of those I have referred to are also remarkable for beauty of colors, but in this respect I consider the "Inland Revenue" stamps of British Guiana to be equal to any in existence. For beauty of engraving the higher values of United States revenues are probably unequaled. As a contrast to the handsome stamps mentioned, many of the rarest are very coarsely engraved and badly printed. The first issue of British Guiana postage stamps (one of the very rarest known) is a noticeable example, the design consisting of a roughly drawn circle enclosing name of country and value.

Although revenue stamps have been long in use (almost two centuries in Great Britain), they have only very recently attracted attention, and their history has never been thoroughly investigated. This mode of collecting taxes seems to be rapidly spreading at present, new issues appear constantly and no more favorable time could be chosen for commencing a collection of these interesting labels.

The first postage stamps were issued in 1840 by Great Britain, and are known as the Mulready envelopes. Two values of these were issued, the 1d. black and 2d. blue; the design representing Britannia sending letters to all parts of the world. In the same year two small adhesive stamps were issued of the same denominations as the envelopes. Brazil issued a set of three stamps in 1843. The design consists of a large numeral in nearly circular frame; and is said to have been adopted by the postmaster-general because he thought it would be showing disrespect to the emperor to blacken his portrait in cancellation. This idea was adhered to by Brazil for more than twenty years but has now been abandoned, and the portrait of the emperor is given on the stamps. The French postal issues date from 1849; those of Switzerland (Zurich) from 1843; the United States was represented as early as 1842 by a stamp issued by the New York post-office, though no general issue occurred until 1847. Postal cards were introduced by Austria in 1869. Since then they have been very generally adopted; and, in many countries "reply cards" are issued. A "reply card" is furnished with a flap which is torn off and an answer written on it, while the carrier waits.

We have seen it stated that the first known stamp-collector was a Belgian schoolmaster, who used his collection to interest his pupils in geography in 1864; but of course this point must remain doubtful. For the further history of postage stamps, I cannot devote space here, but would refer those interested in this department to the standard authorities on the subject. Postage is now prepaid by stamps in almost every part of the world except in Central Asia and the interior of Africa; the issues of China and Persia being the most important recent additions to the list. In another article I will take up the first principles of Philately, and then explain some of the methods of mounting stamps and arranging them in albums.

ETON BOYS.—It was now long after noon, and I saw in a field an Eton game of foot-ball. It was played with spirit, but with less dash than I had been led to expect. At another time, however, there may have been more. Apart from their uniforms, the players could not have been distinguished from the same number of Yankee boys, of like condition in life, engaged in the same sport. I also met a large party of "old boys," as they came up, in their uniforms, from a cricket match. A lather lot of young fellows I never saw. Not that they were either weak looking or unhealthy; but they were not at all what the writings of English critics had led me to expect. Not one was robust; only one had color; and there was not a curling auburn head among them. I saw Eton boys by scores, and found them neither ruddy nor plump, but, like most other boys between twelve and twenty, rather pale and slender. The full-dress Eton costume is a ridiculous one. It is a short jacket or roundabout, with a very broad turn-over shirt collar, and a chimney-pot hat. The combination is grotesque; and it is made more so by the solemnity of most of the young chaps when they have it on. Hunger drove me and my young companion into a restaurant, and I shall never forget the looks of a little Eton prig who entered as we were sitting, and took a place over against us. He kept on his preposterous hat, gave his order as if it were for his own capital execution, and ate his cakes and drank his chocolate as if that event were to take place at the conclusion of his repast.—*Richard Grant White in October Atlantic.*

SOCIALISM IN GERMANY.—It has been thought strange that in docile Germany, where order and submission have been proverbial, socialism, with which in the ordinary mind the excesses of the French Revolution are most intimately associated, could ever rise to the hight of a strong party, and assume proportions which for solidity and the prospect of continuation and growth have been equaled in no other country. There are two main causes of this strength: first, the condition of the German laborer is, on account of natural and social causes, one of hardship; and, next, the German nature is made up of feeling to a greater degree than any other European character,—of feeling deep and solid, which, when roused in philanthropy or from convictions of personal injustice, is not turned to this side or that by some slight accident, as is the case in French character, but carries the philanthropist to the end in his plans for assistance; and the heavy, stolid, deep nature of the laborer keeps him consistent in his opposition to a condition of society which his leaders tell him is the cause of his misfortunes. The German laborer, then, is discontented, and educated philanthropists, in sympathy with him, think that in socialism they have found a cure for his hard condition,—a condition depending primarily on backwardness in industries and the poverty of the German soil, which, though fertile in the south, is generally hard, unyielding, and sterile.

Any one who has traveled through the north-eastern part of Germany knows well the hard condition of the peasants,—knows that they are ill fed, hard worked, and that their hovels, many of them with only one window, some lacking even one, are hardly fit for the fowls which share them with the family. There are many huts containing only one room, with damp earth as a floor, and not more than fifteen feet square, where two families dwell; where sons bring their wives; where young and old of both sexes are thrown together; where modesty can furnish no barrier to vice, and fine feelings, if any could arise, are crushed by hard surroundings. There is a look of dejection on most faces, while the women especially seem utterly downcast. One feels that here are the descendants of those who for hundreds of years have been underlings, in whom habits of submission and obedience have been so thoroughly grounded that all will be borne to the last. But there is also a stolid strength here, that, when once roused, knows no retreat.—*Willard Brown, in October Atlantic.*

SCRIBNER'S MONTHLY.—CONTENTS.—The Camp of the Carbonates: Ups and Downs in Leadville, Ernest Ingersoll. Illustrations, by Mary Hallock Foote and J. Harrison Mills: Head-piece—En Route to Leadville—Leadville Lodgings—Up-hill Work—The Shaft House—At the Bottom of the Shaft—The Jig Drill—Athwart an Incline—The Professor in Suspense—A "Good Indication"—"When Drouthy Neebors Meet"—A Sidewalk Study—As Comfortable as Circumstances will Admit—Mosquito Pass from Capitol Hill—Burning Woods—In the Woods—At the Casino. On the the Piping Shepherd of Fortuny, Charles de Kay; With an engraving of Fortuny's "Piping Shepherd," by T. Cole. Field Sports in Minnesota, Charles A. Zimmerman; Illustrations, by the author, or by A. B. Frost after the author; Goose-Decoys—The Menagerie—A Close Shot—Cornered by a Crane—A Side Shot—A "Bond" in Wet Weather—A Mishap—Bond(ed) Goods in Transit—How Prince got his Breakfast—Kandiyohi Pass—Canvas Back and Red Head—A Cold Morning—The Bridge Stand—A Tight Shell—Stopping an Incomer—Goose-Shooting from Stubble—Wild Geese—Wild Ducks. Edison's Inventions, III: The System of Fast Telegraphy, Edwin M. Fox; Illustrations: Portrait of Thomas A. Edison (drawn by Francis Lathrop; engraved by F. Juengling) and Seven Figures showing the workings of the Automatic Telegraph. Journalism as Exemplified by the late Mr. Bagehot. Cone)—Feminine (H. C. Bunner)—The School-master Abroad.

GOOD TALKERS.—The first requisite of a good talker is genuine social sympathy. A man may not say, out of some selfish motive, or some motive of personal policy; "Go to! I will become a good talker." He must enjoy society, and have a genuine desire to serve and please. We have all seen the talker who talks for his own purposes, or talks to please himself. He is the well-known character—the talking bore. The talker who gets himself up for show, who plans his conversations for an evening, and crams for them, becomes intolerable. He lectures: he does not converse; for there is no power of a talker so delightful as that of exciting others to talk, and listening to what his own inspiring and suggestive utterances have called forth. Genuine social sympathy and a hearty desire to please others are necessary to produce such a talker as this, and no other is tolerable. Social sympathy is a natural gift, and there is a combination of other gifts which constitute what may be called *esprit*, that are very essential to a good talker. This combination includes individuality, tact and wit—the talents, aptitudes, and peculiar characteristic charm which enable a man to use the materials of conversation in an engaging way, entirely his own; for every good talker has his own way of saying good things, as well as of managing conversation based on his *esprit*.

Yet it is true that there are no good talkers who depend upon their natural gifts and such material as they get in the usual interchanges of society. For the materials of conversation we must draw upon knowledge. No man can be a thoroughly good talker who does not know a great deal. Social sympathy and "the gift of gab" go but a short way toward producing good conversation, though we hear a great deal of this kind of talk among the young. Sound and exact knowledge is the very basis of good conversation. To know a great many things well is to have in hand the best and most reliable materials of good conversation. There is nothing like abundance and exactness of knowledge with which to furnish a talker. Next to this, perhaps, is familiarity with polite literature. The faculty of quoting from the best authors is a very desirable one. Facts are valuable, and thoughts perhaps are quite as valuable, especially as they are more stimulating to the conversation of a group. The talker who deals alone in facts is quite likely to have the talk all to himself, while the man who is familiar with thoughts and ideas, as he has found them embodied in literature, becomes a stimulator of thought and conversation in those around him. Familiarity with knowledge and with the products of literary art cannot be too much insisted on as the furniture of good conversation.

Beyond this, the good talker must be familiar with the current thought and events of his time. There should be no movement in politics, religion and society that the good talker is not familiar with. Indeed, the man who undertakes to talk at all must know what is uppermost in men's minds, and be able to add to the general fund of thought and knowledge, and respond to the popular inquiry and the popular disposition for discussion. The man who undertakes to be a good talker should never be caught napping, concerning any current topic of immediate public interest.

How to carry and convey superiority of knowledge and culture without appearing to be pedantic how to talk out of abundant stores of information and familiarity with opinion without seeming to preach, as Coleridge was accused of doing, belongs, with the ability to talk well, to "the art of conversation." It has seemed to us that if young people could only see how shallow and silly very much of their talk is, and must necessarily be, so long as they lack the materials of conversation, they would take more pains with their study, would devote themselves more to the best books, and that, at least, they would acquire and maintain more familiarity with important current events. To know something is the best cure for neighborhood gossip, for talk about dress, and for ten thousand frivolities and sillinesses of society. Besides, a good talker needs an audience to understand and respond to him, and where is he to find one if there is not abundant culture around him?—*Dr. Holland in Scribner for October.*

ST. NICHOLAS.—The October number of St. Nicholas closes the sixth volume of the magazine with an array of features hard to match in interest for the little folks.

Louisa M. Alcott contributes the opening story entitled Jimmy's Cruise in the Pinafore, a charming narrative, illustrated with fine portraits of characters in the Children's Pinafore, which will delight every boy and girl who has heard the famous operetta.

The Elevated Railroads of New York are described in a long article by Charles Barnard, and with it are given eight admirable pictures of various views along the lines of the three New York Roads. The text and illustrations also show how the roads were constructed, and together furnish a capital and entertaining account of those wonderful Railroads in the Air.

Noah's Ark Ashore, is the title of another descriptive article which will be eagerly read by every boy and girl. It is a well-told narrative of a visit to a queer Ark on the Amazon river which a kind-hearted native had turned into a sort of asylum for beasts and birds of various kinds. The story of this novel institution is very interesting indeed, and the illustrations are really superb. No finer pictures of animals have been printed of late years than the eight beautiful drawings which accompany this article.

Besides these, there is a timely little paper telling all about the strange doings and mysteries of Halloween, and illustrated with a lovely frontis-piece; while a very Curious Monastery is shown in a full-page picture, and a fascinating School in the

Woods is described by Maurice Thompson, the literary archer.

Of Stories there is a capital budget, beginning with the two serials Eyebright and A Jolly Fellowship, which are both concluded in this number with "climax" installments. Then there is a lively fishing story—Mr. Carother's Secret, written by the author of Dab Kinzer; a pleasant, fanciful tale by Moncure D. Conway, and a strong home story for girls, called What Kate Found in the Well. An Educational Breakfast at the Peterkins', a very comical affair, is told about by Miss Lucretia P. Hale. Mary E. Bradley contributes a fine poem called Duke Leopold's Stone, for which Alfred Fredericks has drawn a beautiful illustration; and there are several funny pictures and verses scattered through the number, while the Departments at the end will look at least as inviting as ever to the young eyes that read them so carefully every month.

MESSRS. LEE AND SHEPARD will immediately publish Jules Verne's new book, "The Tribulations of a Chinaman in China," which has just appeared in Paris. The book is intensely interesting and amusing, and many of the popular features of the day such as the Phonograph, Capt. Boyton in his Rubber Suit, Life Insurance Companies, Banking Speculations, Advertising Schemes and various other eccentricities of the times are woven into the narrative.

BRIC-A-BRAC.

AT SEA.

WORN voyagers, who watch for land
Across the endless wastes of sea,
Who gaze before and on each hand,
Why look ye not to what ye flee?

The stars, by which the sailors steer,
Not always rise before the prow;
Though forward naught but clouds appear,
Behind they may be breaking now.

What though me may not turn again
To shores of childhood that we leave,
Are those old signs we followed, vain?
Can guide so oft found true, deceive?

Oh, sail we to the South or North,
Oh, sail we to the East or West,
The port from which we first put forth
Is our heart's home, is our life's best!

[*F. W. Bourdillon.*

AN EYE ON A SPREE.—An Allegheny physician, who, in his way, is a great wag, tells a story of a North Side gentleman who for years has suffered from periodical attacks of what in medical parlance is known as superorbital neuralgia. Quinine proved of no effect, and the sufferer was almost crazed with pain. A kind-hearted, old lady, living in the neighborhood of the patient, informed him that if he would cut the affected nerve with a pair of scissors or a knife, it would give him no further trouble. It so happens that the superorbital nerve is the one which controls the action of the eyelid, and when a man is in liquor this nerve becomes paralyzed, and it is this that gives a drunken person such a comical expression about the eyes. The neuralgia patient no sooner heard what he supposed the welcome news from the old lady than he repaired to a closet, and with a jack-knife parted in twain the offending nerve, and he now greets his friends with his right eye as sober as a Quaker in a quarterly meeting and the left in a highly intoxicated condition.—*Pittsburgh (Pa.) Leader.*

AN English writer has been sharply criticising the management of the London public schools, known as the "Board schools," and produces the following specimens of the written examination of some of the scholars:

"Where is Turin?"

"Turcen is the capital of Chiner; the peepul there lives on birds nests and has long tails."

"What do you know of the patriarch Abraham?"

"He was the father of Lot and ad tew wifes—wun was called Ilishmale and the t'other Haygur. He kept wun at home and he turned the t'other into the desert, where she became a pillow of salt in the day time and a pillow of fire at nite."

"DE GUATILLION."

GIT yo' pardners, fust guatillion!
Stamp yo' feet an' raise 'em high;
Tune is: "Oh! dat watermillion!
Gwine to eat it bime-by."

S'lute yo' pardners! Scrape perlitely;
Don't be bumpin' gin de rest.
Balance all! Now step out rightly;
Alluz dance yo' level bes'!

Fo'ward four! Whoop up niggers!
Back agin! Don't be so slow!
Swing cornahs! Mind de figgers—
When I hollers den yo' go.

Hands around! Hold up yo' faces!
Don't be lookin' at yo' feet!
Swing yo' pardners to yo' places!
Dat's de way—dat's hard to beat!

Sides fo'ward! When you's ready
Make a bow as low's yo' kin!
Swing across wid op'st lady!
Now we'll let yo' swap agin!

Ladies change! Shet up dat talkin'!
Do yo' talkin' arter while!
Right and lef' don't want no walkin';
Make yo' steps and show yo' style.

ETIQUETTE OF LETTER WRITING.—As a rule, every letter, unless insulting in its character, requires an answer. To neglect to answer a letter, when written to, is as uncivil as to neglect to reply when spoken to.

In the reply, acknowledge first the receipt of the letter, mentioning its date, and afterwards consider all the points requiring attention.

If the letter is to be very brief, commence sufficiently far from the top of the page to give a nearly equal amount of blank paper at the bottom of the sheet when the letter is ended.

Should the matter in the letter continue beyond the first page, it is well to commence a little above the middle of the sheet, extending as far as necessary on the other pages.

It is thought impolite to use a half sheet of paper in formal letters. As a matter of economy and convenience for business purposes, however, it is customary to have the card of the business man printed at the top of the sheet, and a single leaf is used.

In writing a letter, the answer to which is of more benefit to yourself than the person to whom you write, enclose a postage stamp for the reply.

Letters should be as free from erasures, interlineations, blots and postscripts as possible. It is decidedly better to copy the letter than to have these appear.

A letter of introduction or recommendation, should never be sealed, as the bearer to whom it is given ought to know the contents.—*Hill's Manual of Social and Business Forms.*

TREASURES.

THE rose, preserved with tender care,
The perfumed note, the tress of hair
That speak of boyish folly—
From cozy depths of easy chair,
I scan them all with shrugging air
Of cynic melancholy.
The "carte de dance," the crumpled glove;
The netted purse—"with Polly's love"—
(Confound it! *which* was Polly?)

The posey ring I gave to Bess,
When softly came that whispered, "Yes,"
Which seemed a dream of heaven,
We turtle-doves were wont to plan
(On something very small per ann.)
A dainty cote in Devon.
Ah fickle Bess! she ran away
With Puller of the Guards, they say,
And died in '37.

A foolscap page of lover's sighs,
To one whom I apostrophize
As "stony-hearted Janet."
I call the damsel cruel—cold,
In threadbare terms about as old
As this decrepit planet.
Ah, well, those self-same halting rhymes
Did duty half-a-dozen times—
They *all* had hearts of granite!

'Tis sweet to dream of vanished youth,
Of days long dead and gone—in truth,
A pleasing occupation!
Of boyhood's "fitful fever" o'er;
Of follies past—a matter for
Sincere congratulation!
So dusky relics! with a sigh—
(An epitaph unspoken)—I
Consign you to cremation.

Ah, lips of woman!—rosy, ripe—
The amber mouth-piece of my pipe
To me is twice as charming.
When one arrives at fifty odd,
The arrows of the archer god
Have lost their power of harming.
A wounded heart will ache, no doubt
But *then* one finds a twinge of gout
A trifle more alarming! [*The Argosy.*

ORIGIN OF "CHAM," THE PARISIAN CARTOONIST'S NAME.—When the young man, who was a son of the Comte de Noe, first took to caricaturing, he signed his name and title, Viscomte de Noe. His acutely aristocratic father, who had previously cut him off with the legendary shilling, wrote him an indignant letter forbidding him the defilement of his name. Thereupon the young Viscomte assumed the name of "Cham," which is the French for Ham, the outcast son of Noah. Poor old Noe is well forgotten now, if he ever was known, whereas Cham's memory will survive him at least nine days, which is generally considered unusual longevity for fame in our lightning days.

"EXEGESIS."

THREE POWERFUL SERMONS.—Over the triple doorways of the Cathedral of Milan there are three inscriptions spanning the splendid arches. Over one is carved a beautiful wreath of roses, and underneath is the legend, "All that which pleases is only for a moment." Over the other is sculptured a cross, and there are the words, "All that which troubles us is but for a moment." Underneath the great central entrance in the main aisle is the inscription, "That only is important which is eternal."

USEFUL ITEMS.

KRUPP'S NEW STEEL BREECH-LOADER.—The big Krupp gun, a breech-loader made of steel, was tested a fortnight ago. The charge of powder was 440 pounds, and the weight of the shot 1,712 pounds. The velocity attained was 1,650 feet per second at the muzzle. In each of the three rounds the weight of the powder-charge was 440 pounds. The shot in the second round weighed nearly 1,709 pounds; the velocity was 1,644 feet. In the third round the shot weighed 1,707 pounds; velocity 1,645 feet. The first and second rounds were trial shots, for the purpose of obtaining range. The target was distant 2,735 yards. The first shot went over the target, the second fell short of it, but the third made a good hit. The great gun-maker contends that the real measure of the power of a gun is the hight to which it would be raised by the power which is imparted to the projectile when fired. Krupp, with his great breech-loader, gives to a projectile of 770 kilogrammes a velocity of 502 metres per second. This force would lift more than 10,000 tons a metre high, which is the same as raising the gun itself to a hight of 140 metres, or 458 feet. The energy of the shot fired by the Fraser 80-ton gun would raise the gun itself to the hight of 121 metres, or 397 feet. So also the Armstrong gun, of 100 tons, develops an energy sufficient to raise that gun to an elevation of 125 metres, or 410 feet. The power of modern artillery is well illustrated by the fact that the shot flies on its way with a force sufficient to raise the gun itself to an altitude equal to that of the gilt cross on the top of St. Paul's Cathedral, London. Krupp himself lays claim to a power sufficient to make his steel breech-loader of 70 tons soar at least 50 feet above the topmost point.

For Women.

LET BYGONES BE BYGONES.

LET bygones be bygones: if bygones were clouded
By aught that occasioned a pang of regret,
O, let them in darkest oblivion be shrouded:
'Tis wise and 'tis kind to forgive and forget.

Let bygones be bygones, and good be extracted
From ill, over which it is folly to fret;
The wisest of mortals have foolishly acted—
The kindest are those who forgive and forget.

Let bygones be bygones; O cherish no longer
The thought that the sun of affection has set;
Eclipsed for a moment its rays will be stronger
If you, like a Christian, forgive and forget.

Let bygones be bygones, your heart will be lighter
When kindness of yours with reception has met:
The flame of your heart will be purer and brighter
If God-like, you strive to forgive and forget.

Let bygones be bygones: O, purge out the leaven
Of malice, and try an example to set
To others, who, craving the mercy of heaven,
Are sadly too slow to forgive and forget.

Let bygones be bygones; remember how deeply
To heaven's forbearance we all are in debt!
They value God's infinite goodness too cheaply
Who heed not the precept, "Forgive and Forget."

[*Chambers's Journal.*

EXTRACTS FROM AN APPEAL TO WOMEN CITIZENS OF THE UNITED STATES.

BY the unwearied efforts of a few earnest women, we already number thirty years of agitation on the question of woman's enfranchisement, and fourteen years of persistent petitioning Congress for National protection against the tyranny of State action.

While our demands have not yet achieved political equality, they have secured larger opportunities for women in education, industry, art, science, literature and the professions; more humane legislation in regard to her social and civil rights, as wife, mother, widow; and an increasing respect for the right that includes all others—the right to vote.

The 40,000 votes for woman suffrage in Michigan; the 9,070 in Kansas; the 6,666 in Colorado; the large minority votes in many of the State Legislatures in favor of submitting the question; the 26,468 in Minnesota in favor of woman's voting on temperance; the right to vote on the schools already granted, and women actually voting thereon in Kansas, Michigan, Minnesota, Colorado, California, Oregon, New Hampshire and Massachusetts; the Minnesota Legislature at its last session passing a resolution urging Congress to submit a Sixteenth Amendment for woman suffrage; and the enfranchisement of women in Wyoming and Utah; all these facts show that the best classes of men are in favor of Equal Rights for Women, while the ignorant and especially the vicious, are bitter opponents.

The discussion in Congress on the bill to admit women to practice in the Supreme Court of the United States, and its passage in both Houses by overwhelming majorities lead naturally to the conclusion that if a woman may plead a case involving important interests between man and man before the highest judicial tribunal, it is absurd to deny her the right to vote on the closing of a dram-shop or the opening of a town pump.

From the very birth of our nation, gifted women like Abigail Adams and Lucretia Mott, inspired by our grand principles of government, have asked that the rights of women, as citizens of a republic, should be secured.

Our unsuccessful efforts for enfranchisement through the vote of the people in the several States, and the speedy triumph of the African race in achieving political equality by constitutional amendments, have educated us into the broader demand for national protection. Ever since the war, ours has been the only Woman Suffrage organization, and we the only class of citizens who have steadily maintained the doctrine of National supremacy in the protection of "Equal Rights for All," while both of the political parties, and even the Supreme Court of the United States, have played fast and loose with this fundamental principle of a republican government, declaring that only male citizens of African descent are protected in the right to vote by the Constitution. Hence we demand an additional amendment that shall specifically declare woman's right to vote in every State and Territory of the Union, all State Constitutions or Statute Laws to the contrary notwithstanding.

INDIVIDUAL POLITICAL DISABILITIES.

In considering this petition, let every woman remember that, besides the wholesale amnesty act of 1872, Congress has removed, since the war, the legal and political disabilities of 4,926 men, most of whom had taken part in the late rebellion, while the individual petitions for relief from political disabilities of 300 intelligent and patriotic women, never convicted of crime, slumbered in the committees. We now ask Congress to extend to us the same protection granted to other classes; as the Constitution declares its people to be citizens, first of the United States, and second of the State wherein they reside.

STATE LEGISLATURES.

The question may arise in some minds, "If the enfranchisement of woman should in justice be settled by National legislation, why petition the State Legislature?" For this reason: when a resolution in favor of a measure passes a State Legislature the Senators and Representatives of that State in Congress are thereby instructed as to their votes on that particular measure when it comes up for action, and on the other hand, the people of a State are roused to thought on questions under debate in their own Legislatures. Again, the only way a disfranchised class can bring their wrongs before their rulers is through petitions, and to secure these, agitation and discussion are necessary to attract popular consideration. Hence we ask you to circulate the State as well as the National petitions in every school district.

If we had the power to galvanize all women into as much zeal for their own freedom and development as they now manifest in fairs, temperance associations, foreign missions, church building, decoration and donation parties, our cause would speedily triumph.

Women are not idle, but many spend their best forces in dress, dinners, fancy work and social conversation, and in the froth of literature, politics and religion, without ever sounding the depths of those principles on which society rests. The wrangling of parties and sects may not concern woman; but the vital facts of government, the limits of State and church authority should be considered within the sphere of her interests and comprehension. Instead of clubs for the study of Greek Art, Heathen Mythology, and Microscopic Investigations, Woman Suffrage Associations should be formed in every town, county and State in the Nation. A sense of individual freedom, the liberty to think and act within the same limits prescribed to those in authority, complete equality with those around us, give the strongest impulses in the development of a noble character. When we remember that our present demand for National legislation on woman's political status, involves the same principle that has kept up a continual conflict in this nation for a century, the highest motives of patriotism should add zeal to our efforts for self protection. If every woman, however humble would bear in mind that injustice to her is injustice to all; that to acquiesce in the sacrifice of one individual right, is a step towards the downfall of the republic, a new sense of personal dignity and responsibility would inspire all with greater earnestness in advocating their own enfranchisement.

On Behalf of the National Woman Suffrage Association.

TWO SIDES OF THE STORY.

A WHILE ago there appeared in one of our city papers this advertisement:

WANTED.—A capable woman to do the housework in a family of four persons, and take the charge of two children, the mother's time being occupied with music.

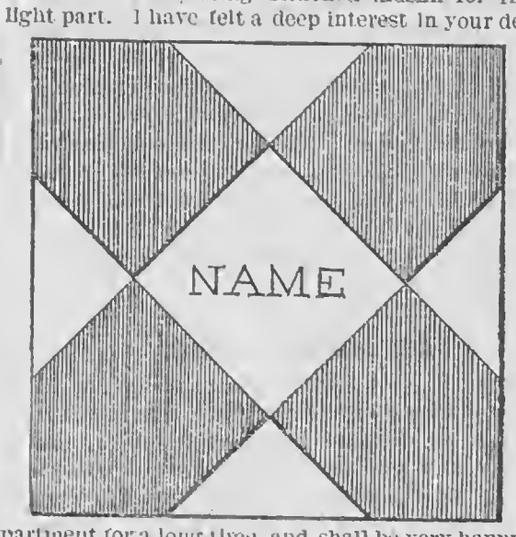
We thought sadly over this advertisement. Evidently there was a husband and wife with two children in this home circle, and the wife and mother so occupied with music as to need hired help to take her natural cares and responsibilities. —*Congregationalist.*

In such cases as this it is necessary to know all the attending circumstances before an intelligent condemnation can be uttered. We are acquainted with a lady who is compelled to leave her children to the care of others, and "occupy her time with music," that she may support herself and them. And we know instances, too, where women have to support a husband as well as children, and while music is the most compensating business she can do, must leave her family in order to support them, she is under the necessity of employing "hired help to take her natural cares and responsibilities." It is quite possible that this was the fact with the advertiser in the above case.—*Standard.*

CORRESPONDENTS' CORNER.

DEAR MISS RIPLEY:—In answer to Constant Reader in RURAL of August 25, I will reply by sending a simple design of a remembrance quilt, which does not require a large amount of material, and is very pretty when made of different kinds of calico; using bleached muslin for the light part. I have felt a deep interest in your department for a long time, and shall be very happy if I can do anything to benefit the dear RURAL sisters from time to time. If we all lend a helping hand, surely success will crown our efforts. We should live for the good of others, as well as of ourselves. Truly yours, E. H. S

Sandy Creek, N. Y.



HOME, SWEET HOME.

'MID pleasures and palaces, though we may roam,
Be it ever so humble, there's no place like home;
A charm from the skies seems to hallow us there,
Which, seek through the world, is ne'er met with elsewhere.
Home, home, sweet, sweet home,
There's no place like home. Oh, there's no place like home.

I gaze on the moon as I tread the drear wild,
And feel that my mother now thinks of her child;
As she looks on that moon from our own cottage door,
Thro' the Woodbine whose fragrance shall cheer me no more
Home, home, sweet, sweet home,
There's no place like home. Oh, there's no place like home.

An exile from home, splendor dazzles in vain;
Oh give me my lowly thatched cottage again;
The birds singing gaily, that came at my call;
Give me them, and that peace of mind, dearer than all.
Home, home, sweet, sweet home,
There's no place like home. Oh, there's no place like home.

K. A. T.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

MRS. ENDICOT'S JOURNAL.

Children's school clothes—aprons for girls—tomato preserves—reading for winter evenings.

CUTTING out work and getting it ready for the machine are hard work, as my aching back testifies. I did not get the children's clothes just "fixed" as they ought to have been before school commenced, having so much housework to do. I spent Monday in looking over last year's dresses, aprons, coats and pants. When it came to the trying on, I was surprised to see how much Della had grown; as for Harry, it's just as he said, "some shorter boy will have to be found" for his heavy suit. Della's "best dress" last winter was a seal-brown cashmere; now she will take it for school. I shall lengthen it by trimming it with blue and green mixed plaid, a piece about two inches deep around the skirt and about the same distance from the bottom. This piece set in, will make it long enough. This, with the three large bib aprons I cut out this morning, will keep her looking nice all winter. The aprons are as long almost as her dress. They are hemmed around the bottom, and trimmed at the neck and waist with a ruffle; a pocket is set on the right side, and trimmed also with a ruffle across the top. Two of the aprons are of blue and white, the other of brown and white checked gingham. They are easily washed, dried and ironed—a great recommendation for winter time. Harry's shirts I make of the brown and white imported cheviots. Sometimes they have a thread of blue or pink through them. His suits I get made, as I find that I do not know how to give them the finish I like them to have. I have hardly made up my mind what I shall do for Katy yet; the white dresses are so pretty but so troublesome that I should not wonder if soft, fine flannel took their place; with pretty white aprons they still look babyfied.

Harry has just brought a large basket of partly ripened tomatoes from the garden, which I know means, that he wants me to keep my promise and make them into preserves, and this is the way I shall do it.

Tomato Preserves.

Take tomatoes that are partly ripe, peel and put over them sugar, pound for pound; let them set till the next morning; then pour off the juice—you will be surprised at the quantity—and put on in a porcelain kettle; when it is boiling briskly, put in the tomatoes; they will need to cook a long time—three or four hours, until the juice is a thick sirup. We find them delicious, and they are a particular favorite with rich cream. I know many persons do not like them, but I think it is because they do not use enough sugar nor cook long enough. This must be done till the water has evaporated, or they will be insipid.

Mrs. Cox was in this afternoon, and we were talking of the long evenings that are coming so soon, which indeed, have already commenced. This led her to speak of a plan she had thought of for our amusement and improvement this winter. It was this—that as many in our neighborhood as wanted should form a club; each one to select any book he or she wanted, the name of the book with the price to be handed to some one selected, who would buy the whole, thus getting them at a reduction from the retail price. It is proposed that the club should meet once in two weeks at the home of some member; exchange books and spend a social evening. Thus each one would get the reading of a number of books for the price of one. The plan suited me exactly, as we have no library in our town. I told her if she would see part of our friends, I would try and see others, as I had wanted to make some calls for a long time.

SIT DOWN TO WORK.

ALL women should economize their strength as much as possible while they are young and healthy, and still more if they are aged and feeble. One way to do this is to rest one set of muscles while others are in action. Begin early in the morning by sitting down to your work before becoming tired, and you will hold out better through the day.

Place a light box in a chair to make it high enough to sit at the table to work, You can iron, wash dishes, mix bread, roll out pie-crust, and many other things with far less fatigue than if standing. Women cannot keep on their feet very long at a time without injury to their health. All women who have children, whether boys or girls, should teach them early to aid in the kitchen.

Boys as well as girls may be taught to pound out, or rub clothes, and even to wash, rinse and hang them up neatly. They may be taught to mop, scrub, and clean ceilings, iron their own clothes, and others', if need be, clean vegetables, and do many things about the house, and it will make better men of them, than if they were not taught to do these things.

HATTIE HOPEFUL.

DOMESTIC RECIPES.

Muffins.

Three cups of milk; one tablespoonful of melted butter; two eggs; one teaspoonful of salt; three tablespoonsful of yeast; one tablespoonful of white sugar. Mix all in a sponge but the eggs. Half an hour before baking add the eggs and a quarter of a teaspoonful of soda. Let rise ten minutes. Bake in rings twenty minutes.

Cocoanut Cake.

Whites of four eggs; two cups of sugar; one-half cup of butter; one cup of milk; one teaspoonful of cream-of-tartar and one-half teaspoonful of soda; four cups of flour. Bake in layers. For filling:—Take whites of two eggs; one-half tea-cupful of sugar (pulverized) and thicken with cocoanut.

Stewed Green Corn.

Cut the corn from twelve ears; add one pint of milk and cook in a covered pail set in a kettle of water; cook one half hour. Then add three eggs well beaten, salt, pepper and a little sugar to taste. Put a piece of butter in the dish in which you serve it and pour in the corn.

Chicken Salad.

Two chickens; chicken and celery equal parts; cut in small bits—not chopped. Dressing:—Yelks of three raw eggs; one teaspoonful of made mustard; a little salt and red pepper; half a bottle of oil stirred in slowly; vinegar to make a cream. Add to salad just before using. MRS. A. GRISWOLD.

For Hemorrhage.

To stop hemorrhage, or bleeding from the nose, wound, or from any cause, apply dried beef scraped very fine. If it is smoked it is so much the better. This remedy saved a pet horse of ours when everything else failed.

MRS. KENNEDY.

To Cook Carrots.

Slice carrots roundwise, as thin as you please; cover with boiling water, and boil till done, and until all the water has evaporated; then cover with milk and cream, and simmer 20 minutes; salt and pepper to taste. D. M. G.

DEAR MRS. MAPLE:—I should like the ladies to try a Southern dish called

Brunswick Stew.

Stew until tender enough to bone easily, two chickens; take out the bones, add ten ears of corn cut from the cob, a dozen tomatoes, peeled and sliced, and a pint of lima beans; cook all together, add salt and pepper to the taste.

Apple Jonathan.

Fill a pudding dish with apples pared and sliced, and pour over the dish a batter made of buttermilk brought to a foam with soda, and thickened with flour, so it will just spread with a spoon. When the apples are tender and dinner is served, turn upside down on a platter; beat the soft apples smoothly on the crust; add a lump of butter, nutmeg or cinnamon, as one prefers, and serve hot. L. W. BALDWIN.

News of the Week.

MISCELLANEOUS.

MONDAY, September 29, 1879.

The legality of the clauses of the new California constitution forbidding the employment of Chinese on public works or by corporation, is likely to be speedily passed upon by the United States Supreme Court. Oregon has a similar law, which has been declared unconstitutional by Judges Deady and Field of the United States District and Circuit Courts, and, if the Supreme Court sustains this position, California's prohibition also falls to the ground. The San Francisco papers endeavor to sustain the constitution by the plea that our treaty with China only recognizes the inalienable right of man to change his home for purposes of trade, curiosty or permanent residence, and argue that employment on public works or for corporations comes under neither of these heads. The annual session of the American veterinary association, recently held at New York, took steps to memoralize Congress to establish a national bureau of veterinary inspection. Its especial purpose is to be the stamping out of pleuro-pneumonia and keeping foreign countries exactly informed as to the prevalence of the disease in this country, now reported by the State officials of New York and New Jersey to be dying out. This New York action happens to be just in the line of the wishes of the great Western herders, whose 15,000,000 cattle, or nearly half of all in the country, feed over the great cattle belt, which stretches 3000 miles north from the Rio Grande to Manitoba. It costs only about $3 to fatten a $30-steer on those wide plains, but if pleuro-pneumonia once got into the the almost numberless herds, the business would be ruined, for it would be impossible to stamp it out. The chief or only danger is from pure-bred imported cattle, especially bulls, for this belt exports cattle to the infected sections, and the next Congress will receive petitions by the bushel asking immediate agreement on some form of national inspection and quarantine against pleuro-pneumonia and other animal diseases.

The Court of Appeals of this State has decided that mortgages made with bonuses or usurious interest are void. The decision is averse to the Knickerbocker Life Insurance Company, and wipes out over $1,000,000 in mortgages held by that company. From April to August last, over 17,000 cabin passengers left this country for Europe. It would be a low average to estimate that these passengers spend $1000 apiece in Europe, and this means the expenditure of $17,000,000 abroad in gold. During the year ending June 30, 2676 post-offices were established and 1079 discontinued. There were 40,872 offices in the country June 30, and the increase since then is 172. Large numbers of Chinamen have arrived at New York the past week from San Francisco, and one of them states that thousands more are coming. The crusade against polygamy at Salt Lake City is to be vigorously pushed. The United States District Attorney is instructed to thoroughly prosecute every case presented by the grand jury, which meets next month. The judiciary will be strengthened if necessary.

The international walking match for Sir John Astley's Champion Belt, worth $500 and a share in the gate money, took place here during last week at Madison Square Garden—formerly Gilmore's—and excited more public interest than Tammany's "bolt," or the proposed "scratching" party of a-little-poor-milk-and-a-good-deal-of-clean-water Republicans. Thirteen competitors started, each of whom had to pay an entrance fee of $500, the total making a stake of $6,500 which was to go to the winner of the match, in addition to the belt, and one-half of the net gate-money. One of the men, Dutcher, fainted on the track after having walked 23 miles, and was at once withdrawn; and then Panchot was withdrawn after having made 205 miles, owing to lameness, and because his backers preferred not to tire him out now, as he is entered for another match at the same place next week; a third, Jackson, withdrew, "knocked up" and hopeless, after having completed 230 miles; and a fourth, Federmeyer, followed his example at the end of his 369th mile. The contest was to end at 11 o'clock on Saturday evening, but all had retired from the track before ten.

The Daily Record.

The following table shows the amount of work done by the contestants each day:

	1st day.	2d day.	3d day.	4th day.	5th day.	6th day.	Total.
Weston	95	78	78	71	83	50	455
Rowell	127	88	95	93	50	78	530
Hazael	100	86	90	93	70	64	500
Guyon	115	85	70	75	70	56	471
Ennis	102	78	40	90	67	73	450
Merritt	110	87	90	80	74	73	515
Hart	110	83	79	67	77	67	482
Krohne	93	67	73	74	76	68	450
Taylor	80	20	50	90	33	37	250
Federmeyer	85	65	70	68	Out.	Out.	348
Jackson	98	62	70	Out.	Out.	Out.	232
Panchot	100	54	51	Out.	Out.	Out.	205
Dutcher	23	Out.	Out.	Out.	Out.	Out.	23

DISTANCE AND TIME.

The following is the distance covered by each pedestrian, and the actual time occupied:

	Miles.	H.	M.	S.
Rowell	530¼	139	25	0
Merritt	515	139	32	15
Hazael	500¼	139	04	50
Hart	482½	140	24	40
Guyon	471	139	12	30
Weston	455	137	17	15
Ennis	450¼	140	51	32
Krohne	450¼	140	48	25
Taylor	250¼	140	24	40

COMPARATIVE RECORD OF PREVIOUS CONTESTS.

The following table exhibits the recorded time made by the previous winners of the belt, including that of "Blower Brown," in the competition for the belt representing the championship of England:

Hours.	Weston.	Brown.	O'Leary.	Rowell.
5	39	35	29	30
10	63	62	56	55
15	87	88	76	88
20	100	113	101	100
25	124	126	120	110
40	144	146	132	132
35	163	168	147	149
40	185	192	166	172
45	211	214	188	182
50	220	221	203	203
55	238	246	220	219
60	246	266	240	237
65	279	285	262	253
70	303	305	283	275
75	315	310	301	283
80	337	335	311	303
85	356	357	330	323
90	372	381	353	343
95	390	403	373	357
100	405	409	386	364
100	417	429	400	385
110	428	447	420	401
115	450	465	442	420
120	463	480	459	427
125	478	490	468	445
130	496	506	487	463
135	517	522	505	480
140	541	541	520	500
142	550	542	520	500

The entrance fee to witness the contest was $1—double the price charged at any former similar exhibition; but at this figure $73,923 were collected from as many "paying" visitors, to say nothing of a multitude of "deadheads" and of a considerable number who got in on stolen or forged tickets. Of this sum Kuntz Brothers, the lessees of the Garden, get 25 per cent. or $18,480.75, and the remaining $55,442.25 are now in the hands of Mr. Atkinson, whom Astley sent over here to represent him. This will be divided among the eight contestants who made 450 miles. Rowell gets half after all expenses are paid. His share will not be much, if any, under $25,000, which, with $6,500 in stakes, to say nothing of the glory of taking the belt back to England, will pay the plucky little fellow well for six days' work. Merritt, the second, a Connecticut lanky, thin-faced chap, will get about 9,000. Hazael, another Englishman who came in third, will get about $6,000; Hart, a negro who won golden opinions and the fourth place, pockets some $2,000, and the others proportionate sums, according to their place at the finish, none getting less than his entrance money—$500.

Weston, who brought the belt back from England after Rowell took it away from O'Leary, proved as disappointing a fraud as he has done on numerous former occasions. Hundreds deny that he ever made the 550 miles credited to him in his late contest in England. They maintain that it was a "put-up job" in order that the contest might take place here rather than in England. There the gate money amounted at the last contest only to a paltry sum of $6,000 or $7,000, whereas here, the winner always pockets a respectable fortune. Others declare the fellow didn't do his best; and all parties vilify him and have lost confidence in him, owing to his "monkey shines" and antics during the week. Rowell has been already challenged by O'Leary and Panchot.

Ex-U. S. Senator Spencer of Alabama, who is now coining shekels from a Black Hills mine, is already mixed up in Dakota politics, and is making a hot fight to prevent Delegate Bennett's return to Congress next year. The Colorado republican state convention at Denver last week nominated Judge William E. Beck for judge of the Supreme Court, and the democrats Tuesday nominated George O. Richmond of Pueblo. Nearly $2,500,000 of the sum paid out under the pension arrearages bill has gone South, the Southern States furnishing 300,000 white men to the Union forces, not so very many less than New England, whose pensioners receive $3,600,000 under the same bill, those in New York receiving $3,230,000, and in Pennsylvania $3,050,000.

FOREIGN.

In Afghanistan the British are concentrating their forces at Sirgar Valley, about 26 miles from Cabool, preparatory to a rapid advance on that city. Yacoob Khan, his heir apparent, and father-in-law, together with many of his chiefs, have arrived in the British camp. Meanwhile, his capital is the prey of the wildest kind of anarchy; the gates are closed and hasty but confused preparations are being made by the mutineers and populace to resist the English invaders. The Khan's power seems to be limited to a very few districts; as the bulk of the country is without law or order of any sort, except the will of a number of petty chieftains or mutinous leaders. The British movements are retarded greatly through inadequate means of transportation.

In South Africa, Zululand is being rapidly pacified since the capture of Cetewayo who has been taken to Cape Town. There he will probably be held prisoner, although it is not unlikely that his final fate will be decided by the home Government. In Europe the meeting of Bismarck and Andrassy, is supposed to have resulted in the formation of an unusually close alliance between Germany and Austria. It is at present stated that each has guaranteed the possessions of the other; so that the future enemies of either will have to fight both. This close alliance is believed to be due to the danger on the one side from the Russian Panslavic propaganda and on the other from the certainty that France will take the first favorable opportunity for revenging Sedan and regaining Alsace and Loraine. It is rumored that there is no chance of a peaceable settlement between Greece and Turkey and both sides are vigorously preparing for war. It is the opinion that Austria is obstructing the efforts for a good understanding, and that in the event of hostilities, she would immediately occupy Macedonia. Prince Lobanoff is reported to be the bearer of a project for an alliance between Russia and Turkey. It is rumored that Russia is willing to renounce eight hundred million francs out of the twelve hundred million which Turkey had to pay her as a war indemnity, and not a franc of which has yet been paid, and in addition to this Russia would give back some of the former provinces of Turkey in Asia

During a recent fight between the Peruvian ram Huascar and the Chilian transport Abtao and shore batteries at Antofagasta, Chili, Capt. Grau of the Huascar attempted to use one of the new English torpedoes. To the consternation of the Peruvians, however, the infernal machine, after traveling about 150 yards toward the Abtao, turned and came directly back. A fatal collision was imminent, when young Lieut. Diez Canseco jumped overboard, swam to the approaching torpedo and changed its course so that it passed under the Huascar's stern. The Chilian naval and land forces are doing nothing. The Peruvian treasury is bankrupt, $5,000,000 being due the banks and others for war expenses, and there is no money to pay the soldiers or furnish them with rations. The finance minister, appalled at the situation, has resigned. Very little was heard of the loss sustained by the Russians in their campaign in Armenia during the Russo-Turkish war. The correspondents were mostly in the Balkan peninsula, but a recent report from the Russian staff shows that the force engaged lost 30 per cent of its officers and 23 per cent of its men, in all, a total of 2139 officers and 70,478 men about equally divided between the killed or wounded and missing.

The new Khedive of Egypt is economical to parsimony, and saves candle-ends; at least the Paris correspondent of the London Times says that "an eye witness has seen him extinguishing candles which were burning in an empty room."

If the early beginnings of the increasing tide of immigration to this country from Europe give any hint of its character, it will largely consist of the wholesale transfer of particular industries. An English trade journal says that a cutlery firm in Sheffield, with all its capital and a full staff of workmen, is removing bodily to this country. The Paris correspondent of the London Economist reports that an organized company of 50 herdsmen and women is just starting from the Cotentin peninsula in France, the chief butter-making district in the country, to organize a dairy farm in the United States.

During the past six years 93 monasteries and 41 convents have been suppressed in Rome, and their inmates, 2888 in number, cast adrift. The net proceeds of the confiscations and sale of the church property in the city were only $5,000,000—a mere trifle in comparison to the great expectations entertained by the authorities. The slaves of Cienfuegos, in the Cinco Villas, Cuba, have risen in rebellion against the Spaniards and joined the Cuban patriots, taking with them a large proportion of their masters' cattle. A correspondent of the Dundee Advertiser says, in a careful review of Scotch farming, that since 1872, when farmers were

to some extent forgetting their losses by rinderpest, there has been but one crop, '74, which paid its way.

The yellow fever is gradually dying out at Memphis, Tenn., but only for want of more material. People are warned to keep away from the city till it is officially declared safe. Sitting Bull and a Crow warrior had a duel after a fight on June 20, between 200 lodges of Sioux, who went south of the Canadian border after buffalo, and United States soldiers and 250 Cheyennes and Crows. Sitting Bull accepted a challenge, recrossed the line, shot the Crow, scalping him and taking possession of his horses. In the retreat across Milk river into Canada, Sitting Bull personally commanded the rear guard of light warriors, covering the movement, and was himself the last to cross. The estimates of the Board of Education of this city for the coming year, foot $3,558,200, a yearly average of about $33 per scholar, the school year opening with 107,398 in attendance. Mrs. Jane Y. Christmas, only daughter of the celebrated Mrs. Myra Clark Gaines of New Orleans, died last week at Warrenton, N. C., of yellow fever.

VARIOUS.

In the past year there were 68 suicides in the ranks of the Italian army, said to have been caused by *ennui* from military life.

Pedestrianism in Berlin took this form. A young man made a bet that he would run on all fours from Konigsthor to Weissensee, a distance of two or three miles, and won, in a heavy rain, in two hours.

France, Germany, Italy, Austria and Switzerland have agreed that their embassies and consulates shall send home indigent persons of their respective nationalities at half the ordinary railway fares.

Of late wild beasts have appeared in unusual numbers in Russia. In one month ten bears near Burakoff destroyed seven horses, four cows and several sheep, and such annoyances have occurred in other districts. Even in populous Odessa the police were occupied in chasing a wolf in the open streets.

Four horse thieves were captured in Cole County Ark., but a fifth, John Cole, escaped. While the prisoners were being transferred from one jail to another, heavily ironed, and guarded by six officers, Cole suddenly confronted the party in a lonely road, presented a pair of revolvers, drove off the posse, and rescued his friends. But his exploit was so exasperating to the people that they pursued and killed him, although in his final resistance he seriously wounded two of them.

There is a curious sort of modesty prevalent among the owners of great mansions in London, which induces them to retain the name of the original owner, even when his successor is ten times as distinguished. Thus even the Duke of Wellington was satisfied that his famous mansion at Hyde Park corner should continue to bear the name of Lord Chancellor Apsley, its original tenant, although it was entirely reconstructed by the Duke; and Mr. Holford, who owns the most artistic mansion in London, built on the site of what was known at Dorchester House, retains that name.

Prince Bismarck is very fond of farming. The soil round Varzin is neither very good nor very bad; it produces average harvests of rye, and the Baltic sand, the bane of the husbandman, shows itself only here and there. Such pieces of ground have long lain fallow. It takes six hours to drive round the estate. Chornitz, where there was formerly a glass house with Bohemian workmen, also belongs to Varzin. The Whipper flows through a part of the domain, and forms its boundaries in other places. It adds to both its beauty and its value, as the rapid stream, which is well stocked with trout, is used to float the timber of Pomerani to the Baltic.

Exactly a hundred and thirty years ago an obscure and unknown Yorkshireman, Richard Tattersall by name, emigrated from the borders of Yorkshire and Lancashire to London, in the hope of making his fortunes. He had previously tried his hand as a wool comber, but failed thereby to get a living. Between 1742 and 1760 the founder of the Tattersall family had so improved his time and opportunities as to be able to open his now celebrated Repository for Horses at Hyde Park corner, on the edge of the marshes on which now stand Eaton and Belgrave squares. There take place all the great English racing sales, and in its paddock is the great betting exchange known as "Tattersall's," which regulates the odds over much of the world.

Norfolk House, London, where a son and heir has just been born to the Duke of Norfolk and the historic house of Howard, was the birthplace of King George III. It is a very large mansion in St. James's square, next to London House the town residence of the Bishop of London, who has Lord Derby as his neighbor on the other side. Forty years ago St. James's square was almost exclusively occupied by noblemen and millionaires; but now clubs have invaded its precincts, and a few public offices have also crept in. The Junior Carlton Club faces Pall Mall on one side and St. James's square on the other, and the magnificent Army and Navy Club occupies the southwest corner.

A strict observance of Sunday is being urged in Germany, and is looked upon with favor even by those who are not church-goers. It is a social and economical, and not a religious movement, and the end desired is not a Sunday like that of England or America, but one on which there shall be rest and recreation for all, and particularly for the artisan and so-called laboring classes, employers not to be permitted to exact work on that day except in cases of absolute necessity. Sunday in Germany has not been invested with much of a sacred character. In the Catholic parts of the country all classes go to church, but they spend the rest of the day in dancing, beer-drinking and other vigorous amusements. In the Protestant sections they do not even go to church. The houses of worship are few—often not more than one to a dozen villages, and an equally small proportion in the cities—and the small number there are, are ill-attended. At the same time there are fewer offences against the public peace than in church-going England.

CARPETS.—American manufactures are rapidly pushing their way to the front, and in no branch is this more noticeable than in carpets. Domestic floor coverings have all but driven the imported ones out of the market. This is hardly to be wondered at, as our Axminsters, Wiltons, Velvets, Brussels and Ingrains rival the best foreign brands in durability, excellence of material, elegance of design and conscientious workmanship, and can, beside, be obtained for very much less money. The novelties and standard patterns manufactured for the fall trade by John and James Dobson, 40 and 42 West Fourteenth street, N. Y., are conspicuous for beauty of design and superiority of finish.

Baker's Breakfast Cocoa is a general favorite. Medical men recommend it as preferable to tea or coffee for nervous or delicate constitutions. Sold by leading grocers everywhere.

That invalid wife, sister, or child can be made the picture of health with Hop Bitters.

Lyon's Heel Stiffeners keep new boots and shoes straight. Sold by shoe and hardware dealers.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Sept. 27, 1879.

BEANS AND PEAS.—Supplies of beans are not pressing and mediums and marrows are firm and higher. Red kidneys dull at easy figures for new and old. No black beans here. Green peas looking up a trifle; quoted, $1.35@1.37½. Canadian nominal at 70c. So. B. E. peas, $2.75@3 per 2 bush. bag. Beans, medium new, $1.47½@1.55; marrow, new, $1.55@1.57½; other, $1.35@1.50; pea, new, $1.50@1.57½; white kidney, new, $1.55; red kidney, new, $1.40@1.70; old, $1.55@1.60.

Receipts for week, 8,275 bush.; exports, 1,014 pkgs.

BEESWAX.—Demand is slack and prices easy. Western and Southern quoted 22@23c.

BROOM CORN.—Is more freely offered but in demand and steady in price. Brush and short broom, choice, per lb., 5½@6½c.; do., common to good, 4½@5½c.; hurl, good to choice, 4@5c.; do., common to fair, 3½@4c.; red and crooked, 2½@3½c.

BUTTER.—Receipts for the week, 42,819 pkgs.; do., last week, 48,457 do. Exports, 24,450 do. There has again been a liberal export demand and a further advance in prices for best grades. The local trade pauses a little under the sudden advances that have occurred of late. Retail distributors always find it rather up-hill work to make consumers follow a material advance in the wholesale market: and at the moment this point checks sales. Part of the improvement State half tubs and Welsh must be ascribed to the better quality of late receipts. Western has better outside rates than before, as hot weather make bargains to fall out of the receipts.

State, pails and tubs, single dairy marks, fresh, extra, 23@24c.; best invoices, 20@21c.; good to prime, 18@20c.; fair to good, 17@18c.; firkin and tub single dairies, choice, 20c.; do., good to prime, 18@19c.; firkins, choice dairies, 19c.; do., dairies good to prime, 17½@18c.; do., fair to good, 16@17½c.; Welsh tubs, best invoices, 19c.; do., good to prime, 17½@18c.; do., fair to good, 16@17½c.; do., tubs, poor, 13@15c.; State creamery, best invoices, 27@28c.; do., good to prime, 25@26c.; sweet cream, best, 25@26c.; do., fair to good, 23@25c.; Western creamery, best invoices, 27@28c.; do., good to prime, 25@26c.; do., fair to good, 24@25c.; creamery, poor, 21@23c.; Western, imitation creamery, 14@18c.; do., dairy, fresh, extra, 17@18c.; do., good to prime, 14@16c.; do., fair to good, 13@14c.; do., poor to fair, 11@13c.; do., factory, best invoices, June, 13c.; do., fair to good, June, 11@12½c.; do., best invoices, late made, 11½@12½c.; do., fair to good, 10@11c.; do., poor to fair, 9@10c.

CHEESE.—Another radical advance at the country markets this week, and in consequence corresponding prices asked here brought business almost to a stand for two or three days, and at the close shippers buy sparingly and a good deal of stock is to be carried over. The market leaves off with a slight modification of views of holders and a nearly nominal situation. Latest prices are:

Fancy at 11@11½c.; good to prime at 9½@10½c.; fair to good at 8½@9½c.; half-skimmed at 7½@9c.; skimmed at 6@7c. State farm dairy: Fine at 10@10½c.; good to prime at 9@10c.; fair to good at 8@9c.; skimmed at 5½@7c. Wisconsin factory: Fine at 10½c.; good to prime at 9½@10c. Ohio factory: Cheddar, fine, at 10½c.; do., fair to good, 8@9c.; flat, fine, 10½c.; flat, good to prime, 9½@10c.; flat, fair to good, 8½@9½c.; half-skimmed, 7@8½c.; skimmed, 5½@6½c.

Liverpool cable, 50s.

Receipts for week, 95,838 boxes; do., last week, 96,171 do.; exports, 35,062 do.

COTTON.—There has been violent fluctuations in prices with an active business. Latest prices are for September, 10.51@10.56c.; October, 10.30@10.31c.; November, 10.15@10.16c.; December, 10.15@10.16c.; January, 10.22@10.23c.; February, 10.37@10.40c; March, 10.51@10.55c.; April, 10.61@10.63c.; May, 10.79@10.83c.

Quotations for spot cotton are based on American standard of classification, and on cotton in store running in quality not more than half a grade above or below the grade quoted.

DRIED FRUITS.—Of apples the receipts from the South are moderate, the demand is fair for the best of the new and prices strong. Peeled peaches show small receipts and a firm market. Small fruits are generally firm.

New North Carolina apples, 6@⅝c. for fair; 8@8½c. for choice; 9@9½c. for fancy sliced. Patent evaporated apples, choice, in cases, at 12c.; do. fair to good, 10@11c.; N. Y. State sliced, choice, 5@5½c.; do. quarters, choice, 4½@5c.; western quarters, common and old, 3½@4½c.; new southern quarters at 4@4½c.; new N. C. peeled peaches at 13@16c.; do. Georgia, at 11@14c. Peaches, Delaware evaporated, peeled at 22@23c.; do. unpeeled at 11@12c.; old unpeeled halves at 4½c.; do., quarters at 4c.; new halves at 5@5½c. Blackberries at 8½@8¾c. for new. Raspberries at 23c. Pitted cherries at 20@21c.

Exports for week, 145 bbls. dried apples.

EGGS.—Receipts for week, 7,215 bbls.; do., last week, 5,979 do. The following rates have been quite steady all the past week. Dealers at the close can name strong prices with the present rate of receipts.

Near points, 21@22c.; State and Penn., 20@21c.; Canadian and Western, choice fresh, 19½@20c.; off grades, 13½@19c.

FLOUR.—The market closed active, with shippers and home trade buyers free operators, and prices are strong.

Latest prices are: $4.55@5 for inferior to fancy superfine State; $5.00@5.25 for ordinary to very good extra do., odd lots and lines; $5.25@5.50 for very good to very choice do.; $4.35@5 for inferior to fancy superfine Indiana, Iowa, Michigan, &c.; $5@5.25 for inferior to very good shipping extra do., and $5.25@5.50 for good to choice extra do.; common to choice white wheat extras, $5.40@6.25; choice to very fancy do. at $6.25@7.00; red and amber winter wheat, inferior to very choice trade and family, at $5.25@6.50; round hoop Ohio at $5.00@5.50, and trade and family brands of do. at $5.50@6.50 the latter rate for very choice; St. Louis, $5.40@6.25 for inferior to very good extra; $6.25@7.00 for very good to very fancy; Minn. clear, inferior to very choice, $5@6.25; do. "straights" very inferior to strictly fancy, $5.65@6.75 (very fancy at $7), and patent poor to very fancy at $6.75@8; unsound stock at from $3.50@6.00; city mill extra at $5.75@6.15, ordinary to very fancy, for West Indies; do. for England, $5@5.25 for ordinary to choice; do. trade and family extras, $5.85@6.75; do. for South America, $5.10@6.50 for standard to choice brands; No. 2 at $3.65@4.35 for very inferior to fancy.

FRESH FRUITS.—Exports of apples past week 4,418 bbls. Receipts of apples have suddenly fallen off and all good table fruit are tending higher. Cranberries have declined. The N. J. crops will turn out well and fully as large as last year's. Berries are small but show less scald than usual. Fine grades of pears are firm and likely to go higher. Delaware peaches done. Others mostly small. Grapes continue cheap. Plums are reduced to few varieties. Melons not wanted. Peanuts firm with limited offerings.

Apples—Blush Pippin, up-river, ₩ bbl., $2@2.25; Western N. Y., selected Fall, ₩ bbl., $2.25; do., mixed Fall, ₩ bbl., $2; N. J., fair to good, ₩ bbl., $75@1.50. Cranberries—Cape Cod, choice, per bbl., $7@8; N. J. choice, per crate, $1.75@2.; do., light colored, $1@1.50. Pears—Bartlett, State, good to prime, $3@9; do., fair to good, per bbl., $2@7; do., Boston, per bush. box, $3@3.50; Jersey, per bbl., $2@4; Sheldon, do., $3@3.50; Louise Bonne, do., $3@4; Virgalieu, do., $2.50@4; Beurre Bosc, do., $3@4; Seckel, No. 1, do., $4@4.50; do. 2, do., $2.50@3.50; Swans' Orange, do., $3@3.50; Flemish Beauty, State, do., $3@3.50; do., up-river, do., $2.50@3.50; cooking, do., $1.25@1.75. Peaches—up-river, Crawford, extra, per basket, 7@1.25; do., fair to good, 75c.@$1.25; Jersey, fair to prime, 75c.@1.25. Grapes—Del., State, 18 3-lb. boxes, $2.25@2.75; do., express lots, $3@3.25; do., in baskets, 6@6½c.; do., up-river, bulk, 5½@6c.; Catawba, State, 18 3-lb. boxes, $2.75@3; do., loose, 5@6c.; Concord, 18 3-lb. boxes, $1.50@1.75; do., express, $2@2.25; do., in baskets, 3½@4c.; do., up-river, bulk, 3@4c. Plums—Reine Claude, ₩ bbl., $7@8; do., pr ½ bu. cr., $1.50@2. Copper, bbl., $7@8; Damson, per bbl., $6@7; do., ₩ ½ bu. cr. $1@1.25. Peanuts, Va. hand-picked, $1.60@1.70; extra prime to fancy, $1.45@1.50; Va., good to prime, $1.30@1.42½; shelled, per lb., 5¾@6c; Chestnuts, ₩ bush., $6.50.

GRAIN.—All articles were lower early in the week, but closed active with a recovery of prices. Latest sales of wheat are of No. 2 amber at $1.25½@1.26½; do., Oct. option, at $1.26; ungraded amber at $1.23¾@1.27½; No. 1 white at $1.27½; do., Sept. option, at $1.27¼@1.28; do. for October at $1.26¼@1.28; do., November, at $1.26@1.28¾; do., steamer grade, at $1.21½@1.25; No. 2 white, at $1.21½@1.25; ungraded white at $1.26@1.26½; No. 2 red at $1.26¼@1.27¼; do., September option, at $1.26¼@1.27¼; do., October option, at $1.25@1.27½; do., November, at $1.21¾@1.27½; do., steamer grade, at $1.24½@1.25; No. 3 red at $1.18@1.20; No. 2 Chicago new crop, at $1.18; New York No. 2 spring, at $1.18; do., October, at $1.13@1.19; No. 3 do. at $1.15; No. 3 Chicago spring at $1.13@1.16; ungraded spring at $1.13@$1.17½. Rye at 75@77½c. for Western. Corn at for New York No. 2 at 53½@53¾c. afloat, do., September, at 53¾@53¾c.; do., October, at 53¼@53¾c.; do., November, at 52¾@51¾@51¾c.; ungraded Western mixed at 53@54c.; No. 2 white at 53c. Oats at for New York No. 1 white at 40c.; New York No. 2 white at 38c; New York No. 3, white at 36¾@37c.; No. 1 at 38c.; No. 2 at 37¼c.; No. 3 at 36½c.; New York rejected quoted at 34@35c.; ungraded mixed Western at 35@37½c.; white do. at 37¾@40c.; white State at 39@43c; mixed State quoted at 37½@39c; No. 2 Chicago at 37¾c.

HAY AND STRAW.—Trade is very fair, but offerings are more liberal, and prices show no change. Shipping hay quoted at 50c.; retail lots at 50@60c. for medium, and 70@80c. for prime; clover at 35@45c. Straw at 55@65c. for long rye, 40@50c. for short rye and 35@45c. for oat.

Exports for week, 3,189 bales.

HOPS.—Emmet Wells in his circular says: The continued heavy exports (2,000 bales again this week) has the tendency to keep the prices firm; but the arrival of nearly 3,000 bales during the same period gives us an average surplus to carry into stock and prevent prices from hardening. Aside from "contract" operations our brewers are at present taking but a few new hops. They do not seem at all alarmed by the heavy shipments to Europe, many of them being well stocked with old hops which they have bought on speculation and for their own use.

	Bales.
Receipts for the week	2,998
Total receipts since September 1, 1879	8,281
Total receipts for same period in 1878	2,262
Export clearances for the week	2,032
Total exports since September 1, 1879	2,691
Total exports for same period in 1878	658

Quotations are for New Yorks, new crop, 28@36c.; Eastern, new crop, 28@31c.; Wisconsin, new crop, none; Yearlings, growth 1878, 26@28c. Olds, all growths, 4@10c.; Pacific coast, growth 1878 (nominal) 9@14c.

HONEY.—A few lots quoted 12@16c., white clover; 10@12c., buckwheat.

OIL-CAKE.—Western is quoted at 23@$23.50.

POULTRY AND GAME.—In live poultry a day or two's trade for Jewish use stiffened prices, but the market is again working in buyers' favor.

Chickens, Southern and Western, 9@10c.; N. J., 11½@12½c.; Western, 10@11c.; Southern, 10c. Roosters, 6@7c. Turkeys from all points, 8@12c. Ducks, price 35@80c. Geese, extra, $1.30; other, $1@1.20.

Dressed poultry arrives rather ahead of trade wants, and the tone of the market is easy. The weather has been cool for several days, and supplies turn out in good order. Shipments should not be too free, as a warm spell may catch a surplus, and that would make a loss.

Turkeys, Phila., dry-picked, 15@16c., Slate and Western, 13@14c. Young, 12@13c. Chickens, choice, 15c.; other, 11@12c. Fowls, Phila., dry-picked, 15@16c.; N. J., 12@14c.; other, 10@12c.; Ducks, spring, 15@16c. dry-picked, State do., 13@14c.; ordinary, 12@13c.

Wild ducks are firm, with a good demand; other birds generally lower, with heavier receipts. Venison has some call at 18@20c., short saddles; 13@15c., long do. Partridge, State, $1.37@1.50 per pair; Western, $1.25; grouse, 75c.; woodcock, 65@75c.; Eng. snipe and plover, per doz., $1.25; wild pigeons, $1.50@1.75; small snipe, 40@50c.; red head and Mallard ducks, 60@75c. per pair; teal and common, 30@40c.

SEED.—Grass are quiet. Timothy quoted $2.35@2.40, Clover at 6¾@7c. for prime Western, and 7¼c. for choice, and State at 7½@8c.

TOBACCO.—Export demand is luggish, but home trade is very fair and prices are unchanged.

PROVISIONS—Have tended higher on a strong speculative movement. Mess pork quoted at, for September, at $9.05 bid and $9.10 asked; October at $9.05 bid and $9.10 asked; November at $9.15 bid and $9.25 asked, and the December option at $9.20 bid and $9.30 asked. Bacon at $5.70 for long clear and $6.25 for short clear. Lard—Western steam at $6.42½ for spot lots; $6.45@6.47½ for October delivery, $6.16@6.17½ for November delivery and $6.12½ for December. Stearine at 6½@6¾c. Tallow at 6c. for prime. Beef hams at $15. Beef—Plain mess at $10.25@11; extra mess at $11.50@12; packet at $11.50@12; tierced beef, city extra India mess, at $19@22, and Philadelphia do. at $18.25@19, and unchanged.

VEGETABLES.—Exports of potatoes past week, 8,243 bbls. Prices let the shippers in, and supplies are too large to allow better rates for local use. Early Rose, $1@1.25; Peerless, $1@1.12; Sweet, Del., $2@2.25; N. J. and Va., $1.75@2; Green corn, per 100, 50c@$1.25; cucumbers, L. I., 75c.@$1; pickles, per 1,000, $1.25@1.75; tomatoes, L. I., near-by, per crate, 50@60c.; string beans, ₩ bag, 50c.@$1.00; potato Lima beans, $2@2.50; Lima beans, flat, $1.50@2; do., shelled, ₩ bu., $5@6; squash, marrow, ₩ bbl., 50@75c.; cabbage, flat Dutch, per 100, $3@5.00; onions, white, per bbl., $1.75@2.25; red, Eastern, ₩ bbl., $1.50; do., Chester, ₩ bbl., $1.37@1.50; yellow, ₩ bbl., $1.50@1.62; beets, N. J., ₩ bbl., 75c.@$1; Russia turnips, Jersey, $1.00@1.25; carrots, ₩ bbl., $1.00@1.25; egg plant, L. I. and near-by, per 100, $2@4; peppers, bullnose, ₩ bbl., $1.25@2.00; pumpkins, per 100, $2.00@5; Cauliflower, ₩ bbl., $1.50@5.

WOOL.—The market retains buoyancy and activity, manufacturers, free buyers and the more desirable grades, or medium qualities are getting scarce.

Ohio, Pennsylvania and Virginia.—XXX and Picklock, 40@42c.; XX, 39@40c.; X, 39@40c.; No. 1, 40@42c.; No. 2, 36@38c.; common, 34@35c.; combing, 40@44c.

New York, Michigan, Indiana and Wisconsin.—XX, 34@36c.; X, 33@36c.; No. 1, 37@40c.; No. 2, 34@36c.; common, 31@33c.; combing, 39@40c.

Iowa, Vermont and Illinois.—X and XX, 32@35c.; No. 1, 36@36c; No. 2, 32@35c.; combing, 37@39c.

Missouri, Kentucky and Tennessee.—Washed fleece, 37@40c.; unwashed do., 30@33c.; unwashed combing, 28@33c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Sept. 27.

BEEVES.—Receipts for the week, 12,659 head; do. last week, 12,699 do. The market recovered a little on Wednesday, soon shrunk again under limited demand and free supplies. First quality and next grades of cattle held up to about our last figures, but common have dragged cheaply all the week. The extreme range for native steers, 7@10c. to dress 54@57 lbs.; business largely at 7½@9c. Texas, Cherokee and Colorado cattle, 6¼@7¼c. Exports for week, 500 cattle and 1,940 quarters.

COWS AND CALVES.—Supplies mainly from near points; range, $20@45 per head, no Western bringing the extreme.

VEAL CALVES.—Buttermilk and grass calves were heavily in excess of trade wants; many sent to N. J. for further feeding. N. J. & Buck's Co., fed, choice, 6¾@6¾c.; do., State, 6¼@6¾c., poor to good calves, 4½@5¾c. Buttermilk, 3@4c.; grassers, 2@2½c.

SWINE.—Receipts for the week, 31,627 head; do. last week, 24,723 do. Western packed goods will soon arrive freely. City demand for live not sharp. Full rates at the close, 3¾@4¼c., with a few pigs at 4½c. New Jersey pork, light, 6¾@7c.; medium, 6@6¼c.; heavy, 5¾c.; city dressed, 4¾@5¾c.; pigs, 6c.

SHEEP AND LAMBS.—Receipts for the week, 32,977 head; do. last week, 38,320 do. Small supplies have tended to steady the sheep market; the range is 3½@5c. for common to prime; a car-load of extra Canadian for export, $5.10 per 100. Lambs weak, generally selling at 4¼@5¼c.; full range, 4½@5¾c.

HANGING BASKETS.

THERE is no prettier ornament for the parlor or sitting room during the bleak winter months than a hanging basket. Plants in any form whether cut flowers or living specimens in pots, when tastefully arranged and well grown, always help to make a room cozy, and have a cheerful influence upon the occupants, but no plant that can be grown in a room can be compared in beauty with a thrifty hanging basket, from which vines droop in rich luxuriance from all sides. Every member of our club, and every cousin whether member or not, should have such a basket, and now is the time to prepare it if they have not already done so. The basket itself need not be expensive. Plants will thrive as well in a cheap home-made wire or cane basket as in one made of costly china-ware. Nor should it be large and bulky; those ugly things called rustic baskets, made of crooked branches and painted brown may do for the piazza, but they are out of place in the house. If a wire basket is used it should first be coated inside with nice moss to hold the soil, and then the soil filled in and the vines planted. Small vines should be stuck in through the meshes of the wire all around to hide the basket and give the whole the appearance of one living mass of foliage. The soil should be a mixture of leaf mold and garden loam with a little manure and sand. It may trouble some of the cousins to obtain the very best kind of plants; those who have Dracænas, Yuccas and similar plants with plenty of all kinds of vines can easily make a handsome basket. In general choose graceful drooping plants in preference to those of a stiff growth such as an old Geranium. In the middle set a tall plant as seen in the engraving and around it arrange the others so that the basket will be nicely balanced. Fuchsias, Ferns, Verbenas, Ivy-leaved Geraniums, Vinca, Oxalis, English Ivy, Saxifrage, Sedum, Lobelia, Tropæolum, German Ivy, Panicum variegatum and similar plants are excellent for baskets. There is the inconvenience with baskets that the water runs through and wets the floor, this can be avoided by watering at a time of day when the room is not occupied and then place a tray under the basket till all the water has run through. A basket planted now will be greatly improved if kept two or three weeks in a greenhouse so as to give the plants a good start. UNCLE MARK.

HOE-HANDLE MEDICINE.

ON a bright, pleasant summer morning, a young man, with a silk muffler around his throat and a woe-begone look in his pale face, plied the big knocker upon the doctor's dwelling. A lady answered the summons and informed the applicant that the doctor was in his garden at work. To the garden the young man went, where he found the man of medicine engaged in hoeing his sweet corn.

"Well, sir, and what is the matter?" the doctor asked, when the applicant had stated that he had come for medical advice and assistance.

"Well, doctor," with a lugubrious face and a whining, moaning tone, "I feel poorly all through. My head has spells of aching; my appetite is poor; my food does not set well, and I am very weak. Really, I need help."

"Yes, I see. Let me look at your tongue. Ah! yes. Now—your pulse."

The pulse was felt, and after due deliberation, said the doctor:

"Look you, young man, you do certainly need help. Now, see; I must attend an important case at ten o'clock, and I must have this corn hoed before I go. So, while I am gone to make up a prescription for you, do you take my hoe and go on with my work here. You know how to use a hoe?"

"Yes, sir. My father was a farmer; but I haven't worked on a farm since he died."

"And you haven't worked much anywhere else, I take it," the doctor threw in, pleasantly.

"No, sir; I am not obliged to."

"Very well. I'll warrant you the work here won't hurt you, so go on with it until I come back."

With that the doctor trudged off, and the young man went at the work of hoeing. He hoed to the end of the row, and there removed the light muffler from his neck. Then he went at it again. Half way down the second row he stopped and looked up, but no doctor was in sight. At the end of that row, as the absent one had not yet appeared, he pulled off his coat.

The third row he hoed more slowly, stopping several times before the end was reached; but he finished it, and after a good rest, attacked the fourth row. There was but one more row after this, and the fancy seized him to have it done before the old fellow got back. It would be a surprise to him. The thought quickened his pulses, and gave him renewed vigor. He had just completed the last hill of the last row when the doctor came back.

"Well, well, my young friend, how are you feeling now?"

The patient really had to consider. He had been looking to see what the physician had brought with him of medicine; but he had brought nothing. His hands were empty. "The work hasn't hurt you, has it?"

"Oh, no, sir," his face glowing with the exercise

"I thought not. Let me feel your pulse again." He held the young man's wrist for a brief space, and then—

"It has worked to a charm. Now, sir, do you go home, and repeat this dose twice a day, every morning and every afternoon; do it faithfully, and be honest with your diet, don't use tobacco, and if that doesn't work a cure, come and let me know. My fee, sir, is one dollar."

"One—dollar?" gasped the astonished youth.

"That is all I charge when patients call at my door."

"But sir, in mercy's name! what is it for? Where is your prescription? What have I taken of yours?"

"My prescription, my dear young friend, I gave you before I left you here with my hoe; the medicine you have been taking in my place—a health-giving potion which I should have enjoyed had I not given it up to you. And now, dear sir, I will tell you frankly, you are rusting out, literally tumbling to pieces for want of exercise of both body and mind. That is all, sir. You can follow my prescription and be cured, or you can take your own way."

The young man paid the dollar and went his way. Not then could he be cheerful; but afterwards, when he had allowed reason fair play, and had come to prove the life-saving and the new life-giving virtues of the doctor's prescription, he came and thanked him.

VICTOR HUGO AND A LITTLE LITCHFIELD GIRL.

THE little girls who write to the RURAL are not the only ones who have their letters published. The following is a translation of a correspondence between a little Litchfield girl and Victor Hugo's private secretary. The New York World published the originals, with a translation, "at the risk of making the life of Mr. Richard Lesching, the secretary of Victor Hugo's correspondence with small girls, a burden to him." The Frenchman's explanation that V. Hugo in Paris must "cross the water" to reach Litchfield is especially naive:

LITCHFIELD, July 7, 1879.

MR. VICTOR HUGO:—Pardon the liberty which I take in writing you this letter. I am a little American girl of Litchfield, Conn. I am learning French and I can already speak a little. I have read "Les Miserables," "The Art of Being a Grandfather" and "93." I admire them much. I have heard so much of you and I should so like to have your autograph, written with your own hand. I hope you will be good enough to send it to me. If you come to America, come to see us at Litchfield. Everybody will be glad to see you. You must come to our house, for it is very large. My father is a doctor, and he speaks French—like an American! My French teacher, Mr. Laloux, will not correct this letter. He says it is well enough written, for me. I shall be so happy when I have your autograph, and the little girls in my class will all be *so* jealous! I thank you many times in advance, and I wish you all sorts of good wishes. *Au revoir*, and do not forget my address.

ANNIE D., Litchfield, Conn.

Send me your portrait, too, if you please!

And here is the answer:

PARIS, August 7, 1879.

MISS:—I am not Victor Hugo and I am very sorry for it, I assure you. But he has instructed me to answer the letters which he receives from little girls, for he receives so many that if he tried to answer them all he would have no time to sleep. I send you the portrait you ask for, with the signature of our master, though I really am not altogether pleased with your letter. I should scold you if I had not a great weakness for little girls. What! You hope to make all your classmates very jealous! That sentiment does not come from a very good heart! I must think the ugly words slipped out unintentionally, for there are very pretty things in the rest of your letter, and I dare say you are the most charming child in the world. At all events it depends only on you to become so. Victor Hugo takes a walk of some hours every afternoon, but I think it would take a longer time to reach Litchfield, especially as he would have to cross the water. Yet the idea is a good one, for I think you asked me also to come. Only we must wait till they build a bridge over the Atlantic. Allow me to kiss you, for I suppose you are still in short dresses, and to call myself your friend,

R. LESCHING.

HANGING BASKET.

LETTERS FROM THE COUSINS.

Another Aunt.

UNCLE MARK:—In the RURAL of July 26 you say any aunt is welcome to join the Horticultural Club, so here I come, I have wanted to come all along, and am glad Aunt Earnest set the example. I love flowers, too, and have all she speaks of in her letter; my bed of Verbenas is just splendid. I, too, have had trouble with Tuberoses, and think they were not kept warm enough. I had one bulb four years before it flowered. Yes, Azilea, I would like to exchange seeds also. Do all the RURAL Cousins know how easy Geraniums can be raised from seed? I had some that flowered the first year from seed, and they were not planted until the first of May. I have found several young plants this summer that came up where my old plants were last year, so it seems the seeds are hardy. Verbenas make nice plants for the house in winter, they flower very freely after they once commence; take off slips now, small ones are best, give a sunny window and keep them growing, pinch off the tops when about six or eight inches high. In the spring they can be planted out in the beds and will keep right on flowering. From

Owasco, N. Y. AUNT MARY.

DEAR UNCLE MARK:—I am a very little girl living away on the Upper Ottawa, and I love to read the dear old RURAL. I have some experience in gardening and wish to join the Horticultural Club. I like boating, fishing, and all out-door games. In gardening I always help mother and have a few vines and plants to care for this year. I have some cucumbers, pumpkins, and watermelons, and also some balsams that were flowering nicely when I left home to live a few days with my big brother. I am ten days away now and don't know when I will get back. But Uncle Mark I suppose you are tired with my letter, you get so many good ones from intelligent American Cousins that I fear you don't like to be bothered with the wild little Canadian girl of the Upper Ottawa.

Temistquemangue. LIZZIE A PICHA.

DEAR UNCLE MARK:—I am a little girl nine years old. I have been going to school six months. This is the first time I ever wrote a letter. I live in Flatbush, L. I. and often visit the Park and Coney Island. I have a brother Edwin, six years old. We have to weed an hour every morning. I love flowers and would like you to enter my name and my brother's name on your Horticultural Club list. Will you please to send me some seeds. FLORENCE H.

Flatbush, N. Y.

DEAR UNCLE MARK:—I have been wanting to join your club a long time. The seeds that we received from the RURAL are doing well. Please put the inclosed names of my sister and myself on the list of your Horticultural Club. Your niece,

Greene Co., N. Y. MINNIE C. STORY.

[You did not give your post-office, Minnie, I must know that also.—U. M.]

Sabbath Reading.

THE GROUNDLESS GRIEVING.

AN end, O soul, to thy poor wearying sadness!
Christ liketh not to see thee bathed in tears;
The Spirit's song is one of trust and gladness,
Not dirgeful moans of melancholy fears.

Dost thou not know tears are for earth, not heaven?
And not earth now, but heaven, is in thy soul;
Let songs, exultant o'er thy sins forgiven,
Through all its corridors and arches roll!

For what is gone weep not, 'tis gone forever;
Nay, 'tis not gone, but by the Lord redeemed;
For what is now, or may be, weep thou never,
Thy spectral ills to Christ have saintly seemed.

Think not by tears to wash out sins, thy Savior
Poured forth not only sacred tears but blood;
Dost think thou wilt be doing him a favor—
To add thy tears to the rich blood of God?

Nay, nay, poor heart, by thy continuous weeping
Thou blindest thee to richer gifts in store;
Lo! while thou agonizest thus, thou'rt keeping
Grace-burdened Christ from entering thy door!

Soul! thou hast had thy cold and cheerless winter,
Thy spring with storm of penitential tears
Now let the sun and song of summer enter—
So with rich autumn fruits to crown thy years!

Denis Wortman, D. D., in Christian at Work.

JESUS THE CHRIST.

WE are accustomed to use the names of the Son of God with little if any distinction, in their significance. We use Jesus, or Christ, or Jesus Christ in conversation and song as if they were one and the same thing. This fact becomes important when we consider the effect upon our opinions that the familiar use of words produces.

There is a difference in the use of these names very clearly marked in the Scriptures. Jesus and Christ are not one and the same thing. One seems rather to be his human designation—the same by which he should be called as man—given to him for the special reason that he was to be the world's Saviour. As the angel declared: "Thou shalt call his name Jesus; for he shall save his people from their sins." Christ, or rather the Christ, on the other hand, is his official designation—the Old Testament Messiah, or the annointed—which makes him and his work specific and unique. This is clearly shown to us by the Apostle Paul, where it is written that, "he mightily convinced the Jews, and that publicly, showing by the Scriptures that Jesus is the Christ."

Greater care is demanded in our use of the names, and like the seamless garment of our Lord, these should not be rent asunder. There is a tendency toward sentimentalism, or religious gush, in the use of the name Jesus, manifested in the familiar and irreverent levity both in prayer and in some of our Sunday-school songs. Skeptical writers invariably use the name Jesus in a complimentary and patronizing way in speaking of the great teacher of Judea; but these ignore the title of the Christ.

We love and rejoice in the name of Jesus! We think of all his life among men, and call him brother and friend because he was partaker of flesh and blood. But he was also the Christ—the anointed of the Father! How clearly the apostles recognized the great truth is seen in the manner of their address after his ascension—the same Jesus who was crucified God hath made both Lord and Christ. Now he has become to them "the Christ," "Christ Jesus," "Jesus the Christ," "the Lord Jesus;" and no approximation to the flippant manner in which he, whose name is above every name, is only too commonly used by us.

Not a little of the prevalent irreverence is due, we think, to the familiar use of the Savior's name—it influences, unconsciously, our thought and conduct. The epithets of endearment often coupled with Jesus in our conversation and singing do not honor or exalt the

> "Strong Son of God, immortal Love,
> Whom we that have not seen Thy face,
> By faith, and faith alone, embrace,
> Believing where we cannot prove."

And when we sing:

> "There is no name ear ever heard
> So dear, so sweet as Jesus,"

it is not true unless it be coupled in our thought and life with the Christ; for this it is that makes Him to be our Lord and our God.—*The Standard.*

WHISKY SELLING.

ANY Christian who keeps a drug store, or business house of any kind, and sells whisky or any other alcoholic stimulant that will make men drunk, ought to be excluded at as early a date as possible.

In view of all the light that has been shed on the temperance question within the last few years, no man can engage in the sale of whisky without crushing the best moral feelings of his nature, and the Christian who goes into it ought not to be countenanced as a Christian for a day.

We have heard of a Christian merchant who has been selling "bitters" under the stamp of the government. He is just as guilty as if he had gone into the regular whisky trade. Yea, more so; for he is trying to cover up his sin, instead of coming out like a man. His church ought to deal with him immediately.

There is no time in this fast age for trifling. If the church is to be the conservator of public morals, she must stand unflinchingly and act decidedly. If any man that is called a brother be a drunkard, or a maker of drunkards, let him be put away from among us just as soon as possible.—*Baptist Banner.*

THE joy of the Spirit is a delicate, sacred deposit, and must be kept in a pure casket; an unholy breath will dim its luster and fade its freshness.

PERSONAL ITEMS.

Blondin, now 55 years of age, gave a performance at Vienna recently.

Cardinal Manning went from Liverpool expressly to christen the Duke of Norfolk's heir, the Earl of Arundel and Surrey, at London.

A man dying recently in St. Louis left $1,000 to an individual who, years before, ran away with his wife. He said in his will that he never forgot a favor.

Clay Rhoades committed suicide at Greenfield, Ohio, because Bob McKinnie had threatened to murder him, and he knew Bob was a man of his word.

When Emperor William of Germany was a young man he indulged in a habit of sleeping, all booted and spurred, on a cannon to exhibit his fondness for military life: in his whole career he has always worn uniform and sword.

A well-dressed woman drew a crowd together in a Cincinnati street by striking a man across the face several times with a whip, and then finishing the punishment with her fists. She coolly explained that he was her runaway husband, whom she had laboriously traced for the sole purpose of whipping him.

Trained from his early youth to the craft of the chamois hunter the Emperor of Austria loves nature too ardently to lend his countenance to the wholesale slaughter of her children. Dressed in his worn shooting costume—a gray frieze coat, short leather breeches, leaving the knees bare, and heavy hob-nailed shoes—he likes to be out alone, or with a single keeper.

Sir Henry Bulwer, uncle of Lord Lytton, for months fancied himself affected with paralysis of the legs, and refused to put a foot to the ground, but was wheeled in a chair by a servant. One day, the Rhone steamer, on which he was traveling, caught fire, and the Captain having run the boat ashore, a plank was thrown out, by which the passengers might land. The first person on this new bridge, and stepping nimbly down, was Sir Henry. When safe on shore, he remembered himself, and called out to his servant: "Carry me, Forster." But it was too late. Forster refused to hear more of his master's folly, and Sir Henry walked very well to the day of his death.

It has just been revealed to startled England that the vicar of Hughenden, Lord Beaconsfield's country parish, is a ritualist. His lordship, about five years since, made a celebrated speech on the Public Worship Regulation Act, in which he denounced the ritualistic service as the "mass in masquerade." But now he finds ritualism carried on in his own parish church by a clergyman—the Rev. H. Blagden—appointed by himself to the living. Lord Beaconsfield, when at home, goes to this church once every Sunday. The family seat is in the chancel. The vicar wears colored stoles, and maintains the eastern position, the communion table being covered with embroidered linen, while on the altar are candles, a brass cross, and lead vases of flowers. As Lord Beaconsfield has doubled his annual subscription from $25 in 1877 to $50 in 1879, it is presumed he sanctions these things.

When worn down and ready to take your bed, Hop Bitters is what you need to relieve you.

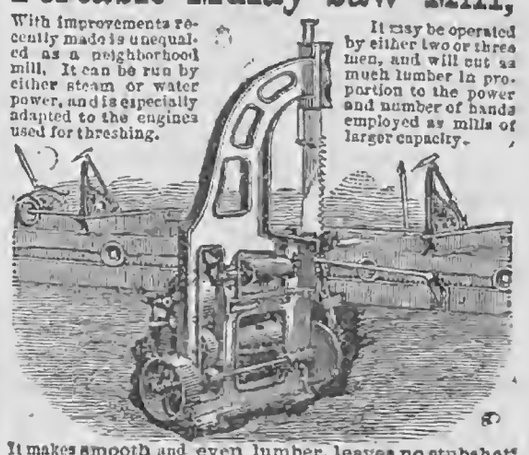
Portable Mulay Saw Mill,
With improvements recently made is unequaled as a neighborhood mill. It can be run by either steam or water power, and is especially adapted to the engines used for threshing.



It may be operated by either two or three men, and will cut as much lumber in proportion to the power and number of hands employed as mills of larger capacity.
It makes smooth and even lumber, leaves no stubshot and will cut any sized log up to four feet in diameter. It may be transported from one locality to another and re-erected ready for sawing in from two to three days, and can be made profitable in localities where there is not sufficient timber to justify the erection of a large mill. Send for descriptive circular, price, etc., to CHANDLER & TAYLOR, Indianapolis, Ind.
Also manufacturers of the Phoenix Threshing Engine and the Eureka Drain Tile Machine.

American Fruit-Preserving Powder
AND LIQUID is the Cheapest, Most Reliable and Best-Known Method of preserving all kinds of Fruits, Tomatoes, etc. Strawberries, Raspberries, and all high-colored Fruits retain their rich color as well as flavor. One ounce of it (costing 3 cents) is equal to 8 lbs. of sugar in preserving property.
Established over ten years, and endorsed by thousands upon thousands of families. One trial will establish the fact that the American Fruit-Preserving Powder and Liquid will effectually prevent fermentation and preserve all kinds of Fruits, Tomatoes, etc., and keep them the year round, or for years, in jars of any kind or size, or in wooden kegs and barrels, *without sealing air-tight.* Simply corked or tied down with a strong paper is all that is needed.
The fruit will keep *without sugar*, or any quantity of sugar may be added as desired.
Warranted to be as healthful as table salt.
The Fruit, etc., may be cooked little or much, as desired. They will keep without any cooking, or they may be cooked down into sauce. The method is simple and easy. None can fail if the Powder and Liquid is added into the Fruit, etc., in quantity as directed.
One package will preserve 256 pounds of Fruit, Tomatoes, etc., or 2 bbls Cider. Price ONE DOLLAR per package.
Give it a trial. If you cannot get it from your Druggist or Grocer, I will send it prepaid to any express office in the United States east of the Mississippi River, upon receipt of the price; or west of the Mississippi River and east of the Rocky Mountains for $1.25 per package. Local and General Agents Wanted.
Address L. P. WORRALL, No. 24 Liberty St., New York.

FAIR CRITICISMS AND SUGGESTIONS.

VERY many exhibitors at the fairs of county and other local Societies become disgusted with this or that thing connected therewith; for some of these grievances the officers are blamable, such as the admission of lottery dealers, gift jewelry hawkers, horse jockeys and all manner of gamblers; but there is one great difficulty under which such Societies labor, and that is, in securing competent committees to award the premiums. In nearly all cases where I have had an opportunity of knowing, the judges were appointed at a meeting held previous to the opening of the fair. Little attention was given to their qualifications, but a great show of fairness was made by electing to the same committees judges from parts as widely separated as possible in the territories to be affected by the decision. Usually three members are considered necessary to pass upon the merits of each animal or article included in each class. When the time for performing their duties arrives, perhaps one or more of the committee are absent, a substitute is picked up from the crowd and the work goes on. The money and honors are divided up as these men think will be *about right*. The decision is seldom in accordance with the merits of the object, as I have often heard them express themselves thus:—"We know nothing about Ayrshires—could not recognize one in a yard of Devons, but Mr. Jones has the first premium for his bull, so we think it fair to give Mr. Smith the first for his cow." And so it goes through all departments, with a few exceptions, of course, until we come to the horse trot. There any fool can see (if the crowd permit) which horse comes in ahead, but not which is the best horse.

Now would it not be well, for the sake both of profit and reputation, that such organizations should secure the services of experts in the more important departments. If exhibitors were made to know that prizes would be awarded for superior excellence and for that only, a much better show would be the result, and greater benefits would be derived by the farmers in attendance, who are there to learn. Men should be selected from outside the county or State, men of recognized ability, and sound judgment in the matters which they are called to decide, and if they make that one thing their "hobby," so much the better.

M. B. PRINCE.

FAIR NOTES.

AN INDIAN FAIR.—Of all the fairs held lately it is doubtful whether any is more significant of progress than that of the Chippewa Indians held on Thursday, the 18th inst., at White Earth Reservation in the Indian Territory. The exhibits included horses, cattle, grain, vegetables, butter, cheese, maple sugar, sirup, bread and cake, preserves and pickles, rag-carpets, reed mats, moccasins, quilts, bark work and mittens. Most of the judges were Indians. Among those who decided on stallions and brood mares were Waw-waw-me-ke-sence and May-shaw-ke-ge-shick; while among the experts on hogs, sheep and poultry were Say-cah-gay and Wah-ge-ge-shuh. The premiums for bulls and cows were mainly awarded by May-tah-noush, Moh-kah-ge-wenk and Wen-ge-mah-dub; while Mrs. Bay-ke-wah-nonch was among the judges of dairy and kitchen products. The premiums ranged from $5 to 50c. Among the exhibits thus honored was "The breaking plow in best condition after two or more years' use." A prize was given to the farmer who did most breaking the past year; another to the one who cultivated most land with least expense to the Government, and a third to him who owned most farm tools in the best condition. The judges in the farming class were Bay-bom, Me-no-ge-shick and Tay-cum-e-ge-shick, together with three white men without any special distinction even with regard to their names.

WE are indebted to Mr. H. I. Budd, the secretary of the Burlington Co., Agr'l. Society, for a ticket of admission to that Society's fair, which will be held at Mount Holly, N. J., on Oct. 7th to 10th inclusive. Curiously enough, in a note enumerating what visitors may expect to see, the trotting, tournament, bicyclers, etc., are named first, as of superior attraction; while the display of grain, fruit, etc., is placed secondary as a kind of side show.

SOMERSET County Agricultural Fair will be held at Somerville, N. J., from Sept. 30th, to Oct. 2d, inclusive 1879. The secretary who sends us a ticket promises a great display of live stock and all kinds of farm products. For list of premiums apply to the secretary, Mr. Wm. S. Potter, Somerville, N. J.

PIC-NICS.

IF the Sun were not Broiling, and the Sand didn't get into the Salad, and the Rocks were soft and Smooth, and there were no Hornets, and one hadn't to go Three-quarters of a Mile for Water, what a tame affair a Pic-nic would be!

HEADING OFF A LAWYER.

RUFUS CHOATE, in an important marine assault and battery at sea case, had Dick Barton, chief mate of the clipper ship Challenge, on the stand, and badgered him so for about an hour that at last Dick got his salt water up and hauled by the wind to bring the keen Boston lawyer under his batteries.

At the beginning of his testimony Dick had said that the night was "dark as pitch, and raining like seven bells."

Suddenly Mr. Choate asked him:

"Was there any moon that night?"

"Yes, sir."

"Ah, yes! A moon—did you see it?"

"Not a mite."

"Then how do you know there was a moon?"

"Nautical almanac said so, and I'll believe that sooner'n any lawyer in the world."

"Ah—you are growing sharp, Mr. Barton."

"What in blazes have you been grinding me this hour for—to make me dull?"

"Be civil, sir. And now tell me what latitude and longitude you crossed the equator in?"

"I shan't"

"Indeed! You are chief mate of a clipper ship, and unable to answer so simple a question."

"Yes, 'tis the simplest question I ever was asked in my life. Why, I thought every fool of a lawyer knew there ain't no latitude on the equator."

That shot floored Rufus Choate.

A COLLEGIAN ANSWERED. — A skeptical young collegian confronted an old Quaker with the statement that he did not believe in the Bible. The Quaker said: "Does thee believe in France?" "Yes, for though I have not seen it, I have seen others who have; besides, there is plenty of corroborative proof that such a country does exist." "Then thee will not believe in anything thee or others have not seen?" "No, to be sure I won't." "Did thee ever see thine own brains?" "No." "Ever see anybody that did?" "No." "Does thee believe thee has any?" The young man left.

In Districts formerly Ravaged

By fever and ague, immunity from the dreaded scourge is enjoyed by those who have rendered their systems malaria proof with Hostetter's Stomach Bitters, the best preventive and remedy. Quinine cannot compare with it in efficacy, and is anything but safe. Physicians commend the Bitters for its remedial and resuscitating properties and the closest analysis reveals nothing in the composition of a deleterious nature. It does not deteriorate, is an agreeable cordial as well as a potent medicine, and when mixed with brackish or unwholesome water neutralizes its hurtful properties. The denizens of malarious localities, not only in the United States, but the tropics, regard it as an invaluable protection, and in hosts of families it is kept constantly on hand. As the tide of emigration spreads farther westward, the demand for it among those compelled to encounter the vicissitudes of climate, constantly increase.

BRADFORD MILL CO.

Manufacturers of
Portable Corn and Flour Mill
For Farmers' Use.
These Mills are cheap, durable and easily operated. They are made of the Best Material, with French Mill Burr Stones. Adapted for either horse or steam power. Price-lists and circulars sent on application.

Pomological.

SOME OF OUR BEST APPLES.
Where they Will Succeed.

We have made a number of accurate drawings from specimens of well-known and well-tried apples, which we shall endeavor to place before the reader before the present planting season shall have passed away. Our present engravings are from specimens kindly forwarded by Messrs. Ellwanger & Barry of Rochester, N. Y. From all sources available to us we append a list of the States in which these varieties will thrive best.

Golden Russet. (See p. 655.)

Fruit, medium in size, generally somewhat oblong, keeps till spring. Flesh, fine, firm, crisp. Flavor, rich, aromatic. Tree, irregular. This apple thrives well in Vermont, New York, Michigan, Wisconsin, and moderately well in Connecticut, Ontario, Minnesota, Oregon, Ohio, Kansas, Utah, California, So. Carolina and Alabama.

Red Canada. (See p. 657.)

(This is the Nonsuch of Massachusetts, Richfield Nonsuch of Ohio, Steele's Red Winter.) Fruit, medium, conical, regular, nearly covered with red, indistinct whitish dots; keeps through winter. Flesh fine, compact with a rich sub-acid, excellent flavor. Leaves wavy; tree productive. One of the best table apples. In some localities the growth is slender, the fruit scabby. Entirely distinct from the Nonsuch of England. It succeeds best in Maine, Michigan, Ohio, Illinois, and moderately well in Connecticut, Indiana and Nebraska.

Esopus Spitzenburgh. (See p. 657.)

This apple of unequaled flavor, is unfortunately a moderate bearer, succeeding best, so far as we are aware, in its native State, New York. The fruit is above medium size, somewhat conical, of a rich red color, sometimes faintly striped. The flesh is yellowish, crisp, very spicy, rather acid. Keeps till spring. Growth erect. Thrives best in New York and California; moderately well in Vermont, Ontario, Oregon, Pennsylvania, Ohio, Indiana, Illinois, Missouri, Nebraska, Alabama and Louisiana.

Roxbury Russet. (See p. 655.)

(Boston Russet, Putnam Russet of Ohio. *Thomas.*) Fruit, medium to large, covered with russet on yellowish-green ground. Occasionally a brown cheek. One of the best of keepers. The quality is very good. Spreading growth. Highly productive, fair fruit always. One of the best market sorts. Succeeds best in Massachusetts, New York, Rhode Island, New Jersey, Kentucky, Louisiana, and moderately well in Nova Scotia, Connecticut, Ontario, Michigan, Pennsylvania, Ohio, Indiana, W. Virginia and Utah.

Cooper's Market.

(Cooper's Market—Cooper's Redling. *Thomas.*) Medium size, splashed and striped with red on yellow ground. Flesh white, tender with a brisk, sub-acid flavor. Keeps through winter. Shoots long, slender. Profitable, though not of best quality. New York, Pennsylvania, New Jersey and Michigan.

Northern Spy.

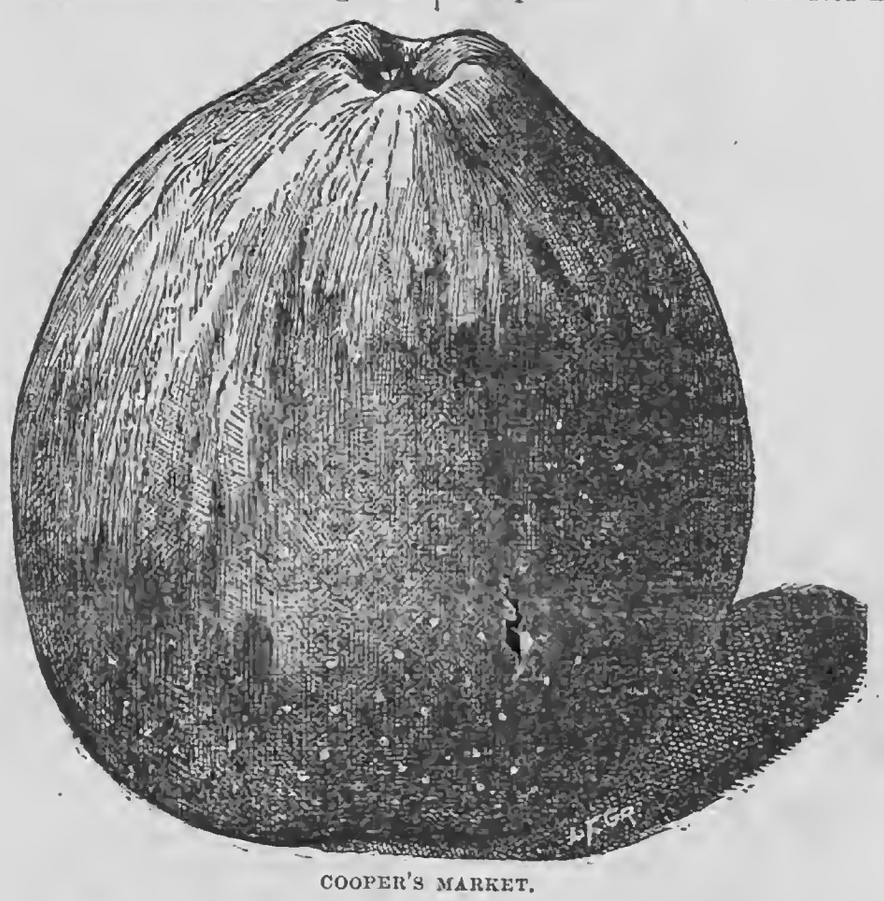
Medium to large, striped, dard-red on sunny side, juicy, aromatic retaining its good qualities until June. Tree a rapid, erect grower and abundant bearer under good culture. It is one of the very best late keeping apples. It is a tardy bearer. We find it does remarkably well on *Paradise* stock, bearing the second year. This fine apple succeeds well in Nova Scotia, Maine, New York, Michigan, Indiana, Illinois, and moderately well in Louisiana, Alabama, California, Utah, Nebraska, W. Virginia, Ohio, Maryland, Virginia, New Jersey, Pennsylvania, Oregon, Wisconsin, Connecticut, Rhode Island, Massachusetts and Vermont.

Horticultural.

STRAWBERRY NOTES.

GEO. J. KELLOGG.

I am situated on light, prairie loam near the timber. After a few feet of soil we strike a firm plastering sand for 70 feet. My strawberry crop the past season was something over 300 bushels from about 1½ acre of ground. My varieties were in about the order named for quantity of fruit.

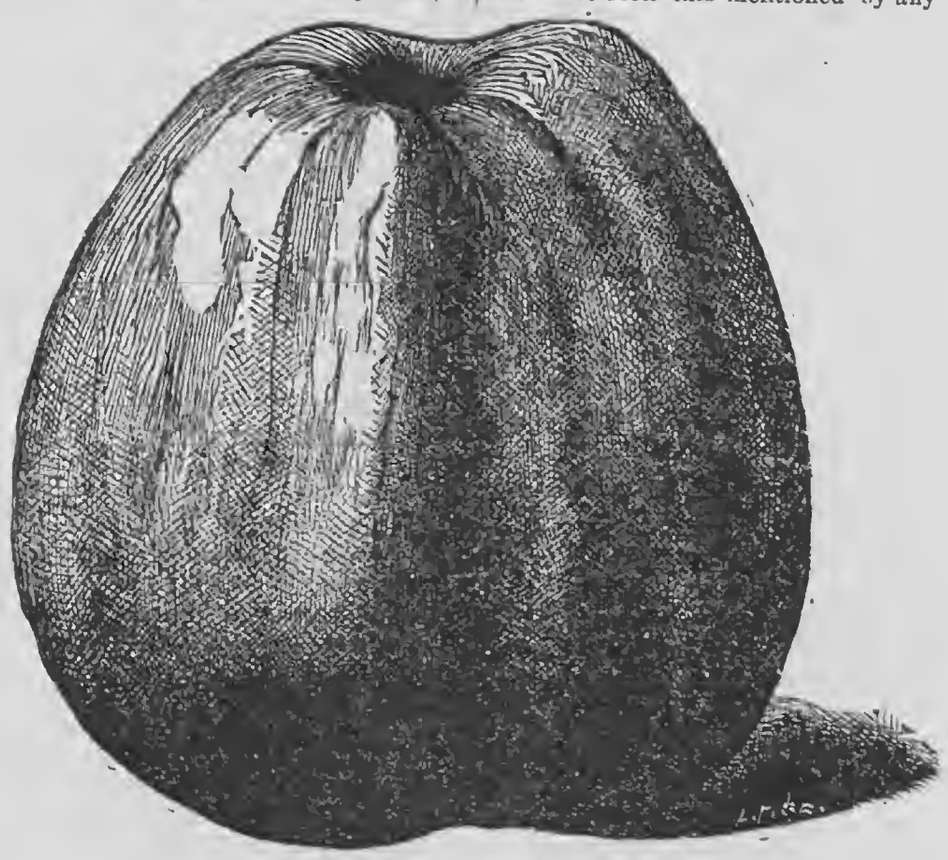


COOPER'S MARKET.

Wilson did nobly; the only fault was rust upon the leaf.

Crescent Seedling, although but the second season's fruiting, has done remarkably well. In the hurry of picking and owing to two days' absence attending our State strawberry show, I failed to keep separate the pick of seven rows, 19 rods long, one year planted, of this kind. The plants were set three by four feet apart, allowed to mat one way, but the seventh row only contained 99 plants set in 1878, in May. On June 16, 1879, in the third picking, one boy in nine hours took from this seventh row 100 quarts of very fine berries. The yield from this bed, I think, did not come up to the 15,000 quarts per acre, but it was quite satisfactory. As to its requirements, I think the late bloom failed to perfect the fruit as well as if a Downing row had been adjacent. It will doubtless do best to set a Wilson, Downing or Captain Jack every fourth row. There seems to be a great variety of opinion as to the quality of the Crescent. With us it is very fine; bears transportation well for a hundred miles, and retains its color, and markets well. Since fruiting, the Crescent bed has taken care of itself, no weeds are allowed to grow, while the foliage is very luxuriant and healthy.

Captain Jack puts in a claim for productiveness ahead of Wilson, and almost equal to Crescent. I find but one objection to this variety—the calyx is left upon the vine in picking. I have not seen this mentioned by any writer.



NORTHERN SPY.

For market it is objectionable, for family use it is in its favor. For market the stem must be *nipped*, and even then the pickers were anxious to leave the Wilson and Col. Cheney and pick Captain Jack. Its size, flavor and firmness are in every way satisfactory.

Prouty's Seedling comes next to Captain Jack, more productive than Wilson, but not worthy of cultivation. The fruit stalk is so short that unless very carefully mulched, the berries rot on the vines before ripening, and the later pickings are of very inferior flavor.

Col. Cheney it is useless to say a word about, except in comparison. It always gives some of the largest berries as well as some of the smallest, both rather soft, except for home markets. It bears nearly equal to Wilson for the same number of vines; but it is worthless if planted alone.

Of Green Prolific the same can be said. So far as quantity for *home market* is concerned, no pistillate is more productive than this, and the quality is all right, if the fruit is eaten the same day it is picked, but with these last two kinds one must set some such varieties as Wilson, Charles Downing or Captain Jack, say every second or third row, or one will not have a bushel to an acre.

Duchess bids fair to be one of the *best early* sorts; being large, productive, and of the best quality.

Forest Rose, Pres. Lincoln, Pioneer, Red Jacket and others did not have as good a chance to show what they could do, as did some others. There is one serious objection to Red Jacket—the calyx adheres so firmly that it wants a knife to detach it from the hard core inside, otherwise, for a soft berry, it would have a run.

We have a third of an acre set to 19 of the best kinds out of 40 varieties, on new soil just from the forest, from which we expect big returns, and a fair test of the kinds, and we propose to tell the faults as well as the good points of all.

The Great American I forgot to mention, because it forgot us; it is worthless on light soil. On clay it will please the grower if he pets it.

Janesville, Wis.

THE LADY WASHINGTON GRAPE.

For the last eight years I have supplied Mr. J. H. Ricketts with a large amount of produce from my poultry yards and farm. To deliver his orders I have to pass his Lady Washington Grape, and have watched its progress with much interest. I am fully convinced it is the most desirable Grape that I can plant. As far as I can see, it receives quite ordinary care—no better than I give my own vines. The large, full clusters of light-green, almost white, grapes at once win the admiration of all who see them, and the very fine eating quality of the fruit must make it a source of profit to those who plant it. To satisfy myself, three times during the past season I have walked up on the hill-side opposite Mr. Ricketts' home place, to watch the progress of his two-year-old vines, planted for the purpose of fruiting next season, as well as of increasing his stock. On August 19, I found the vines had made a growth of from 18 to 30 feet of strong, healthy-looking wood. The ground was closely planted with currants and tomatoes between the rows of vines. I saw four large clusters of the most beautiful grapes I ever beheld, on one vine. I learn that the produce of this vine has been on exhibition at New York, Rochester, Waverley and Philadelphia.

I write the above notes in good faith for the information of Rural readers who have not the opportunity of seeing the vines and fruit, and will add that I shall plant as many of the vines of this Grape as I think I can afford to buy, and regret that I have not done so before.

Orange Co., N. Y. W. C. Hart.

The Great American Strawberry.—It is a pleasure for me to be able to say a good word for the Great American—the more so that it does not meet with universal favor.

In the spring of 1877 I purchased my plants of Mr. Durand, and, with many misgivings, planted them in a moderately rich spot. I per-

mitted them to make as many layers as they would. The following season I found it necessary to move the plants, and did so late in the season, thus securing but little fruit. The past season was the first they have borne a crop, and it was well worth waiting for. The berries were large to very large, the quantity simply immense, and the quality very pleasing. I have always regarded this berry as the product of high culture, and one that would not succeed under ordinary cultivation; the result has been just the opposite, and I am more than pleased with it. My soil is strong clay and moderately enriched with good stable manure. I have given the bed no special care save to keep the thistles out, and to occasionally stir it to keep it from baking. H. T. J.

Rochester, N. Y.

Industrial Societies.

THE MICHIGAN STATE FAIR.

[Special Correspondence.]

DETROIT, Mich, Sept. 20.

THE Michigan State fair held at this city Sept. 15-19, was, as an exhibition, more than an ordinary success. Illinois at Springfield, and the St. Louis Association may excel it—probably they will: Ohio at Columbus did in a few respects; but, on the whole, the Detroit fair so far has been the banner exhibition of the West. In point of attendance it was good, considering that the afternoons of the first and second days were rainy and that Thursday—usually the best day of the fair week—was thoroughly and disgustingly moist throughout.

If the State Board had tried—and I do not know but they did—to find a more unpromising plot of ground in the vicinity of Detroit for fair purposes, they could not have succeeded better. Low and boggy, not half underdrained, with a clay bottom somewhere beneath, and a clayey mud of uncertain depth at the surface, the wet weather gave the people as uncomfortable a time and way of getting about as can well be imagined. But for the admirable arrangement of running the railroad track into the grounds, one can hardly imagine how the heavy machinery could have been got on to or off the place.

Michigan people are rather proverbial for their good taste in external affairs. Their cities and villages are the prettiest of the West; their farm-houses and barns are, on an average, better perhaps than those of any State to the west of the lakes, and what a shock it must have been to them, as they entered these fair grounds, to see what had been done to improve them. Along the right of the walk from the entrance to the Society's office were some neatly constructed newspaper headquarters; but to the left and stretching away down an avenue in front of the president's and secretary's offices, stood such a grotesque row of refreshment stands as never stood before on any fair ground. Instead of erecting halls and uniform booths in which to comfortably feed the people, ground fronting as I have said, was rented at $4 per front foot, it was stated, and every caterer who could raise enough money to secure ten feet—and these included men of nearly all nationalities, races and colors—put up a structure of rough boards in form to suit his taste. Profusely decorated with ten-cent bits of the stars and stripes, they presented a barbaric appearance that would be highly appreciated in Central Africa. Passing by the officers' neat quarters, there appeared a long stretch of canvas covered with distorted paintings of monstrosities and fierce animals and crawling snakes, that rounded out the scene in the most perfect manner. This was the first of half a dozen great fairs, visited this season, where the side shows—those relics of a former decade—were allowed inside the gates.

The grand cavalcade of live stock on Thursday told the story of Michigan's greatness in this important interest. If Noah marshaled such an array as this from the ark and gave to each deserving animal a ribbon, then they had more silk factories in those days than history gives them credit for. The show of draft horses was very fine, Percherons and Clydesdales closely competing for the honors. Michigan is somewhat noted for roadsters, and they were out in full force. There was an excellent array of brood mares and fillies. The race track being so far removed from the exhibition proper, the usual outside trials of speed did not distract general attention and demoralize the show. The herds of Shorthorns represented here are as choice as any State can show. Specimens of the milch breeds were numerous and choice. The exclusion of animals from other States and Canada lessened the number considerably and was the cause of considerable unfavorable comment.

The swine exhibit was good; in fact, though less numerous than I have seen at some of the Illinois and Iowa fairs, in excellence of specimens of the prominent and fashionable breeds, the show would have been a credit to any State.

As a sheep State Michigan retains its supremacy, especially in American Merinos. In the mutton and long-wool classes the display was more than ordinarily good. On the whole, the indications are that Michigan sheep growers have not in these long years of depression, lost faith in their flocks as a remunerative branch of farming.

Except perhaps in Game fowls, the poultry show was of more than ordinary excellence. There were plenty of Games to be sure, but they were not the choicest specimens. The Asiatics, of course, took the lead, though the Plymouth Rocks held their own very well. I noticed but few French fowls. These seem to be losing their hold in this country. The show of aquatic fowls was good. The exhibition of fruit was more than creditable. Michigan is, as every one knows, a most excellent fruit State. Besides her active Pomological Society, with many veteran pomologists as members, she has numerous local horticultural societies composed of active, experienced men bent on developing the interest to its utmost. These nearly all united in filling Fruit Hall with the products of their orchards and vines. The entries were numerous. In this hall was also the floral exhibit—not large, to be sure, but the exhibit of cut flowers by Mr. Vick of Rochester, helped it out finely.

Farm Product Hall was well filled. The exhibits were for the most part by counties, and the competition was spirited. The show of potatoes was exceptionally fine. The collection was much better arranged than is usually the case at Western fairs.

Mechanical Hall, the largest of the lot, was filled to its utmost with a wonderfully varied and interesting class of machines and devices. It was thronged throughout every day. It was a study, and it disseminated a great deal of knowledge concerning inventions and processes.

But the crowning display of this fair was the agricultural implement department. Long lines of shafting run by heavy portable engines, exhibited in motion machines requiring motive power, making them a center of attraction to all classes of visitors. Acres were covered with the best reapers, mowers, rakes, thrashers, clover hullers, harrows, and the like, while many of the manufacturers of plows in Michigan and Indiana made choice and elegant displays under roofs erected for their own special uses. This grand field of machinery was arranged with method and taste. Engines for thrashing and other farm work were numerous. A self-binder in constant operation always had a crowd about it. The fair ground presented an admirable opportunity for showing the working of a first-class ditching machine, but I saw none at work, perhaps none was present. Among the standard and well perfected machinery here exhibited we may make the following brief special mention.

The Wm. Anson Wood Mower and Reaper Co., of Albany, N. Y., through Messrs. Woodford & Niles, Detroit, Mich., their general agents for Michigan and northern Indiana, made a fine exhibit of a full line of their reapers and mowers. The new machines, which we noticed in full at the New York State fair, attracted a great deal of attention. There is no doubt but that these machines will take well with the Michigan farmers, as I heard them spoken highly of by all who saw them. The new reaper especially, on account of its lightness, strength and durability, takes well. The arrangement for raising and lowering both ends of the cutter-bar at once; its adjustability to all kinds of work; its being so nicely balanced, and its general construction (being made of the best of material and in the very best manner), commend it to all who see it.

The Lion self-operating sulky rake and the Howe force pump, made by Messrs. A. W. Miner & Co., Belmont, N. Y., were exhibited by A. F. Chandler, of Coldwater, Mich., their general agent for Michigan and Indiana. The Lion rake possesses many acknowledged strong points, as shown by its being awarded the first premium at this fair, after being thoroughly examined by two committees of practical farmers. For simplicity, ease and nicety of operation, it merits the highest commendation. It has no cumbersome rachet or springs to continually get out of order; the teeth are adjustable, and can be raised or lowered at will by a double crank and two independently-acting clutches. The pump is suitable for all windmill purposes, warranted to be frost-proof; it never needs priming, and works so easily that any child can operate it. It, also, was awarded the first premium.

One of the largest exhibits on the grounds was that of the old and reliable firm of P. P. Mast & Co., of Springfield, Ohio. It included their new Buckeye grain drill, with or without fertilizer attachment, which has the largest sale in this State of any of this class of implements, and is also a "general favorite" wherever used. This drill has many new and important improvements—which we illustrated a few weeks since in the RURAL. Their exhibit also includes a handsome display of their celebrated corn field and fallow cultivators, cider mills, plow sulkies, etc. P. P. Mast & Co. have the largest factory in this country for their class of goods, and have been running to their full capacity night and day, but have yet been unable to fill their orders. A large number of drills was sold on the grounds, purchasers having to wait until the drills could be manufactured. Mr. Butts says that farmers who use the "Buckeye" always wear a smile after harvest.

The Gale Manufacturing Co., of Albion, Mich., made a handsome display of their celebrated plows in a large tent, showing all their different styles; also their hay rake and other goods manufactured by this company. These plows are well known in this part of the country, and kept up their well-earned reputation by taking six first premiums:—1st, the sweepstakes premium for largest and best display; 2d, on best general purpose plow; 3d, on one-horse plow; 4th, on best cleaning coulter; 5th, on best rolling coulter, and 6th, on gang plow. They also took first premium week before last at the Northern Ohio Fair, held at Cleveland. These premiums were well earned, as this plow has made an excellent record wherever introduced. We have often had occasion to speak favorably of it. The Gale Manufacturing Co. are now building a large addition to their factory, so as to be able to fill the constantly increasing orders for their plows.

Newkirk's stock food-steamer and evaporator, exhibited by the patentee and manufacturer, A. Newkirk, of Cleveland, Ohio, was awarded the first premium. This steamer is especially adapted to the general wants of the farmer and stock raiser; it is simple, durable and effective, and made of the very best material. It is simple in its construction, and is fully warranted by the manufacturer to answer all the purposes of a first-class steamer and evaporator. It heats water rapidly, and is very useful for scalding hogs and many other purposes. The furnace is arranged to use either wood or coal. We saw it in full operation, burning green bass-wood. There has been a large number of these steamers sold during the past three years, and the patentee has yet to hear of the first case in which they have not given perfect satisfaction!

The Perry Royce reaper was exhibited by Messrs. Wyckoff, Tuttle & Olin of Perry, N. Y. This reaper is celebrated for its simplicity of construction, lightness, ease of handling and lightness of draft. The separate parts are few in number, and are made of the very best material. Its weight is about 600 pounds. Although the manufacturers ran their factory to its full capacity during the past season, they were unable to fill their orders. They are at present increasing their works, and next season will be able to at least double their supply. From the talk of agents and farmers who have used this reaper during the past season, we should judge that this machine is fast becoming one of the leading implements in this region.

The Robbins's Cultivator Co. of Jackson, Mich., made a large and handsome display of their celebrated cultivators and broadcast seeders, and were awarded the sweepstakes premium. They have taken the medal at the Michigan Fair every year since 1873. The Robbins's Cultivator has been long and favorably known in this region, and is fast gaining a strong hold in Ohio, New York and Pennsylvania. It is a combined corn and fallow cultivator, with an excellent broadcast seeder attachment. It is made of the very best material, and gives the very best of satisfaction wherever used.

At the election of officers, at the Michigan State fair the old officials were re-elected. They are: Pres.—Geo. W. Phillips, of Romeo; Sec'y.—R. F. Johnston, of Detroit; Treas.—A. J. Dean, of Adrian; Members of Executive Committee—Abel Angel, of Bradley; D. W. Howard, of Pentwater; H. O. Hanford, of Plymouth; F. M. Manning, of Albion; A. F. Wood, of Mason; F. V. Smith, of Coldwater; John Gilbert, of Ypsilanti; J. Q. A. Burrington, of Vassar; John McKay, of Sheboygan; C. A. Harrison, of Paw Paw. W. W. C.

NEBRASKA STATE FAIR.

[Special Correspondence.]

BROWNSVILLE, Neb., Sept. 27.

Agriculturally and pomologically, we are in the midst, or rather nearly through with our fairs, State, District and County. The State Fair at Lincoln, and District Fairs at Hastings and Fremont, important interior points, are through with. The State Fair in some respects was the best ever held. Such a display of fine hogs and blooded horses one will scarcely see anywhere. Forty-nine imported thoroughbred stallions were in the stock arena at one time, principally heavy draft strains. It was a grand sight. The cattle show was not as extensive in numbers as at times before. The specimens, however, were as fine as could be desired—Short-horns, Herefords, Alderneys, Holsteins; Galloways, Devons, grades and "Natives." There was a good show of sheep; principally short-wools; and a better exhibit of long-wools than ever before. Hogs were generally of the black breeds—Berkshires and Polands Our people generally have discarded the white breeds. Some of the old Chesters were on exhibition, and a few choice Short-face Lancashires. A few pens, for the first time, of Red hogs—Jersey Reds—attracted attention, and were quite favorably received.

While we consider our fruit of all kinds a failure this year, there was a very creditable fruit exhibit—about two thousand plates, principally apples, pears and grapes. There were but few peaches: strange to state, nearly all the peaches on exhibition were from the interior counties, one and two hundred miles west from the Missouri River, and grown on the high, open prairie. Heretofore, it has been thought by many, that only in the Eastern counties—those on the Missouri, and south of the Platte River—could peaches be grown. I saw, picked and eat peaches from trees in the Republican Valley, over two hundred miles from the eastern border of the State—in the heart of that region designated by Fremont, Miles and other government officials as the "American Desert." The facts are that good fruits can be grown anywhere between the Missouri River and the Rocky Mountains.

It is a matter of regret among true friends of agriculture, that in agricultural products—actual fruits of the farm—our State Fair never made so poor a showing, and this, too, in the face of the fact that we have never had such universally abundant crops.

Crops of all kinds are good in every portion of the State. Seasons have been when corn and small grains have been better, here and there; but never before have there been such average crops throughout the whole State. While hand-bills and posters of State, or county fairs, show in their largest-lettered display lines—"THREE THOUSAND DOLLARS FOR THE SPEED RING"—"RACES EACH DAY"—"SLEEPY TOM WILL TROT"—and no quotations for farm products; while the premium lists provide one thousand dollars for a "Free-for-All" *Agricultural* horse trot, not one of the animals competing, being worth agriculturally, for any practical and useful purpose, six cents; while, on the other hand, twenty dollars is the highest premium for a thoroughbred draft stallion, or mare, or bull or cow, and one dollar for the best bushel of wheat, corn, oats, barley, potatoes, or for the best pound of butter, or cheese, we may expect fairs to run to "hoss trots" and that farmers will keep their products at home. The friends of trotting claim "it draws the crowd, and furnishes gate money!" If that be the only argument, an arrangement with State Executives to turn over criminals to State or County Agricultural Societies and have them publicly executed at the fairs, would draw crowds better, and be equally legitimate *Agricultural* objects!

There has been a great rush of people from from the old States to this new and rapidly developing region, especially the past season. We have quite doubled our population within the last two years; and still they come, and there is room for more. The railroad companies who own large tracts of lands, and those who purchased lands on speculation years ago, are offering most favorable terms. Lands can be had on time to suit desire of purchaser, and at low rates of interest—five and six per cent. ROBT. W. FURNAS.

VERMONT STATE FAIR.

[Special Correspondence.]

THE Vermont State Fair, held this year at the State capital, (Montpelier), was very successful. Not only was there a large exhibit in nearly every department, but the attendance was also greater than in any previous year, except when Horace Greeley, then presidential candidate, delivered the address at St. Johnsbury. The net receipts amounted to $1,200, and the accumulated funds of the Society now reach nearly or quite to $20,000.

In live stock the largest exhibits were in Jersey cattle and American Merino sheep, but the other breeds in both lines were well represented. There were several good herds of Short-horns, and also Ayrshires, while the Devons, Dutch, Swiss and Guernseys were respectably represented. Cotswold sheep, to the extent of 30 pens, were exhibited. In this class the prizes were mostly taken by entries from the Province of Quebec. There were also 15 pens of South-Downs, and the popularity of this breed for mutton and lambs is apparently increasing in the State. Few pigs were presented, mostly Poland-Chinas and Chesters. There was a large and very excellent display of poultry, embracing nearly every breed of hens, ducks, geese and turkeys. There was a number of exhibitors in this class from without the State.

The show of dairy goods, and especially butter, was unusually large, brought out in part by extra premiums offered by the Vt. Machine Co., the Ferguson Creamery Co., and the Higgin Salt premiums, all of which was special, in addition to the regular premiums offered by the State Society. By far the greater portion of this butter was from herds of Jersey blood. There were manifest evidences

of improved care and taste in the putting-up of the butter for market, small packages prevailing, and the Kennerson butter stamp (illustrated in the RURAL some time since), seemed quite generally in use. A number of the exhibits were from creameries, the number of which in the State is rapidly increasing. The low prices and Western competition have not been without some compensating advantages to the Vermont dairymen, by stimulating care in manufacture and neatness of manipulation in the dairy, and now that prices have taken a start, a much better feeling is manifest among the cow keepers in the State.

The implement show was very extensive, the chief novelty being Kemp's manure cart and spreader, which does excellent work with all kinds of manure, distributing it rapidly, evenly, and at the rate of any desired number of loads to the acre. All the principal mowers and harvesters were well represented, as well as rakes and tedders. Tillage tools of every sort, including the newest patterns of plows, harrows and cultivators, were spread out before the people.

The Hall shows were excellent, but in the way of vegetables, grain and fruit, not very extensive. The floral exhibit, though mostly by amateurs, was remarkably fine and quite large, showing, as I think, the influence of such papers as the RURAL in stimulating taste and developing horticultural skill among the people. One lady exhibitor had 95 varieties of blooming plants, another 365 varieties grown from Vick's seeds, still another 36,500 cut flowers; while bouquets, baskets and floral designs in great numbers, and displaying excellent taste, as a rule, occupied the extensive tables. It should be remarked that these exhibitors were not persons of wealth, employing professional gardeners, but the wives and daughters of plain farmers, with no horticultural knowledge other than what they have gained by reading and practice. It was to me the most gratifying part of the whole show. The display of apples, pears, plums and grapes, though not large, was choice, and showed the improvements going on in the development of new varieties specially suited to local exigencies, particularly in the colder parts of the State. Comparatively small as this portion of the show was, it over-ran the space allotted to it, thus indicating a decided advance. If we could have the advantage of a pomological organization exhibiting simultaneously with other branches at the State fair, Vermont fruit-growers could easily fill a very large hall with their choice specimens, and astonish many with her resources as a fruit-growing State. H.

MONTREAL HORTICULTURAL SOCIETY.

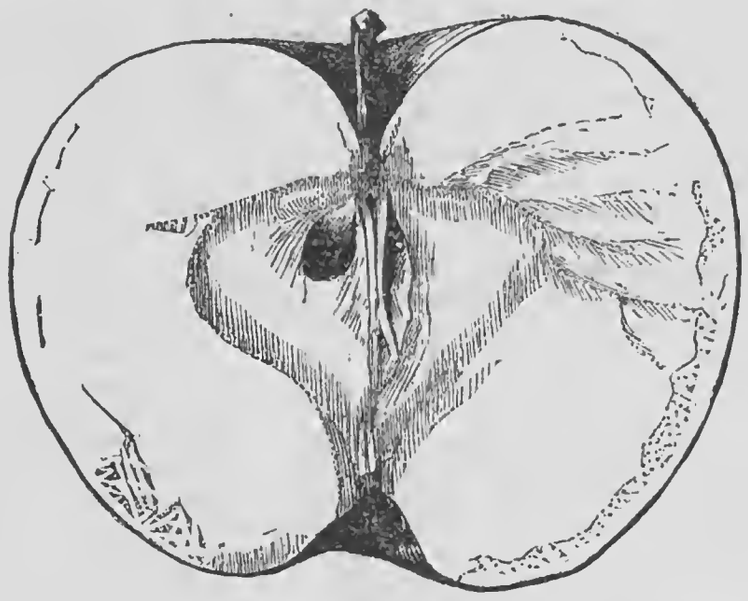
[Special Correspondence.]

THIS organization held its annual exhibition at the Victoria Skating Rink, Montreal, Sept. 16, 17 and 18. The attendance was very large, this society being one of the few in America that seem able to command the attention and patronage of the public. Part of this is to the credit of the people of the Canadian Metropolis, greatly noted for their love of horticulture; and perhaps still more is due to the skill and energy of the management. The president of the Society, B. P. Cheney, Esq., whose extensive operations in wheat growing on the line of the Northern Pacific R. R., have been the subject of much comment in the agricultural press, is also equally *au fait* in the line of horticulture. Mr. Cheney is the principal owner of the America and Canada Express, and his ample means enable him to gratify his tastes, both for farming and gardening, to their full extent. He has also taken great interest in the development of practical fruit-growing in the Province, which has been largely increased by the facilities he has provided for the rapid transportation and delivery of these products in market. His Company deliver strawberries at Montreal during the hight of the season at the rate of twenty tons a day, and nearly the whole of this trade has been developed under the stimulus of the opportunity offered to growers by one who is in sympathy with their efforts, while at the same time he is able thus to aid them. I chronicle this fact as an illustration of how easy it is for the right man in the right place to greatly help the industrial progress of a community in which he resides. Mr. Cheney is a native of New Hampshire, but for many years a resident of Montreal, which is the natural center of his great business.

The floral display at this fair was not only large, but very choice, being enriched by the contributions of the many wealthy amateurs of the city, whose conservatories, vineries and orchard houses were laid under contribution for things rich and rare. Added to this, many commercial florists, gardeners and orchardists, made liberal additions to the display, and amateurs of less means, but perhaps of equal skill and taste, vied with the richer exhibitors, and in specialties sometimes surpassed them.

But fine as was the show of flowers, ornamental and flowering plants, it was not so interesting as the display of fruits. Plums, pears and grapes were in great abundance, mostly, however, the growth of city gardens. In the country, outside of the island of Montreal, the success experienced in the culture of these fruits is but moderate, though it is increasing gradually, as hardy varieties are introduced and more skill acquired in management.

The greatest gain was in the apples, and it is a noteworthy fact that the first prize for a county collection went, this year, to one of the colder counties. Heretofore Huntingdon



ROXBURY RUSSET.

county, which borders on Lake Ontario, and has the mildest climate of any county in the Province, has taken the first premium in this contest. But this year it went to the county of Trouville, among the mountains near the Vermont border, one of the severest localities contesting this prize. The class of apples from this county was quite different from those grown in Huntingdon, embracing more of the native Canadian varieties, with some Russian and new Northwestern sorts. But in an impartial contest, they took the lead for size, fairness and beauty. This is most encouraging; for it establishes the fact that apples of good and merchantable sorts can be successfully grown in districts hitherto thought to be too cold for orcharding.

Among the newer sorts that attracted the attention of fruit growers were a number of fine plates of the new Minnesota seedling, the "Wealthy," which for size, high color, perfect form and fairness surpassed all expectation. The tree is perfectly hardy, bears young and abundantly, and though the fruit can only be classed as early winter, it must be considered a great acquisition in cold localities. It was feared that it would fail is size when brought East, but the specimens shown were fully up to the average of Baldwins. Another new apple, the Canada Baldwin, an apple of the Famense type but a long keeper, bids fair to prove very valuable, especially on heavy soils, where it proves hardy and a great bearer. The quality of this apple is very good, but the size not much above medium. What is still sought for by the orchardists of Lower Canada, is a large apple of fine color, high quality and a good keeper, and at the same time sufficiently productive for profit. Such a fruit would be most valuable for exportation. The home market is so limited that there is danger of over-production, unless a standard exportable fruit can be grown. T. H. H.

Orleans Co., Vt.

Miscellaneous.

A TRIP TO BOSTON AND ITS SIGHTS.

The City Hall and Common.

WITH the special object of visiting the annual exhibition of the Massachusetts Horticultural Society, and at the same time with the intention of improving the opportunity to visit some of the places in the vicinity of interest to a young horticulturist, I set out for the City of Notions, which, according to Dr. Holmes, is the "Hub of the Solar System." Reaching my destination about the middle of the afternoon of the 8th of September, by way of the Fitchburg road, a few minutes' walk took me to the State House, which stands on the highest spot of ground in the city. From its cupola windows I obtained a magnificent view of the city and harbor. In the main hall may be seen the remnants of the flags carried by Massachusetts soldiers in the late war, and the guns carried by the Concord minute-men in the war of independence. Not far from the State House is the Common, the pride of Boston, with its hundreds of stately Elms and broad, pleasant walks, and the Public Garden which is exquisitely laid out and contains about twenty-five acres. Near the center is an irregular lakelet of water, which is crossed by a substantial iron bridge, and contains an island with a pretty vine-clad summer-house. The stretches of green, velvety lawns, dotted and bordered with beds of flowers, are looking especially beautiful at this season. There are many fine specimens of the ribbon or carpet style of planting, the plants most used for the purpose being Coleus Verschaffeltii, Geraniums and Centaureas, and some large beds are planted thickly with hundreds of Gladioli, Japan Lilies and Tuberoses, the latter filling the air with their fragrance in the evening.

The next morning I was up bright and early and spent an hour or two in and about Quincy market. Those who have never visited the markets of a large city, can form but a faint idea of the immense quantity of provisions required for the use of its inhabitants. It is difficult for a countryman to realize that the thousands of bushels of fruit and vegetables and quantities of meat and fish brought in, go down the throats of Bostonians in a single day. After seeing the markets I visited the celebrated pear orchard of Hon. Marshall P. Wilder, reached by a pleasant half hours' ride through the rural-looking Dorchester district. Dorchester is the home of many of Boston's wealthy business-men, and elegant residences surrounded by beautiful grounds are common, but some show the effect of the hard times by the advertisement, "This Estate for Sale," frequently seen.

The Pear Orchard of Col. Wilder

is said to be the finest experimental orchard of the kind in the country. It covers about twelve acres of ground and once contained nearly a thousand varieties which are now reduced, from one cause and another, to between eight and nine hundred. Nearly every tree is bearing fruit this year, a great many are loaded down almost to breaking, and the crop is estimated at not less than 2,000 bushels. The soil is a heavy sandy loam and is plowed and kept clean by cultivation, crops of small fruits and vegetables being grown between the trees, which are from ten to fifteen feet apart, too near it is thought. As fast as the fruit is picked, it is carried to the fruit-house and placed in a cool room in the basement to ripen, and, when in the proper condition, is sorted, packed in boxes, holding a bushel each, and marketed. About thirty bushels of fine-looking (and tasting) Doyenné Boussocks were nearly ready for boxing. The Bartlett is the most popular sort, no other selling well when that is in market. On the lawns about the residence are many fine ornamental trees, among them a large and beautiful specimen of Cut-leaved Birch, which Col. Wilder thinks highly of as a lawn tree. I was kindly showed about the place by a son of the proprietor, to whom I am indebted for most of the above information.

In the afternoon a three-mile ride from Bowdoin Square in a horse-car marked "Garden Street," carried me near the entrance to the

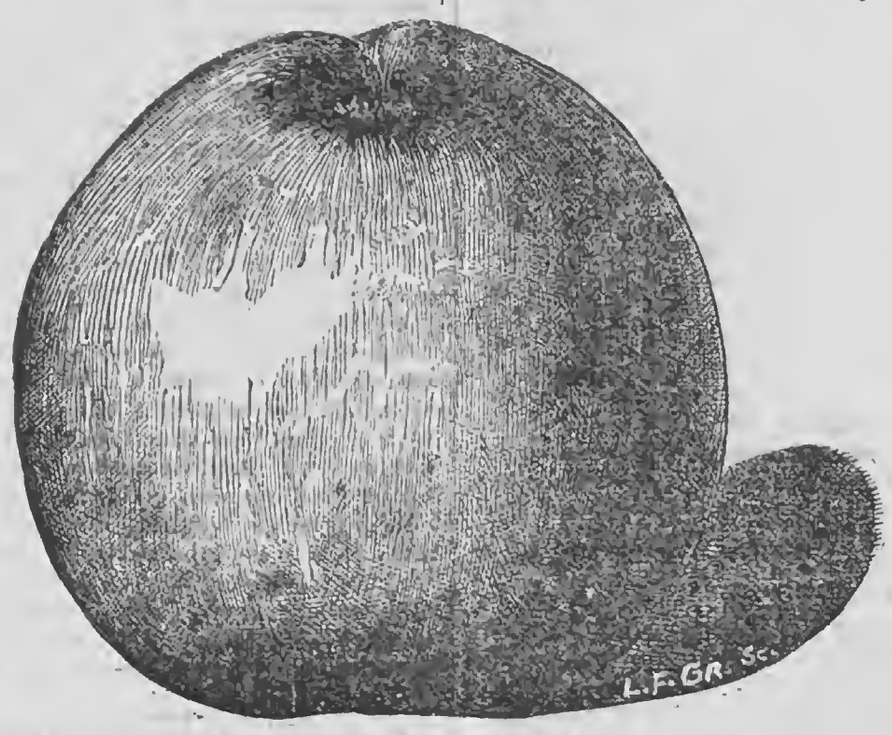
Cambridge Botanic Gardens,

which are fittingly called the Paradise of botanists. About 3,000 species of hardy plants are cultivated in the gardens and 2,000 species of tender plants in the greenhouse, and a student of botany can here gain a better knowledge of the flora of the world than could be obtained from books by months of study. The plants are plainly labeled and classified as far as possible, and Mr. Falconer keeps everything in most excellent trim. The most conspicuous plants now in flower are the numerous species of Solidago (Golden-Rod), and Helianthus (Sunflower), with their wealth of golden flowers, and the Asters, many of which are well worthy of culture in private gardens. Planted among rocks and trees on one side of the garden, so as to give them the conditions of their native homes, are the hardy orchids and spring-blooming plants and bulbs. Secluded from the main part of the garden by the Willows which cover its grassy banks, is a small pond filled with a great variety of aquatic plants. But to mention even a small part of the interesting things to be seen here, would be too great a task; but I must not forget the bed of Cacti planted out in front of the greenhouse, containing, I should think, a hundred species at least, and all looking as green and healthy as though growing in their native climes; nor the fine specimen of that beautiful evergreen tree, Abies Menziesii. This tree is a native of the Rocky Mountains, is perfectly hardy, and the foliage is of a steel-blue color, contrasting finely with the deep green of the lawn, all of which should make it one of the most popular of evergreens.

Exhibition of the Mass. Hort. Society.

The Mass. Horticultural Society, which has done so much for the encouragement of horticultural taste, celebrated its Semi-Centennial Anniversary on Sept. 9, 10, 11 and 12, by holding one of the best exhibitions ever held by it, fully sustaining its reputation of standing at the head of horticultural Societies. Among fruits the pear took the lead this year, nearly 600 plates having been on the tables; all the leading varieties and many that are unknown outside of large collections, being represented. It was too early in the season for most varieties to show to the best advantage. Souvenir du Congres and Beurré Clairgeau were particularly noticeable for large size and fine appearance. A plate of medium-sized Flemish Beauties was exhibited by Wm. Currier, of West Gloucester, which were grown on a graft put into an apple tree 35 years ago; and cuttings of both graft and stock were also exhibited to show that the tree is still vigorous. The exhibit of apples was small in quantity, but some fine specimens were shown. Though early for Grapes, the display of both native and foreign sorts was good. There was a small but choice collection of peaches and plums, and some luscious-looking Early Crawfords measuring three inches in diameter by the rule.

The display of plants and flowers in both quantity and variety was said by good judges to be the best ever made, Hovey & Co., Wm. Gray, Jr., H. H. Hunnewell and S. R. Payson being the largest exhibitors. The first prize for the best specimen plant was awarded to Mr. Hunnewell for Sphenogyne latifolia, and also first "for the best specimen plant not offered in any other collection." Anthurium crystallinum, a magnificent plant with thick, dark-green, velvety leaves, about two feet long and half as wide, having large greenish-white veins, attracted the admiration of all. Among many other rare and beautiful plants that were much admired were Ficus Parcellii; Croton pictum, C. interruptum and Wisemanii; Agave Schidigera, Phyllotænium Lindenii and Alocasia metallica. There were fine specimens of the newer varieties of Coleus, and collections of large and well-grown specimens of fancy Caladiums. Mr. Carl Schaeffer exhibited fourteen varieties of Tuberous Begonias selected from 150 seedlings, some of which surpassed the named sorts. Palms and Ferns were shown in great variety. The exhibit of Gladioli, cut-flowers and bouquets was good. The display of vegetables was very large and of great variety. The tomatoes were especially noticeable, the show consisting of about forty plates of the leading varieties, and I noted that the Acme received the first prize as the best variety for which a premium was not offered in the schedule.



GOLDEN RUSSET.

A pleasing feature of the exhibitions of this Society (and one that many smaller and some large Societies would do well to imitate), which adds greatly to the attractiveness of the display, is the uniformity of the arrangement of the exhibits, competing articles or varieties being placed in proximity, so that comparison can be easily made by judges and visitors. An exceedingly interesting address by Marshall P. Wilder, giving a brief history of the progress of horticulture from the organization of the Society to the present time, was delivered on the last day of the exhibition.

Amherst, Mass. YOUNG RURALIST.

NOTES ON VARIOUS TOPICS.

S. RUFUS MASON.

Breeding for a Purpose.

PROFESSOR BLOUNT is still trying to improve his corn, but it will be a difficult thing to do, as it is so extremely susceptible in its nature. I have now growing, from RURAL seed sent me this spring, a small patch. I also have, some 500 feet off, a patch of between two and three acres from seed grown by myself here on my farm last season (1878), from seed got directly from Professor Blount. My own seed was selected from nearly four bushels—the product of 120 hills of the original seed—by discarding all ears having less than 10 rows. I got about a peck of this seed, and planted it all this season (1879). I made this selection because Western farmers do not like corn with so few rows. I am trying to improve in this way at first. I don't think it safe to undertake too much at the outset. I mentioned that Blount's corn was very susceptible—it is evidently an aristocrat. The corn in my large patch is doing remarkably well. I put it upon land that has never been manured, as I am growing it for seed, and I want it to be honest seed.

The RURAL patch is on the same sort of land on which I put Blount's seed in 1878, and it was manured for the first time then by putting a shovelful of a mixture of one-third of old hen manure and two-thirds of common soil to each hill, after the corn was up.

The RURAL seed—one seed to a hill four feet apart each way—on this manured land, suckers heavily, and most, if not all of it has an ear. But corn suckering in a field planted three or four grains to a hill, and the hills four feet each way, and on heavily manured land, would not produce a single ear of corn: it would soon be a thicket and smother itself out, or at least turn to a grand article of corn fodder. If in this section we are going to grow this corn for *corn*, we must plant thinly, on poorish but on very clean land, and only cultivate just enough to keep down weeds. Too much manure or too frequent stirring of the soil, excites it so much that we should need a step-ladder at husking time. My field of corn does not sucker at all: it has grown just as I would have corn to grow, has met with no mishap so far, is ripening fast and is very prolific. Having now had two seasons' experience with this corn under varied conditions of both seed and soil, I give my deductions as above, *pro bono publico*.

A New Trick in the Trade.

Last fall I planted some plum stones in my garden; they grew about as usual, except one plant which is double the size of the rest. Close by it came up a parsnip from accidental seed. I believe the parsnip in its rapid growth, shooting its root down by and in contact with the plum roots, kept the soil loose and thus favored their growth unusually. It is worth further experiment.

Road-Making.

"There is no royal road to anything," it is said; every one must make a road for himself, then I ask how came those ruts?—Few men in any pursuit follow it long without making a mark of some kind; out of these a very few leave their marks *above* the road, like a telegraph wire, the posts representing their peculiar ideas, and the wires, the chain which connects and forms them into a whole. But the many, unable to lift their ideas above the common level, form ruts, going deeper and deeper until they engulf themselves, and are smothered in the muddiness they have created. The difficulty lies in early life; the path upon which the youth started in his career, was a "blind" one: it was beset and encumbered with clumps and stones, which made it a "hard road to travel," and the traveler, ignorant that, not what was before him, but what he left behind, formed his character, rushed toward the goal, leaving nothing but ruts to show his progress.

His energy spent, his brain weakened by fruitless efforts, his courage lost, retrospection commands but a sorry view. In our early days, the objects of life seem mere playthings, but when we are near the close of our career, we see that a little more *work* would have made a smooth road for our thoughts to travel back upon, and encourage others to at least follow our lead. These remarks have a moral, physical and intellectual application, and even to those who have got well along in their journey I may gently hint—it is not to late to mend.

Where is it All to End?

Is progress a forward or backward motion? Population increases, it must be clothed and fed, meat and grain are the staples, and the demand is constantly for a better quality. We take a breed of hogs, for instance: it has many good qualities, but is not quite perfect. We cross it; we shorten the head; we lengthen the body; we throw weight into the hams; we decrease the offal; we increase the net profit on each animal; but do we get all this for nothing?—I fear not, in fact I *know* we don't. Well! what is the cost of all this gain? First, answer me this:—How many pigs did good sows formerly have at a litter? Answer: from 10 to 15, yes, and raised them all, and when sold they would weigh from 400 to 600 pounds, dressed. Now how many pigs will our best improved breeds produce? From five to eight only, and if at two years they will reach 400 pounds, they are called grand. We will not consider prices, although they are vastly in favor of the past, but are no part of the breeder's especial skill. It is not worth while for me to figure up how much *money*—and after all that is the only test, as glory doesn't pay—can be made by the two sorts; every one can see for himself. Now, will some one please answer my question at the head of this article.

Dodge Co., Neb.

Farm Topics.

THE TRUTH ABOUT IT.

[THE object of articles under this heading is not so much to deal with "humbugs" as with the many unconscious errors that creep into the methods of daily country routine life.—EDS.]

"SHALL HE BE A PRACTICAL OR SCIENTIFIC FARMER?"

IN one of the "Brevities" of the RURAL NEW-YORKER of Aug. 16, the words above quoted occurred. The inference to be drawn from them seems to be that there is a difference, and a sort of antagonism, between the meanings of these terms; that a farmer cannot be practical and scientific both; and that if this be true and the practical farmer is the real one, the scientific farmer is a sham. Now, the writer of that item possibly did not mean all this; but the logic of the sentence is incontrovertible, and the deduction must stand. Unfortunately, there is a very prevalent idea that a scientific farmer is one who is full of crotchets, whims and oddities, who spends money in his farming without any idea of getting it back again, and who is to be considered as an example of all that is wild, foolish, reckless and extravagant.

This idea is not only erroneous, but injurious to a class of men who have done more to improve the practice of agriculture, and the character of the so-called practical farmers, than any other influence whatever. It is the scientific farmer who buys and uses the first ton of artificial fertilizer that is brought into his locality, who introduces the corn planter, the wheat drill, the wheat cultivator, the mower, the agricultural paper, with all that the use of that beneficial influence implies; who brings into his locality a pure-bred bull or ram, or boar, and generously permits the neighbors to use it and profit by it; while many of these laugh in their sleeves, and remark that "neighbor Moneybags will soon run to the end of his tether; that when he is sold out, there will be a fine vendue;" and facetiously quote adages and proverbs regarding fools and their money.

This is a specimen of your scientific farmer, a man of large mind usually, generous, liberal, of business habits, who does not often spend a dollar without knowing where it is going to; but who is very willing to invest hundreds or thousands, if he has them, if he can see in the distance a profitable return for his expenditure, and will wait patiently for his reward. For years back the truly scientific farmers have been draining, fertilizing and improving their land; have been improving seeds and live stock; have been testing implements and applying new methods; and all these innovations have been closely watched by your practical farmers who have been ready enough to adopt those which have turned out to be successful. The fact is, the scientific farmers are the really practical men in their business, for it is surely practical to use every method and appliance for making one's labor more effective and profitable, and quite unpractical to neglect them, and to be content with half-pay for one's work.

If we compare other industries with agriculture, we shall find the same true of them. The most practical electrician is Edison, and he is the most scientific; the most practical shipbuilder of his time was Ericsson, and his most scientific achievement, the building of the Monitor, was the most practical, and laid the foundation of the present iron-clad navies of the world. The most practical engineer of the present day is Capt. James B. Eads who, by the most scientific application of the principles of his profession, has opened the Mississippi River to the fleets of the world by removing the bar which closed this highway of a whole world's commerce.

It is the same with all others: the scientific men are the truly practical ones and keep the practice of their professions and arts in constant progress, and to these really practical men are we indebted for all the advance which the world has made in the past half century. It is time now that the term scientific farmer should be held to mean something more than that formerly reproachful term, "book farmer," and that it should be given at least a parallel meaning with the term practical. There are working farmers who are not practical, but a scientific farmer is eminently a practical farmer and can be nothing else; for if he is not practical, he is a quack and a humbug, and no scientific man at all. S.

Remarks.

It strikes us that there is a good deal of fallacy in the above article, which comes to us from one of our most popular agricultural writers. What makes a scientific man? Is he scientific who is engaged in the *pursuit* of pure knowledge? No, the knowledge must be gained. Science is true knowledge. Of what? Of one thing, or of all things? It is well to understand the difference between *science* and *art*, and to keep the plain distinction in mind. Our farmers can never be *scientific* farmers in the right sense of the word. It would be *impracticable* for them to become so. The pursuit of any single branch of science, with a view to original results, requires an amount of time and labor which the average farmer cannot give, even though his investigations ended in important inventions or discoveries.

A *good* farmer is not necessarily a "scientific" farmer, though good farming is necessarily based upon scientific principles. A good farmer has the intelligence to apply the teachings of science; to understand and to accept the conclusions which scientific investigations have revealed. The average farmer—by which term we mean him who depends upon his farm for support—has no time to inquire and to experiment for the sake of *knowledge*, but for the sake of production. He can be a scientist only to the extent that he is quick to apply the system of rules which science establishes. Science *must be* a profession in itself. Scientific truths of great importance are rarely ascertained by chance, and only those who devote their lives to scientific research have been eminently successful in adding materially to our knowledge. The *good practical* farmer is he who knows how to adapt scientific teachings to his own surroundings and circumstances. He has the practice, the skill, the education, the *art* to do this. He may follow rules, but he has little time for original inquiry.

We assert that the agricultural scientist would starve if he were dependent upon the products of his own farm for support. Can "S" tell us how much it cost to prove that artificial fertilizers could be profitably used in agriculture? How much did the corn planter, the wheat drill, the mower cost those who invented them and caused their usefulness to be made known? Such men are scientists. There is no science in being early to make use of the discoveries or inventions of others. "All these innovations have been closely watched by your practical farmers, who have been ready enough to adopt those which have turned out to be successful," says "S." That is precisely what we want our farmers in general to do. We want them to hasten to avail themselves of the benefits of scientific research. But we want specialists to make those researches. No other journal has been more earnest than this in advocating that farmers educate themselves as far as may be, and that, especially, they educate their sons—not, however, with the view of making them scientific farmers, but in order to enable them to take advantage of agricultural science as it develops.

Dr. J. B. Lawes is a scientific farmer, and he has spent fortunes in chemical researches which have brought to light valuable facts which must benefit agriculture everywhere and for all time. Does "S" advocate that every farmer should become a chemist? that laboratories, rain-gauges, etc., etc., should be established or constructed upon every farm? We would that we might hear less of scientific agriculture and scientific farmers. It is useless to reply that scientific farming merely means good farming. It means something else, or it means nothing. Educated farmers will hasten to avail themselves of all methods which will increase their crops with the same or less labor. But a farmer's life is inimical to scientific investigation to the extent which makes that word applicable to his pursuit.—EDS.

FARM HINTS.—A correspondent from Berlin, Conn., says, that the best purifier of cistern water he has ever tried is a bag of charcoal. Lower it into the cistern with a stone attached to it, to keep it down. The amount of charcoal should vary with the size of the cistern. To change it once a year is often enough. For scaly legs in poultry he has found an effective remedy in a mixture of common kerosene oil and lard, to be applied freely every second day. He has found by experience that this would cure the ailment in a short time.

Sheep Husbandry.

MUTTON AND WOOL.

PROFESSOR E. W. STEWART.

THERE are many considerations which seem to point to a great increase in the consumption of mutton by the people of this country, in the near future. The farming class is a very large proportion of the whole population—embracing, directly and indirectly, more than eighteen millions of people. This class now consumes much more pork than is conducive to the best health, not perhaps because pork is preferred to beef or mutton, but because it is more easily preserved during hot weather. A beef animal is too large to be used by the farmer in hot weather, but sheep are well adapted to furnish the farmer's summer fresh meat, as, with a proper refrigerator, he can use the carcass of a sheep at any time, and the introduction more generally of mutton into the farmer's summer diet would not only greatly promote health, but would create a large home market. It would soon lead to a vast extention of mutton and wool growing throughout the country. A few sheep could be accommodated on a large majority of farms in the older States without much interfering with other operations, and no doubt with an increase of profit. The best system for most farms is variety of products, not trusting the "eggs all in one basket." Variety leads to great economy of resources. A small flock of sheep will bring into use neglected spots and fence corners, will turn to account the gleanings of grain fields and consume many things not as well relished by cattle.

Portable Hurdle Fence.

And as we are treating of improved culture from a better marshaling of all the undeveloped farm resources, let me say that one of the first improvements needed in sheep-keeping on all the farms in the older States, is 50 to 100 rods of movable hurdle fence. By using the hurdle, any piece of after growth or stubble growth may be surrounded in an hour, and the sheep or other animals confined; then the hurdles may be moved over the field till every part of it is eaten and turned into flesh and wool. This will have a double advantage—turning the green food into money and killing many weeds. The portable or rolling hurdle is most convenient, as it is placed so quickly, and rolled so easily along, day by day, to supply fresh herbage, that its slight additional cost may well be afforded.

In this way a flock of considerable size may be kept all the fall upon stubble fields, without interior fences. With small flocks thus kept, it is also easy to add a small grain ration, which, in the warm season, will fatten them rapidly for market. It should always be a prime consideration in feeding sheep for market to do as much of it as possible in warm weather. And if they are to be kept till January or February, still, the feed should be very generous in the fall, that they may be fat enough for the butcher at the beginning of cold weather. It will then be easy to carry them to February in fine mutton order; and it will require much less food to do this than if they are only in a growing condition when cold weather begins. A small grain ration in September and October, on grass, will push them faster than a large one in cold weather. Where only small flocks are kept—and these should be upon most farms—the only profitable system will be that of early maturity and quick returns. A given amount of food will produce more live weight on a sheep in one year than in two; it must, therefore, be most economical of food to keep sheep, intended for mutton or wool, on full rations at all times.

Early Lambs.

The farmer with a small flock has them so under control that he ought to be able to produce the most profitable result. He may understand the needs of each animal and provide for each. He will find one of the most satisfactory items of profit in the sale of lambs. They will bring a better profit for the food expended than older sheep. It costs less to grow the first hundred pounds upon a lamb than the second hundred, or any proportion of it. The food of support is less in the young than the grown animal. Hence a large proportion of what the lamb eats, goes to increase its weight and the consequent profit. Early lambs sell for the best price, and where the shelter is warm enough to insure the safety of lambs coming in January, February and early in March, the extra price will well repay the extra care and food. It is but a few years since

that a lamb of 40 to 45 pounds would bring $8 to $10 in April or May, while late lambs bring but little more than fat sheep. But where the shelter is not such as to protect the young lamb from the rigor of the cold, it is not judicious to attempt raising early lambs. The risks will be greater than the chances of gain.

But whether lambs be early or late, they must furnish a large proportion of the profits of the flock. And to facilitate this result the shepherd should see that each lamb has a full supply of food. The dam sometimes gives less milk than the lamb can thrive on, in which case it should be taught to suck warm, fresh cow's milk from a bottle. But good judgment must be used to know when the lamb has enough—over-feeding being nearly as bad as under-feeding. A slight amount of extra food will produce a marked difference in the thrift of the lamb, and 10 pounds in the weight of an early lamb will add, very often, fifty per cent. to the market price. Early lambs, properly fed, should average, when 80 to 100 days old, 40 to 50 pounds, or one-half pound per day of age. Such lambs will always bring the top figure.

The ewes, whilst sucking, should be fed with reference to the production of milk as much as a herd of dairy cows. And in view of this, the ewes should be selected with regard to capacity for secreting milk. The best milkers will raise the best lambs. But the dams require succulent food, such as some one of the various kinds of roots, and, when these are not at hand, oil-meal, oats and wheat middlings mixed in equal proportions, one pound to each ewe per day. This will be paid for in the growth of the lamb and in the condition of the ewe. It will cause the dams to give excellent suckle to the lambs through the cold weather. These ewes should also have the best hay in the barn. When these early lambs are two or three weeks old it is well to teach them to lick a little wheat middlings, and gradually accustom them to take such food as will develop the first stomach and cause them to chew the cud. Strict attention to all these matters will be well repaid in the market-price of the lambs.

A CHANGE IN FARMING—GROWING COMBING WOOL.

COL. F. D. CURTIS.

A FLOCK of combing-wool sheep may be bred in two years, as a second cross would be three-fourths that of the ram. The quality of the wool would depend upon the blood and in making the cross. In all cases a pure-bred ram should be used—and one with as long a staple of wool as possible coupled with a good strong constitution. A careful breeder would look particularly to the form of the ram and select one with short legs, a small head, a broad, full chest and a broad back. The ewes may be Merino, in which case it would require at least three crosses to change the short and oily wool characteristic of Merinos to the combing standard. If the ewes should happen to be coarse-wooled, the desired quality may be obtained sooner. The Canada grade coarse-wooled sheep are the best for the purpose, and may be obtained for about $2 each, and brought into New York at a cost of less than $4, including 20 per cent. duties and the freight expenses. A pure-bred Cotswold ram may be purchased for from $25 to $50, and a Leicester for the same. The breeders of pure Leicester sheep are very few in the States, but in Canada what are called Border Leicesters are plentiful. We had the last flock of pure-bred Leicesters we know of, purchased by us of Messrs. Nolcott & Campbell, New York Mills, and imported by them from Yorkshire, England. The flock has run out, the Leicesters not being suited to our severe climate.

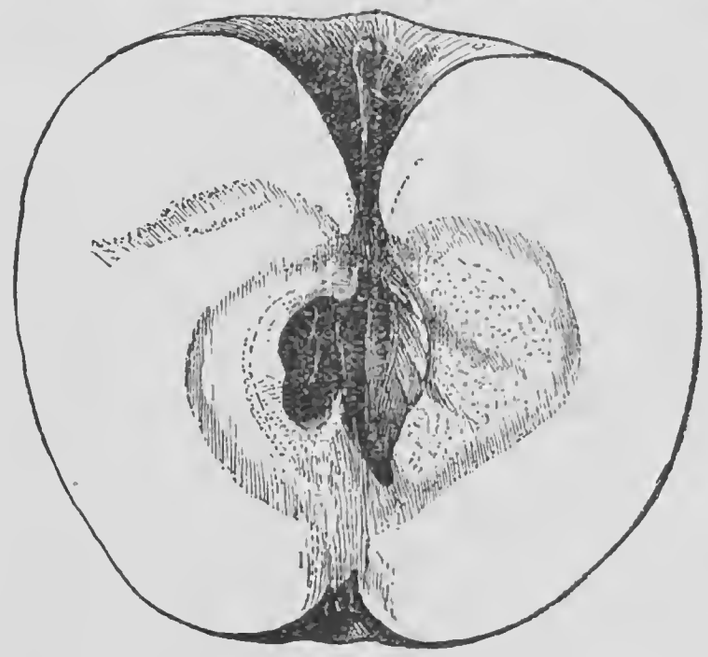
Cotswold rams are plentiful and, with good care, a yearling ram can be made to cover two or three hundred ewes. He should be kept in a stable and be liberally fed and allowed to serve a ewe but once; as soon as served, the ewe should be removed from the flock. The restraining of the sire to one service will insure vigor on his part and produce more twins and stronger lambs. Lincoln sheep have the longest and most lustrous wool when imported, but whether they will maintain this superiority in this country we do not know, but they undoubtedly will for a time. The continuance of the luster will depend upon the care they receive. They are a cross between the Cotswold and the Bakewell Leicester, and possess the size and vigor of the Cotswold with the beautiful staple of the improved Leicester. Careful selection and high feeding have brought them up to a high standard. The only flock we ever saw was that of Messrs. Nolcott and Campbell who imported them about a dozen years ago and are still breeding them. They have spread somewhat, but the number in this country is quite limited. A flock of pure-bred combing-wooled sheep is the most desirable, but is not within the reach of every farmer. A small capital comparatively will enable any one to obtain a good flock by crossing. By saving all of the ewe lambs and continuing the cross of the same blood, an improvement may be made from year to year. In all of the dairy districts the local markets *will* absorb the male lambs at remunerative prices, or the surplus may be sent to other markets.

Field Crops.

NOTES FROM THE RURAL FARM.

Wheat Experiments.

UPON our wheat field for another year oats were raised the past season, corn in 1877. It had been in pasture for six years previously. For corn, Mapes's corn fertilizer was used in the hill. For oats a special oat fertilizer was sown at the rate of 500 lbs. per acre. The oat



ESOPUS SPITZENBURGH.

stubble was plowed under Aug. 28. The field was manured with barnyard manure Sept. 8th, at the rate of 15 two-horse loads per acre. On one part, however, concentrated fertilizer (Crocker's "Ammoniated Bone Superphosphate") alone was used. The guaranteed analysis is as follows:

Soluble phosphoric acid	6 to 8	per cent.
Precipitated " "	2 to 4	"
Insoluble " "	1½ to 2½	"
Ammonia	3½ to 4½	"
Sulphate of Potash	1 to 2	"

The entire field was twice plowed six inches deep, then harrowed, rolled, cross-harrowed and diagonally harrowed. Clawson wheat, at the rate of one and a half bushel, and the above fertilizer at the rate of 250 lbs. per acre, were then drilled in. Three quarts of timothy per acre were sown. We shall harrow in the spring and sow clover.

Special Plots.

No. 1. FULTZ. Drills 12 inches apart, two inches apart in drills. The same fertilizer (the analysis of which is given above, and which we shall designate as C) *sown in drills* at the rate of 500 lbs. to acre.

No. 2. FULTZ. Same as No. 1, except that C was sown broadcast.

No. 3. FULTZ. Drills six inches apart—*no* fertilizer.

No. 4. FULTZ. Drills 12 inches apart—*no* fertilizer.

No. 5. LOST NATION, (from Dr. Hoskins, Newport, Vt.) Drills six inches apart, 500 lbs. C to acre sown broadcast.

No. 6. ARNOLD'S GOLD MEDAL. Sown broadcast. No fertilizer.

No. 7. WYSOR'S FULTZO-CLAWSON. (See Wheat Number of RURAL). Sown broadcast. C at rate of 500 lbs. per acre.

No. 8. ASIATIC WHEAT: 42 kernels (the largest we have ever seen) planted in two drills one foot apart and 33 feet in length. Three drills of BENTLEY (from H. A. Whittemore,) one foot apart, 10 inches apart in drills.

Eleven drills of KNIGHT'S EXCELSIOR (supposed to be a new variety), same as preceding.

Seven drills of GOLD-DROP same as preceding.

Seven drills of OREGON, same as preceding. On this plot (No. 8) C was sown at the rate of 800 lbs. per acre.

No. 9. MOLD'S WHITE WINTER. (Bliss) Drills 12 inches apart, 900 lbs. per acre of C.

No. 10. Mold's White Winter. Drills 12 inches apart. 900 lbs. *unleached ashes.*

No. 11. DEFIANCE. (Bliss). Drills 12 inches apart. 600 lbs. of unleached ashes *and* 600 lbs. of C.

No. 12. DEFIANCE. Drills 12 inches apart, 600 lbs. of C.

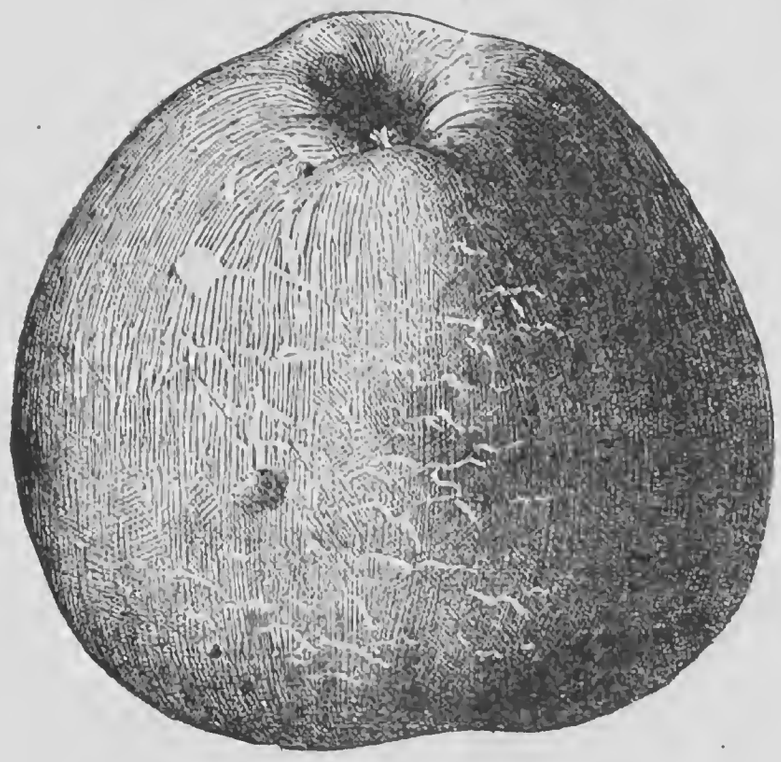
No. 13. CHAMPLAIN (Bliss). Broadcast. 240 lbs. salt—240 lbs. of C.

No. 14. MOLD'S RED WINTER. Broadcast. 1,800 lbs. of C.

No. 15. SHUMAKER. (Mich. Ag. College.) Broadcast. 600 lbs. of C per acre.

No. 16. SILVER CHAFF. Drills six inches apart, 600 lbs of C.

The Clawson field and all of the above plots received a final rolling after the seed was sown. The first was sown Sept. 19; the special plots Sept. 18.



RED CANADA.

The Poultry Yard.

POULTRY AND POULTRY BREEDING.

A. M. HALSTED.

THE science of poultry breeding has grown incredibly during the past few years. Most of us can remember when the chickens were looked upon as a necessary nuisance, to be tolerated only because the female portion of the household looked to them for a supply of pin-money. And those, to us bygone days, are still things of the present in many sections of the country. The fowls are regarded as a species of free-booters, and allowed to range at will. The weight of full-grown fowls in those days was perhaps on the average 3½ pounds: now frequently they weigh eight to nine pounds at maturity, and broilers are made to weigh one-and-a-half pound at six weeks old. Eggs then averaged 12 to the pound, now eight or nine, and even seven. The same ratio is noticeable in ducks, geese and turkeys. Fifteen or sixteen pounds were formerly considered extraordinary weight in turkeys, and if a pair of ducks reached eight pounds, the producer was well satisfied; he had something above the average. Now we often find turkeys in our market weighing twenty to twenty-five pounds, and ten pounds are not an unusual weight for a pair of ducks, while twelve and even fourteen are not uncommon. The same is the case with geese: the improved breeds, Bremen and Toulouse, are often in our Christmas markets weighing twenty pounds; and pairs of the latter have been exhibited in England which weighed, alive, *fifty-six pounds*:—nearly or quite double the weights of good specimens twenty-five years ago.

Nor is the improvement confined to size and weight. Quality as well has been looked for: A plump-bodied, full-breasted, yellow-fleshed and juicy, tender-meated chicken now takes the place of the lean and tough broiler of bygone days. In eggs, too, we find the improvement equally noticeable. The idea that "an egg is an egg," no matter whether fresh or stale, whether stringy and tasteless, or meaty and rich, has exploded. If the fowls have to shift for themselves, getting a precarious living in the barn-yard, or wherever they can pick it up, the eggs can not have the rich melting quality which results from a good, generous diet of grain and prepared food. We might as well expect the same quality of meat in the half-wild Texas steer, as we get in the well fed, pure-bred Short-horn. A thoroughbred, whether of cattle, sheep, swine or poultry, may be relied upon to make a better quality of food than a so-called native mongrel. In egg-production, as in butter, the thoroughbred produces the choicest quality.

Premising this much brings me to consider especially the means of attaining these improvements which is through careful breeding and selection. The two systems, natural and artificial, I shall not contrast, but rather show the use of each and how the second is but an addition to the first. I am well aware that many people ridicule the idea of artificial hatching and culture, and to such self-complacent plodders in the old path, I have nothing to say.

I shall consider this subject as applying to persons rearing poultry for market. The same treatment modified will meet the needs of the small breeder. As to location, I prefer a dry situation, a southern slope on the bank of a lake or pond, or, better, a small stream, with low underbrush. As to buildings, a number of small houses is preferable to one large one. They may, for economy's sake, be built double for two yards of fowls, letting the dividing fence join the houses in the the center. Each yard should accommodate 50 hens, four cocks, and be at least three-quarters of an acre, two-thirds in grass and the rest kept mellow by weekly spading or plowing. The hight of fence must be regulated by the breed of fowls kept. In addition to the buildings for breeding stock, there must be a setting or hatching room, a nursery for young chicks partly roofed with glass, and another room into which they may be turned when four or five weeks old.

In the selection of stock the breeder must be governed by the object to be gained. If it be eggs, Leghorns, Houdans or a cross of these upon some other breed, will be best; if to fatten for market, Brahmas, Cochins or Plymouth Rocks, will prove most satifactory, though there is a great difference of opinion on this point. In the laying stock it is best to have one-half pullets of last season's hatch and the remainder hens, one year old. By this selection we have no cessation of eggs. The pullets commence laying in the fall or early winter, and by the time they have laid their first clutch, the hens are ready to take up their share of the work. Select strong, vigorous males, with a long, loud, full crow. Mate the pullets with the cocks, and the old hens with the cockerels. This mating gives a stronger and more vigorous progeny.

As to the care of eggs, they should be gathered twice a day in cold and once in warm weather, best in the evening. According to the tabular statement which lately went the rounds of the press, said to have been based on a microscopic examination of the ovarium of a hen, the number of eggs possible for any one hen is 600. This number was allotted as follows:

During the first year after birth, the hen was supposed to lay			15 to	20
During the second year			100 "	120
"	third	"	120 "	135
"	fourth	"	100 "	115
"	fifth	"	60 "	80
"	sixth	"	50 "	60
"	seventh	"	45 "	40
"	eighth	"	15 "	20

But for once, science was wrong, as it has been frequently proved of late years that Leghorns and other non-sitting breeds will frequently lay 1,000 eggs during their lives. In my own experience I have had an annual yield of 175 eggs per hen, for two consecutive years from the same fowls. Of course, this production of eggs was forced. The present year, from Jan. 1st to Sept. 1st, from an average of 43 hens, I have gathered over sixty-two hundred eggs.

In breeding for profit this production of eggs should be forced by proper feed and care. Assuming the table given above, to be correct in the proportion of eggs laid at certain ages of the fowl, it follows, that to get the full value of the egg production, we must keep her until the fourth year.

If by proper care and attention, we can cause her to lay three-fourths, or more, of that possible number during the first two years, we can fit her for market, and fill her place in the yard by a younger fowl to be put through the same forcing process. It is folly to keep and feed a hen four years when the bulk of profit may be obtained from her by proper care and feeding in half that time.

Everywhere.

RURAL SPECIAL REPORTS.

N. Y., Clinton, Oneida Co., Oct. 1.—As the season for frosts has arrived with the beginning of October, and consequently the season for vegetable growth is virtually closed, I will no longer defer reporting as to my success with certain seeds, so kindly sent from the RURAL office, in its free seed distribution. And, first, I will say of Blount's Prolific corn, while it may be successfully cultivated in a more Southern latitude, I am convinced that it is not adapted to any portion of Central New York. I planted the seed furnished me, on the 12th of May, but as the balance of the month was quite unfavorable for vegetable growth, the plants were a long time in coming up; but finally made their appearance, though quite irregularly. As the season advanced, it showed a vigorous growth of stalks, attaining a hight of from 10 to 13 feet, with from two to six ears on a stalk. But when the first frost struck it, on the night of the 25 h of September, not one kernel of it was sufficiently ripened for seed, while all my other varieties of corn were fully ripened, and secure from damage by frost. Besides its lateness in ripening, I find other objections to it for my use. I do not care to cultivate a corn which bears its ears eight or nine feet from the ground, rendering a step-ladder necessary to pick them, or a hatchet to cut up, by the ground, stalks having the circumference of my wrist, and almost worthless for feeding to stock. Therefore I say, no more Blount's Prolific corn for me. Of the Beauty of Hebron potato, I received a little over two ounces of seed. From this small sample, I succeeded in getting eight plants, which were planted in as many hills. They were planted in my garden, on the 10th of May, by the side of my Early Rose, for a comparison. Of course, they both received careful garden cultivation, as I desired to give them a fair trial. It occurred to me afterwards, that for a fair test, I should have cut the seed of the Early Rose into as small pieces as I was obliged to make of the Beauty of Hebron.

As it was, I found that the Early Rose were the first to appear above ground, which I attribute to this difference in the condition of the seed planted, and to me it is additional evidence of the folly of being niggardly in the use of seed in planting. Possibly, for the same reason, a smart white frost which appeared on the morning of the 23d of May, cut the Beauty of Hebron down close to the ground, while the Early Rose seemed unharmed. Or, is the Beauty of Hebron the more tender? I could perceive no difference in the time of the ripening of the two kinds, so far as the decay of the tops would indicate, and on harvesting them, about the first of September, there was no perceptible difference in the appearance of the potatoes as to shape, color or size. From the two ounces of seed planted of the Hebrons, I had 10 pounds of potatoes, which I considered very fair for the quantity of seed planted. If the estimate is made from the quantity of ground occupied, the yield would be nothing extra. I have saved all for seed, and shall make a more thorough trial on the farm, in field culture, next year. Of the Pearl Millet I have but little to say. Probably in consequence of the seed having been planted too early, and an unfavorable spring, but little of it germinated. The vigor of the growth of the plant did not at any time equal my anticipations; and as it has failed to ripen its seed, I shall probably not try it again, for I see nothing to convince me that it is to be preferred to sowed corn for soiling purposes in this locality, which is considered fully as favorable as the average of Central New York. The Acme tomato proved quite satisfactory to us, ripening fully as early as the Golden Rural, and some ten or twelve days earlier than the Trophy, which is classed as a rather late variety, but is admirable for canning purposes. I shall continue to cultivate the Acme, both on account of its early ripening, and of its flavor, which is excellent. Indeed, in the latter respect it may be marked as one of the *very best*. The Seedling Bronze Ricinus proved very satisfactory. It is an improvement on the R. Gibsonii, heretofore considered as the best. Of the other seeds received, I may report at a future time. RURAL subscribers are certainly greatly indebted to its conductors for their free seed distribution. It is very warm here at present, and we are suffering greatly from the need of rain. Springs, streams and wells are failing, and we are but illy prepared to extinguish a fire, if one should occur, for our fire department would be almost useless, because of the scarcity of water. L. R.

N. Y., Madalin, Dutchess Co., Sept. 26.—I have been a subscriber to the RURAL for many years, and think the present volume more interesting than any of its predecessors. Your seed distribution has added a new source of interest. Each recipient becomes interested in his neighbors' experiments as well as in his own, and looks in the correspondents' column for their reports. On the 15th of May last I planted 50 hills of Blount's White Prolific corn, three feet apart. Its extraordinary growth astonished every beholder, stretching upward from 14 to 17 feet, and bearing from two to four ears on a stalk. It was planted in the garden on heavy loam, with no fertilizer, except a little ashes left from the burning of some grapevine prunings, weeds, etc. The Beauty of Hebron received had seven eyes which were made seven hills in loamy garden soil, without any fertilizing. The largest eye sent up its vine in about 10 days, strong and vigorous, making a large bushy top from three to four feet in length, bearing several large tubers, one of which weighed a pound. The vines from the remaining eyes were not so vigorous, were much longer in coming up, and the tubers did not attain so large a growth. The product was much in proportion to the size and growth of the tops, yet the aggregate yield from that one potato was 17 pounds. In April last I procured some Snowflake potatoes for planting. The ground, not being in readiness, I dug a trench in a sunny part of the garden and buried the potatoes therein until the *eyes were swollen* and the ground fitted for planting. Having selected the strongest eyes first, and planted them in newly prepared sod land about the first week in May, they came up in a few days, grew vigorously, made large spreading tops, growing until about the middle of August. Eight weeks after planting, the tubers were dug for eating, the size of a hen's egg, and the entire crop was gathered before the first of Sept. in fine condition, giving in some hills over 20 fair-sized tubers, several selected potatoes, weighing from one to one-and-a-half pound each. I now regret that I did not measure the ground and weigh the potatoes, so as to be able to compare the yield with that of the small ones planted at the same time, the yield from the small potatoes being about half the size and quantity. From this and similar experiments, I find much is gained in time and thrift, by starting potatoes before the ground is warm enough for planting. You are thus enabled to select the best seed which, being planted when the ground is fresh and warm, will come up quickly and get the start of the weeds and bugs while the ground is moist, and a fair, if not a large yield is almost assured. W. S. B.

NEW YORK, Pitcher, Chenaugo Co., Sept. 17.—The weather here, since July, has been very dry. It will doubtless shorten the corn crop very much, although some pieces look quite good, while others will not yield more than half a crop. Frequent rains in the early part of the season gave us a good crop of hay and oats. Potatoes are a large growth; but many pieces on very rich ground are badly decayed. My Beauty of Hebron potatoes proved a success. I received of the RURAL one potato weighing from two to three ounces; I put one eye in a hill, and harvested 20½ lbs. My Blount's corn stands from 12 to 13 feet high, with from three to five ears on a stalk; some of the ears stand 9½ feet from the ground. But it will want one month of good warm weather more than we have any reason to expect, to ripen here. I have been holding my breath almost all summer to see if I could not make a good report on Pearl Millet; but I will allow that I am not very favorably impressed by it. The lettuces were splendid. The flower seeds did not grow. A very small portion of the Defiance wheat came up. L. W. S.

L. I., Smithtown Branch, Suffolk Co., Sept. 14.—I have about 170 stalks of the Blount corn growing in my garden. I shall average two good ears on a stalk. It is from 8 to 12 feet high. Some stalks develop four ears. I planted it too thick, not knowing anything of its character. I have a patch of the Pearl Millet doing finely. It was planted the last of May and has been in blossom for more than a week. I have no doubt of its ripening its seed if the frost keeps off a week longer. It stands from five to seven feet high. C. S.

OHIO, Felicity, Clermont Co., Sept. 29.—Crops, especially tobacco, have suffered here on flat ground considerably, owing to a surplus of water. Farmers are now very busy sowing wheat and cutting tobacco. My Beauty of Hebron potatoes yielded well, but were not quite as early as the Early Ohios, which were planted beside them at the same time. Defiance wheat did not fill well on account of drought at the time of filling; and to the same cause I attribute my failure with most of the flower seeds sent me by the RURAL. The Pearl Millet is doing finely, some of it having been cut the third time: if frost keeps off a little longer, I shall have plenty of seed for another year. I only had one Voorhis watermelon that came to perfection, but it was most excellent. The Blount's corn I gave to Charlie to try for a premium. It was doing finely, and was a wonder to all who saw it. It was blown down three times and he straightened it up each time as well as he could; but there were four stalks broken entirely off, from which he husked twenty-one moderately fair ears. One or two stalks have ten ears each, and now the birds have commenced eating a share of it, so Charlie thinks his chance for a premium rather discouraging. L. J. A.

OHIO, Napoleon, Henry Co., Sept. 27.—Wheat was a good crop—equal to that of last year. Yield, from 20 to 40 bushels per acre. Some of it was injured before thrashing. Seeding is not all done even yet. The principal varieties grown are Clawson and Fultz, though Clawson is not as popular as it was, owing to its liability to sprout and to heat after storing. Corn is not as good as last year, but it will be about an average crop. Potatoes are good, both in quantity and quality. A good deal of sorghum is raised around here, the Amber variety being the favorite. Every one, almost, raises his own "bar'l o' 'lasses." Farmers are generally prosperous and in good spirits. V. J. E.

OHIO, Hartford, Trumbull Co., Sept. 30.—My Beauty of Hebron potato had seven eyes. I made six hills of them, and dug 19 pounds of very nice tubers. My Blount's corn is from 12 to 14 feet high. I guess some of it will ripen if it don't freeze up for a month. But it is not the corn for this latitude, in my opinion. There is a comfortable supply of fruit in this region, grapes and pears being very plentiful. A. N.

INDIANA, Madison, Jefferson Co., Sept. 26.—I have been taking the RURAL for a number of years and I like it. I think it is improved and still improving. Farmers' papers are beginning to be what they should be. They are read and thought of now much more than they used to be. Why? Because they contain far more useful information and practical suggestions than farmers generally can make use of. But though these cannot often utilize individually all of which they may approve, yet they need such instruction and are "bound" to have it. Farmers are getting to be wideawake. Many of the old folks and some of the young ones, too, had little or no scholastic advantages in their early days, and these, the best of them, look to their papers to supply this deficiency now. Each of these feels the want of scientific, or in other words, accurate knowledge. He wants to know what different kinds of soil are formed of; what goes to make up the crops he grows; what are the constituents of his manures, so that he can apply them or not according to the requirement of his land. All this and subjects equally instructive are the topics that will make a successful paper, and the RURAL is going ahead in this line. I read articles from it before our Grange and they are generally pronounced good. The Acme and Rural tomatoes are not as early as the Trophy with us. I grew enough of the Beauty of Hebron potatoes to give me seed for next year; this year wasn't a fair test; the spring was remarkably dry and cold. We couldn't get seed to sprout, or if it sprouted, it died. We planted our corn fields three times, indeed we were still planting when harvest began, and even then we didn't know whether half a crop would be obtained. I planted the RURAL'S Blount's Prolific on May 20, 18 inches apart, one kernel in a hill, not having dared to plant it earlier through fear of losing the seed. Out of 150 kernels planted 114 sprouted, and did well considering the unpropitious weather. I plowed and hoed the patch twice. It was in three short rows in our garden which was common garden soil without any extra manuring. Now the corn is nearly ready to cut; for, though some ears are still green, others are quite dry. I have grown 301 ears nearly all of them a foot long—good large ears well filled out to the end, some pushed out of their shucks like an over-grown lad bursting through his over-tight "unmentionables." Moreover, there are shucks with no corn in them and some stubbins. On the whole, considering the year, I think it makes a good crop and I feel proud of it. I wonder if I shall have any chance for one of those prizes; I'd like to crow a little over our Grange if I get one of them; but if others shall beat me, I'll be glad that they have done so well. By the way, there were some barren stalks. J. O. R.

IND., Williamsburg, Wayne Co., Sept. 12.—The harvest in this part of the country was generally good, wheat especially so, yielding an average of from 25 to 28 bushels per acre. Oats, some pieces good, others ruined by rust. Hay, an average yield, good and of excellent quality. Flax, a poor yield per acre, but of fair quality. Prospect for corn, as to quality, fully an average, but it is badly blown down, so much so that if we don't have a very dry fall, a great deal of it will rot, and the prospect now is for wet weather. We have been having very heavy rains every week, which is making seeding progress slowly. What between prostrated corn and wet weather, the acreage sown to wheat will be considerably below what it would have been under more favorable circumstances. Markets here are: wheat, 90c.; corn, 33c.; oats, 20@25c.; cattle, $2.50@4; hogs, $2.50@$3. My Beauty of Hebron potato had 13 eyes, from which I made as many hills; the bugs worked them badly, but I got a yield of 18 pounds of fair tubers, for which I would not take the price of your valuable paper. The Blount's corn gives promise of from one to six ears to the stalk, but looks as if it would not mature well, as it is very late. Taking the crops already harvested and the prospects for the rest of the year 1879, all in all, the outlook is very flattering, and we think will soften the hard times we have all heard so much complaint of, for which we should all be very thankful. W. M. H.

ILL., Lawn Ridge, Marshall Co., Sept. 19.—We have had several frosts that cut off the buckwheat and killed the late potatoes. Oats are half a crop. Corn is good. There are not as many hogs as usual, for so many were sold in June. Apples scarce. Weather very dry all through this section. J. Y.

WIS., Magnolia, Rock Co., Sept. 20.—Last spring I sent to New York for five pounds of Beauty of Hebron potatoes, and planted them with the single potato the RURAL sent me, cut to one eye in a piece, and put one piece in a hill. I dug them about the middle of August, and had 11 bushels and 40 pounds by weight. They ripened about the same time with Early Rose, but the yield was nearly twice as large and the potatoes the finest I ever saw. I shall save them all for seed, as I think they will prove a valuable addition to our early varieties. G. H.

TEXAS, McKinney, Collin Co., Sept. 23.—Of the seed sent out by the "old reliable" RURAL, Blount's Prolific corn was planted expressly to compete for the premium; but the awful drought cut it short, making about at the rate of 40 bushels per acre. As we had 52 days without rain, I think it a good corn to follow stubble. Pearl Millet is not a humbug, nor anything like thereunto; for Hungarian, German Millet and Milletarian all failed, while this is maturing nicely. I could have made two cuttings, but I let it stand for seed. Rabbits, birds, chinch-bugs and other pests have injured it, still I think a prize will be taken at the county fair by 24 mature heads of it 16 inches long and well filled, all from one hill planted with a single seed. Bronze Ricinus ornaments our garden walk "majestically." The Defiance wheat was sent too late, the rust destroyed it. Seeds and plants sent me by Commissioner Le Duc and our representatives in Congress have mostly succumbed to the dry weather—such as Tea plants, Eucalyptus, Japanese Persimmons, etc., although Prickly Comfrey and Amber sugar-cane will probably be valuable acquisitions to our Southern climate. I have succeeded in crossing the Amber with the Silver Drip, and the cross is more likely to give satisfaction than either, because the Amber is too small and the Drip too large and watery.

The Beauty of Hebron is a beauty in the potato line, being earlier than the Early Rose. The Bermuda sweet potato and Brazilian yam yield, in a good year, from 200 to 300 bushels per acre; but they are not as sweet as the Nansemond or the Spanish yam, which only yield about 100 bushels. Cuttings of vines make a small, smooth potato, but slips are much more prolific. Mediterranean wheat yielded about 20 bushels per acre, while Red May (Texas) did not average 10. Farmers, therefore, are sowing chiefly of the former to the chagrin of the millers, who have tried to rule in the wheat raising matter, but at last "give in." The RURAL speaks of better times in the East and sends as encouraging news of the prospects, on account of the recent crop failures in Europe; but what good does this do the farmer who has nothing to sell? Throughout Texas and the adjoining States and Territories the drought has created a considerable "shortage"; for where the showers happened to fall, will not constitute more than one-tenth of the general area; therefore the home consumption will exhaust the surplus. For once, in many years, we must learn to do without hay, and if rains do not come soon to bring forward the wheat and barley for winter pasture, stock must fare badly, if much snow falls this winter.

I would be pleased if every farmer in this section could *read* and *heed* the RURAL'S articles of Cash vs. Credit—for ninety-nine out of every hundred of them have fallen into the habit of going in debt, and a more pernicious and ruinous custom never existed. It is the first step to serfdom. I look upon these hard times as containing one factor of beneficence in the way of teaching farmers to be economical, frugal, and cautious in their transactions. I see in Western, as well as in Eastern Agricultural Journals an effort to put forward honest, energetic farmers for officers of trust and honor. Why not? Does not the farming interest represent by far the larger share of the whole population? And shall a few aspiring, boasting, blowing politicians belonging to a meager minority enact laws for us who should wield the national influence which belongs to us by the right of numbers, intelligence and morality? It is high time that we, the tillers of the soil, should have a voice in matters of state.

Plymouth Rock fowls have proven to be much better for the Southern climate than the Light Brahmas. W. N. W.

The Querist.

ANSWERS TO CORRESPONDENTS.

Cost of Making Butter and Cheese at Creameries and Factories.

"*Kane County*," *Ill.*, asks whether cheese and butter can be made at the factories and creameries for less than two and four cents respectively, and if so for how much less. These are the lowest figures at which these products are manufactured in his neighborhood, and farmers there complain that the factories take every cent of profit in milk.

Answer by Professor L. B. Arnold.

It costs the same to manufacture a given quantity of milk whether made into butter or cheese, and if reckoned by the pounds of product, the price for making a pound of butter should be two and a half times the price for making a pound of cheese. The price at which a manufacturer can afford to make either depends upon several circumstances, the chief of which is the quantity of milk he can depend upon receiving. It will cost more in proportion to make up 3,000 lbs. of milk a day than it will to make up 15,000 lbs. a day. The former will require one hand who is an expert, whose time will be worth, say, $60 a month; the latter can be made up by one expert and three cheap hands worth $20 a month each, equal to a $120 for a month's labor. The cost for water privilege, buildings and apparatus is also much less for a large quantity of milk than for a small one. The price of furnishing and also of board and labor varies in different localities, so that it would be impossible to say just what a pound of butter or cheese could be manufactured for, unless all the varying circumstances were known.

Prices have varied this season very widely. In cheese factories they have run from 80 cts. a hundred, (where there is no charge for use of factory) to $2 50 a hundred and all the whey thrown in, the profits from which vary according to the skill with which it is fed. I find variations running all the way from 20cts. to $1 for the whey from 1,000 lbs. of milk. In Pennsylvania it is a common practice to manufacture milk for one-sixth of the product. In New York State cheese is made by the 100 lbs. at $1 to $1.50, generally at $1.25, which is equal to $3.13 per 100 lbs. for butter. In Canada the average price is $2 for drawing the milk and making and selling 100 lbs. of cheese, the delivery of the milk costing from 40cts. to 75cts. per 100 lbs. of cheese, according to the length and compactness of the routes to be traversed.

In addition to the foregoing, "Kane County" and other parties concerned may be interested in the items of expenditure as they occur in the management of factories. Accordingly I append the actual expenses paid by a Joint Stock Company for running their factory last year.

Pounds of milk received		3,378,116
Pounds of cheese made		327,528
Paid for delivering milk		$1,550.50
Paid for labor of making cheese		$1,308.44
" " 1896 rennets	256.00	
" " 65 cords of wood, including sawing	107.00	
" " 2625 yds. 40 inch bandage at 4¾ cts.	127.97	
" " 11,800 lbs. Liverpool salt, $1.75 for 240 lbs.	78.75	
" " 25 gallons Mitchell's coloring at $3.60	90.00	
" " 5,192 boxes	519.20	
" " furnishing and labor of making		$2,484.36
" " delivering, furnishing and manf'g		4,034.80
" " furnishing and making 100 lbs. cheese		.75 cts. and 85-100c

To this may be added a fair rent for use of factory and apparatus, which would be 30cts. per hundred for cheese or 75cts. per hundred for butter, making the total cost for furnishing and making 100 lbs. of cheese $1,05 and 85-100ct. or for a hundred pounds of butter $2.64½. There was an average of five hands employed in this factory for doing the work which four could have done, and the rennet and coloring were needlessly expensive, while the fuel was below the average cost.

The proper variations for running smaller factories may be made by varying the items above, which would be affected by reducing the milk received.

Picking Apples.

F. W. S., Baden, Pa., wants some information in regard to the picking and saving of apples; he asks, 1, when is the best time to pick; 2, if it is a good plan to leave them out on the sod in the orchard exposed to the weather for two or three weeks after they have been picked; should they be put in the cellar at once? 3. Can the Fallawater be picked October 1st.

Ans.—This depends upon the season of ripening and the character of the fruit. Summer pears and apples should be gathered at least a week before they are ripe; if left on the trees till perfectly ripe, they not only become very liable to injury in packing and shipping, but many of them, especially those of a mealy texture, will be perfectly worthless. Winter apples and pears should remain on the trees until danger of frost. All kinds of fruit should be gathered only when it is perfectly dry; if a shower should come up while the work is progressing, the gathering must be suspended till the fruit has again become dry. Furthermore, the gathering should all be done by hand, and in baskets of a convenient size to be carried up the ladders and in the trees; the branch should be held with one hand and the fruit gathered with the other, being careful not to tear off the leaves or spurs from the tree or the stems from the fruit. In emptying the basket, the fruit should not be turned out, but carefully taken out one by one and at the same time classified into two or more grades, according to size and soundness. Winter fruit should then be brought under shelter in a fruit-house, dry cellar or similar place where it may be laid in heaps four or five thick for two or three weeks in which time a large portion of the "sweat" or superfluous moisture will pass away; it can then be packed and shipped for the market.

It is customary to keep apples in barrels during the winter, but for home consumption it is much better to have them spread on shelves of a convenient width to reach across. This facilitates the selection of just such specimens as are wanted, and, what is of greater importance, the fruit can be gone over whenever needed for the separation of all that is decayed. It often happens that the greater part of a barrel of choice fruit is spoiled by decay, one or two decaying apples rapidly spreading the disease to those around. When spread on shelves, such can immediately be detected and removed. The place in which to keep fruit should be a dry, frost-proof room or cellar, with an even temperature of about 45° F., if possible, and with means of ventilation whenever necessary. The second question is answered by the above. It is a very shiftless and negligent method to leave fruit in heaps in the orchard for two or three weeks after it is picked, exposed to the weather, to marauding animals and a temptation for thieves. 3. Yes. It is a winter apple, and should be picked on the apprehension of frost.

Eucharis Amazonica.

"*Californian*," *Napa Co., Cal.* (*We desire that all inquirers shall give their names and addresses.*) has purchased several bulbs of the above-named plant, but has so far met with complete failure in the cultivation of them, and therefore inquires what treatment they should receive in order to make them flower.

Ans. This plant, which is also known as Eucharis gandiflora, belongs to the Amaryllidaceæ, and is a native of Choco, New Grenada. It is a stove plant and must be grown in a hothouse to attain the best results. The bulbs will succeed well when potted in good fibrous loam, with the addition of a little peat and well decomposed sheep manure, and a slight sprinkling of silver sand. The drainage must be good; and it may here be remarked that good drainage does not consist merely in the quantity of potsherds used, but much more in the careful manner in which they are placed in the pot. The Eucharis can, by a little judicious management, be made to bloom at almost any season, but it is particularly valued as a winter bloomer. To this end, pot the plants, say, in June or July, and set them in a high temperature and moist atmosphere where they should receive a liberal supply of water after they have started to grow, and they should be shaded the same as other soft-leaved stove plants. About September, place them in a cooler house, and give them but little water until the beginning of November. After this period they should be put in a house with a night temperature of about 65° F. and again liberally watered both at the roots and on the foliage when the flower scapes will soon begin to make their appearance.

Cyclopedias.

J. A. C., Greensborough, Vt., asks what are the distinguishing characteristics of Appleton's, Chambers's and Johnson's Encyclopedias.

Ans. — Appleton's, as the only genuine American work of the sort, devotes more space than any of the others to topics of special American interest. It is well arranged; its information is the result of the latest researches, and while there are very few subjects discussed at length, the range of topics embraced in it is very extensive. Chambers's Encyclopedia has a great deal to say on a number of scientific subjects; dwells on matters of interest to the inhabitants of the British Isles at considerably greater length than on subjects in which Americans take special interest, but has the reputation of being very accurate, while revised editions are issued often enough to keep up with the times Johnson's is issued by American publishers in four bulky volumes and contains a large amount of information greatly condensed. It treats of nearly as many matters of interest to Americans as does Appleton's; but at considerably less length. It is an excellent work for its size. The Encyclopedia Britannica, a new edition of which is now being issued in this country, is probably the best of all those here mentioned, in its fullness of information, especially on subjects of world-wide interest; but it, too, is lacking in the minute information on American matters to which Appleton's can lay claim. The first eight volumes only are issued at present, and judging from these, it will be nearly twice the size of Appleton's.

Making Vinegar.

S. O., Aiken, S. C., asks for information about the manufacture of a good domestic vinegar, made from the juice of grapes or apples.

Ans.—Vinegar from grapes may be made as follows: The wine is stirred into a large tun which contains lees, and when thoroughly mixed, is squeezed by pressure through cloth sacks into an iron-bound vat, whence, after standing some hours, it is drawn off into casks for fermenting. These casks have only a small opening at the top, and are kept at a temperature of 77 deg. F., to 86 deg. F. After 14 or 15 days, the vinegar, now formed, is drawn off (cautiously so as not to disturb the sediment) into barrels which contain birch-wood chips. This clarifies it, and after standing a few days it may be syphoned off into the casks in which it is to remain. The residue, containing "mother," is employed to ferment all the subsequent liquor by simply pouring the latter into the cask that was used previously. To make vinegar from cider, the following recipe is recommended. Place in the cider barrel a small piece of bread soaked in vinegar, or else a piece of sour dough. Add about a pint of vinegar and set the barrel in a warm place (75 deg. F. to 85 deg. F.). Malt will produce the same effect as the dough and so will yeast and lean meat. The vinegar will clarify itself by settling, and on being drawn off from the top by means of a syphon, a clear liquid is obtained. A good table vinegar may be made by dissolving three pounds of white sugar in a gallon of water and fermenting with yeast.

Competing for Corn Premiums.

O. L. O., Hunt's Sta., Knox Co., O., says that on account of the dry weather or for some unknown reason, only about half of his Blount's corn came up, so he has but about 70 stalks, and he asks, 1st, will it be worth while for him to report as one of the competitors for the corn premiums; 2nd, at what period must the fodder be weighed.

Ans.—In accordance with the conditions that must be adhered to in order to compete for the premiums, as published in the Rural of April 26th and May 31st of the current volume, our friend can report as one of the competitors if he wishes, but since the premiums are to be awarded according to the yield from the *number of kernels planted*, his chance of receiving one is not very flattering. 2nd. Both ears and stalks should not be weighed until they are ripe, perfectly dry (free from the juices of plant growth) and free from all atmospheric moisture, so far as this can be effected by air-drying. If they were to be weighed in the green state, or at any prescribed period, we could not exercise the fairness we desire in comparing the yields and distributing the premiums. As has been stated elsewhere, it will be well for each contestant to provide himself with *proof* of his entire proceeding, such as the evidence of a justice or other competent authority.

Alfalfa.

J. P. P., Utica, Mich., referring to J. S.'s article on Alfalfa, in the Rural of Sept. 20, asks whether it would be likely to thrive in that section on sandy soil.

Ans.—It is very doubtful whether Alfalfa, or Lucern, would do well so far north. It needs a warmer climate than red clover, requiring greater heat and more sunlight. It is peculiarly adapted to a hot, dry climate, as its roots penetrate to a great depth, far below the influence of an ordinary drought, and there find moisture enough to keep the plant green and vigorous while all other vegetation is scorched or drooping. The roots have been traced to a depth of 13 feet. While a good top-soil is of great consequence with clover, a permeable sub-soil is essential to the success of Alfalfa. This may be loamy, sandy or gravelly, but it must be thoroughly broken up to a very considerable depth to give the plant a fair chance. Alfalfa languishes in a compact clay soil or in light soils lying over an impermeable sub-soil. We do not know of a single instance in which the plant has thriven so far north as Macomb Co., Mich.; though it has done well on a rich, deep, warm soil in several places in the Middle States.

Miscellaneous.

O. S. B. Burdell, N. Y., wants information on the following questions: 1. What can be put around his peach, apple and plum trees to keep the grubs from them? 2. One half of a tree on his place is girdled, shall he let it stand, or set a new one? 3. How much salt is it safe to put around a tree six inches in circumference? 4. Where can he get the best fertilizer for barley, warranted.

Ans.—1. Various remedies have from time to time been suggested, such as heaping up mounds of sand, earth, ashes etc., around the trees, but most of them seem to be of doubtful utility. A mound a foot or more high around peach trees, interferes with the Ransom process of fighting the curculio; therefore it has been recommended to encircle the base of the tree with a sheet of tin a little larger than the circumference of the tree, and fill the space between that and the trunk with coal ashes or earth. This should be done in May; in September the tin is removed, an examination made for borers, which can generally be found by the gum oozing out, and then the trench is left bare during the winter. This will answer also for plums. In the case of apple and pear trees, it has been found that soapy mixtures are obnoxious to the beetles at the period of egg-laying. Soft soap mixed with lime and potash and applied to the base of the trunk in June and again in July, has proved effectual. In September the whole orchard should be examined for borers, and these should be killed either by inserting a wire into the holes or by cutting the pests out. 2. We should in this case take the value of the tree and how well it bears the injury into consideration before it is replaced by another. If it is a large tree, it may be best to save it, if possible. In that case, cover the wound with grafting wax or tar. 3. A couple of handfuls. 4. Of any firm that advertises fertilizers in the Rural. The analyses are in nearly all cases attached to the bags; if not, they will be furnished on application to the dealers.

L. H. R., New Bloomfield, Mo., asks for some good disinfectant for use in stable and privy.

Ans.—Cabolic acid, charcoal dust, chloride of lime, plaster, copperas, and many other substances are effectually used for this purpose. One of the best disinfectants is the surface soil about the house, made thoroughly air-dried and sifted through a coarse sieve to remove sticks, pebbles and other extraneous matters. This can be cheaply obtained by every-body and when enriched by the deodorized substances, forms an excellent manure.

A. L., Crawford, Chenango Co., N. Y., asks several questions respecting the seedling Grapes of the late T. B. Miner, now advertised in this journal.

Ans.—Mr. Miner, two years ago, sent us specimens of his Grapes. They have grown thriftily but have not yet fruited. Illustrations of several of his varieties appeared in the Rural of September 30, 1876, and he brought bunches to this office for examination. They are seedlings of the Concord selected from about 10,000, and we have great hopes that they will prove worthy of extended cultivation.

A. F. F., Fall River, Mass., asks where he can obtain some Mulberry trees he has seen mentioned in the Rural; 2, is there any advantage in grafting the Grapevine; if so, when should it be done and how?

Ans.—If the Mulberry trees are intended for feeding silk-worms, Morus alba, M. nigra and multicaulis are the only ones worth purchasingg, and these can be supplied by most large nurserymen, like Ellwanger & Barry, Rochester, N. Y. 2. The Grapevine can be grafted, but there is no advantage in doing so.

S. M. J., Cleveland, N. Y., sends some variegated leaves from a beech tree found in the woods, and asks whether the variegation is something unusual and how it could be perpetuated.

Ans.—Such variegation is not uncommon in the leaves of Beeches growing in the shade. It is not permanent, however, and cannot be fixed.

Old Subscriber, Decatur, Ala., requests that we give directions for growing an Osage Orange hedge.

Ans.—Will our friend please see the Rural of April 26th where the same query was answered briefly and to the point.

B. F. M., Penryn, Cal., asks if the Bronze Ricinus is a kind of Castor Oil Bean.

Ans.—Yes, in the same manner as the purple-leaved Beech of the gardens is a variety of the Beech growing wild in the forest.

O. L. H., Spirit Lake, Ia., asks where can be got the People's Practical Poultry Book?

Ans.—The work can be obtained through this office, price, $2.

I. F. H., Lynn, Mass., sends flower and leaf for name: he bought the seed for Chrysanthemum Japonicum.

Ans.—That is the right name.

C. W., Church Hill, Md., wants to know now much salt he should apply to the acre of wheat.

Ans.—From three to ten bushels.

Our Fair Edition of 60,000 extra copies, is distributed. We cannot any longer, therefore, supply copies to applicants.

THE PROSPECTS FOR THE WHEAT MARKET.

In commenting here, at different times during the last few months, upon the prospective price of wheat, we have always expressed the opinion that it must rise. A careful examination of the various reports of the condition of crops in different parts of Europe and elsewhere, led directly to this conclusion. The nature of these reports has been from time to summarized for the benefit of our readers, so that they might be in a position to act intelligently in either selling their crop at once or retaining it for higher figures. With the same object in view we have also placed before them the chief rivals we have to meet in foreign markets, and the extent of the competition these have maintained with us there for the last three years.

The late advances in the prices of wheat have already justified our predictions, and from our present information we are strongly of opinion that prices must go even somewhat higher. Former estimates with regard to foreign harvests were based, to a great extent, upon probabilities which, as the crops were still in the field, were liable to modification by a week's sunshine, or a day's downpour. By this time the European wheat crop has been gathered and the average yield pretty accurately ascertained by thrashing. As a rule with few, if any, exceptions, the anticipations of a deficient harvest have been fully realized, and in several cases sadly exceeded. In England, for instance, not only is the yield even below what was expected, but the grain is generally of poor quality, and the straw of a dark, mildewy color. Both Mr. Caird and Mr. Scott, the two most trustworthy English authorities on agricultural statistics, place the shortage at 30 per cent. of an average fair crop.

The latter of these experts has been figuring, from the best attainable data, upon the probable relation between supply and demand in the wheat markets of the world for the present crop, and has given to the public the results of his calculations in a recent letter to the London Times. Briefly summarized in a tabular form for the sake of clearness, his conclusions are as follows:—The estimated surpluses of wheat, after repeated revisions down to the beginning of September, are put down for—

The United States and Canada at:	132,000,000	bushels
Russia	40,000,000	"
Turkey, Egypt, India and Australia	24,000,000	"
Algeria	1,600,000	"
Aggregate surplus	157,600,000	"

On the other hand, to supply their wants for ordinary consumption, it is estimated that there will be needed by

England	136,000,000	bushels
France	61,000,000	"
Italy	20,000,000	"
Belgium with Switzerland, China and the West Indies, 16,000,000 bus. each	48,000,000	"
Austro-Hungary, Germany, Spain with Portugal, 8,000,000 each	24,000,000	"
Holland	6,000,000	"
Total deficiency	298,000,000	"
Total surplus to supply it	257,600,000	"
Deficiency unsupplied	40,400,000	"

From information in our possession, collected from various sources, we are disposed to believe that the surplus from this side of the Atlantic is considerably understated in the above estimate; but there is no doubt that the demand will fully equal the supply, and prices therefore must be strongly in sellers' favor. Continental buyers, especially French, have hitherto been the heaviest investors at advanced rates; but English purchasers must soon, however reluctantly, follow their example, and when they do, the upward movement will be more strongly felt in our home markets. Already, in face of by far the largest importations of grain, that have ever occurred, prices for wheat are steadily rising in the markets of Great Britain.

LAND AGITATION IN IRELAND.

Rifle and rent are once more becoming ominously connected in the "Gem of the Ocean." On the first of the month an obnoxious land agent of the Marquis of Sligo was shot at near Castlebar, the capital of county Mayo. The would-be homicide, however, was a poor marksman, for while the agent drove off unscatched, the surer aim of his son who accompanied him, proved fatal to one of their four assailants, who turned out to be a militiaman. The extreme members of the Home Rule Party are doing their best to fan into a conflagration the fire that, with the exception of a few fierce outbursts, has smoldered for centuries in the Celtic heart at the cruel injustice with which the Ironhearts of Cromwell and the mercenaries of William of Orange dispossessed the natives of their ancestral acres. It adds to the bitterness that the largest landowners are generally of a different religion and often of a different nationality to the bulk of the people, and that whatever their faith or their country Ireland seldom knows them except as imposers of hard taxes upon her industrial classes—taxes levied through unscrupulous agents and squandered in foreign lands.

Land meetings at which thousands assemble, are being held or projected in different parts of the country. At these, patriots, politicans, enthusiasts, soreheads and agitators of all kinds loudly lament the tenants' manifold grievances and savagely denounce the heartlessness of their landlords. A considerable reduction of rent is the immediate object of their demands; but an entire change in the land laws and the total abolition of absentee landlordism are the ultimate aims of the agitation.

AGAIN.

We thought we had convinced at least those who read this journal (except, it may be, Professor Riley perhaps), that a small proportion only (very small, indeed, according to our own careful experiments) of *weevil-eaten peas* will grow. An experienced seedsman of this city told us a few days ago, however, that there was no use in trying to make it appear that they will not grow because he *knew they would!* "But have you tested them for yourself?" we asked. "No," he said, "I have sold them too long to make that necessary." Well, we give it up. If people are *determined* to believe that weevil-eaten peas will grow, in spite of trustworthy tests which prove the contrary we must e'en leave them to think so. It may seem strange that many *will* believe that wheat sometimes turns to chess. In this case, however, it is really hard to *prove* that it will not. But if any incredulous body that reads this will, next spring, sow *only* weevil-eaten peas depending upon them for his main crop, we are confident that he will never again feel like casting doubt upon the results of our experiments.

WHEN TO TRANSPLANT?

Just as soon as the leaves have performed their functions. This varies with different genera, species and even varieties. For instance, some Pears lose their leaves in mid-September; better transplant them then than to wait until after frosts; the roots have so much the more time to become established in new soil. The discoloring of the leaves is proof positive (if the tree is in health) that they can be of service to the tree no longer. They have become clogged with mineral matter; the leaf-stalks, though still clinging, are really severed from the stems. The buds for another year are matured, and the sooner trees so circumstanced are removed, the better is their chance of passing the winter unscathed and of making a vigorous growth the ensuing spring. During long, favorable seasons, such as the present has been in this part of the country, many kinds of trees are prone to make a late fall growth. This has little time to mature and generally perishes before spring. Better remove such trees before the late growth starts, in which case the tendency is effectually checked.

BREVITIES.

Prune Grape-vines.

Our Potato Number will be next week.

Golden Russet (see engraving) is extensively grown in Western New York.

We read of 50 bushels per acre of Fultz wheat having been produced in Indiana.

Preserve Mangolds, Beets and Carrots from frost. Salsify is better for being frozen.

Another Dairy Exhibition of the "International" sort will be held beginning about Dec. 15th in the building of the American Institute of this city.

Somebody has said (we forget who) that beets added to apples, in the proportion of one bushel of the former to ten of the latter, will make better cider than apples alone.

"Pay as you go" was the text of President Hayes's address at the late Michigan Fair at Detroit. We heartily welcome this presidential support in our crusade against agricultural indebtedness.

In Colorado, we are assured, steers can be got ready for market at a cost of $4 per head, with a possibility of raising them for a dollar less on a large scale! Isn't cattle-raising in Colorado done on a large scale now?

The editor of the Ouratonna (Minn.) paper asks: "Can there ever be an entire failure of crops in Diversified Farming?" We say no, if the farming be sufficiently diversified: Neither can there be an entire success.

We learn that the position of Professor of Agriculture of the Michigan Ag. College has been offered to our contributor, Mr. W. I. Chamberlain. We know of no other person that combines so much of high scholarly attainments with a practical knowledge of agriculture.

Ex-Gov. Seymour says: "Agriculture has always been known as the basis of civilization with all peoples. But it has rarely if ever happened in the world's history that it has wrought out such marked and rapid changes in the credit and prosperity of a government as those which we now witness in our land."

"In Premiums for Swine" a breeder remarks "the largest hog always takes the premium;" in every-day life, too, who has not noticed that among his acquaintances the biggest hog always appropriates the best of everything; though in both cases the animal has often only a slim claim to what he collars?

We see the advice given to purchase trees now, and, if they cannot be set this fall, to *heel them in* until spring. Our advice is to wait until spring rather than to heel them in. It makes nearly double work, with scarcely any advantage, and the trees are weakened during the winter, unless the "heeling in" is carefully and skilfully performed.

A microscopist, M. Woronin, finds that club-root in cabbages is caused by a minute fungus which he calls Plasmodiophora brassicæ. Sulphur, so effective in killing other fungoid spores, is suggested as a remedy. One crop of diseased cabbages should never be followed by a second cabbage crop, since probably the ground becomes infested with the spores.

This would be a good time for those who want choice English breeds of sheep, to invest in them. Owing to the poor condition of root crops and the general agricultural uncertainty, sheep are now reported a drug in the market. Those exhibited at fairs generally find ready purchasers, but exhibitors this year complain that it is next to an impossibility to dispose satisfactorily of their flocks.

So many experiments will be made all over the country this year in the extraction of sugar from sorghum, beets and corn stalks, that this may well be called a test year in this connection. Should it be definitely decided that sugar can be profitably produced from either of these sources, it is probable that there will soon be a diminution in the area sown to wheat in favor of whichever of these plants may prove more profitable.

One of our farm hands remarked to us the other day while we were surveying a field full of new potatoes, new turnips, beets, etc., which were for the most part failures;—"Tell you what it is, these 'speriment things ain't worth nothing anyhow." It is a truth that testing "novelties" in a large way is a costly business. But gems do crop out now and then and those who aid in making them known, are engaged in a good work.

Under the head "Miscellaneous" in our last issue, a cut was given of a variegated Tubrose discovered by Mr. Rhea, of Griffin, Ga., two years ago, growing in a bed of other Tuberoses. He naturally supposed it a sport, and since then has succeeded in reproducing the variegation by planting sets from the main bulb. Mr. Dreer, of Philadelphia, however, writes to us that he has been offering this variety for sale during the last ten years.

To the managers of agricultural fairs, who insist that "hoss trots" are necessary to the success of their exhibitions, on the ground that they draw a big crowd and thus increase the gate-money, we strongly recommend Ex-Gov. Furnas's suggestion that they should appeal to the Executives of their several States for permission to hang a criminal on the grounds, as a means of drawing a still greater throng, and chiefly of the same rowdy element too.

A root party and farmer's pic-nic was largely attended at Kirby Homestead, Charlton, N. Y., on the afternoon of the 4th inst. The genial Colonel Curtis and his excellent lady extended a cordial welcome to their host of visitors, besides providing a lunch for those who came from a distance. Everything which brings farmers together for instruction or innocent amusement, or, better still, for both combined, is worthy of praise and imitation.

While the weight of Short-horn grades for shipment from this port averages about twice that of Texans shipped from Indianola to Cuba, the former sell for more than five times the price of the latter, owing mainly to their superior quality, though considerably, of course, to the superior advantages of this place as a shipping point. This great difference in price between beasts of different beef qualities should stimulate our farmers and stockmen to still further improvements in their herds.

The lowest price per bushel of wheat on ship-board during the first half of the current year, was at New York, $1; at Philadelphia, $1.06 to $1.16; at Baltimore, $1.06; at Boston, $1. The average price per bushel of red winter wheat on shipboard during the same period was at New York, $1.12, at Philadelphia, $1.11; at Baltimore, $1.6¼; at Boston, $1.06. The average freight per bushel to Liverpool was from New York, 12c.; from Philadelphia, 7½c.; from Baltimore, 13½c.; from Boston, 15c.

English farmers, by late accounts, seem to take kindly to emigration, hopeful of better fortune elsewhere than that which the Mother Country has, in step-mother fashion, allowed them. On four adjoining estates in Yorkshire, no less than 180 farms are deserted, and on a multitude of other estates also, what money will be lost for the next year or two, at least, must come out of the landlords' pockets, who will themselves have to farm them.

According to a recent report of the English Secretary of Legation at Washington, the average weight of pigs shipped from this port to England is 170 pounds. Large hogs are unsuited to the British market. The price for them here averages 5 cts. per pound, varying from 4 cts. to 6¼ and 7 cts. The rate of freight is about 1½ cts. per pound. Such a 170-pound hog would sell on an average in Liverpool for $12, or at the rate of a trifle over seven cents per lb. There cannot be much profit in the exportation of swine at these figures, after a fair allowance has been made for mortality on the voyage.

Depression in agriculture is sure to be attended by depression in all branches of business connected with it. Our manufacturers here must have felt the truth of this during the recent period of distress among our farmers, and the largest English manufacturers of farming goods are now going through a similar experience. Lately Messrs. Lawes & Co. had to give notice to the 300 employés engaged in their Chemical Manure Works of a reduction of 10 per cent. in the wages of all hands receiving $10 per week and upwards, and of 7½ per cent. on wages under that amount. A strike was feared, but the employers have met their hands half-way, and both parties are for the present satisfied.

A trip through Long Island, N. Y., shows that buckwheat has been seriously damaged by frost. Winter turnips will be a magnificent crop. We saw many picking late beans and peas, and others green tomatoes for pickles. There is an immense area of late cabbages raised on this Market Gardeners' Island. Clawson has been sown ten times as much as any other variety. It is three or four inches high on many fields, sown about the 12th of September. Since that time there has been no rain, and many fields yet remain to be sown. A great many sweet potatoes are raised. Nansemonds are thought the sweetest, mealiest and earliest. Peabodys will yield more and grow larger. That is the best that can be said of them.

For the first half of the present year "prime" beef at wholesale for exportation, has ranged between nine and ten cents a pound on shipboard in this city, while common-quality beef has varied from seven to nine cents. Dressed beef shipped in quarters has cost from eight to nine cents. Beeves shipped alive have averaged $5.70 per 100 pounds gross weight, the best grades fetching more, and fair grades less. "Prime bullocks" have averaged 1,400 pounds and "common bullocks" 1,100 pounds. The average freight per head to Liverpool has been $17—though it has been as low $12 and as high as $23. In Liverpool the price of American "prime" beef has ranged from 14 cts. to 15 cts. per pound, though it has sold for as high as 18 cts., but shippers would make a good fair profit at a considerably less price than either of these figures.

Our premium list and posters will be ready the 10th inst., and—please note—all of our readers so desiring, will be welcome to them on application. We certainly hope that our readers can conscientiously speak a good, hearty word of commendation for this journal to their friends, and that our power to improve it through another year will be much increased. One thing is certain, we do not intend to fill up the Rural with premium lists and self-advertisements for the next three months, whether we increase our circulation or not. We are happy as we are, and feel confident that earnest endeavors and conspicuous worth will engage the good opinion of good people everywhere. If for 1880 we can secure an *increase* in our circulation twice as great as was this year's increase over that of last, we shall feel *entirely* satisfied and we shall see to it that our subscribers also fully share in our prosperity.

The old, old question as to whether fall or spring transplanting is better, now comes up again to perplex all who are about to take their first lessons in experience. There are good arguments in favor of each—some against fall transplanting—one against spring transplanting. We need scarcely repeat them, they have been told so many times. Let us say, however, if transplanting is to be done this fall, do it as soon after the leaves have changed color as possible. Dig holes large enough to admit the roots without cramping them. Work the soil well in between the roots and fibers and make the soil *compact*, so that the roots shall be in *contact* with the soil. Raise a *slight* mound about the stem, and over this, in a circle three feet in diameter, place two or three inches of straw, old manure or litter. Currants, Raspberries, Gooseberries and Grapes may be planted with perfect safety until the ground freezes.

Some time back we mentioned, with an expression of incredulity, the report of a newly discovered Australian device by which cattle might be reduced to a condition of suspended animation, shipped to Europe without danger of putrifaction or cost of feeding, and restored to life on their arrival at their destination. Although the process was fully described, in good faith, by a large number of papers, the London Times among them, that pride themselves on their immunity from the possibility of being imposed upon, yet, as we expected, the thing has turned out a complete hoax. We now learn from the same land of marvels that wonderful things are expected from the results of experiments now being practiced there with the object of preserving meat in the carcass by the injection of brine into the blood vessels. A dozen years ago we remember seeing this very experiment made at the beef packeries on Matagorda Bay, Texas. The fault that caused its rejection there was that, while it preserved the meat safely enough, it did so by reducing it to the hard condition of a pine plank.

Literary Miscellany.

EVELYN HOPE.

BEAUTIFUL Evelyn Hope is dead;
Sit and watch by her side an hour:
That is her book-shelf, this her bed:
She plucked that piece of geranium-flower,
Beginning to die too, in the glass:
Little has yet been changed, I think—
The shutters are shut, no light may pass
Save two long rays through the hinge's chink.

Sixteen years old when she died!
Perhaps she had scarcely heard my name;
It was not her time to love; beside,
Her life had many a hope and aim,
Duties enough and little cares,
And now was quiet, now astir;
Till God's hand beckoned unawares,
And the sweet white brow is all of her.

Is it too late, then, Evelyn Hope?
What! your soul was pure and true;
The good stars met in your horoscope,
Made you of spirit, fire and dew—
And just because I was thrice as old,
And our paths in the world diverged so wide,
Each was naught to each, must I be told?
We were fellow mortals, naught beside?

No, indeed! for God above
Is great to grant, as mighty to make,
And creates the love to reward the love—
I claim you still for my own love's sake!
Delayed it may be for more lives yet,
Through worlds I shall traverse, not a few—
Much is to learn and much to forget,
Ere the time be come for taking you.

But the time will come—at last it will,
When, Evelyn Hope, what meant, I shall say
In the lower earth, in the years long still,
That body and soul so pure and gay?
Why your hair was amber, I shall divine,
And your mouth of your own geranium's red—
And what you would do with me, in fine,
In the new life come in the old one's stead.

I have lived, I shall say, so much since then,
Given up myself so many times,
Gained me the gains of various men,
Ransacked the ages, spoiled the climes:
Yet one thing, one, in my soul's full scope,
Either I missed or itself missed me—
And I want and find you, Evelyn Hope!
What is the issue? let us see!

I loved you, Evelyn, all the while:
My heart seemed full as it could hold—
There was place and to spare for the frank young smile,
And the red young mouth, and the hair's young gold:
So hush—I will give you this leaf to keep;
See, I shut it inside the sweet cold hand;
There, that is our secret! go to sleep:
You will wake, and remember, and understand.

Robert Browning.

IN FOLLY'S NET.

CHAPTER VIII.

(Continued from page 645.)

When she went down to luncheon, which, in the absence of *ces messieurs*, was a slender and hasty repast, Jean was equipped for her walk, and Lady Sholto asked her, casually, what she was going to do.

"Something you will not approve of, Florence," answered Jean, trifling with a chicken's wing upon her plate. "The dreadful deed I am going to commit is a walk to Glenholme, to sketch the old church there."

"It is a long walk, Jeanie dear," said Lady Sholto. "Are you sure you are equal to it? You will go by the road of course?"

"Yes, I have often walked further, Flo."

"Yes, I know, last year, with Archie; but you were in practice then, you know, and now you are not."

"Oh! yes," said Jean, laughingly, "I shall not be happy unless I get my sketch, and it is a lovely day."

"Good-bye, Florence," she said, stooping to kiss her. "Don't be uneasy; if I am a little late, I shall get an escort home."

"Good-bye, dear," said her ladyship, rather languidly. "Don't over-tire yourself, Jeanie."

Jean went off gaily, sketch-book in hand, down the terraces, out of the grounds, on to the road beneath, where she started for her excursion, in what professionals would call "very good form," and at a good sound pace.

She gathered some heather, and adorned her deer-stalking cap, and, putting another piece in her buttonhole, she said to herself:

"I will send that to Archie," and then suddenly recollected that she had not yet written her daily budget. "How tiresome! I shall miss the mail. Well, it can't be helped."

But the brightness seemed clouded as she went on her way after that thought. Archie would be vexed, and disappointed, and just now that he is low-spirited about Frank Johnstone's death, he would feel it now, she thought with angry impatience at her own carelessness.

Then another thought came to her. Would Archie approve of her rendezvous with Mr. Blair? Surely not, and Jean made up her mind that she would have to be a very sorrowful penitent when she made confession before Archie would absolve her from such a peccadillo.

"I could not help it," she said, ruefully. "He looked so sorry, poor fellow; and I can't bear making people unhappy. There is no harm whatever."

Good walker as she was, undoubtedly, Jean found that when she arrived at Glenholme she was much more tired than she had expected, and thought to herself that she could not be so strong now as when last year she had taken those long walks with Lord Ivor, during which they had learnt to know each other. The road had been lonely too, and she had only met a few chance passengers between Sholto and Glenholme, so that she was not sorry that the return walk would be made in Mr. Blair's society.

She was glad enough, too, to sit down on a little stone step by the old church, and rest awhile before she began her sketch, and leaning her pretty head against its ruined wall, she fell into a little slumber, which lasted quite half an hour before she awoke to a consciousness of where she was. Then, hastily opening her sketch book, she began to sketch, and was soon so absorbed in her work that she did not notice Mr. Blair's approach, and he stood for some minutes watching her as she sat there, and thinking what a pretty picture she made. The bright interested face, with her pretty brown hair slightly disordered from her walk, her hat thrown carelessly at her side, the graceful figure in its quaint tweed dress, the diamonds flashing on the white, ungloved hand; the background of blue sky, and the solitary ruined church in the foreground. Suddenly looking up with a start, Jean saw the tall figure in his loose shooting garments, standing leaning against a tree looking at her with dark gloomful eyes, which softened into tenderness as they met hers.

"Have you been there long?" she said, lightly. "You quite startled me. Please don't move, for you are just the one thing wanting in my sketch. Stand just as you are now for a few minutes."

"Willingly," he answered. "For as long as you like, Miss McLeod, it could not be too long."

"There," said Jean, after a pause. "I have done, and you are free, Mr. Blair. I am very much obliged."

He came and threw himself on the ground beside her in an attitude of easy grace.

"May I see your pretty sketch?" he said, putting out his hand. "You are an accomplished artist, Miss McLeod."

"It was always my forte," said Jean, lightly. "Have you had good sport to-day?"

"I believe so, yes."

"Is it time to start homewards," she asked, after a moment's silence.

"Ah! no, not quite yet," he said, with quick, eager entreaty, looking up into her face. "You can spare me a few minutes still; see I have 'The Wanderer' in my pocket, and we can amuse ourselves very well for a little while."

"You are constant in your likings," she said, glancing at the little worn edition of Meredith's poems.

"Very constant," he said, quietly. "I never change."

He was turning over the leaves idly as he spoke, looking up into her face covertly.

"What makes you like Owen Meredith so much?" she said.

"Because he writes like a man who has suffered."

"Have you suffered, then?"

"Yes, lately; intensely."

The words dropped from him as if each cost him an effort, and as if spoken in pain; Jean, tender little heart, softened strangely, and her lip quivered; he was silent for a moment, and when he spoke again it was in a different tone, carelessly and irrelevantly.

For half an hour they sat together under the walls of the old, weather-beaten, ruined church; he talked mostly, while she listened at intervals, fascinated and entranced by the singular charm of his conversation, for he had laid himself out to please her, and could not but succeed. He talked of poets and poetry, of sunny southern climes, of that land where "love most lovely seems," Italy, and Jean felt herself carried by his impassioned eloquence far from Glenholme to the magic land of which he spoke.

"By ocean bar, by woodland belt,
Our silent course a syren led,
Till dark in dawn began to melt;
Through the wild wizard work o'er head,
A murmur from the violet sails;
A glory in the golden dell,
There beauty all her breast unveils,
And music pours out all her spell.
We watched towards the land of dreams,
The fair moon draw the murmuring main;
A single thread of silver beams
Was made the monster's rippling chain;
We heard far off the syren's song,
We caught the gleam of sea maid's hair,
The glimmering isles and rocks among,
We moved through sparkling purple air."

It was very pleasant to sit and listen; and when at last he rose from his lowly position at her feet with a long sigh, Jean sighed also, softly and faintly—an echo of his own.

"Time to go—so soon!" she said. "It has been very pleasant. We have a long walk home, though."

"Yes, and I am afraid it is later than I thought, Miss McLeod. It is past five!"

"Past five!" ejaculated Jean, in dismay. "We shall never be at home in time for dinner. There is a short cut across the moor. Do you know it, Mr. Blair?"

"I think I do. Will it save us much?"

"Yes, fully a mile; come, now," she added, gaily, "we must put best foot foremost!"

"Are you going to leave your sketch-book?" he said, lifting it from the ground.

"Oh! I had forgotten it!" she said, laughing. "You have made me forget everything this afternoon but Owen Meredith and Italy!"

His face brightened as they walked rapidly on, talking gaily for some time; but before they had walked a mile Jean's pace flagged, and, without making any remark, Mr. Blair altered his step to suit hers.

They had not gone very far when a sudden, great splash of rain fell upon Jean's cheek, and she started in dismay.

"It is going to rain, I think! Oh! what a heavy, black cloud! Mr. Blair, here is a complication!" she exclaimed.

He looked anxious and uneasy.

"I am afraid it is going to be rough," he said. "I almost wish we had kept to the road. I hope you are not very tired; for we must walk fast."

"I am not tired," she answered. "How tiresome of it to rain!"

They went on more silently now, the rain coming down faster; and the sky darkened rapidly as the evening fell. After a time a sudden stillness—the hush preceding a storm—fell over the face of the wide-spreading moor. It was becoming difficult to see the way; and Jean's little feet were growing more and more weary as they plodded on. Mr. Blair had removed his shooting-coat, and, regardless of her remonstrances, wrapped it round her, so that she was not yet wet, and he had drawn her hand through his arm to help her on; but before two miles had been covered Joan's fatigue almost overpowered her.

"This is terrible for you, my poor child," he said, tenderly. "I am so sorry."

"You are wet through," said Jean, trying to laugh; but she was so weary and exhausted fighting with the wind and rain, that the effort was a decided failure.

"That does not matter. How can I help you?"

"I wonder how far we have to go now?" she said, wearily, as they went on again; but they had not gone many paces when the first flash of lightning and a low roll of thunder sounded the outbreak of the storm.

Jean uttered a cry of terror, and turned to her companion, who put his arm round her and drew her close to his side.

"Do not be alarmed!" he said, in a hoarse, agitated voice. "You are safe, dear child!"

But the girl, who was the veriest coward in a storm, broke into terrified sobs, and struggled in vain to conquer her emotion and terror.

Very gently Mr. Blair bent over her, holding her within his arm, and trying to soothe her and to induce her to go onward; but the progress was very slow, and by the time another mile was walked the storm was at its hight. Jean was half dead with terror, fright and exhaustion, and Mr. Blair was fain to confess that he did not know his way.

They were lost on the moor!

CHAPTER IX.

CAUGHT IN THE NET.

Lost on the moor!

"Have we lost our way?" asked Jean, lifting her head from Mr. Blair's arm in sudden fear as he stopped.

"I almost think we have," he answered, speaking cheerfully, to give her courage. "It is rather a chapter of accidents altogether, is it not? I wish I could find some shelter for you, poor birdie!"

"I think we cannot be very far from home," she said, withdrawing herself a little from his support. "I wonder which way we ought to go?"

"If I could only find some shelter for you," he said again, "I would push on to Sholto and bring a carriage."

"No, no!" with a sudden terror; "you must not leave me, Mr. Blair."

"Of course not here, dear child; as if I could!" There was no attempt at concealment of the tenderness of his voice now, and, terrified though she was, and faint and trembling, Jean recollected her faith to Lord Ivor and his trust in her with a pang of self-reproach.

"Perhaps they will send to look for us," she said in a moment.

"I hope so—I hope so," he said, and at this moment a flash of lightning showed a figure coming towards them across the moor.

"There is some one coming," said Jean, rallying for a moment, and if the darkness had permitted her to see her companion's face she would have seen that an expression of anger and annoyance flashed across it.

The figure came nearer to them, and Mr. Blair called out asking if he could put them in the way to Sholto Hall, and how far it was.

"To Sholto," was the answer. "Troth, man, ye should hae hadden wessel to Sholto; ye're aiblins ten mile or mair awa frae Sholto."

Jean uttered a faint little cry of dismay, and Andrew Blair muttered something between his teeth which might have been a benediction or an execration, or both perhaps.

"Hech! sir, but it's a weary long gate yet to Sholto, and unco heavy road for the leddie," said their informant.

"What can we do?" said Mr. Blair. "It is such terrible weather, and this lady is quite exhausted."

"I kenna, unless ye like to gae down with me to Langdale, and speer for quarters at the hottle there; I'se warrant they'll hae room for ye and your guid wife there."

"How far is it to Langdale?" asked Mr. Blair.

"A gey bit, aiblins twa mile and a bittock," was the reply.

"I am afraid that that is our only resource," said Mr. Blair, bending over Jean again. "Are you strong enough to walk the distance, or shall I carry you, Jean?"

"I can walk," she said, faintly. "You are very good, Mr. Blair," she added as they went slowly on. "I am such a foolish coward."

"It is a terrible ordeal for you, poor child," he said, tenderly. "And you are bearing it far better than most women would. If you will allow me to put my arm round you, I can give you more effectual assistance and support. There is nothing improper," he added, smiling, "you would allow me to do it if we were waltzing, you know, and our friend here thinks we are man and wife, so he won't see anything unusual in the proceeding."

Jean was too weary to make any resistance and she suffered him to pass his arm round her and found it a great help and assistance as they went on; the sturdy yeoman beside them making an occasional remark as to the way, the storm or the distance which Mr. Blair answered.

For some time they proceeded thus, slowly enough, for Jean's strength was failing her, and she leant more and more heavily on the strong arm clasped around her; she did not speak even in answer to a few cheering, helpful words which Mr. Blair addressed to her now and then, she was too utterly weary, every limb was aching with fatigue, and her bodily prostration deadened the sense which had at first made her feel acutely miserable, that Florence would be anxious, and that when Lord Ivor heard of her adventure on the moors he would be seriously displeased. It was all her own fault, she thought, dimly, as her weary head dropped on Andrew Blair's shoulder and her little cold hands lay passive in his, all her own fault; but she had not strength to care much even for Archie's anger.

"The puir lassie is sair tired," said the man once.

"Yes," said Andrew Blair, softly, and Jean felt how the tender clasp tightened round her trembling form.

"My certie, it's but naltural," was the rejoinder. "Your guid wife, sir?"

Andrew Blair hesitated for a moment, then he answered, quietly:

"Yes, my wife."

They went on in silence for a few minutes. Jean had heard the words, but had not cared to contradict them; perhaps Mr. Blair had good reason for making such an assertion.

Suddenly he bent over her and spoke in a low tone.

"Jean, he said, softly, "it will be better for you to pass as my wife at this inn; it might lead to unpleasant remarks otherwise. Are you willing?"

"Yes," said Jean, languidly. "If you like."

Andrew Blair's heart throbbed quickly with mingled joy and triumph, his wished-for object was almost attained. Not only might he possess the wife he longed for, but he might take the cruellest revenge upon Lord Ivor that it was in the power of man to take.

Remember, they were in Scotland—in Scotland "where a man and a woman have only to declare themselves married, and the thing is done."

Poor, light-hearted Jean McLeod, in what a terrible net was she entangling herself! Was there no guardian angel by her side to show her the pitfall open at her feet? What a terrible future of sorrow and suffering she was preparing for herself, and one whose happiness was far dearer to her than her own.

"Courage," said Mr. Blair, softly, as her footsteps flagged, then ceased. "We shall soon be there. It is but a few yards further, dearest child."

Jean made an effort, but stumbled; and Mr. Blair caught her in his arms.

"I cannot," she said feebly. "I cannot; I am so tired. Help me—oh! help me!"

Her eyes closed, and he felt her head fall heavily forward on his breast.

"I am faint," she moaned; then consciousness entirely deserted her, and she lay in his arms in a dead faint.

Mr. Blair lifted her in his strong arms lightly, as he might have done a sleeping child, and the beautiful, pallid face fell upon his shoulders white and still.

"She has fainted," he said, briefly. "Perhaps it is better so. We can step out now, friend."

And the two men quickened their pace, the one apparently as little encumbered by his helpless burden as the other was by the bundle he carried slung on the end of his stick.

The swift motion, however, soon recalled Jean to herself, and in a few moments her eyes opened again. She looked vacantly into the darkness, dimly understanding what had happened, and lifted her head feebly from its resting-place.

"I can walk," she said, in low faint tones; but Mr. Blair peremptorily silenced her.

"You must not think of it," he said, firmly, but tenderly. "I will not allow it. Langdale lights are visible now, and your discomfort will soon be over. Meanwhile rest still, my darling. I will hold you but a few moments longer, my precious little wife."

The last words were said with an inexpressible tenderness. Jean's head rested again upon his breast, and two large tears forced themselves between her long lashes.

Langdale was a wretched little hamlet—a collection of hovels built in a little dell with mountain on one side and moor on the other three. The inn, the largest house among the number, was a square, stoutly-built erection, which had an air of sturdy independence about it.

"The landleddy is a Southerner," said Mr. Blair's guide, as they drew near the house; and Jean uttered a feeble little petition that she might walk; she was quite strong again.

"Please, Mr. Blair."

"Won't you trust me to take care of you, Jean?" he said, softly; and at this moment their guide knocked at the door of the inn, and Mr. Blair placed Jean gently upon her feet.

She was giddy and faint still, and seeing her weakness, he put his arm round her again, and the door of the inn being opened, a flood of light came streaming out, giving a ruddy welcome to the weary travelers; and the occupants of the bar-parlor looking up, saw on the threshold a tall man supporting on his arm the slender, drooping form of a young girl, whose white face lay upon his breast, and whose languid, nerveless movements seemed to denote illness, or the exhaustion following on extreme fatigue, while behind them appeared a farmer-like figure, who was well known to some of them, and who was greeted by one or two as "David Grainger."

A tall, fresh-looking woman came forward to meet Mr. Blair, and looked at him inquiringly.

"Are you the landlady?" he said.

"Yes, sir," she answered, with something of the same sturdy, independent air which characterised her house.

"We lost our way on the moors," said Mr. Blair, speaking with slow distinctness, and in tones audible to most of the men assembled in the lighted bar-parlor; "and this lady, my wife, is terribly tired and exhausted. Can you give us shelter until the storm is well over, and a good fire, if you please?"

"Certainly, sir," was the answer. "You will require private rooms, of course?"

"Yes; and perhaps you can give my wife a change of clothes; hers are wet through, as you perceive."

"This way, sir," the landlady said, showing

them up a little wooden staircase, up which Jean stumbled as best she could, and sank exhausted on a chair, in a cold-looking little sitting-room on the first floor of the house.

"Light a fire with as little delay as possible," said Mr. Blair, hurriedly. "Make as much haste as you can, my good woman."

CHAPTER X.

As Mr. Blair spoke he crossed over to Jean's side and gently removed her hat, which was dripping with water, while the little piece of heather, with which she adorned it in the afternoon, was beaten down and drenched. The young girl tried to laugh as he took her hands and peeled off, literally peeled off, the clinging gloves.

"Are you better dear child?" he said, softly. "You frightened me dreadfully a short time since."

"I am sorry," she said, heavily.

"I think your good lady would be better in bed, while her clothes are drying," suggested the landlady, who had coaxed the fire into a blaze; but at this practical suggestion, Jean exclaimed, in horror.

"Oh! no, please," she said, hurriedly. "It is only my dress which is wet. I had your coat, you know. "It," and she turned to the landlady, "you could lend me something to wear while my dress is drying, that will be all I want."

"Very well, ma'am, I will get you something; but I am a lone woman, sir, she added, "so that I fear I cannot accommodate you."

"And you are in much worse plight than I am,' said Jean, regretfully. "Please go and get your things dry. I think the storm is beginning again, is it not?"

"I am afraid it is," said Mr. Blair, as the landlady left the room, and he looked out on the moor, which lay dark and gloomy before the window. "I am so happy to think you are sheltered, my child," he added, coming back to Jean, who was resting her head against the hard horse-hair bolster of the little sofa, in almost a stupor of exhaustion and fatigue.

"You only think of me," she said, smiling faintly, holding out her hand to him.

"Is it not natural that a man should take care of his own," he said, bending over the little hand and touching it to his lips, just as the landlady returned with some garments over her arm. "Such a dear little wife must be taken care of, must she not?"

Jean laughed slightly.

"And you are the most careful of husbands," she said, as she rose languidly from the sofa with his assistance; for she was stiff and weak still, and her limbs trembled.

"I will go down and see about a hot drink for you," he said, giving her into Mrs. Martin's care (for the landlady, although a lone woman, had taken brevet rank.) "And by the time my things are dry, you will be rested a little."

Almost as he spoke the storm, which had momentarily subsided, broke forth again, and a vivid flash of lightning was succeeded by a long peal of thunder.

Jean shivered.

"You will not be long?" she said, kindly, turning to Mr. Blair.

"Oh, of course not. Take good care of my wife, Mrs. Martin."

"Yes, sir," replied the landlady; while Jean, who was touched by the tender consideration for her he had displayed throughout their adventure, forced a smile as he left the room, and by two words sealed her own fate.

"Take good care of yourself, my husband!" she said.

"You have a very good husband, ma'am," said Mrs. Martin, as she proceeded to remove Jean's wet clothes, and to array her in her own Sunday best garments, which consisted of a deep crimson cashmere gown, which was, of course, considerably too large, long, and full for Miss McLeod's slender figure.

"Yes; he is very kind," said Jean, absently. "Oh! I wish the storm would cease," she added, wearily.

At last Mrs. Martin's performance was concluded; Jean lay back on the little sofa, which was drawn up near the fire, and before Mrs. Martin had finished "tidying up," she had fallen fast asleep; even the storm without did not disturb her, although it raged violently, and ever and anon the little sitting-room was lighted by the red, lurid glare of the lightning, while the roar of the thunder shook the house to its foundations.

When Jean awoke, she felt refreshed and rested, the fire was blazing cheerily, and the storm had died away, and as Jean sat up, pushing away her hair from her forehead, she glanced down at her quaint costume, and laughed softly to herself.

Almost at the same moment there came a knock at the door, and in answer to Jean's "come in," an elderly, hard-featured woman entered with a tray, with tea upon it, which Jean hailed with delight.

The woman placed it on a little table, and brought it to Jean's side, saying she hoped she had rested well.

A little note lay on the tray, and as Jean answered her smilingly, she took it up, and opening it, read as follows:

"MY DEAR LITTLE WIFE,

"I hope you have partly recovered your fatigue. When you are ready to receive me let me know, as I am anxious to see how you are. Will you forgive me for having taken such a liberty with your sketch-book?

"Your affectionate husband,

"ANDREW BLAIR."

The note was written on a leaf torn from her sketch-book, and folded in two. Jean read it, smiling to herself. Then she tore off the blank sheet, and with a pencil, which was lying on the tray, wrote in reply:

"MY DEAR HUSBAND,

"I am quite ready to receive you, and I am anxious that you should see me in my charming toilet. Don't apologise for using my paper. I thought that a wife's property was less her's than her husband's. You see I have a proper notion of what my prospective duties are.

"Your affectionate wife, JEAN."

"Take this note to the gentleman who gave you that one," Jean said to the hard-featured handmaid, who had watched her proceedings with interest.

"It was Mrs. Martin who gave it to me, ma'am," was the reply.

"Well, give it to the gentleman who came here with me," said Jean.

"Twa gentlemen came with ye,' ma'am," said the woman, obtusely. "Never fash yoursel," she added, as Jean made a movement of impatience, "never fash yoursel, it is yer guidman, ye mean?"

"Yes; I mean my husband," said Jean, angrily, just as the door behind opened and Mrs. Martin appeared on the threshold, asking if "Mrs. Blair," had everything she required, and her servant went down to Mr. Blair with Jean's note, which he answered almost immediately in person.—*To be continued.*

RECENT LITERATURE.

American Popular Dictionary of the English Language, Illustrated. New York: Carter & Peck, 271 Broadway. Price, $1.

Unlike most of the low-priced dictionaries which have been extensively advertised of late, this one is worth infinitely more than the amount asked for it. It contains all the information usually comprised in books of its class, beside much other matter generally found in encyclopedias and even there in not so compact a form.

The first 311 pages are occupied by the dictionary proper—i. e., words, their pronunciation and definition—followed by a list of words, phrases and quotations from ancient and modern languages with their signification; a complete list of Scripture proper names; an alphabetical list of American geographical names with their derivation and signification; popular (or nick) names of American States and cities. The treatise on "How to Pronounce Difficult Words," is fully illustrated by examples and this, together with the extensive list of correct pronunciation of words commonly mispronounced, would alone make the book a valuable acquisition to any library. The chapter devoted to showing how to write with elegance and ease, and the other to the enumeration of slang, vulgar phrases, inaccurate terms and expressions, contain information which it is important for every one to know. For the rest, there are tables giving dates of discoveries, lists of aborigines of North America, statistics of American Revolution, Declaration of Independence, the name, birthplace, age of the signers of the same; facts relative to population, public debt, public lands, homestead laws, canals, army, navy, vital statistics, insolvent and assignment laws; newspapers and periodicals of the world; railroads, coal productions, interest tables, and a chronological history of the United States. The book closes with a list of the gods, heroes and goddesses of mythology, with a short sketch of each. It would be all but impossible to find within the covers of any other book now extant, so much useful, curious and interesting information. The faith of the publishers in their ability to satisfy the most critical and exacting of purchasers, is evidenced by the offer they make to refund the money to any who may, for any reason, be dissatisfied with the dictionary.

Summer Savory. By BENJ. F. TAYLOR, LL.D Chicago, S. C. Griggs & Co. Price $1.00.

This volume we are informed in the preface is a "record of gypsy-like rambles in sunny days;" and that these rambles took place in Utah and Colorado, may be inferred from occasional descriptions of scenery and persons. These are interspersed with discourses on hats; funeral extravagance; a caravan which the writer saw when he was a boy; the poetry of picnics; an old-time "meeting-house;" winks and winkers; Webster's Spelling-Book; a country ball-room, and other subjects of equal importance. This literary kaleidoscope contains several pleasing pictures among which those of Colorado mountain scenery seem to deserve special notice; but to us the most interesting passage is the description of the services at the Mormon Tabernacle in Salt Lake City. The account of the caravan is amusing in everything except the closing sentences which relate to the various kinds of lions; these show such traces of careful construction that the effects of the humor are somewhat lost. "The poetry of picnics" will appeal to those who find this the most delightful method of killing time. The author informs us that some of the "Moody and Sankey" hymns have been degraded in certain localities into waltzes. This information is new to us, and possibly may be to some of our readers. If this *is* so, think of the frightful consequences that may result should this new moral disease prove contagious! What if some scoffer should construct a popular schottische from "Old Hundred?" To speak seriously, the style of sacred music now becoming popular, shows a natural revolt of the popular taste against the unvarying monotony of the older hymn tunes, a desire for a more animated style of composition, that may occasionally go a little too far; but how any rational human being can think "Jesus of Nazareth Passeth By" suitable for waltz music, we cannot imagine. In conclusion, we may say that if "Summer Savory" was written only to furnish a means of killing time, it may accomplish this, and its low price makes it an inexpensive investment.

Studies of Paris. By EDMOND DE AMICIS. New York. G. P. Putnam's Sons.

This brilliant writer's previous work on Constantinople won for him golden opinions, his title to which is confirmed by this later production. His marvelous powers of delineation, his ability to seize the central idea of a scene, or the salient characteristics of a race or a city, and by a few happy sentences to bring them vividly before the reader, make his descriptions stirring and picturesque. His art as a writer has enabled him to invest with new charms, even so worn a subject as Parisian sights and sounds. To many readers the extended sketches he gives of Victor Hugo and Emile Zola, replete as they are with interesting facts concerning these authors—the character of their works, methods of composition, habits of life—will be the most attractive portions of the book.

De Amicis hits off most admirably the overweening vanity of the Parisian in the following: "This idea of having been born in Paris, of having had this sign of predilection from God, is the leading thought of the Parisian, like a star which irradiates his whole life with a heavenly consolation. The benevolence he shows to strangers is inspired to a great degree by a feeling of commiseration for them, and his dislike of them is not a profound one simply from the fact that he considers his enemies sufficiently punished by the fate which caused them to be born where they were. For this reason, he worships all the childishness and vice of his native city, and is proud of them only because they belong to Paris, which, to his mind, is above human criticism."

MAGAZINES.

INTERNATIONAL REVIEW, for October.—Contents: The Light of Asia, Oliver Wendell Holmes; The Negro Exodus, F. R. Guernsey; The Political Situation in France, A. Talandier; Mr. Blackmore's Novels, George Barnett Smith; Protection and Socialism: J. Laurence Laughlin; Von Holst's History of the United States, Henry Cabot Lodge; The Study and Practice of Medicine by Women, James R. Chadwick; Contemporary Literature, Pierce's "Æneid."

THE NEGRO EXODUS.—A marked race-prejudice is shown against the negro immigrants by the farmers, who are mainly Republicans in politics. Among the small white farmers of the Louisiana hill-parishes and the German settlers in Texas there is exhibited the same antipathy to negro neighbors. It may be set down as a fact that any community of white men who themselves work in the fields object to being brought into competition with a race considered to be inferior. One of the objections raised by Kansas farmers to negro settlers is that the blacks are immoral, and they fear the results of an association of the children of the two races in the public schools. Ex-Governor Anthony of Kansas, a life-long abolitionist and "pronounced" Republican, said to the writer that he was opposed to a pauper immigration of any nationality or race, and therefore had no sympathy with the enthusiasts who would open Kansas to the pauper negroes of the South. The most potent reason against negro immigration in the minds of the leading men of Kansas is a well-grounded fear that the news of a numerous settlement of blacks in that State would serve to turn the tide of white immigration into Nebraska and Minnesota. A declared inclination on the part of the present administration in Kansas to invite a large immigration of negroes would immensely strengthen the feeble Democratic opposition, even if it should not result in a division of the local Republican party.

The employment of Chinese in the cotton fields of the South has often been mooted; but, to our knowledge, the only practical test, on a large scale of the alleged superiority of Mongolian over African labor has been made in Texas, where about three hundred Chinamen, imported originally to build a railroad, have been employed as laborers on cotton plantations, or have been allowed to become tenant-farmers. These Chinamen have proved to be diligent and satisfactory. They are physically inferior to the negroes, but make up for their deficiency in strength by unremitting industry. As tenants they are very shrewd, requiring that the land they rent be measured by disinterested persons, and confirming the surveyors' report by an independent measurement of their own. They will not submit to extortionate prices, and make their purchases where weights and measures, as well as prices, are satisfactory to them. The Chinaman contrives in some way nearly always to have a little ready money, and is accordingly able to buy his goods where he pleases, and to avoid getting into the power of the grasping merchants. The Chinaman is willing to work six days in a week, while the average negro tenant is likely to make a holiday of Saturday as well as of Sunday. One of the evils of share-farming has been the readiness of the negro to take a holiday when the mood came upon him. Yet the plodding, patient Chinaman, although honorable in meeting the letter of his contract, is not looked upon with favor by the majority of the planters. They prefer the negro race, to all the peculiarities of which they have become used, and regard with disfavor the Chinaman, who is of alien religion, and destitute of every trace of American feeling.—*F. E. Guernsey, in International Review for October.*

THE HERALD OF HEALTH.—Contents for October: Physiological and Sanitary Marriage and Parentage, by the editor; Value of Physical Endurance, by Prof. Huxley; Winter Suits for Little Girls; The Insidious Evil of Tobacco; After Death—Baby's Appeal—Life—Parental; What is a Good Citizen?; Lomi-Lomi; Sir Rowland Hill—Shakespeare; How to Treat Mischievous Children—Idling Well—Weather Prophets—Unoccupied Houses a Source of Disease; Both-Handedness—Hygiene for Stutterers; Starvation in the Nursery—Congestive Headache—A Cheap and Good Pudding; A Judicial Opinion of Fashionable Dress—Death from Soothing Syrup—Moral Effect of Tea, Coffee, etc.; Baked Fruit and Bread Pie—Damp Closets—Current Literature; Health Foods.

HOW TO TREAT MISCHIEVOUS CHILDREN.—Here is a little child, who is a great tease and trouble. He is always asking to do this or that impossible or unpermissible action. He bursts in abruptly upon the conversation of his seniors. He destroys all peace in the house by shouts and screams, imperious demands on the time and attention of every one, endless interruptions of every one's affairs. He is an imp of mischief, breaking furniture, overturning inkstands on the carpet, setting fire to valuable papers, driving nails into the furniture. How shall you abate this nuisance? You may try to destroy these bad habits by scolding him, by rebukes, by lectures, by punishments. That is one way, but not the best. These bad habits often spring from an instinct of activity, an intense desire to do something, which the Creator has given the child as a means of mental and moral growth. In trying to pull up the tares you are in great danger of rooting out the wheat also. If you succeed by force in changing his disagreeable torment of perpetual activity into a dull quiet, you have changed a bright boy into a dull one. A better way than destroying this tendency is to fulfill it by giving him plenty of occupation of an innocent kind. Give him a heap of sand to dig, blocks of wood to build houses with, a box of tools, and boards to saw. Set him at some work, useful or interesting, or, at least, harmless. He will like all this better than he likes mischief. All his irregular activity was a cry for something to do.—*Rev. J. F. Clarke, in Herald of Health.*

USEFUL ITEMS.

THE DARK AGES.—HOW THE PEOPLE OF THAT TIME ENJOYED THEMSELVES.

THE fathers of the printing trade accepted a grave responsibility in exciting a world that was intellectually tranquil. To us, looking back upon them out of the light, those so-called "dark ages" seem sufficiently dreary. In the intervals of those active occupations which are scarcely suited to our quieter modern tastes—feuds, lighting, fire-raising, rapine, rapes, &c.—it appears to us that time must have dragged along very heavily. In reality, to the mass of those who knew no better, those times of universal ignorance and torpidity must have been at least negatively agreeable. With the rare exception of some solitary student, of some scheming churchman, or some statesman in advance of his age, we may take it for granted that nobody thought very deeply. There was no wear and tear of the mental fibers, and, consequently, there were none of those painful brain and nerve diseases that fill our asylums, and are transmitted by descent. So the stomach had a similar immunity from strain, and the unimpaired digestion was never troubled by abstruse thought or far-fetched anxieties—which, by the way, was a most beneficient provision of Providence, when we remember the character of the mediæval *cuisine*, and the habits of feasting among the rich and idle. What passed for thought with society generally was the mechanical action of a languid brain working in the narrowest circles of its immediate interest and cares. Concern with a future state was the special care of clergy; the church had settled the dogmas which the devout had only to receive. It is next to impossible now-a-day to realize the condition of the nobleman or county squire, unable to read or to write, who groped his way from the cradle to the grave in the profoundest mental darkness. He never troubled his head about foreign politics, unless he were personally summoned to serve beyond the seas; or when some strolling wayfarer, like Wilfrid of Ivanhoe, brought news of the wars in France or Palestine. Nor did he concern himself much more about domestic broils, unless they seemed likely to cost him his head, or bring him some addition to his domains. Such conversation as there was over the heavy banqueting, beyond remarks on the cooking of the joints and the quality of the heady liquors, turned generally on matters manorial or parochial. The guests grew excited over the encroachment of some neighbor on the rights of free-foresty, the latest deed of audacity of the nearest band of outlaws, a raid on the droves of swine, or a murrain in the herds of cattle. Men were forced to drink hard and long after supper, since there was nothing else to be done, and so the heavy brains became slowly sodden, and still more insensible to intellectual stimulants.—*Blackwood's Magazine.*

KABUL.—It is somewhat singular that the name of Kabul should have made its first appearance in history as a term of reproach. The Old Testament Scriptures record that when Hiram, King of Tyre, dissatisfied with the twenty cities given him by Solomon, asked, "What cities are these which thou hast given me, my brother?" he marked his displeasure by calling them "the land of Kabul." The picturesque surroundings of the modern city may fairly exempt it from a similar taunt; but not a few Afghans will give the preference to Kandahar, which actually superceded its elder rival as the native metropolis for seventeen years after its foundation, the re-transfer of the seat of government to Kabul taking place in 1776. From a military point of view, however, the strong fortress of Ghazni, lying southwest of Kabul on the great northern road from Kandahar, would be preferable to either. It was captured for the first time in 1839, when a deserter betrayed to the English the secret of a weakly-guarded gate, which was forced while a feigned attack in another quarter distracted the attention of the garrison. Notwithstanding this mischance, however, the city still retains its native title of "the impregnable."—*N. Y. Times.*

MANY kinds of wood are used in making bows for archery service, among which are some beautifully variegated woods from South America. The lance and hickory take the lead among the common varieties, and the elegant snakewood, backed with hickory, makes one of the nicest bows that is made. The snakewood takes a beautiful polish, and owing to its responsive nature, sends the arrow farther and with more certainty than a bow made of any other kind of wood. The nicest bows are planed by hand, great care being required to make the sides curve exactly alike, as any deviation injures the efficiency of the bow. The ends of the bows are carved out of horn. The nicest bows are tipped with buffalo horn. A piece of cork is shaped and glued to the center and covered with plush to make the handle. The power of the bow is measured by the number of the pounds it pulls, a spring scale being used for the purpose of showing this. A bow pulling thirty pounds is considered the right thing for a lady, and fifty pounds for a gentleman.

For Women.

THE BUTTERFLY.

MRS. LAURA S. HAGNER.

SAILING so airily over the clover,
Bending so lovingly over the rose—
Who would not envy thee, beautiful rover?
What dost thou know of our life and its woes?

Thou hast forgotten thy former existence,
Wingless and sad 'mid thy mates of the clod—
So shall *our* earthly life fade in the distance
When we arise in the likeness of GOD!

THE WOMAN'S CLUB.

TO THE MOTHERS.

COME, mothers, let us "reason together," and by our friendly intercourse and exchange of ideas, through the medium of this department of one of the best papers of its kind, tend in some degree toward the elevation of the sisterhood who are so interested in its perusal. There are none of us who have had the care of little ones and watched their growing years, even in never so careless a manner, but may sometimes have had experiences that, if given to the world, would touch a responsive cord in some other bosom. Your position, dear mothers, is not the occupation of a day or a week, but day after day and year after year you have kept your vigilance unabated; ceasing not in your anxiety, but each hour, as it follows the one just gone before, finds you unfaltering at your trust.

When I see a young mother as she fondles and caresses her first baby, in the full joy of possession, a thrilling enthusiasm seeming to pervade her whole being which nothing else can ever give, I feel almost a pang of sadness, for beyond I see long years of care and solicitude, weary nights of watching over sleepless lids. She waits, hopes, looking away off into the future, when the little helpless creature, now so entirely dependent on her for the relieving of every want, shall have developed into a good and high-souled man or woman, with all the attributes which a gracious heavenly Father has given it, cultivated and improved, and on whose loving support she may lean in her declining years. This is a sweet dream, and how sustaining! "If it were not for hope, the heart would sink." Yet too many fall short of the coveted excellence; some children may inherit tendencies, or "natural propensities," that make it very difficult for the mother to train them aright, but in the greater number of such instances the first and all-important fault is in the parent not knowing how to govern herself.

A little babe is given you whose mind is like the blank pages of a book; not an idea has been written there; it breathes and sleeps because this is its nature; it cries when uncomfortable, yet knows not whether it is sick or hungry; yet even in this untutored state it is soothed by the sound of the mother's voice, one of the first to reach its ear and quite the first to be comprehended; it has brought love with it into this "world of woe," and under the influence of love and tender care it is to be guided on its peaceful way.

Then how essential it is that she to whom is given this holy trust should have learned the control of her own temper, keeping down every impulse of harshness, all hasty words such as are often "spoken in a hurry, to be repented of at leisure." Who has not seen the little infant, when a sharp word has been uttered, such as a command to "hush up" (it may be), sob and all its features showing that it is nearly heartbroken?

You should begin your training in a steady, firm, but loving manner, and always do the very thing you say you will. If it is a promise of reward or punishment, have your mind made up deliberately, and, if possible, never vary. Let your children rely on your truthfulness; let them feel that "if mother says so, it is so, if it isn't so;" this will save you a vast deal of trouble and that greatest annoyance, teasing. Do not say, "I didn't want you to go, but you bother me so." Oh! how soon they learn the weak point. I once knew a mother who was so easily diverted that all her children had to do was to make her laugh, and that put her in so good a humor that she could not punish them.

Do not drive your little darlings from you by being too busy to be interested in their play and their petty grievances, seeming so small to you, but often to them as great trials for the time being as any they may have to endure in after life. A few moments' attention, a word of sympathy or a kiss will go a long way toward healing a wounded or troubled spirit. Bring yourselves down to their level, and show them you can make companions of them; encourage them to confide in you without fear of ridicule, and they will never go away from you to find another on whom to bestow their confidence. It is a lovely sight where sons and daughters can thus repose their most perfect earthly trust in the loving heart that has yearned over them from infancy; and this happiness you may enjoy if you only take the right course. How many anxious hours it will save you to know where your children are, and in what company—feeling that they will not deceive their beloved and trusted mother.

YELLOW BECK.

THE PROSE OF LOG-CABINS.

DEAR MISS RIPLEY:—In order to give the ladies some idea of the discomforts almost every new comer has to put up with in making themselves a home, I will go back to our advent here, which was on Nov. 30th, 1877. We bought what they call an *improved* place, but Floridians have a very peculiar way of improving their places. There were fifteen acres of cultivated land with all the dead pine trees standing except those that had blown down. Every stump was left to mark the spot where the giant of the forest had stood, no matter how much in the way it might be; no one here would think of digging out a stump, for that would be a waste of labor, "let them alone, they will rot out in the course of twenty years or so," say they. We had several bearing orange trees and grape fruit, (Shaddock, I think, is the proper name for them) plenty of peach and quince trees, with figs, pomegranites, bananas, mulberry, sassafras, and Pride of India trees, all mixed up together just as though they had been dropped and grew wherever they happened to fall. Scarcely anything standing where a person of any taste would want it, and not a vine, rosebush or flowering shrub of any kind about the yard, here too, where so many things of that kind grow almost spontaneously. But the worst feature about it all was the miserable old log building which they called a house. If any one has any romantic ideas about log houses, let them come to Florida and the romance will soon disappear. Very few of the planters live in any thing else and take them all in all, the surroundings and the inside furnishings, they are the most comfortless abodes I ever saw. I don't think I can describe ours so as to give you half an idea of what a doleful looking affair it was. It seemed to me I could never stay in it over night, but as it would very soon be time to set out orange trees, roses, shrubs, &c., and there was so much work to be done to get ready for that, we decided we must defer building for a few months.

We were boarding in town, but found we could do but little unless we were on the spot to attend to it at all times, so we went to work to see what could be done towards making our cabin habitable. It was built after the fashion, of this country, long and narrow, not a window in it, with two wide doors, one on each side, opposite each other; almost the whole of one end was taken up by the huge fireplace and chimney built of sticks and mud, there was no ceiling overhead and the rafters were covered with an accumulation of spider's webs, which I do not think had ever been disturbed in the whole eight years since the cabin was built. They were draped and festooned in the most fantastic way, some of the patterns so intricate and beautiful, it really seemed a pity to ruthlessly destroy the effects of so much patient labor. I am fond of spiders and dearly love to watch them at their work, but do not quite fancy their dropping down upon me at all times, so the first thing to be done was to have the roof thoroughly swept, the walls well washed with lime water and the puncheon floor well scrubbed with soap and sand.

The cabin was built of round logs, the spaces between having been originally battened with narrow boards split out by hand, many of these were gone, leaving huge cracks which I called my "Bay Windows;" they gave us a good circulation of air, too. I hung up sheets and blankets to hide the ugly walls, curtained off one end of the room for a bed room, spread some pieces of carpeting and some bright-colored rugs on the floor, made a table of a large packing-box, covered it with a spread, and put upon it the books, magazines and papers, I wanted for daily use; put my writing table in a convenient corner, my sewing machine in the middle of the floor, between the two doors, to get the light, hung a few pictures, placed my husband's easy chair on one side of the fireplace, my Victoria rocker on the other, and when evening came it was cool enough to make a pitch-knot fire very comfortable and very pleasant. Indeed, that old fireplace alone was sufficient recompense for many deprivations. How beautifully it did light up those old black rafters. It carried me back, too, to my childish days, when I used to dream over the wood fire and see such wonderful pictures in the coals. If I found myself getting homesick or sighing for the comforts and luxuries of my northern home, thoughts of my friends there, closely shut up within doors, trying to keep warm over their base burners, and looking at the outer world through frosted panes, would soon cure me, for here I was, in mid-winter with the doors wide open and the sunshine pouring in all day long, and living almost entirely in the open air. But this article is already too long I fear; in my next I will tell you about our first winter's work.

Starke, Fla.

ONE WOMAN'S AMBITION.

DEAR CLUB"ITES." Many topics have been discussed in our meetings, and self-improvement has been not a little dwelt on. Perhaps a chapter on this subject from out of my own life may not be without interest. I ought, I suppose, to preface it with an apology for thus thrusting myself and what concerns me, prominently before the members of the Woman's Club, but as I write solely with the hope that possibly some one may be encouraged by my example I feel justified in waiving the apology.

In my childhood like most girls I was put through a course of piano tuition and was forced to spend many dreary hours practicing. I had in all about seven years of instruction. When my teacher was dismissed I had mastered a few gallops, and quadrilles, some showy pieces of the Shower of Pearls, order, one or two overtures, and this comprised about the extent of my musical knowledge.

All the compositions of Beethoven, Meyerbeyer, and a host of brilliant composers were unknown to me. The fault of course lay with my teacher. He, for it was a *man* with quite a metropolitan reputation as a good teacher—never insisted on my taking a thorough course in scales and exercises, but as soon as I had the least command over my fingers, he gave me piece after piece, no one of which did I ever learn to play accurately. The result was when I came to a brilliant run, I had to stop then and there to learn it instead of having acquired a thorough knowledge of it and similar passages before I had a "piece" at all. Mothers, how many of *your* daughters are rushing into pieces, and wasting their time on silly little polkas before they have mastered the alphabet of music?

After the teacher was dismissed, I dropped playing and for months at a time the piano was unopened. I decided I had no talent and concluded not to waste any more time over it. Years passed and still the piano remained dumb.

Something Miss Margaret B. Harvey wrote, made me question whether I had a right to allow all the time, effort and money expended in the endeavor to make an accomplished pianist of me to go to waste, and the result of my deliberations was that I—who have entered my fortieth year—determined to begin again. For my encouragement, there were the following facts; I am familiar with the notes, their situation, &c., my fingers had been broken in young and so are "limber," and I am possessed of considerable knowledge which it would take a beginner a long time to acquire, so that I had a little capital to start on. On the other hand the disheartenments (if I may be allowed to coin a word) of which the following are the chief made the prospect of success seem rather problematical. To start with I am thirty-nine, and enthusiasm and hope are rather hard to invoke at that age; I am confined in a factory from 8 A. M. to 6 P. M., for 6 days in the week and then I am very poor.

I bought a copy of Richardson's Piano Method, and every night now finds me engaged for two or three hours in a hand to key struggle with scales, arpeggios, five-finger exercises and octaves. I intend to study by myself for one year, and by wearing my old suit this winter and economising in other ways. I hope to save enough to pay for instruction next fall. It is my ambition to be a good pianist in three years, and after that I shall hope to run up the degrees until I reach superlative.

And what advantage will result from it? I do not indulge in many day-dreams on the subject, but this much I know, a brilliant pianist is welcomed in refined, cultivated circles; there are beside many opportunities to earn something at fashionable "musicales." I have now an object in life. When the senseless chatter or the ignoble conduct of the people with whom I am forced to associate is more than ordinarily trying, I turn to my music for comfort and consolation.

I have written thus at length, thinking, perhaps, I may by it encourage some good RURAL sister to do and dare something outside of the demoralizing routine of petty home cares, or of factory or store life, a something which will lift her above the common place. I sincerely hope that success may crown the efforts of every woman who honestly strives to become something more than a machine.

Yours fraternally, EDNA HOUGHTON.

THE SERVANT GIRL QUESTION.

THE experience of "Clare" has been mine for the last five weeks, and as misery loves company, her contribution was read with great interest. You have dear Clare, my sympathy, and I am safe in saying that of many others, who are suffering from this very nuisance. It has been so for years and there is no prospect of any change, one servant out of ten, by chance may be a good one. As long as we have intelligence offices we will not have good servants. They get together there, and discuss every family far and near, and there is always one leader and many weak minded ones, and they do more mischief in one day than can be undone in one year. I called at an intelligence office to get a girl being in a great straight for help. The person in charge, looked me from head to foot and then without asking me to be seated, went on with some writing, directing circulars I took them to be, all the while leaving me standing. After she had finished, she asked me my business. I informed her my object was to get a girl to go in the country for general housework. She demanded two dollars. I told her after I selected a girl I would pay her and not before, so she went into a back room and returned with a very delicate young woman with a child in her arms. She would go a short distance in the country if the family was small and the work not heavy, for she and her child were sick and the doctor said they must have change of air and the child was teething and would die if they stopped in the city, she would go for $12 a month if the work was not too hard. I listened until she had finished, then walked out of the office and will never enter one again. My next experience was hunting over the city. I cut out a number of advertisements from the paper, and as it was raining I put on my rubber cloak and started at eight A. M. Called on seven, some were old and some were young all calling themselves *girls*, but I found most of them thought themselves very fine ladies; at last after five o'clock I found one willing to go in the country, who called herself a middle-aged woman, I engaged her and started for home. The next day when I set her to work I found she was at least seventy, almost blind and very lame, and knew nothing about cooking or anything else for that matter, so I shipped her. By that time I was sick in bed, caught cold in the rain, *girl hunting*. As soon as I could I had a horse harnessed and scoured the country; at last I thought I was about to be repaid for all my trouble, I found one that could do every thing and would go for low wages, a good home being the greatest object, she did not care to run out nights, so I engaged the treasure, but she could not go home with me then she would come next day. So I sent for her the next day a distance of six miles, she was not to be found anywhere. The man waited a while and then by the directions given him went to look for her, finally after a great deal of trouble he found her. I never was so glad to see any one so I met her with a happy smile of welcome, told her to go right up stairs and put on her working dress and hurry down as I had so much to do. She was a long time away so I thought I would go and hurry her, I met her coming down, she said she had forgotten her calico dress but she would go to the village and get one from her sister, and would be back in a half an hour, I felt like giving up, or doing something to relieve myself of servants. Well after three days she came back all smiling with a good story, she found her bundle in the wood-house, and an opportunity to look for another place. All of my neighbors and acquaintances are complaining of the same trouble. Clare we are not alone, if that is any comfort. If every one could give us their experience we would hear of many laughable things as well as annoying ones. If any one can tell us of a way out of this dilemma I hope they will send it to the Woman's Club, and oblige a

HOUSEKEEPER.

THE MUCH-MALIGNED MOTHER-IN-LAW.

AFTER reading "In behalf of Mothers-in-law" in RURAL of 25th of Sept. I felt inclined to cry out "Bully for the Mother-in-law who dared to protest," but considerations of propriety restrained me, and I substituted a milder adjective of the "approbative" degree. But didn't she polish the men off nicely!

It always did seem to me the acme of idiocy for men to go into convulsions of laughter over bald, thread-bare jokes on this class of women. A lecturer or a knight of cork—otherwise a negro minstrel—will ask "Why Adam was a to be envied man?" and although the audience has heard the joke (?) some score of times before, the answer, "Because he had no mother-in-law" is invariably greeted with shouts of laughter. I don't believe the men think it at all funny, they just applaud it on principle because it is a slur on women.

Men don't sneer at or make a joke of their mothers, or their own children, they reserve this species of courtesy for their wives and their wives' mothers.

"Mothers-in-law are meddlesome." Pity they were not more so, if they were there would be fewer broken-down disheartened young wives. John vows to protect, shield and take care of her generally, he can do it so much better than her mother, who being but a woman and having had only 18 or 20 year's experience cannot be expected to know so well as he, the subtile instincts of whose love have taught him the needs of her nature and how to minister to them.

"Subtile instincts of love" are quite delightful in books—makes the sentiment look so high-toned—but they are very unsatisfactory for every day use. The mother very naturally has a most absorbing interest in the welfare of her child, and when she sees this girl imposed on, slighted and brutally treated by her protector (?) is she to stand idly by and let selfish John tyrannize as much as he will?

If ever I have a son-in-law won't I lead him a life! All the wrong done to mothers-in-law from the date man invented the first joke against them down to the present, he will have to expiate.

AVENGER.

CHAIRS AND PLANTS AND GRIDDLE CAKES.

I WOULD like to tell the writer of the "artistic room" how to make a barrel chair. Take an apple or salt barrel and saw it half across, just the hight she wishes to have the seat of the chair, and regulate the width of the seat by the number of staves sawed off and tack the hoops on the part designed for the back. Now with a draw knife fashion the back *with* or *without* arms. To prevent the back being too hollow, take canvas or old bed quilt and tack on the inside of the back, laying an occasional *plait* and fasten over the outside previous to attaching it. Stuff well with straw so as to form a nice cushioned back, and cover with any goods you please. Make a cushion to fit the seat, fill the bottom of the barrel with straw and fit on the cushion. Put four or five castors on the bottom, and your chair is complete. Such chairs are handsome when upholstered.

The first of September I bring all the plants and vines I wish to keep growing through the winter into the Conservatory leaving the doors open day and night, for by so doing plants do not feel the change from out-doors to the house; after repotting such as need it, (I use slips of nearly all plants for winter blooming, especially geraniums, and start them in June,) I wash the jars *clean* and paint them with a paint made of English vermilion, turpentine and a little furniture varnish *mixed*, using a small brush, and then I decorate with *decalcomanie* pictures. With slight expense, and a few hours labor, one can make home look very attractive and cheerful, after the coal fires are started in the fall.

Ornaments on coal stoves that have been discolored by heat can be made to look like new by scouring them with sifted coal ashes.

I make griddle cakes these cool mornings by mixing one-third corn meal, two-thirds wheat flour, with buttermilk and saleratus, nice to be eaten with melted sugar and butter.

Fulton, N. Y. MRS. C. F. R.

HER PLAN.

LET me say in answer to "Matilda" that "how to preserve my RURALS for future use" was long a puzzling question to me. Now, I can exclaim "Eureka" for my plan proves very satisfactory to me, and I think it cannot fail to be so to others. Sew and cut the weekly numbers as soon as they arrive. At the end of each month sew the four or five numbers together firmly in their order. Thus you have each month by itself and as easy for reference as Scribner's Magazine. At the end of the year you have the twelve ready to be bound, if you wish and I think it advisable to have it done. If the sewing is attended to promptly, it is easily done, but it takes hours of work if neglected.

MARGUERITE.

CORRESPONDENTS' CORNER.

WILL some RURAL reader please to furnish for publication the poem beginning:

"Oho! The trumpet sounds; the din of war's alarms,
O'er seas and solid grounds, doth call us all to arms."

Reading to the middle of the lines, downward, as if in columns, gives an American's views on the Revolution; the regular reading, a British Tory's.

READER.

Domestic Economy.

CONDUCTED BY EMILY MAPLE.

MRS. ENDICOT'S JOURNAL.

What to put in the vases; company to tea; pressed chicken; sandwiches; sweet pickles; orange cake; gold cake.

SEPT. 23.—This afternoon I went to call on Mrs. Lee, a friend of Mrs. Cox who is visiting her. She was so pleasant and friendly that I invited her and Mrs. Cox to tea on Thursday. Thinking it over after I came home, I thought it would perhaps be pleasanter if there were other friends to meet them. As I can only accommodate fourteen comfortably at my table, it required some thinking to select the remaining number.

Baby Katy and I quite enjoyed our walk next morning, when we went to give our invitations. Our last call was at Dr. Green's. While talking to Mrs. Green at the door, I happened to see in one corner of the flower garden, a large bunch of old-fashioned Ambrosia. She told me to take all I wanted of it, and as I felt sure we were going to have a hard frost that night, I did so. When we got home Katy was asleep, so, taking my wraps off softly, I hastened to the kitchen with my Ambrosia. Taking one piece at a time I dampened it, then had a pan of flour in which I dipped it, rolling it around so that every part was thoroughly whitened. When all had been treated in this way, I gave a brisk shake to get rid of extra flour, and put them into vases. When Harry came home from school he volunteered to go after bitter-sweet berries, as he knew one place where they were ripe. He found some lovely clusters, which I added to my vases of Ambrosia. The contrast certainly was beautiful.

Wednesday morning Betsy and I held a consultation, the result of which was that we decided to have warm biscuit, sandwiches, pressed chicken, pickles, jelly, orange cake, gold cake, sliced peaches, tea and coffee. Of the biscuit we will have about forty. I always make my sandwiches of light bread, sliced thin, the crust cut off, and spread evenly and thinly with butter. The ham is well boiled, chopped fine and a little mustard added, and placed not too thickly between two slices of bread, which I then cut in three, making sandwiches three by four inches. They look nice piled on the plates, and have quite a relish. I will proceed in this way for the

Pressed Chicken.

Two chickens boiled until the meat leaves the bones easily; then pull to pieces and chop fine, letting the liquor in which they were cooked, boil away until only a cupful remains. About half as much ham as chicken is then added, roll two soda crackers, season highly and pour the stock over. Mix all well together, put in a deep, long pan, pressing down hard with the hand. Fold a napkin several times over the top and put on a weight. This should be prepared the day before using, when it will slice down easily. I examined my pickles which are cucumbers made sweet, after the following recipe. To one gallon of vinegar, add one quart of water, five pounds of sugar, a tablespoonful of salt, one stick of cinnamon. Pour over boiling hot, let stand ten days, then pour over the liquor and boil again, after which they are ready to be set away for use. I found them all right.

Thursday morning we made the cakes after the following recipes and had "splendid luck."

Orange Cake.

The whites of six eggs beaten to a froth; three tablespoonsful of melted butter; one cup of sugar; half a cup of milk; a cup and a half of flour, in which have been stirred two teaspoonsful of baking powder and a very little salt. This makes three thin cakes. About half an hour before eating, take the juice of one large orange, the white of one egg, beaten stiff, and thicken with granulated sugar, spread between the three cakes, and dust powdered sugar over it. I doubled these proportions making two cakes.

Gold Cake.

One half cup of butter and two of sugar stirred to a cream; the yelks of six eggs well beaten, half a cup of milk with half a teaspoonful of soda dissolved in it. With the flour put in a teaspoonful of cream-of-tartar. It should be as stiff as cup cake. Add half a nutmeg, one cup of raisins and half a cup of currants,

Everything was ready in good time; children dressed, table set and dining-room closed, with a little time to rest. Now that I have things once more in running order, I am determined that it shall not be so long again before I entertain some other friends. I believe that a certain amount of company is a good thing for any family.

LITTLE HELPS FROM HAPPY HOME.

DEAR RURAL SISTERS: As I have read your words of help and cheer from time to time, my inward monitor has often asked; Why not add your little mite to the general fund? The RURAL is no stranger to me, as I think I have read, or heard it read, every year but one since its issue, and as I am just thirty-one years of age you see I have almost grown up with it.

I went to the kitchen and hurried up the cakes this morning for a little girl who was going to a school picnic, and this is what I did:

I set out two bowls for cake, (I always use yellow earthenware bowls) and a smaller one for frosting. Then I broke three eggs, placing the three yelks in one cake bowl, two whites in the other, and one in the bowl for frosting. I rolled two cups of sugar, leaving them separate on the rolling board; then I put four cups of flour in two separate dishes, two cups in each, with two even teaspoonsful of baking powder and a very little soda stirred into each. After beating the whites in one bowl to a froth and stirring the yelks in the other, I added to each one-half cup of butter, with the sugar and beat it to a cream. Added to each one-half cup of sweet milk, then stirred in the flour. My cakes were then ready for the tins. I flavored the yellow one with vanilla, poured it directly into the tin and put it into a moderately hot oven. Then the afore-mentioned little girl, who had previously stirred one cake for me while I stirred the other, procured and washed some Rose Geranium leaves which she placed in the tin, while I buttered a paper to lay over them. This makes a very fine and not a common flavoring, notwithstanding the fact that I said "it tastes like a hornet" upon eating for the first time a cake flavored with them.

While the cakes were baking, I made a thick sirup of white sugar in which I boiled a Geranium leaf; then I beat into it the one white of an egg which was left, one tablespoonful of corn-starch, and turned upon it the boiling sirup which made a beautiful, glossy, creamy, frosting, much better and more healthful than pulverized sugar. It requires a very thorough beating after the sirup is added and it is, I am sure, a recipe every farmerine will appreciate, as town is often far away and pulverized sugar not at hand.

I cannot express my appreciation of Annie L. Jack's helpful hints from "Every Day House," also those of Jessie Seabright, Country Girl and many others, whose suggestions and experiences have given new life and vigor to my weary spirit many times when I was feeling keenly the want of society which I cannot have, confined at home as I am by three little children and an invalid mother. Add to that the fact that my own health is very poor and Country Girl will readily see that I have no time for the fancy-work which she and I both love, as, when I am well enough, I have to spend every moment of time that I can spare from my other duties, in doing the sewing for a family of eight. But I think it is just as much my duty to read as to do anything else, so I can read her vivid description of what *may* be done, and enjoy in anticipation the doing of it at some future time when my health may be better and my cares less.

Do any of the RURAL mothers know that milk boiled one hour with a piece of charcoal, the size of an egg to one quart of milk, will agree with any child, when raw milk will be utterly rejected by the stomach? It is best to boil it in a double boiler, and it is excellent food for "dog days" especially when followed by a dose of calf's rennet or pepsine for preparing which, at home, I will give directions in my next letter. MRS. FRANK M. PARKER.

DOMESTIC RECIPES.

Oyster Sauce.

One pint of oysters boiled three or four minutes in their own liquor. Stir in two tablespoonsful of butter rolled in a spoonful of flour, the juice of half a lemon with pepper and salt to taste. Heat a teacupful of milk, pour into the oysters and turn at once into the sauce-boat. MRS. HART.

Quince Souffle.

Take ripe fruit, pare, cut up and stew until tender. Put through a colander, sweeten and turn into a deep glass dish. Make a boiled custard of the yelks of three eggs, and pour over. Whip the whites to a stiff froth, add two spoonsful of powdered sugar, flavor to taste and heap upon the custard.

Baked Macaroni.

Take one-half pound of macaroni, break into inch lengths and boil twenty minutes in salted water. Drain, put into a pudding dish, first a layer of macaroni, then strew with grated cheese, bits of butter, pepper and salt. Fill the dish in this way, pour in a cup of milk and bake covered, half an hour, then brown.

MARY B.

Sponge Cake.

Ten eggs, one pound of pulverized sugar, one-half pound of flour, two lemons. Beat the eggs separately a long time; add the sugar to the yelks, then the whites and then the flour. Do not *stir* the flour in, but dip it in. Lastly add grated rind and juice of lemons. Break the cake instead of cutting it. H. L. H.

News of the Week.

MISCELLANEOUS.

MONDAY, October 6th, 1879.

Kearney has been twice refused a reception by General Grant on sending up his "card," and that, too, after a Chinese delegation had been respectfully admitted. A special reporter of the Chicago Times, who was sent to Yazoo City to ascertain the facts in regard to the killing of Dixon, has given a long and apparently conscientious account of the murdered man's history. It appears from this that Dixon, who was born in Virginia in 1847, and who ran away to join the Confederate army, arrived in Yazoo early in 1866 as a professional gambler, and presently opened a gambling-house, which he gave up only a short time before he ran as independent candidate for sheriff, and on the stairs of which he was lately assassinated. In 1872 or 1873 he openly shot down a negro to whom he owed money. In the political campaign of 1875 he became the head of a body of regulators called "Dixon's Scouts," among whom was Barksdale, and who passed their time in breaking up Republican meetings, terrorizing the colored population, and hanging such of them as were charged with crime or were otherwise obnoxious. One of these victims had $1,600 on his person, which he begged the "Scouts" to send to his mother in Ohio. Dixon demanded this money of the man to whom it was entrusted, and pretended that he paid it into the Democratic campaign fund, to be used "to stuff the ballot-boxes, if nesessary;" but the Democratic Committee denied having received it, and the probability is that Dixon appropriated it for his own advantage. In January, 1876, on the eve of the Democratic return to power through the efforts of the regulators, the county treasurer's safe was robbed of $50,000, an act of which the outgoing treasurer could not be accused, for he had handed over his accounts, but which was publicly fastened upon Dixon by a fellow-gambler named Harrison. This led to frequent encounters between the two men, until Dixon had killed his accuser. He was tried, but was acquitted and escorted home with a brass band. Barksdale at this time was deputy-sheriff, and during the imprisonment an enmity arose between them which culminated in Dixon's death. Barksdale is said to have shot him not because he was trying as a negro candidate to divide his party, but because he had made the grossest and filthiest attacks on the character of his mother and sister. It appears, however, that Dixon was getting to be regarded as too dangerous a man to be tolerated any longer, and that there was some concert in his taking off. In spite of his many atrocities the negroes eagerly followed him as a political leader, and it is plain that the power of such a man in the community, with such a constituency, was as much to be dreaded as if he had been a Northern carpet-bagger. The regular Southern correspondent, however, of the New York Sun (Democratic), stamps the stories to the discredit of Dixon as lies, and charges that his "taking off" was a cowardly premeditated, political murder.

While the revenue of the country collected has increased over $2,000,000, the cost of collection was $728,000 less in 1879 than in 1878. The average cost of collection throughout the whole country was a trifle over 3 per cent., excluding the Territories. The cost of collecting in the States which seceded was 6½ per cent. The revenue from the tax upon banks and bankers, other than national banks, during the last fiscal year, was $3,198,000—a decrease compared with the previous year of $293,000. This falling off is attributed to a loss of confidence by depositors in savings banks. The total decrease of the revenue for July and August, compared with the previous year, is $90,000.

Deadwood, Dakota Territory, has been entirely burnt up, entailing a loss of about $3,000,000. The fire started in a miserable shanty, and in a few hours 500 houses were destroyed.

In Chicago there has been great excitement in the grain market during the week. The bulls and bears have been engaged in a fierce struggle over the price of wheat, the former trying to raise it and the latter frantically endeavoring to pull it down. They succeeded temporarily in depressing it from 4c. to 6c. per bushel, but the bulls soon tossed it up again. Here in New York great excitement has prevailed during the week in the stock market. Railroad and other securities have been subjected to severe fluctuations in prices.

President Hayes has been making an extensive trip through the Western States, and has been cordially received everywhere along the route. He has delivered a large number of speeches on various topics, but especially on those connected with the agricultural interests of the country. Gen. Grant still lingers on the Pacific Coast, where he is being feted and honored as no guest has ever been received there before. By the way, from present appearances, he will, most likely, be the Republican candidate for President at the next election, should he be willing to accept the nomination. Of the Democratic candidates Tilden is in the van, though a good deal will depend in his case, upon the result of the election in this State, this fall. John Kelley & Co., are still earnestly bent upon ruining Robinson's chances to be our next Governor, by dividing the Democratic party. They are organizing their forces briskly here and in a large number of other places through the State, and boast of being able to command 100,000 staunch Democratic votes. If they can deprive Robinson of even half that number of party supporters, they will seriously jeopardize his election. Meanwhile, that corporal's guard of "scratching" Republicans are busy trying to insure the defeat of Cornell by sending out circulars, etc., etc. Already they have advanced so far in organizing as to issue some earnest appeals for money to run their little side show.

The West suffers a great deal from the scarcity of small bills. St. Louis and Chicago banks are unable to supply themselves, nor is this strange, remembering that the volume of small bills has been materially diminished. The natural course would be to supply gold in small denominations, but nineteen-twentieths of the gold coin in the treasury is in $20 pieces, and none of the foreign gold which the Philadelphia mint is recoining is put into smaller denominations than $5 and $10, obviously too large to meet the demand for small bills. The smallest form in which gold can be conveniently handled is the quarter-eagle, $2 50, but the law requires a minimum coinage of $2,000,000 of silver, as its coinage is slow work, the mints have no time to turn their attention to small coinage. It is reported in connection with the suit to upset the will of Mrs. Dorsey, of Louisiana, who left her property to Jefferson Davis, that another suit will be instituted against Davis for alleged conspiracy to deprive the heirs of their rights, and for a yet more serious offense against the law. Widow Oliver, who sued Simon Cameron for breach of promise, is destitute, and she has gone to the almshouse at Washington, the poor-commissioners having promised to care for her.

Another Indian war has begun, and various opinions prevail, even among those well posted in Indian affairs, as to the extent it will attain before it closes. Major Thornburg, with his command of about 180 men, while on his march to the Milk River agency of Ute Indians, was suddenly assailed by about 350 of the latter last Tuesday, on Milk Creek, about 160 miles from Rawlins, Wyoming Territory. When the Indians first appeared, the major refused to fire on them, as doing so would be against the orders given to him on account of our present "peace policy;" the Indians, however, soon settled the matter by opening fire. The command was some distance ahead of the wagon train and while one body of "hostiles" attacked the troops in front, another got in their rear, between them and the wagons. To reach and save the latter, Thornburg made a charge upon the intervening Indians; but though the bulk of his command fought their way to the train, the gallant major fell, pierced through the brain by a couple of bullets. Captain Payne then took command, and the troops, partly sheltered by the wagons, succeeded in repulsing several fierce attacks of the enemy. Every spare moment they employed in digging entrenchments, and by night they had succeeded in still maintaining their position. Then Rankin, the chief scout, crept through the circle of surrounding Indians on the best horse remaining alive in the command, and in 21 hours rode the 160 miles between the place and Rawlins to summon assistance. General Merritt at once telegraphed to all the neighboring posts and to the East; troops were hurried forward from every quarter, and upwards of 1,100 men left Rawlins on last Wednesday to relieve the beleaguered troops. However quickly the relieving troops may have been pushed forward, they could not reach the scene of the conflict before yesterday; and no account of their arrival there has yet been received. Capt. Payne sent word by scout Rankin that he was encamped near water and that he expected to be able to hold out five days. News has lately been received that several bands belonging to other Indian tribes have joined the hostile Utes and strong fears are entertained by many that the small body of our soldiers will be overwhelmed and massacred before the arrival of aid. When Rankin left on the first night of the attack, besides Major Thornburg, Lowry, a scout, 13 enlisted men, the wagon master, McLinisters, and one teamster had been killed and three officers and 35 men wounded. Mr. Meeker, the agent at Milk River Reservation, is believed on all hands to have been tortured to death with his family and attendants, before the red fiends set out to attack Thornburg's command.

Professor Wise, the balloonist, early last week made an ascent from St. Louis, accompanied by Mr. Burr, a bank cashier. The balloon was seen at various places to the northeast of St. Louis until darkness fell; but since then nothing has been heard of either of the men or of the balloon. It is supposed they have met the same fate as Prof. Donaldson some months ago. It will be remembered that he and a companion were lost on Lake Michigan, into which their balloon plunged. Yesterday Prof. Colgrove, an aeronaut, and a Mr. Williams went up in a balloon at San Francisco, during a storm. The balloon was badly filled and did not rise enough to free it from contact with the houses; both Colgrove and Williams were thrown out and killed.

The fever is still afflicting Memphis. Of those who remained in the city all through the pestilence few are now stricken; but many of the refugees have returned prematurely, and are attacked. Yesterday six new cases were reported to the Board of Health, and there were five deaths. Another walking match commenced here in Madison Square Garden at one o'clock this morning. It is for the O'Leary belt—a belt got up by Daniel O'Leary, the ex-champion. Twenty-five competitors have started, among them some good walkers.

FOREIGN.

The election for direct electors to choose deputies to the Prussian Diet took place on Tuesday last, with a result, so far as is known at this writing, decidedly adverse to the Chancellors's pretensions. There are three parties in the field: the Conservatives, who are supporting Bismarck, and who maintain under his guidance that the issue is economical reform and the possession of the Railroads by the Government; the National Liberals, who maintain that it is the preservation and development of parliamentary institutions, now threatened by the Chancellor; and the Ultramontanes, who maintain that it is the liberty of the Church. The last have been thrown into a state of great excitement by the formal announcement through the semi-official paper that all stories of negotiations between the Government and the Pope are false; that the nuncio, Roncetti, was never authorized to open any such negotiations, and has never opened them. Moreover, the new Minister of Worship has just returned an answer to the petition of the clergy of the dioceses of Munster and Paderborn which

shows that Herr Putkammer is not a whit more pliable than Dr. Falk. The petition claimed for the Catholic prelates the right of participating in the organization and inspection of the schools, and asked that the ordinances now depriving them of that right might be abrogated, and the exclusive state inspection and control modified. The Minister replies that the act they complain of is simply a new expression of what has always been the Prussian law, and the situation is of their own creating, and that no change of any kind will be made. The *Germania*, the Ultramontane organ, therefore denounces him as Falk with a new name. But the Socialists have elected two members in Saxony, which is a severe blow to the Chancellor, and has made some sensation throughout the country.

The *Germania* also meets the the National-Liberal cry for "war against Rome" by declaring that the real danger to Germany comes from the growing numbers and the influence of the Jews, and makes four capital charges against them; (1) That they are appropriating an amount of the puplic fortune out of all proportion to the services they render to society, and make their money either without labor, or by trickery: (2) that they mix themselves up in Christian quarrels for the purpose of rendering them more bitter, and attack Christianity itself; (3) that they labor systematically for the corruption of the Christian world by their sensational press, their immoral novels, and their indecent engravings; (4) that in all the political movements of the day they are among the most radical and revolutionary, and wage bitter war against all that is legitimate, historical, and Christian in the national life, and promote all upturnings, knowing that Judaism has always flourished on ruins. The liberal papers make fun of this, but all knowledge that Jews are taking possession more completely every day of the press, the finances and trade of the Empire, and playing a more and more prominent part in all fields of national activity. For their wonderful success in all other pursuits there seems to be only one remedy, and that is the slaughter of all Jewish children!!

Yesterday four monstrous mass meetings were held in Ireland for the purpose of keeping up the agitation on the land question. At the Cork meeting 20,000 were present; at Marysborough, in Queen's County, 14,000; at Dunmore, in Galway, 15,000, and about as many at Ballinrobe, Mayo. Absentee landlordism was bitterly denounced, as were high rents, and the utter neglect of their duties by most of the landlords. Frequent exclamations of "shoot them," "give 'em an ounce of lead" and similar expressions of popular opinion were always greeted with applause. The meetings were addressed by various Members of Parliament belonging to the Home Rule Party who were as earnest in their opposition to the present system as the most extreme tenant-righter.

An English banker, Mr. Newmarch, who has been bringing Tooke's History of Prices down to date, has reached the conclusion that prices are now lower than at any time since 1850, having very nearly fallen to the figures of 29 years ago. From 1850 to 1864, Mr. Newmarch finds that prices increased 72 per cent. Since then they have fallen off, and stood in December, 1878, only four per cent. above the point at which they started. This return of current prices to their original level has taken place in spite of an enormous increase in the circulating medium of civilized countries. The production of the precious metals since 1850 amounts to $4,500,000,000, and the volume of paper money in England, France, Germany and the United States has risen from $375,000,000 to $1,473,000,000, facts which must make it extremely doubtful whether prices are as much affected by the state of the currency as has been supposed.

In France Jules Ferry, Minister of Education and Public Worship, is resolved to free the public schools from clerical control, as he regards priests, monks and other ecclesiastical bodies as hostile to the Republic. As the Legislative Assembly is not in session at present, however, political agitation there is at present dormant. A large meeting of prominent statesmen and merchants assembled yesterday in Paris to listen to Mons. Leon Chotteau's report of his visit to this country for the purpose of forming a more liberal commercial treaty between the two nations. Among several resolutions the following was unanimously adopted:—That considering the government at Washington, as well as the Congress and Chambers of Commerce of the United States, were disposed to open negotiations with France with a view to concluding a treaty of commerce on a basis of equal advantage to both nations, and considering that it was important that the French government should respond to these favorable manifestations. Resolved, That the President of the Republic be invited to appoint three commissioners to study the situation and report to competent Ministers, conferring, if necessary, with commissioners appointed by the American government." Among the audience were Governor Noyes, the American Minister; Mr. Hitt, Secretary of the American Legation; General Fairchild, Mr. Bancroft Davis and MM. Brisson and Bralatour.

As a light, mild beverage, agreeable to the most delicate digestive organs, the Cocoa preparations of Walter Baker & Co. are recommended to invalids and convalescents as well as to those in full health.

Don't physic, for it weakens and destroys, but use Hop Bitters, that builds up, up!

Straighten your old boots and shoes with Lyon's Patent Heel Stiffeners, and wear them again.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, Oct. 4, 1879.

BEANS AND PEAS.—The market is strong for beans; an advance has seldom been so well supported in the face of new crops. A feature of th week is an export of 500 bbls. of marrows for England. The West Indies usually take the totals given weekly for export. Red kidneys are steadier, but no higher. The trade objects to the many imperfectly cured beans coming forward. Such stock has no regular price here, particularly as the weather is adverse to them. Green peas doing better; $1.45@1.50; Canadian peas have no quotable business. Southern B. E. peas firm at $2.75@3 per 2 bush. bag. New marrow beans, $1.57@1.60; other, $1.40@1.52½. Pea and white kidney, $1.57½@1.60; red kidney, $1.65@1.70 prime; poor or soft, $1.45@1.50.

Receipts of beans for week, 9,444 bush.; exports, 873 pkgs.

BUTTER.—Receipts for the week, 36,950 pkgs.; do., last week, 42,819 do. Exports for week, 16,000 do. Prices have become somewhat shaded during the past few days. Local buyers are forced to reduce their purchases to actual wants and many have dispensed with ice. The export demand is good again keeping down an accumulation. Dealers do not look for a recovery of full prices on state until the weather settled cool, and even then much depends upon the supply and quality of western.

Comparative receipts and exports.

June 1, '76, to Oct. 1, '76	1,287,476	57,226,203

Receipts for week, 55,050 boxes; do., last week, 95,893 do.

Liverpool cable, 46s.

Steam, 60s.

BEESWAX.—A small business is noted and a steady market at 22@23c.

DRIED FRUITS.—Apples have a moderate demand and rule steady in price. Peaches are in light receipt and rule at strong prices. Small fruits are in small receipt and favor sellers.

New North Carolina apples, 6@7¼c. for fair; 8@8¾c. for choice; 9@9¾c. for fancy sliced. Patent evaporated apples, choice, in cases, at 12c.; do. fair to good, 10@11c.; N. Y. State sliced, choice, 5@5½c.; do, quarters, choice, 4¾@4¾c.; western quarters, common and old, 3½@4c.; new southern quarters at 4@4¼c.; new N. C. peeled peaches at 13@16c., do. Georgia, at 11@11c. Peaches, Delaware evaporated, peeled at 22@23c.; do. unpeeled at 11@12c.; old unpeeled halves at 4½c.; do., quarters at 4c.; new halves at 5@5½c. Blackberries at 8½@8¾c. for new. Raspberries at 28@29c. Pitted cherries at 19@20c.

EGGS.—Receipts for week, 6,614 bbls.; do., last week, 7,215 do. The market is weak under rather full supplies. Had it not been for one or two active days at the close, it is thought that prices would have broken down.

Near points, 20@21c.; State and Penn., 19@19½c.; Western and Canadian, fresh, 18½@19c.; off quality, 18c. Limed nauled at 16c. Egg oats, 28c.

MONEY.—There is some offering, but the demand is only for single packages for grocery and other store decoration in the way of novelties. White clover, single comb boxes, 15@16c.; larger, 12@14c.; buckwheat, 10@12c.; extracted, 10@12c.; strained, 8@9c.

FRESH FRUITS.—Exports of apples 6,903 bbls. Receipts fell off early in the week, but are again free and prices quoted full; but fall sorts $2; fair to good, $1.50@1.75; common open heads, 75c@$1.12. Cranberries dull. Grapes have ruled so low that many shippers have quit picking, this has made fine Concords scarce. Quinces are smooth and strong this season. Choice apples, $5@6 ₱ bbl., pears, $3@4. Peaches hardly quotable, all 40@50c. ₱ basket, a few extra table, $2.00. Pears are in good supply and popular in price. Choice Boston and Cal., $3@4 ₱ box. Cranberries—Cape Cod, fancy, per bbl., $5.75@7; Cape Cod, good to choice, per bbl, $6@6.50; Cape Cod, poor to good, $5@6; Eastern, large round hoop bbls., fair to choice, $5@6; N. J., fancy, per crate, $1.75@2; do., good to choice, ₱ crate, $1.50@1.75; Jersey, light colored, per crate, $1@1.25 Pears—Duchess, State, per bbl., $3@4.50; Sheldon, per bbl., $3.50@4.50; Louise Bonne, ₱ bbl., $3@4.50; Virgalieu, ₱ bbl., $5@4; Beurre Bosc, ₱ bbl., $3.50@4.50; Seckel, No. 1, per bbl., $5; do., No. 2, ₱ bbl., $2.50@3.50; Flemish Beauty ₱ bbl., $3@4; Cooking pears, ₱ bbl., $1.25@1.75. Grapes—Delaware, State, 18 3-lb. boxes, $3@3.25; do., in baskets, ₱ lb., 6@7c.; do., 18 3-lb. boxes, $2@2.50; do. loose, ₱ lb., 5c.; Concord State, 18 3-lb. boxes, $1.75@2.25; do., in baskets, ₱ lb., 3½@4½c.; do., up-river, bulk, ₱ lb., 2½@3½c. Plums—Copper Plums, per bbl., $7@9. When new crop peanuts are fully in stock, sales will be made by the pound, no tare and no charge for bags. Market quiet and easier. Va. hand-picked, $1.60@1.65; other, $1.25@1.37½. Shelled, 5½c. per lb. Chestnuts, $3.50 ₱ bush.; shellbarks, $1.50@1.75.

FLOUR.—The export movement is large and home trade demand active, with prices very strong.

Latest prices are: $4.75@5.25 for inferior to fancy superfine State; $5.10@5.35 for ordinary to very good extra do., odd lots and lines; $5.35@5.60 for very good to very choice do.; $4.85@5.25 for very inferior to fancy superfine Ind., Iowa, Mich., &c.; $5.10@5.35 for inferior to very good shipping extra do., and $5.35@5.60 for good to choice extra do.; common to choice white wheat extras, $5.50@6.40; choice to very fancy do. at $6.40@7.00; red and amber winter wheat, inferior to very choice trade and family, at $5.35@5.50; round hoop Ohio at $5.20@5.65, and trade and family brands of do. at $5.70@6.65, the latter rate for very choice; St. Louis, $5.50@6.35 for inferior to very good extra; $6.35@7.00 for very good to fancy; Minnesota clear, inferior to very choice, $5.10@6.25; Minn. "straight," inferior to strictly fancy, $5.75@6.75 (very fancy at $7), and patent poor to very fancy at $5.75@8; unsound stock at from $3.50@6.00; city mill extra at $5.75@6.15, ordinary to very fancy, for West Indies; do. for England, $5.10@5.60 for ordinary to choice; do. trade and family extras, $6.00@7.00; do. for South America, $6.00@6.50 for standard to choice brands; No. 2 at $4@4.75 for ordinary to very fancy (the latter an extreme for even winter wheat product).

CORN MEAL—Sales of Brandywine at $2.90@3, and Western yellow at $2.45@2.75.

GRAIN.—Wheat showing extensive export dealings, the shipments this week reaching 2,700,000 bushels, and an active market generally, with prices favoring sellers. Sales of No. 1 amber at $1.30¾; No. 2 amber at $1.23@1.29; do., October option, at $1.29; ungraded amber at $1.21@1.29; extra white at $1.30¾; No. 1 white at $1.23¾@1.30; do., for October at $1.29¾@1.30; do., November, at $1.30¾@1.31; No. 2 white, at $1.27¾; ungraded white at $1.20@1.28¾; No. 1 red at $1.30¾@1.30¾; do., No. 2 red at $1.29¾@1.30¾; do., October option, at $1.29¾@1.30¾; do., November option, at $1.30@1.31¾; do., December option, at $1.32; No. 3 red at $1.20@1.22; ungraded red at $1.18@1.30; mixed winter at $1.27@1.29; No. 2 Chicago spring at $1.22; New York No. 2 spring, at $1.22; do., October, at $1.22; do., November, at $1.23¾; No. 2 northwest spring at $1.22; do., October option, at $1.23; ungraded spring at $1.17@1.21; New York No. 3 spring at $1.17@1.18. Rye at 77@78c. for No. 2 Western. Corn is active and strong; latest sales of New York No. 2 at 54@54¾c.; do., October, at 53¾@54¼c.; do., November, at 54¾@55¼ c.; do., December, at 55¾c.; New York steamer mixed at 53¾@54c. for spot lots; do. October at 54c.; November quoted at 54c. bid; December at 53c. bid and 54c. asked; No. 3 nominal; ungraded Western mixed at 53¾@55c., the latter for fancy; No. 2 white at 60c. Oats are higher and active; sales of New York No. 1 white at 41c.; New York No. 2 white at 38@39c.; New York No. 3 white at 36¾@37c.; New York No. 1 at 37¼c.; New York No. 2 at 35@37c.; New York No. 3 at 35½c. New York rejected quoted at 34c.; ungraded white Western at 36¾@40c.; mixed Western at 35½@37¾c.; white State at 38@42c; mixed State quoted at 37@38c.; No. 2 Chicago at 37¾c. bid.

HAY AND STRAW.—A fair trade is in progress and prices unchanged.

Shipping hay quoted at 50c.; retail lots at 50@60c. for medium, and 70@80c. for prime; clover at 35@45c. Straw at 60@65c. for long rye, 40@50c. for short rye and 40@45c. for oat.

HOPS.—Clement Wells in his weekly circular says: "We have to report a very strong and active market; the movement has been almost exclusively export. There is no perceptible change in values, though holders of choice goods decline to sell at present quotations, believing that if the export demand keeps up much longer at the present rate the price must advance. How well these anticipations may be realized remains to be seen. An advance to 40c. and over would be likely to check the export movement unless a corresponding improvement took place in London to warrant it. Our brewers remain wholly unmoved by the heavy demand from Europe, still believing there are hops enough of last year's growth and older growths to bridge them over to the next crop, and they seem to fear no 'famine' even though every bale of 1878 is shipped out of the country; 30@33c. have been the ruling prices in the interior this week."

	Bales.
Receipts for the week	5,445
Total receipts since September 1, 1879	13,726
Total receipts for same period in 1878	3,222
Export clearances for the week	4,410
Total exports since September 1, 1879	14,101
Total exports for same period in 1878	658

Quotations are for New Yorks, new crop, 28@36c.; Eastern, new crop, 28@34c.; Wisconsin, new crop, 30@35c.; Yearlings, growth 1878, 7@18c; Olds, all growths, 4@10c.; Pacific coast, growth 1878 (nominal) 9@14c.

OIL-CAKE.—Western is quoted at $28.50.

PROVISIONS—Have been alternately weak and strong, and active. The quotations are for mess pork, October at $9.30 bid and $9.40 asked; November at $9.25 bid and $9.40 asked, and the December option at $9.30 bid and $9.45 asked. Bacon at $6 for long clear and 6¾c. for short clear. Lard—Western steam'ne at nil $6.50 for spot lots; $6.17½ for November, $6.12½, $6.05 for December, and $6.15@6.17½ for January. Steam'ne at 6¾@6¾c. for Western. Tallow at 6¾c. for prime.

POULTRY AND GAME.—The live poultry market is very low for fowls and chickens: 8½@9c. quoted for ordinary, and 10c for selected. Roosters, 5c. Turkeys, N. J., 10@12c.; S. and W., 8@10c. Ducks, 35@6c ₱ pair. Geese lower; choice, $1.25@1.37; other, 87c.@$1.12.

Warm weather has checked trade in dressed, and prices are lower; stock from any great distance selling at inside rates. Chickens not doing much better than fowls.

Turkeys, Phila., dry-picked, 14@15c., State and Western, 12@13c. Young, 13@13c. Chickens, Phila., 14@15c.; other, 9@11c. Fowls, Phila., dry-picked, 13@14c.; N. J., 11@12c.; State and W., 9@11c. Ducks, spring, Phila., 14@15c.; other, 11@12c. Young geese, 13@14c.

Game has met weather too nearly of a summer temperature to hold good prices. There is a liberal offering at the following reduced rates:

Partridge, State, per pair, 75c.; Western, 50c.; grouse, 65@70c.; wild pigeons, flight, per doz., $1.25@1.50; woodcock, State, per pair, 50c.; Western, 50c.; English snipe, per doz., $1.50; plover, $1.50; Minn. venison, short saddles, ₱ lb., 12@15c.; State and Western, do., 12c.; venison, whole deer, 8@10c.

SEED.—Clover is quiet, with Western quoted at 6¾@7c¾., and State at 7¾@8c. Timothy quoted a $2.30.

TALLOW.—Export trade is light, but the home demand is fair, with prices firm throughout and essentially as last week.

VEGETABLES.—Exports of potatoes for the week, 5,536 bbls. The market is unchanged, the assortment is better and quality favors sellers. A few Peachblows, in bulk, $1.50; Rose, in bulk, $1@1.25; Peerless, $1@1.12; double-headed city, suitable for export, $1.25@1.37; a few for the English market, $1.45. Sweet, Del., $1.75@2; Va., $1.50@1.75; N. J., $1.25@1.50. Other items are in full supply and of exceptional fine quality this fall. Green corn, per 100, 25c@$1.00; cucumbers, L. I., 75c.@$1 tomatoes. Long Island, near-by, per crate, 35@40c.; string beans, ₱ bag, 75@87c.; potato Lima beans, $1.50@1.75; Lima beans, flat, $1@1.25; do., shelled, bu., $4.50@5; squash, marrow, ₱ bbl., 50@75c.; cabbage, flat Dutch, per 100, $3@5.00; onions, white, per bbl., $1.75@2.25; red, Eastern, ₱ bbl., $1.50; do., Chester, ₱ bbl., $1.25@1.50; yellow, ₱ bbl., $1.50@1.75; beets, N. J., ₱ bbl., $1.00; Russia turnips, Jersey, 50c.@$1; carrots, ₱ bbl., $1; egg plant, L. I. and near-by, per 100, $3@5; peppers, bullnose, ₱ bbl., $2@2.50; pumpkins, per 100, $2.00@5; Cauliflower, ₱ bbl., $2@5.

WOOL.—There is an active trade and the market presents a good strong appearance. Latest sales of X (and above) Ohio at 38@43c.; XX do, at 41c.; XX and above do., at 41@42c.; State at 35@36c.; medium Wisconsin at 32c.; half-blood State at 38½c.; delaine State at 35½c.; fine Michigan and Ohio at 40@42½c.; spring California at 20@26½c.; old fall do., at 17@22c.; Texas at 20@31c.; Oregon at 28@31c.; Territory at 27½@28½c.; Lake at 34½c.; Nevada at 25c.; super pulled at 41c.; mixed scoured at 60@70c.; Australian at 37c.; Montevideo at 31@32c.; Cape at 30c.

LIVE STOCK MARKETS

NEW YORK, Saturday, Sept. 27.

BEEVES.—Receipts for the week, 10,255 head; do. last week, 12,687 do. Much of the past week has been devoted to closing out back supplies. At the close sellers had been quite successful in this way and though prices are not much in favor of sellers, there is thought to be a better outlook for stock. Texans sold at 6¼@6¾c. to dress 55 lbs., good Colorado steers, 7@7½c. do. Poor to very best natives, 6¼@9¼c.; in a wholesale way, 5¼@56 lbs. Selections, 9¾@10c.

SHEEP AND LAMBS.—Receipts for the week, 30,308 head; do. last week, 33,977 do. With the warm weather of the week supplies have been rather liberal. Dealers after making some concessions were mostly closed out to-day, and prices left off at 5@5c. for sheep; and 4¼@5¾c. for lambs, the latter looking up.

COWS AND CALVES.—Prices are not likely to improve while receipts are so abundant. The wide range of $20@45 is quoted this week.

VEAL CALVES—Barely steady for choice; grassers almost worthless herd. N. J. & Buck's Co., fed, 6c.; fair to prime State and other, 4@5¾c.; buttermilk, 3@3½c.; grass, 1@2c.

SWINE.—Receipts for the week, 29,931 head; do. last week, 31,627 do. Market easy at the close, few bringing the extreme. State live, $3.75@4.25 per 100 lbs.; Western, $4@4.37 do.; New Jersey dressed, 40@70 lbs., 6½c.; 70@100 lbs., 6@6½c.; 100@150 lbs., 5¾@6c.; 150@200 lbs., 5¼@5¾c.; city, $5.12@5.75.

SEED DISTRIBUTION.

How New Varieties of Fruit are Produced.

I TAKE pleasure in announcing that I now have ready for distribution among the members of the Horticultural Club a lot of grape seed, saved expressly for them. The seed is taken from a number of our best native grapes, such as Delaware, Lady, El Dorado, Martha, Iona, Secretary, Salem and others. I distribute this seed among *all* the members who have sent me their post office addresses, though there are some on my list who have not faithfully complied with the conditions that were stipulated as necessary to maintain a good standing in the club—that is, they have sent me no report of what they have been doing all summer; and if, therefore, I should send seed to those only who merit it, I fear there would be some who would not get any. In the future, as the number of members increases, I shall be obliged to follow this rule more strictly. For those who do not know how to sow the seed and raise the plants, I will give the following brief directions: Sow it immediately after its arrival, either in boxes or pots, filled with a mixture of good garden soil and leaf mold. The pot or box should be well drained; that is, the hole in the bottom should be covered with potsherds to give a free outlet to the water, which otherwise would sour the soil. If a pot is chosen it should not be too small, or it will dry out too quickly; fill it loosely to the rim, when shaken down to within an inch of the rim the soil will be of the right firmness; then sow the seed and cover it with a quarter of an inch of soil, water and set the pot away in a moderately warm place. No light is needed until the plants come up, but the soil must, of course, always be kept moist. When the young plants have three leaves they should be potted singly in small pots, in which they can remain till next spring, when they should be planted in the open ground. Do not be discouraged if the seed does not come up immediately. It may come in three weeks, and it may also remain dormant for three months. I send you this seed in the hope you may raise some new varieties. Think what a triumph it would be for you, if in addition to the pleasure of caring for the young vines, you are rewarded by a new and excellent variety, whose fruit may be better than any now in existence. All new varieties of fruit are produced from seed. It was by sowing grape seed that Mr. Ricketts, Mr. Miner and other horticulturists have produced the new grapes which are just now being talked about all over the country, and there is no reason why any of you may not be equally successful.

It is a fact, and why it is so, no one is able to tell, that the seed of apples, pears, peaches, plums, grapes, etc., will very rarely, and I may almost say never, produce trees and vines that will bear fruit which is exactly like the fruit from which the seed was taken. In the majority of instances the seedling fruit is of a poorer quality than its parent, but it sometimes happens that it is better, and when this does happen the fruit is named and propagated and will henceforth take a place among the acknowledged good varieties. Skilled horticulturists may help nature in the production of good varieties from seed by the process known as cross-fertilization, which I have mentioned before in my talks to the Horticultural Club. It consists in transferring pollen from one tree or vine to the pistils of another closely related tree or vine. This is very delicate work and it must be done in such a manner that there is no possibility of the flower to which the pollen is transferred having been fertilized from any other source. Nature cross-fertilizes on a grand scale by the wind and insects carrying pollen from one plant to another, and hence it is that the seed does not reproduce the plant from which it was taken. But it is now too late for this season to cross-fertilize, so perhaps it is best to defer saying more about it till next spring.

UNCLE MARK.

ADVICE TO BOYS.

The following is the substance of an address by Professor Huxley on the occasion of the distribution of prizes to the University College School boys on August 1. It is both entertaining and instructive and is well worthy of perusal by all the boys who read the RURAL:—

WHAT sort of fellows are those who win prizes? Is there in all the long list which we have gone through to-day the name of a single boy who is dull, slow, idle, and sickly? I am sorry to say that I have not the pleasure of knowing any of the prize-winners this year personally—but I take upon myself to answer, certainly not; nay, I will go so far as to affirm that the boys to whom I have had the pleasure of giving prizes to-day, take them altogether, are the sharpest, quickest, most industrious, and strongest boys in the school. But by strongest, I do not exactly mean those who can lift the greatest weights or jump furthest, but those who have most endurance. You will observe, again, that I say take them altogether. I do not doubt that outside the list of prize-winners there may be boys of keener intellect than any who are in it, disqualified by lack of industry or lack of health, and there may be highly industrious boys who are unfortunately dull or sickly; and there may be athletes who are still more unfortunately either idle or stupid, or both. Quickness in learning, readiness and accuracy in reproducing what is learnt, industry, endurance—these are the qualities, mixed in various proportions, which are found in boys who win prizes. Now there is not the smallest doubt that every one of these qualities is of great value in practical life. Upon whatever career you may enter, intellectual quickness, industry, and the power of bearing fatigue are three great advantages. But I want to impress upon you, and through you upon those who will direct your future course, the conviction which I entertain, that, as a general rule, the relative importance of these three qualifications is not rightly estimated; and that there are other qualities of no less value which are not directly tested by school competition.

A somewhat varied experience of men has led me, the longer I live, to set the less value on mere cleverness—to attach more and more importance to industry and to physical endurance. Indeed, I am much disposed to think that endurance is the most valuable quality of all, for industry, as the desire to work hard, does not come to much if a feeble frame is unable to respond to the desire. Everybody who has had to make his way in the world must know that while the occasion for intellectual effort of a high order is rare, it constantly happens that a man's future turns upon his being able to stand a sudden and a heavy strain upon his powers of endurance. To a lawyer, a physician, or a merchant it may be everything to be able to work sixteen hours a day for as long as is needful without knocking up. Moreover, the patience, tenacity, and good humor which are among the most important qualifications for dealing with men, are incompatible with an irritable brain, a weak stomach, or a defective circulation. If any of you prize-winners were a son of mine—as might have been the case, I am glad to think, on former occasions—and a good fairy were to offer to equip him according to my wishes for the battle of practical life, I should say, "I do not care to trouble you for any more cleverness. Put in as much industry as you can instead; and oh! if you please, a broad, deep chest and a stomach of whose existence he shall never know anything. I should be well content with the prospects of a fellow so endowed. The other point which I wish to impress upon you is, that competitive examination, useful and excellent as it is for some purposes, is only a very partial test of what the winners will be worth in practical life. There are people who are neither very clever nor very industrious, nor very strong, and who would probably be nowhere in an examination, and who yet exert a great influence in virtue of what is called force of character. They may not know much, but they take care that what they do know they know well. They may not be very quick, but the knowledge they acquire sticks. They may not even be particularly industrious or enduring, but they are strong of will and firm of purpose, undaunted by fear of responsibility, single-minded, and trustworthy. In practical life a man of this sort is worth any number of merely clever and learned people.

Of course I do not mean to imply for a moment that success in examination is incompatible with the possession of character such as I have just defined it, but failure in examination is no evidence of the want of such character. And this leads me to administer from my point of view the crumb of comfort which on these occasions is ordinarily offered to those whose names do not appear upon the prize list. It is quite true that practical life is a kind of long competitive examination, conducted by that severe pedagogue Professor Circumstance. But my experience leads me to conclude that his marks are given much more for character than for cleverness. Hence, though I have no doubt that those boys who have received prizes to-day have already given rise to a fair hope that the future may see them prominent, perhaps brilliantly distinguished members of society; yet neither do I think it at all unlikely that among the undistinguished crowd there may lie the making of some simple soldier whose practical sense and indomitable courage may save an army led by characterless cleverness to the brink of destruction; or some plain man of business who by dint of sheer honesty and firmness may slowly and surely rise to prosperity and honor, when his more brilliant compeers, for lack of character, have gone down, with all who trusted them, to hopeless ruin. Such things do happen. Hence let none of you be discouraged. Those who have won prizes have made a good beginning; those who have not, may yet make that good ending which is better than a good beginning. No life is wasted unless it ends in sloth, dishonesty, or cowardice. No success is worthy of the name unless it is won by honest industry and brave breasting of the waves of fortune. Unless at the end of life some exhalation of the dawn still hangs about the palpable and the familiar; unless there is some transformation of the real into the best dreams of youth, depend upon it whatever outward success may have gathered round a man, he is but an elaborate and a mischievous failure.

LETTERS FROM THE COUSINS.

DEAR UNCLE MARK:—I thought I would like to have another little chat with you about my garden. I sold the last of my radishes about the middle of July, with the exception of a few that I left for seed; but those that I let remain, do not run up to seed at all, the roots keep growing larger and larger. I fear they will not go to seed. On the fourth day of July I received a package of Dolly Dutton Sweet Corn. I planted it on the fifth. I have now realized about two dollars for my garden produce, and have not disposed of everything yet. We planted our Defiance wheat about the last of April, it grew nicely for a while, but all at once it began to turn a little yellow, headed out all right but not a kernel of wheat could be found in the heads. Our Prolific corn has grown from 10 to 12 feet in hight and still keeps on growing, it has tasseled and begun to silk, but I fear it will not get ripe before frost. How sad it always makes me feel to have our garden and bright flowers cut down by frost. I turn my attention to the care of house plants in the winter. I have some fine Geraniums, among other plants. I have the promise of three more in a short time, a Rose, Balsam, and a fine Double Geranium, they are all presents to me, and I prize them very highly. In a short time I am going to the woods with my mamma to gather leaf mold for repotting my plants. I want to tell my cousins that I have some chickens and ducks as well as plants. My ducks know their names. I expect to go to the fair this fall as we live only a short distance from the fair ground. If I do go I will tell you of some of the nice things I see there. Good-bye for the present. WALTER C. GAYHART.

Lucas Co., Ohio.

DEAR UNCLE MARK:—My little daughter Elinor aged seven, and her brother George six years old, are very anxious to join your Horticultural Club, and they wish me to write for them as they "print" with difficulty. They planted corn this year and squashes; and they also have an interest in the flower garden, I think your club is destined to accomplish a great deal of good among the youth of our country, in stimulating a love for rural pleasures. All children naturally love flowers, but many have no opportunity to develop this love.

I remain, yours truly,

Chula, Va. I. W. B.

DEAR UNCLE MARK AND COUSINS:—My garden has done splendidly this summer after the rain. We had a fine rain the 16th of August, it was very dry before that. This is the third year that we have had a drought. Dolly Varden, I do not want you to scare me like that again; I almost jumped out of my boots. Well, I must close or this may find its way to the waste basket as my last one did, so good-bye. LAKE SIDE.

Wesleyville, Pa.
